THE spring regatta of the Larchmont Y. C. will be sailed on June 7, being open to members of the New York, Eastern, Seawanhaka, Corinthian, Atlantic, New York Corinthian, Oyster Bay Corinthian, New Haven, New Rochelle and Corinthian of Marblehead yacht clubs. Prizes will be offered in each class where two yachts start with full intention of completing the course, and in each class where four or more yachts start, a second prize will be given. All open yachts will be divided into two classes, as follows: Class A, schooners measuring over 9 ft.; Class B, 8 ft. and over 7 ft.; Class C, 7 ft. and over 6 ft.; Class D, 6 ft. and over 5 ft.; Class E, 5 ft. and over 4 ft.; Class F, 4 ft. and over 3 ft.; Class G, 3 ft. and over 2 ft.; Class H, 2 ft. and over 1 ft.; Class I, mainsail yachts measuring under 3 ft. Racing length is ascertained by adding to the load waterline length the square root of the sail area, and dividing the sum by two. The result will be the measurement for time allowance and classification. All open yachts will be classified according to their load waterline length as follows: Class 12, 12 ft. and under; Class 13, 13 ft. and under; Class 14, 14 ft. and under; Class 15, 15 ft. and under; Class 16, 16 ft. and under; Class 17, 17 ft. and under; Class 18, 18 ft. and under; Class 19, 19 ft. and under; Class 20, 20 ft. and under; Class 21, 21 ft. and under; Class 22, 22 ft. and under; Class 23, 23 ft. and under; Class 24, 24 ft. and under; Class 25, 25 ft. and under; Class 26, 26 ft. and under; Class 27, 27 ft. and under; Class 28, 28 ft. and under; Class 29, 29 ft. and under; Class 30, 30 ft. and under; Class 31, 31 ft. and under; Class 32, 32 ft. and under; Class 33, 33 ft. and under; Class 34, 34 ft. and under; Class 35, 35 ft. and under; Class 36, 36 ft. and under; Class 37, 37 ft. and under; Class 38, 38 ft. and under; Class 39, 39 ft. and under; Class 40, 40 ft. and under; Class 41, 41 ft. and under; Class 42, 42 ft. and under; Class 43, 43 ft. and under; Class 44, 44 ft. and under; Class 45, 45 ft. and under; Class 46, 46 ft. and under; Class 47, 47 ft. and under; Class 48, 48 ft. and under; Class 49, 49 ft. and under; Class 50, 50 ft. and under; Class 51, 51 ft. and under; Class 52, 52 ft. and under; Class 53, 53 ft. and under; Class 54, 54 ft. and under; Class 55, 55 ft. and under; Class 56, 56 ft. and under; Class 57, 57 ft. and under; Class 58, 58 ft. and under; Class 59, 59 ft. and under; Class 60, 60 ft. and under; Class 61, 61 ft. and under; Class 62, 62 ft. and under; Class 63, 63 ft. and under; Class 64, 64 ft. and under; Class 65, 65 ft. and under; Class 66, 66 ft. and under; Class 67, 67 ft. and under; Class 68, 68 ft. and under; Class 69, 69 ft. and under; Class 70, 70 ft. and under; Class 71, 71 ft. and under; Class 72, 72 ft. and under; Class 73, 73 ft. and under; Class 74, 74 ft. and under; Class 75, 75 ft. and under; Class 76, 76 ft. and under; Class 77, 77 ft. and under; Class 78, 78 ft. and under; Class 79, 79 ft. and under; Class 80, 80 ft. and under; Class 81, 81 ft. and under; Class 82, 82 ft. and under; Class 83, 83 ft. and under; Class 84, 84 ft. and under; Class 85, 85 ft. and under; Class 86, 86 ft. and under; Class 87, 87 ft. and under; Class 88, 88 ft. and under; Class 89, 89 ft. and under; Class 90, 90 ft. and under; Class 91, 91 ft. and under; Class 92, 92 ft. and under; Class 93, 93 ft. and under; Class 94, 94 ft. and under; Class 95, 95 ft. and under; Class 96, 96 ft. and under; Class 97, 97 ft. and under; Class 98, 98 ft. and under; Class 99, 99 ft. and under; Class 100, 100 ft. and under; Class 101, 101 ft. and under; Class 102, 102 ft. and under; Class 103, 103 ft. and under; Class 104, 104 ft. and under; Class 105, 105 ft. and under; Class 106, 106 ft. and under; Class 107, 107 ft. and under; Class 108, 108 ft. and under; Class 109, 109 ft. and under; Class 110, 110 ft. and under; Class 111, 111 ft. and under; Class 112, 112 ft. and under; Class 113, 113 ft. and under; Class 114, 114 ft. and under; Class 115, 115 ft. and under; Class 116, 116 ft. and under; Class 117, 117 ft. and under; Class 118, 118 ft. and under; Class 119, 119 ft. and under; Class 120, 120 ft. and under; Class 121, 121 ft. and under; Class 122, 122 ft. and under; Class 123, 123 ft. and under; Class 124, 124 ft. and under; Class 125, 125 ft. and under; Class 126, 126 ft. and under; Class 127, 127 ft. and under; Class 128, 128 ft. and under; Class 129, 129 ft. and under; Class 130, 130 ft. and under; Class 131, 131 ft. and under; Class 132, 132 ft. and under; Class 133, 133 ft. and under; Class 134, 134 ft. and under; Class 135, 135 ft. and under; Class 136, 136 ft. and under; Class 137, 137 ft. and under; Class 138, 138 ft. and under; Class 139, 139 ft. and under; Class 140, 140 ft. and under; Class 141, 141 ft. and under; Class 142, 142 ft. and under; Class 143, 143 ft. and under; Class 144, 144 ft. and under; Class 145, 145 ft. and under; Class 146, 146 ft. and under; Class 147, 147 ft. and under; Class 148, 148 ft. and under; Class 149, 149 ft. and under; Class 150, 150 ft. and under; Class 151, 151 ft. and under; Class 152, 152 ft. and under; Class 153, 153 ft. and under; Class 154, 154 ft. and under; Class 155, 155 ft. and under; Class 156, 156 ft. and under; Class 157, 157 ft. and under; Class 158, 158 ft. and under; Class 159, 159 ft. and under; Class 160, 160 ft. and under; Class 161, 161 ft. and under; Class 162, 162 ft. and under; Class 163, 163 ft. and under; Class 164, 164 ft. and under; Class 165, 165 ft. and under; Class 166, 166 ft. and under; Class 167, 167 ft. and under; Class 168, 168 ft. and under; Class 169, 169 ft. and under; Class 170, 170 ft. and under; Class 171, 171 ft. and under; Class 172, 172 ft. and under; Class 173, 173 ft. and under; Class 174, 174 ft. and under; Class 175, 175 ft. and under; Class 176, 176 ft. and under; Class 177, 177 ft. and under; Class 178, 178 ft. and under; Class 179, 179 ft. and under; Class 180, 180 ft. and under; Class 181, 181 ft. and under; Class 182, 182 ft. and under; Class 183, 183 ft. and under; Class 184, 184 ft. and under; Class 185, 185 ft. and under; Class 186, 186 ft. and under; Class 187, 187 ft. and under; Class 188, 188 ft. and under; Class 189, 189 ft. and under; Class 190, 190 ft. and under; Class 191, 191 ft. and under; Class 192, 192 ft. and under; Class 193, 193 ft. and under; Class 194, 194 ft. and under; Class 195, 195 ft. and under; Class 196, 196 ft. and under; Class 197, 197 ft. and under; Class 198, 198 ft. and under; Class 199, 199 ft. and under; Class 200, 200 ft. and under; Class 201, 201 ft. and under; Class 202, 202 ft. and under; Class 203, 203 ft. and under; Class 204, 204 ft. and under; Class 205, 205 ft. and under; Class 206, 206 ft. and under; Class 207, 207 ft. and under; Class 208, 208 ft. and under; Class 209, 209 ft. and under; Class 210, 210 ft. and under; Class 211, 211 ft. and under; Class 212, 212 ft. and under; Class 213, 213 ft. and under; Class 214, 214 ft. and under; Class 215, 215 ft. and under; Class 216, 216 ft. and under; Class 217, 217 ft. and under; Class 218, 218 ft. and under; Class 219, 219 ft. and under; Class 220, 220 ft. and under; Class 221, 221 ft. and under; Class 222, 222 ft. and under; Class 223, 223 ft. and under; Class 224, 224 ft. and under; Class 225, 225 ft. and under; Class 226, 226 ft. and under; Class 227, 227 ft. and under; Class 228, 228 ft. and under; Class 229, 229 ft. and under; Class 230, 230 ft. and under; Class 231, 231 ft. and under; Class 232, 232 ft. and under; Class 233, 233 ft. and under; Class 234, 234 ft. and under; Class 235, 235 ft. and under; Class 236, 236 ft. and under; Class 237, 237 ft. and under; Class 238, 238 ft. and under; Class 239, 239 ft. and under; Class 240, 240 ft. and under; Class 241, 241 ft. and under; Class 242, 242 ft. and under; Class 243, 243 ft. and under; Class 244, 244 ft. and under; Class 245, 245 ft. and under; Class 246, 246 ft. and under; Class 247, 247 ft. and under; Class 248, 248 ft. and under; Class 249, 249 ft. and under; Class 250, 250 ft. and under; Class 251, 251 ft. and under; Class 252, 252 ft. and under; Class 253, 253 ft. and under; Class 254, 254 ft. and under; Class 255, 255 ft. and under; Class 256, 256 ft. and under; Class 257, 257 ft. and under; Class 258, 258 ft. and under; Class 259, 259 ft. and under; Class 260, 260 ft. and under; Class 261, 261 ft. and under; Class 262, 262 ft. and under; Class 263, 263 ft. and under; Class 264, 264 ft. and under; Class 265, 265 ft. and under; Class 266, 266 ft. and under; Class 267, 267 ft. and under; Class 268, 268 ft. and under; Class 269, 269 ft. and under; Class 270, 270 ft. and under; Class 271, 271 ft. and under; Class 272, 272 ft. and under; Class 273, 273 ft. and under; Class 274, 274 ft. and under; Class 275, 275 ft. and under; Class 276, 276 ft. and under; Class 277, 277 ft. and under; Class 278, 278 ft. and under; Class 279, 279 ft. and under; Class 280, 280 ft. and under; Class 281, 281 ft. and under; Class 282, 282 ft. and under; Class 283, 283 ft. and under; Class 284, 284 ft. and under; Class 285, 285 ft. and under; Class 286, 286 ft. and under; Class 287, 287 ft. and under; Class 288, 288 ft. and under; Class 289, 289 ft. and under; Class 290, 290 ft. and under; Class 291, 291 ft. and under; Class 292, 292 ft. and under; Class 293, 293 ft. and under; Class 294, 294 ft. and under; Class 295, 295 ft. and under; Class 296, 296 ft. and under; Class 297, 297 ft. and under; Class 298, 298 ft. and under; Class 299, 299 ft. and under; Class 300, 300 ft. and under; Class 301, 301 ft. and under; Class 302, 302 ft. and under; Class 303, 303 ft. and under; Class 304, 304 ft. and under; Class 305, 305 ft. and under; Class 306, 306 ft. and under; Class 307, 307 ft. and under; Class 308, 308 ft. and under; Class 309, 309 ft. and under; Class 310, 310 ft. and under; Class 311, 311 ft. and under; Class 312, 312 ft. and under; Class 313, 313 ft. and under; Class 314, 314 ft. and under; Class 315, 315 ft. and under; Class 316, 316 ft. and under; Class 317, 317 ft. and under; Class 318, 318 ft. and under; Class 319, 319 ft. and under; Class 320, 320 ft. and under; Class 321, 321 ft. and under; Class 322, 322 ft. and under; Class 323, 323 ft. and under; Class 324, 324 ft. and under; Class 325, 325 ft. and under; Class 326, 326 ft. and under; Class 327, 327 ft. and under; Class 328, 328 ft. and under; Class 329, 329 ft. and under; Class 330, 330 ft. and under; Class 331, 331 ft. and under; Class 332, 332 ft. and under; Class 333, 333 ft. and under; Class 334, 334 ft. and under; Class 335, 335 ft. and under; Class 336, 336 ft. and under; Class 337, 337 ft. and under; Class 338, 338 ft. and under; Class 339, 339 ft. and under; Class 340, 340 ft. and under; Class 341, 341 ft. and under; Class 342, 342 ft. and under; Class 343, 343 ft. and under; Class 344, 344 ft. and under; Class 345, 345 ft. and under; Class 346, 346 ft. and under; Class 347, 347 ft. and under; Class 348, 348 ft. and under; Class 349, 349 ft. and under; Class 350, 350 ft. and under; Class 351, 351 ft. and under; Class 352, 352 ft. and under; Class 353, 353 ft. and under; Class 354, 354 ft. and under; Class 355, 355 ft. and under; Class 356, 356 ft. and under; Class 357, 357 ft. and under; Class 358, 358 ft. and under; Class 359, 359 ft. and under; Class 360, 360 ft. and under; Class 361, 361 ft. and under; Class 362, 362 ft. and under; Class 363, 363 ft. and under; Class 364, 364 ft. and under; Class 365, 365 ft. and under; Class 366, 366 ft. and under; Class 367, 367 ft. and under; Class 368, 368 ft. and under; Class 369, 369 ft. and under; Class 370, 370 ft. and under; Class 371, 371 ft. and under; Class 372, 372 ft. and under; Class 373, 373 ft. and under; Class 374, 374 ft. and under; Class 375, 375 ft. and under; Class 376, 376 ft. and under; Class 377, 377 ft. and under; Class 378, 378 ft. and under; Class 379, 379 ft. and under; Class 380, 380 ft. and under; Class 381, 381 ft. and under; Class 382, 382 ft. and under; Class 383, 383 ft. and under; Class 384, 384 ft. and under; Class 385, 385 ft. and under; Class 386, 386 ft. and under; Class 387, 387 ft. and under; Class 388, 388 ft. and under; Class 389, 389 ft. and under; Class 390, 390 ft. and under; Class 391, 391 ft. and under; Class 392, 392 ft. and under; Class 393, 393 ft. and under; Class 394, 394 ft. and under; Class 395, 395 ft. and under; Class 396, 396 ft. and under; Class 397, 397 ft. and under; Class 398, 398 ft. and under; Class 399, 399 ft. and under; Class 400, 400 ft. and under; Class 401, 401 ft. and under; Class 402, 402 ft. and under; Class 403, 403 ft. and under; Class 404, 404 ft. and under; Class 405, 405 ft. and under; Class 406, 406 ft. and under; Class 407, 407 ft. and under; Class 408, 408 ft. and under; Class 409, 409 ft. and under; Class 410, 410 ft. and under; Class 411, 411 ft. and under; Class 412, 412 ft. and under; Class 413, 413 ft. and under; Class 414, 414 ft. and under; Class 415, 415 ft. and under; Class 416, 416 ft. and under; Class 417, 417 ft. and under; Class 418, 418 ft. and under; Class 419, 419 ft. and under; Class 420, 420 ft. and under; Class 421, 421 ft. and under; Class 422, 422 ft. and under; Class 423, 423 ft. and under; Class 424, 424 ft. and under; Class 425, 425 ft. and under; Class 426, 426 ft. and under; Class 427, 427 ft. and under; Class 428, 428 ft. and under; Class 429, 429 ft. and under; Class 430, 430 ft. and under; Class 431, 431 ft. and under; Class 432, 432 ft. and under; Class 433, 433 ft. and under; Class 434, 434 ft. and under; Class 435, 435 ft. and under; Class 436, 436 ft. and under; Class 437, 437 ft. and under; Class 438, 438 ft. and under; Class 439, 439 ft. and under; Class 440, 440 ft. and under; Class 441, 441 ft. and under; Class 442, 442 ft. and under; Class 443, 443 ft. and under; Class 444, 444 ft. and under; Class 445, 445 ft. and under; Class 446, 446 ft. and under; Class 447, 447 ft. and under; Class 448, 448 ft. and under; Class 449, 449 ft. and under; Class 450, 450 ft. and under; Class 451, 451 ft. and under; Class 452, 452 ft. and under; Class 453, 453 ft. and under; Class 454, 454 ft. and under; Class 455, 455 ft. and under; Class 456, 456 ft. and under; Class 457, 457 ft. and under; Class 458, 458 ft. and under; Class 459, 459 ft. and under; Class 460, 460 ft. and under; Class 461, 461 ft. and under; Class 462, 462 ft. and under; Class 463, 463 ft. and under; Class 464, 464 ft. and under; Class 465, 465 ft. and under; Class 466, 466 ft. and under; Class 467, 467 ft. and under; Class 468, 468 ft. and under; Class 469, 469 ft. and under; Class 470, 470 ft. and under; Class 471, 471 ft. and under; Class 472, 472 ft. and under; Class 473, 473 ft. and under; Class 474, 474 ft. and under; Class 475, 475 ft. and under; Class 476, 476 ft. and under; Class 477, 477 ft. and under; Class 478, 478 ft. and under; Class 479, 479 ft. and under; Class 480, 480 ft. and under; Class 481, 481 ft. and under; Class 482, 482 ft. and under; Class 483, 483 ft. and under; Class 484, 484 ft. and under; Class 485, 485 ft. and under; Class 486, 486 ft. and under; Class 487, 487 ft. and under; Class 488, 488 ft. and under; Class 489, 489 ft. and under; Class 490, 490 ft. and under; Class 491, 491 ft. and under; Class 492, 492 ft. and under; Class 493, 493 ft. and under; Class 494, 494 ft. and under; Class 495, 495 ft. and under; Class 496, 496 ft. and under; Class 497, 497 ft. and under; Class 498, 498 ft. and under; Class 499, 499 ft. and under; Class 500, 500 ft. and under; Class 501, 501 ft. and under; Class 502, 502 ft. and under; Class 503, 503 ft. and under; Class 504, 504 ft. and under; Class 505, 505 ft. and under; Class 506, 506 ft. and under; Class 507, 507 ft. and under; Class 508, 508 ft. and under; Class 509, 509 ft. and under; Class 510, 510 ft. and under; Class 511, 511 ft. and under; Class 512, 512 ft. and under; Class 513, 513 ft. and under; Class 514, 514 ft. and under; Class 515, 515 ft. and under; Class 516, 516 ft. and under; Class 517, 517 ft. and under; Class 518, 518 ft. and under; Class 519, 519 ft. and under; Class 520, 520 ft. and under; Class 521, 521 ft. and under; Class 522, 522 ft. and under; Point, Fall.

OAKLAND C. C.

AS will be seen from the following list of fixtures, the Oakland Canoe Club is in the happy position of being able to sail through the entire year, the races beginning on Jan. 12 and ending on Christmas, to begin the new year again. The club has three trophies, the Mayrisc badge, to be sailed for once every quarter; the Holiday cup, six times a year; and the O. C. C. trophy for best annual record, the conditions being as follows:

1. The races shall be under the management of a committee of three, and its decision in all controversies shall be final.
2. Races shall be sailed once a month over the regular club course, 3 miles. Dates and classification of canoes shall be announced by Feb. 1 of each year.
3. Canoes shall be divided into three classes, viz.: First Class, latest models, plate centerboards, improved rigs, etc. Second Class, old models, inferior centerboards, old rigs, etc. Third Class, beginners, small canoes, etc.
4. The classification, dates or course may be altered from time to time, due notice being given to the contestants.
5. Record points shall be as follows: Every entry completing the course, 2 points; the winner in each class, 3 points; the second in each class, 2 points.
6. Canoes shall be sailed by owners only. In case of a bona fide change of ownership between members of the club, a canoe may retain its record and the trophy go with the boat.
7. The winner in each class alternately shall hold the trophy until the next race, but should he meanwhile cease to be a member, it shall be returned to the committee immediately.
8. The New Year coming in during the year shall receive an average of the credits in their class.
9. The owner of the canoe scoring the highest number of points in the twelve races shall win the trophy.

10. In case of a tie, a handicap giving liberal time allowance to inferior craft, shall be sailed before the annual meeting.

The programme of races for 1890 is: Jan. 13, Mayrisc badge, (14th); Feb. 9th, O. C. C. trophy, (1st); Feb. 22, the Holiday cup, Washington's Birthday; Mar. 9, O. C. C. trophy, (2d); April 6, O. C. C. trophy, (3d); April 20, Mayrisc badge, (15); May 4, O. C. C. trophy, (4th); 30, the Holiday cup, Decoration Day; June 8th, O. C. C. trophy, (5th); July 4, the Holiday cup, Independence Day; July 6, O. C. C. trophy, (6th); July 20, Mayrisc badge, (16th); Aug. 3, O. C. C. trophy, (7th); Sept. 7, O. C. C. trophy, (8th); Sept. 9, the Holiday cup, Admission Day; Oct. 5, O. C. C. trophy, (9th); Oct. 19, Mayrisc badge, (17); Nov. 2, O. C. C. trophy, (10th); Nov. 27, the Holiday cup, Thanksgiving Day; Dec. 14, O. C. C. trophy, (11th); Dec. 25, the Holiday cup, Christmas Day; Jan. 1, 91, O. C. C. trophy, (12th).

The officers are: Com., W. W. Blow; Vice-Com., A. D. Harrison; Secty., G. W. Rudolph; Treas., S. A. Hackett; Measurers, John Olsen, A. H. Blow; Regatta Committee, James Guiler, Jr., W. G. Morrow, P. J. G. Kenna.

Mr. Guiler was formerly a member of the New York C. C. and his canoe Vitesse was the New York, formerly Jess.

PASSAIC RIVER MEET.—The camp of the Passaic River canoeists will be on the same site as in 1888, at the foot of W. Fifty-seventh street (old Fifth street), Newark Bay. The New Jersey Central Railroad, foot of Liberty street, New York, will land canoeists at Pamrapp (East Forty-ninth street) on the New York Bay side, and the Bergen Point and Jersey City horse cars run across Fifty-seventh street within three blocks of the camp. At Bergen Point they connect with the Staten Island ferry. Mail matter may be addressed to "The Passaic Canoe Camp," Saltersville P. O., N. J. Two mails will be received and sent from camp each day. Express matter to be sent via U. S. Ex. to Pamrapp, care of committee. Canoeists are requested to register their names at the committee's tent on arrival in camp. The camp will begin to-day. Mr. R. H. Peebles has been appointed sec.-treas., Mr. Pennington having resigned. Rear-Com. Dorland, A. C. A., takes Mr. Peebles's place on the camp committee. The subscription for the new cup is closed and it is being made.

BROOKLYN C. C.—The Brooklyn C. C. has lately issued a neat club book, showing a membership of thirty and a fleet of thirty-six canoes and boats. The club has this year been incorporated, the officers being: Com., R. J. Wilkin; Vice-Com., Percy F. Hogan; Purser, M. V. Brokaw, 70 Hoyt street, Brooklyn; Meas., F. K. Kell, reg. Trustees, R. J. Wilkin, J. F. Newman, F. G. Badington, M. V. Brokaw, F. L. Dunnell. Regatta Committee, W. McT. Miller, M. M. Davis, D. H. Nash. The annual regatta will take place on June 2, with 6 events.

A. C. A. MEMBERSHIP.—Eastern Div.: A. C. A. Chamberlin, W. D. Winslow, Boston; C. F. Schuster, Hoyoake, Mass.; Ralph L. Morgan, Worcester, Mass.; Wilton L. Richards, Malden, Mass.; Edwin D. Dresser, Winchester, Mass. Atlantic Division—Augustus W. Mott, Mott Haven, N. Y.; L. D. Huntington, Jr., New Rochelle, N. Y. Northern Div.: J. M. Douglas, V. de V. Dowker, A. W. Morris, Montreal.

IANTHE C. C.—The opening races of the season on May 24 were hardly more than scrub races, but they served to warn the men up for next week. Passaic, G. P. Douglas, won the sailing race, beating Nipsic, O. V. Schuyler. Minola, G. W. Baxter, won the junior sailing, with Cyniska, H. S. Tanner, third. Cyniska won the combined, with Passaic second. Mr. Palmer won the paddling race, with Mr. Douglas second.

KNICKERBOCKER C. C.—The annual regatta of the Knickerbocker C. C. will be held on May 30 at the club house, 152d street, North River, at 2 P. M. The programme includes an unlimited sailing, paddling, tandem upset, jury scurry and open paddling race, all under A. C. A. rules. The regatta committee are F. C. Moore, D. D. Gessler and C. C. Taylor.

HOBOKEN C. C.—Officers, 1890: Com., Julius Warnecke; Vice-Com., Richard Beyer; Sec'y, P. C. Gottschalk. The club now has 12 members, with a house at the foot of Fourteenth street, Hoboken.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

G. A. C.—The penal code of New York forbids Sunday fishing.

C. W., Brooklyn, N. Y.—Pure white puppies are not uncommon, but generally, as they grow older, patches or spots of color will appear.

E. S. R., Philadelphia—I expect to go out to Red Fork, I. T., by the first of October next. I would like you to inform me what there will be to gun for at that time, and as I have rifle and shotgun both, would it be advisable to take the both or just the one? Ans. The shooting will be on birds and one should take a shotgun.

A. B. P., Providence, R. I.—Can you give me any information about wild rice, where to get it? Is there any trouble to get it started in shallow water? Will it grow in New Brunswick? Ans. Wild rice is supplied by Chas. Gilchrist, Port Hope, Ont., or R. Valentine, Janesville, Wis. Neither of them have any now on hand; will not have it until fall. It will grow in New Brunswick.

E. S. T., Thompsonstown, Pa.—Kindly inform me if I can purchase and where, something similar to a soldier's knapsack, to use in a tramp, to hold a rubber coat, lunch, matches, etc., to be strapped on the hips. Ans. You can procure it from dealers in sportsmen's goods. See names of firms advertising. These dealers supply everything a sportsman has use for.

A. J. F., New York.—Can you inform me what kind of red silk tackle makers use for tying guides on rods so that it shows the red silk transparent after shelling. I used some regular sewing silk, and after I put shelling on it turned a dark color. Ans. Use best quality sewing machine silk, and wax it before winding, or instead of waxing after winding the silk wet it with hot water and brush it over with thin glue. You will do well to read the work on "Fly-Rods and Fly-Tackle," by Henry P. Wells.

G. DE M., Quebec.—Can you tell what is to be the adopted designation for the "ouananiche," "winanish," or whatever "ische" or "ish" he may be? The first name looks nice when correctly spelled, but the other appears easier reading. "Landlocked salmon" is expressive, but awkward. Ans. In "The Fisheries and Fishery Industries of the United States," published by the United States Fish Commission, the Indian name of this salmon is adopted and the phonetic spelling is expressed by winninish. The same form was employed by Dr. Goode, first in the "Game Fishes of the United States," and later in American Fishes. Winnish is a variation of the above. The name ouananiche is the French equivalent of the same thing.

A. W. B., Hot Springs, N. C.—1. I want to get a rifle that will do for general shooting such as I may run across in this region, wild turkey, deer and perhaps sometimes a shot at a bear; would a Winchester repeater, model 1886, .38cal. be heavy enough for my purpose or would the .40cal. be better? 2. I am afraid of snakes and meet more or less of them in the mountains. I have never got into close quarters with a rattler, but if I should would a pair of medium heavy boots protect my feet and legs or would the snake be able to bite through them. I want to have a pair made and wish to know how heavy it is necessary to have the leather to protect myself. Ans. 1. Select the model 1886, .38-56-255. 2. The regular hunting boots kept in stock by dealers or made to order.

 81 NEW STREET, NEW YORK.

THOS. ROWLAND, NATURALIST AND TAXIDERMIST.
 Dealer in Foreign and Domestic Bird Skins. A specialty in Mounting Birds and Animals. ALSO MOOSE, ELK, DEER HEADS, ETC.
 No. 182 SIXTH AVENUE, Near Thirtieth Street, NEW YORK.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated, entirely by the hand that holds the rod.

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1, black bass; No. 2, bass and pickerel; No. 3, muscalonge, salmon trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction, one minnow having been known to catch twenty-five bass before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

The ACME FOLDING BOAT CO.

MIAMISBURG, O.

Safest, Lightest, Handsomest Model, Most Compact.

The only portable boat that combines handsome model with compactness. No bagging; smooth, uniform surface. All parts of frame adjustable to compensate for stretching and shrinkage of canvas. Flooring forms the shipping case. The Acme is endorsed by prominent sportsmen everywhere. Capt. Paul Boyton, the famous swimmer, who has a 12ft. boat, writes: "In all my experience with boats of every description, I never saw anything so compact and perfect. Her strength, lightness and beauty of model surprised me. She is easy to set up and to pack. She will be my companion on all my hunting expeditions, as I can carry her behind on my saddle as easily as I can a roll of camp blankets."

SYRACUSE, N. Y., Oct. 14, 1889.
H. M. Sprague, Boat Builder, Parishville, N. Y.:
DEAR SIR—I can hard say on paper how well I like your boats, and your Patent Rubber Improvement is just the thing, at least that is the way I find it by use of two of your boats the last summer on the river by all my family, and any boat that can stand the hard usage a boat gets with six or eight children in and out of same two months in summer every hour of day and have the boats stand the wear, is good enough and better than words.
Respectfully, S. B. MERRILL.

Now is your chance to buy a **Sprague Patent Rubber-Packed Boat**. Over fifty now ready for immediate delivery, from 10 to 16ft. Over 50 in use giving perfect satisfaction; wherever known and used they are the established favorite. I am determined to have them placed before sportsmen more generally. Don't fail to send 2-cent stamp for 1890 catalogue. Address

The issue of June 12 will be a Western Number. It will be brimful of good things picturing sport with rod and gun in the Great West.

TRANSFER OF THE FISH COMMISSION.

ON May 14, 1890, the U. S. Senate Committee on Agriculture and Forestry recommended the passage of a bill providing for the transfer of the U. S. Fish Commission to the Department of Agriculture. This bill was amended by making the Commission a Presidential appointment instead of a departmental one, and the bill as amended is now in the hands of the Senate Committee on Merchant Marine and Fisheries, to whom it should have been first referred. In recommending the passage of the bill the Committee includes in its report the following remarks:

"This measure has for its object an increase in the efficiency of the Fish Commission by allying it with a distinctly scientific executive department in which, while its usefulness shall in no manner be circumscribed or impaired, it may be brought into proper relation with the Executive and Congress."

The report next sketches briefly the resolution of 1871, creating the Commission, the amendment to the original resolution providing for a salaried appointment by the President, and the debate looking toward a permanent organization. To resume the language of the Committee:

The Fish Commission has now grown to be a powerful and extensive bureau, furnishing employment to more than one hundred and forty employees, disbursing annually more than \$300,000, and controlling, in whole or in part, the operations carried on in all parts of the country and on the sea in connection with the study of the habits of fishes and with their propagation for human food. * * * Doubtless independence promotes efficiency in some exceptional cases, or in the formative stage of an organization like this, where so much depends upon the personal qualities

of the head; but as already shown the formative and exceptional stages with respect to this organization have been passed; it has entered on a career which promises to be perennial; and its continued efficiency cannot wisely be left dependent upon the qualities, attainments and inclination of the individual who may be its temporary head, but should depend rather upon the systematic administration of rules, principles and business methods, sanctioned by law and experience, to be passed down from administration to administration, as in the case with respect to other bureaus of the Government.

It is hardly necessary to say that any relations which this organization may have with other branches of the Government will be in no respect impaired by the change proposed; rather will they be greatly increased in usefulness by the enlistment as its representative of one whose personal relationships with the heads of other Executive Departments are necessarily more intimate and influential.

It is of importance also that the President shall have the opportunity of obtaining information, which would be furnished if the Commission were placed under the control of a Cabinet officer, with whom he regularly consults, and to whom he looks for the wise direction which is essential to good administration. And this brings up one of the strongest possible reasons for placing the Fish Commission under charge of one of the great Departments of the Government.

The head of the Commission is, and must continue to be, a person of great scientific attainments. It is the work of such which has brought the bureau to its present state of usefulness. But along with this must necessarily go the business ability necessary for the making of contracts, the superintendence of construction, the adjustment of salaries, the control of subordinates, and that general management which is necessary in all affairs of moment, both private and public.

It is evident that the proposed transfer is not in the interest of economy and efficiency, for no mention is made of the former, and the report itself pays tribute to the excellence of the present organization, in which it reflects the mature judgment of the people whose interests have been advanced by the skill and energy of the Commission. This work has been done under the direct and constant supervision of committees of both Houses of Congress; the details of its expenditures have been scrutinized annually; various departments of the Government have contributed to its scope and, in turn, utilized its results. Leaders among business men and scientific associations at home and abroad have expressed their admiration of the very efficiency which has provoked the envy of political greed. From far and near, wherever the Fish Commission is known, protests have come against any experiments with this successful branch of the public service. Clearly this proposition has its origin, not in the public demand, which is unreservedly opposed to it, but in a supposed political necessity. It aims simply to pull down the organization to the level of a fish-distributing machine, double the appropriations, and provide additional places in reward for partisan service.

SNAP SHOTS.

THE National Geographical Society has sent out an expedition to Alaska for the special purpose of climbing Mount St. Elias. The gentlemen in charge, Messrs. Mark B. Smith and J. C. Russell, expect to leave Seattle by the steamer which leaves for Sitka June 14, and hope to begin their work about July 1. This work will include not only the attempt to climb Mount St. Elias, which has long been regarded as the highest mountain in the United States, but also the mapping of all the glaciers which can be reached from it. The party will consist of about fifteen white men, and of course a contingent of native helpers will be secured when the ground is reached. The money for the expedition has been raised in Washington by private persons, but it is stated that the U. S. S. Pinta will be placed at the disposal of the party on their arrival at Sitka to transport them to Yakutat Bay, and to render any other aid possible.

The opinion is tenaciously held by some people that the solution of the problem of protecting our migratory game may be found in Congressional legislation. It is beyond dispute that a National law might embody wiser and more effective provisions than the contradictory and inadequate State laws, if Congress had any power to legislate on the subject. Our frequently expressed belief is that game protection, except on the public lands, is something with which Congress has no concern whatever, and that national sportsmen's conventions which listen to speeches advocating Congressional action on the subject are simply wasting their time. The only jurisdiction Congress has, it appears reasonable to assume, is when game having been killed becomes an article of inter-State commerce, and as such subject to action of Congress with respect to regulation of that commerce.

THE MAN IN THE HOLLOW TREE.

IT happened at the time of the Wyoming Massacre in Pennsylvania, that a fugitive took refuge in a hollow tree. No sooner had he entered than a spider began spinning her web across the entrance through which he had crawled. The web completed, up came the Indians, peering into every nook for their victim. One look at the hole in the hollow tree showed them the spider web spun across the opening, with the spider snugly ensconced therein, and they passed on. This story, with details of name and place and date, was told to Dr. Henry C. McCook by a descendant of the man who had been saved by the spider. Dr. McCook gives it in his "Tenants of an Old Farm," and says it may have been true, but points out that it is a variant of an old tale. A similar story was told, in the times of the Reformation, of a Protestant refugee, who was concealed in an oven. Before that, in Arabia, it dates back to the early part of the seventh century, to the Hijrah, when Mohammed and his companion Aboo-Bekr, flying from the Korishites, took refuge in the cave of Thor, and were there miraculously saved by a spider in the same way. Still further back, in the third century, St. Felix of Nola, hiding in a ruined wall, owed his life to a like friendly spider. Finally, a Jewish tradition has it that David, fleeing before Saul, hid in a cave, and was in the same manner preserved by the intervention of a spider. If then the Pennsylvania pioneer did hide from the Indians in a hollow tree, he had no reason for feeling lonely, for he was one of a goodly and distinguished company. If we had the entire list, no doubt it would be found that the story has been told in every corner of the earth where men have ever hidden in caves and hollow trees, and where spiders have spun webs.

But the caption at the head of this paper refers to another man in a hollow tree.

The *Saturday Globe*, of Toronto, Ont., in its issue of May 17 last, contained a letter written from London, Ont., and signed S. S. Cann, which was briefly this:

Mr. James Blackwell, a pioneer of Ops township; but now a respectable retired citizen of Lindsay, gave me on his word of honor a remarkable incident of Canadian bush life in early pioneer days, as happening to himself at a time when bears and wolves were numerous in those frontier townships.

Mr. Blackwell had the misfortune to lose himself in the great forest. Night fell suddenly, and was made more gloomy by the calls and answers of the too well known marauding wolves; and he philosophically concluded to secure the best stateroom provided by nature, and wait for the light of day. He soon found an old stub, about 17 ft. high, with a sapling leaning to. This stub, forming at one time part of an immense tree that had been broken pretty squarely off by a storm, he selected. On reaching the top he found it to be hollow, leaving merely a shell. Mr. Blackwell was preparing in the darkness to descend, but slipped and fell feet first into the stub, and to the bottom. Certainly his situation could hardly be more deplorable. To climb out was impossible. Mr. Blackwell, after the first shock had passed, was not long in discovering that he was not alone, for he found himself in a veritable bears' den, though the old folks were not at home.

Now, it might seem that the presence of bears with such surroundings only added to the miseries of the situation, but it proved otherwise, and this seeming misfortune was but a blessing in disguise. Mr. Blackwell was a muscular man, clear-headed and cool. He began to reflect. As smoke is an indication of fire, so fat and frisky cubs were an indication of adult bears not far off, which in the order of things would soon put in an appearance. He knew the bear would never descend head first, so here was the first dawn of hope. Soon he had the gratification to hear her bearing, his deliverer, scrambling up the outside of his prison. On reaching the top she reversed the order of things and began to descend. Soon, with knife in hand, he found himself bearing up against the huge brute. Now it was clear that to catch her by the hindlegs would disqualify her from climbing. He knew that she carried a caudal appendage a few inches long, strong and covered with good bear skin, so with a death-like grip he seized the bear's tail and gave her a couple of inches of cold steel. She started upward again, apparently much astonished, carrying him a few feet attached to her tail. Then she halted, apparently to take in more fully the peculiarities of the situation, or to make quite sure she had not got into the wrong stub. Of course there was no time to lose. "Drowning men will catch at straws," to use Mr. Blackwell's expressive language, "to say nothing of tails. It needed no prophet to tell me that it was now or never, so tightening my grip still tighter, if that were possible, I gave the old lady a few more inches of steel as a gentle persuader, and she carried me to the top like lightning, just giving me time to grasp for a hold when she threw herself like a ball to the ground and scampered into the thickets. I descended to find other quarters, and soon placed myself for safe keeping in the crutch of an adjacent tree. Not too soon either, for shortly after the bears returned. I heard their well-known snuffling distinctly. Not only so, but the tree was soon surrounded by the wolves, which made the place hideous by their snarling and dismal cries. At daylight they dispersed at the rising of the sun. I descended, got my bearings, and after traveling many miles struck a clearance, thankful for my deliverance. Though now over 80, I look back to that night, 50 years ago, and ask myself, not what might have hap-

pened by being surrounded by wolves, but what might have happened if I had not got among the bears."

This hollow tree and bear story may not be so ancient by several hundred years as the hollow tree and spider story, but it is of a respectable antiquity, as we shall show.

In an interesting account of a canoe trip through the Miramichi wilderness of New Brunswick, published in *FOREST AND STREAM* of May 31, 1888, Mr. Arthur P. Silver tells this story as related one night by his Micmac guide Joe:

An Indian was chased by an infuriated she bear, whose cub he had robbed. His only refuge was a hollow tree, down which he lowered himself with his captive. The old bear descended bear fashion, tail first. The Indian seized her by the stumpy tail, whereupon he was drawn to the top, and giving the bear a thrust off, remained at the summit of the stump master of the situation.

But long before this version, from the Canadian wilds, another variant, from Georgia, had been published in our columns. In the issue of this journal of July 25, 1878, was the following narration, which had been read before the Georgia Historical Society by Capt. W. W. Paine:

Morgan Gillis was a hunter of some renown, and a bold and powerful man. One day, hunting in the piny woods, he killed a fine buck, and while engaged in skinning it he discovered several Indians creeping toward him. There was no time to deliberate or to tarry. Springing to his feet and leaving rifle and venison behind, he ran for life and reached the swamp, where he noticed a large poplar which had been broken off near its top and had the appearance of being hollow. A knarled or knagged hickory which rested against this enabled him to easily climb the tree, when, to his great joy, he found it hollow, with an opening in the top sufficient for him to enter. He entered it, and sliding to the bottom found it tenanted by two fat cubs, and at once discovered that he was in the den of a bear, which, fortunately for him, was not at home. About three feet from the bottom of the den was a small knot-hole, from which Gillis saw the Indians approaching, and who seemed much puzzled at not finding him.

After hunting around, the Indians disappeared, supposing that Gillis had escaped to the river. Waiting some time, and the Indians not reappearing, Gillis thought it time to leave his hiding place, and, attempting to do so, found to his dismay that he could not climb out, and that he was entombed within the wooden walls of a tree. Our friend was not the first man, nor the last, who had gotten into a scrape and found it difficult to get out. Gillis could not perish with hunger for some days, for he could eat the cubs; but he might perish for water. Having his large hunting knife with him, he commenced trying to cut his way out of the hollow, and while thus engaged he heard, as he supposed, some one climbing on the outside of the tree. He thought of the Indians, and gave himself up as lost. Soon the aperture at the top of the tree was darkened, and an object commenced descending, and, horror of horrors! it was the old bear. Bears always descend a tree backward—and as Mrs. Bruin neared the bottom Gillis, in terror, commenced using his knife vigorously on her, and she, not expecting such a warm reception in her quarters, hastily ascended, and Gillis, taking advantage of her discomfiture and hasty retreat, seized hold of her shaggy hair and was drawn to the top. He escaped and reached home in safety, a wiser if not a better man.

Reading this, at the time, a correspondent wrote that the story of the man and the bear in the hollow tree was an old one, and had been printed years before in a school reader. Not long ago we came across this old school book. It is "The Reader's Guide, by John Hall, Principal of the Ellington School," and was printed at Hartford, Conn., in 1836. Mr. Hall gathered into his "Guide" for the delectation of the tender Connecticut mind a jumble of "Lessons for Practice," comprising divers examples of literature, ranging from sermons to bear stories. Among other things is a poem called "Recollections of Childhood," credited to an "English paper," and so like Woodworth's "Old Oaken Bucket," that one of them must have been a plagiarism from the other. Here, sandwiched in between a sentimental composition entitled "Melancholy Moments," by Miss Mary E. Jackson, and a moral tale of "Temper," by Mrs. Opie, is the "Story of a Hunter." It is credited to a "Scrap Book," and it must then first have been printed prior to 1836. The "Scrap Book" writer gives the narration as having come "from a friend who actually heard it related by a person in the manner herein described." The original narrator put the date of the occurrence at "about thirty-five years ago," so the actual date must have been somewhere around 1800. It was winter, and the young pioneer was out for venison, having tramped five or six miles from home without seeing any meat. What happened to him is thus told with the circumstantiality and detail which characterize veracious bear stories the world over:

At length I arrived at a large cedar swamp, on the edge of which I was struck by the singular appearance of a large stub, 25 or 30 ft. high, with its bark off. From its scratched surface I had no doubt it was climbed by raccoons or martins, which probably had also a den in it, as from its appearance I judged it was hollow. The stub at its base might have been 7 or 8 ft. through, but 8 or 10 ft. higher up its size was much diminished, so that I could grasp sufficiently to ascend it and ascertain what was within. My gun and great coat were deposited in a secure place, and being an expert climber I soon gained the top. As I anticipated, the stub was hollow, the aperture being about 2½ ft. in diameter. The day, you will observe, was dark and cloudy, and looking down the hollow I fancied that I could see the bottom at no great distance, but having nothing to put in to ascertain its depth I concluded that I would try to touch bottom with my feet. I therefore placed myself in the hole and lowered myself gradually, expecting every moment that my foot would come in contact with some animal or the foot of the hollow; but feeling nothing I unthinkingly continued letting myself down until my head and hands and whole person were completely within the center of the stub.

At this moment a sudden and strange fear came over me; I know not from what cause, for I am not naturally timid—it

seemed to affect me with a sense of suffocation, such as is experienced in dreams under the effect of night-mare. Rendered desperate by my feeling, I made a violent attempt to extricate myself, when the edges of the wood to which I was holding treacherously gave way, and precipitated me to the bottom of the hole, which I found extended to a level with the ground. I cannot wholly account for it, but probably from the erect position in which my body was necessarily kept in so narrow a tube, and my landing on my feet on a bed of moss, dried leaves and other soft substances, I sustained little or no injury from so great a fall; nor were my clothes but little deranged in my descent, owing, probably, to the smoothness of the surface produced by the long and frequent passing of the animals to and from their den—for a den I found it to be.

After recovering from my fright, I had time to examine the interior. All was dark; and putting out my hands to feel my way, they came in contact with the cold nose and then the fur of some beast which I immediately knew was a half-grown cub or young bear. Continuing to examine, I ascertained that there were three or four of these animals, which, aroused by the noise made in my descent, came around and smelt of me, uttering a mourning noise, taking me at first, no doubt, for their dam; but after a little examination, snuffing and snorting as if alarmed, they quietly betook themselves to their couch on the moss, and left me to my gloomy reflections. I knew they were too young to do me any injury, but with that knowledge came the dreadful certainty that the mother, whose premises I had so heedlessly invaded, was quite a different personage, and that my life would date but a short period after she arrived, as arrive she certainly would before many hours could pass over my head.

The interior of the den grew more visible after my eyes became accustomed to the darkness; and aided by a little light from the top, I discovered that the den was circular, and on the ground was 5 or 6 ft. in diameter, its circumference diminishing at the height of 7 or 8 ft. to a diameter of less than 3 ft., owing to the singular formation of the trunk, as I have before remarked. All my attempts to reach the narrow part of the hollow, in the hopes of working my way out, as a chimney sweep might have done, were fruitless. My escape in this way, therefore, was impossible. To cut through the trunk a hole, sufficient to let out my body, with a small pocket knife, the only one I had, would have been the work of weeks and even months, as from the examinations which I made of both the exterior and interior, I knew that it could not be less than a foot thick. The knife was the only weapon which I possessed, and a hug of my tremendous adversary would deprive me of the power to use even so contemptible an implement, and even if I succeeded in killing the bear—which was not to be expected—my case was equally hopeless, for I should only exchange a sudden death for one, if possible, even more horrid, a lingering one of famine and thirst, for my tracks in the snow I knew were long since covered by the drift, and there was no possibility of my friends finding me by searching in a wilderness of many miles in circuit.

My situation was indeed hopeless and desperate. As the shades of evening were now fast approaching, I thought of my cheerful home; my wife seated by the fire with our child in her arms, or preparing our evening meal, looking out anxiously from time to time, expecting my return. These and many more such thoughts rushed through my mind, and which way soever they were turned you may suppose they were teeming with horror. At one time I nearly determined to wreak my feeling upon the cubs by destroying them, but the wanton and useless cruelty of the act, as they could be of no service to me then, prevented me. Oh! you know not how merciful one is when he feels that he himself would willingly be an object of mercy from others.

Two hours had probably elapsed, and to me two of the longest that I ever experienced, when suddenly the little light which had illuminated me from above was gone. I looked up, and could no longer see the sky. My ears, which at the time were peculiarly sensitive, were assailed with a low growling noise, such as a bear makes on discovering an enemy and preparing for an attack. I thought that my fate was at hand, as this was the mother descending to her cubs, having by her acute organs of smell discovered that her den had been entered by some enemy. From the time I had ascertained my true situation I had opened my knife and held it ready in hand for the encounter, come when it would. I now, therefore, braced myself for a grapple with my terrible antagonist, feverishly awaiting her descent.

Bears always descend in the same manner as they ascend trees; that is, the head is always upward; consequently her most assailable, or rather least formidable part was opposed to me. A thought quick as lightning rushed through my mind that escape was possible and that the bear might be the means. No time could be afforded, nor was necessary for deliberation.

Just as she reached that part where the hollow widened and where by a jump I could reach her, I made a desperate spring and with both hands firmly caught hold of the fur which covered her extremities, giving at the same time a scream, which, in this close den sounded a thousand times louder than any human voice in the open air. The bear, and she was a powerful one, taken by surprise, and unable to get at me, frightened, too, at the hideous and appalling noise which I made, scrambled for life up the hollow. But my weight, I found, was an impediment to her; for when about half way up, I perceived that she began to lag, and notwithstanding I continued to scream, at length came to a dead stand, apparently not having strength enough to proceed. Knowing that my life depended on her going on, I instantly let go with the hand in which I had my knife, driving it to the haft into her flesh, and redoubled the noise which I had already made. Her pains and fears gave her strength, and by another effort she brought me once more to the light of day, at the top of the stub; nor did she stop there, to receive my thanks for the benefit which she had conferred on me; but hastily descended to the ground, and made her way with all speed to the swamp. I sat for some time on the stub, out of breath, and hardly crediting the reality of my escape. After giving thanks to that Providence which had so wonderfully preserved me, I descended to the ground, found my hat and gun where I had left them, and reached home after a fatiguing walk through the woods, about nine o'clock in the evening.

The teller of that story told it with a prolixity and a regard for detail which indicate that he intended it to be believed; and no doubt it was implicitly accepted as true by the scholars of the Nutmeg State, who, thanks to the thoughtfulness of Schoolmaster Hall, were nurtured on the bear-story brand of literary pabulum. It is the earliest American version of the tale we have traced; but in going back thus a hundred years little progress has been made toward the original story of the man and the bear in the hollow tree. When and where the tale was first told cannot be surmised; but there is an ancient variant of it which dates back to a period when it is cer-

tain that while there were hollow tree stubs by the score and bears galore, there was not in all the unbroken forest of this North American continent a single white man to fall into the one or to be pulled out by the other. While Cortez was conquering Mexico, there dwelt at Lake Como in Italy a certain Bishop Paulus Jovius, who, from all accounts, were he living in these days, would be an excellent type of the "true sportsman." He was catholic in his tastes, a great lover of nature, and one who believed in getting his share of all the good things there were in life for a man in the years from 1473 to 1550. His chief literary labors were the writing of eulogistic biographies of the great men of the time, who sent their portraits to adorn his elegant home. But he did not disdain to lighten his books with an occasional anecdote; and his writings prove him to have been a gentleman, a scholar and a good judge of bear stories. And here, told by Paulus Jovius three hundred years and more ago, we find a tale given him by one Demetrius, an ambassador to Rome, which is decidedly the best, because briefest, wittiest and quaintest of all the stories of the man in the hollow tree. It was translated from the original Latin by a writer of the last century thus:

A neighbor of mine, searching in the woods for honey, slipped down into a great hollow tree and there sunk into a lake of honey up to the breast, where, when he had stuck fast two days, calling and crying out in vain for help (because nobody in the meanwhile came nigh that solitary place)—at length, when he was out of all hope of life—he was strangely delivered by means of a great bear, which, coming thither about the same business that he did, and smelling the honey (stirred with his striving), clambered up to the top of the tree and then began to let himself down backward into it. The man, bethinking himself, and knowing that the worst was but death (which in that place he was sure of), beclipt the bear fast with both his hands about the loins, and withal made an outcry as loud as he could. The bear, being thus suddenly affrighted (what with the handling and the noise), made up again with all speed possible; the man held and the bear pulled, until with main force he had drawn *Dun out of the mire*. And then, being let go, away he trots, more afear'd than hurt, leaving the smeared swain in a joyful fear.

The Sportsman Tourist.

FOREST INTERESTS AND DISCUSSION.

IT seems to me that very few people in this country have an adequate idea of the value of popular discussion, or of its necessity under the conditions of life in a democracy. For many years I have observed the work and methods of men who wish to have various things done by the Legislatures of some of the States, New York and others. Most of them appear to depend almost wholly upon direct effort to "influence the Legislature" after it has assembled. Some one stays at the capital of the State during the session and talks to the members, endeavoring to obtain their support. Sometimes a few petitions are presented, and usually there are articles in the leading newspapers in advocacy of the measure proposed. Most members of State Legislatures whom I have known have a courteous manner of promising to give careful consideration to any matter which is urged upon their attention. Soon after the opening of the session nearly all the agents at the capital make favorable reports to their principals regarding the prospects of the various measures which they have in charge. It is natural that they should do so. Most of us probably overestimated our influence, and consent is taken for granted because a man listens to us with apparent interest. (The gentlemen who go to the capital to promote the measures which we favor are agents, or attorneys, and are excellent men; the bad men, who represent those who oppose us are lobbyists, and they are, as is well known, "indescribably corrupt.") This is the popular phraseology, but it means very little.)

A hearing before a Legislative committee is a real opportunity for those who know how to improve it. The chance is often thrown away because men do not "speak to the question," do not put the essential matter clearly before the committee, with the chief reasons for the action desired, but insist on being eloquent, and wish to display their own superior ability. After each hearing before a committee the reports of the agents to their principals are apt to become increasingly favorable.

But "there's many a slip 'twixt the cup and the lip," and, strange to say, the bill which we were so sure of does not pass, does not come anywhere near passing, and, as we can see now, never had the slightest chance of success. When a bill for some worthy public object fails it is common to denounce the members of the Legislature. I have often heard insinuations and direct accusations of corrupt action, when I knew—and any one might have known—that the mass and great majority of the people of the State had never heard of the proposed measure, and that no attempt had been made to bring the matter before them for their consideration. Such effort as had been made in behalf of the object in view had been mostly upon wrong lines—if any action was desired—and upon any lines it would have been ridiculously inadequate. The friends of the poor still-born bill are surprised at its failure, but in truth any other result would have been most astonishing, entirely unaccountable, indeed, on the basis of the facts of the case. In such cases a bill before the Legislature has no vital relation to popular intelligence or sentiment. Even though its purpose may be a good one, there is no real demand for it.

I suppose that the members of the Legislature of any State represent the majority of the people fairly well and that the average intelligence and honesty and other good qualities usually get themselves expressed in legislative action. It is most idle to assume that the chosen representatives of the people are not as good and honest as intelligent and as much civilized as the average of their constituents.

When I urge a member of the Legislature to support a measure which I am trying to promote, he rightly hears me courteously, and then he rightly listens for the voice

of his constituents. He thereby shows me my real opportunity and work. My business as an intelligent advocate is with his constituents, with the people. If I can convince them they will attend to him. If I can bring my object or plan to their attention and consideration, and can obtain their judgment upon it, that is all I need desire. Either they will pronounce the verdict which I seek, and their representatives will faithfully register it in their action, or, if they decide against me, I must make a new beginning, plan another campaign of popular discussion, and try the case all over again.

But few men have the stomach or patience for such work. They are soon tired of discussion and begin to scold. In our country the real appeal is always to the people, and it is best in every way that it should be so. If legislation for the best objects were obtainable without the support of the people's judgment, no great benefits would result from it. Government in a democracy ought to be government by discussion, and what a majority of the people desire and prefer after adequate discussion should be decreed and done.

I have seen all these ideas illustrated in various ways in the course of effort to secure popular attention to the forest interests of the State of New York, and have observed many other things of interest, not to be fully described at present for want of time. I think as much has been accomplished as could reasonably be expected under all the conditions, and considering especially the amount of effort hitherto devoted to the forestry agitation and its unorganized method and character. There is an organization now, and the New York State Forestry Association is in favor of decided action by the people of the State for the preservation of the mountain forests, which are necessary to the existence and value of the great waterways of the State of New York. The matter has been committed to the present Forest Commission for a thorough investigation, its findings and recommendations to be reported to the next Legislature.

This practically puts the business directly into the hands of the people of the State for their decision. The work for this summer and the coming autumn is discussion, and it should be full and effective. I think it would be wise and well for the people to acquire title to the land of an extensive region around the sources of the principal streams of the State, and to provide for the permanent maintenance of forest conditions over the entire area. What do you think about it, and what do you wish to have done in the matter when it comes up for decision a few months hence? What do the people—all the people of the State—think and wish regarding it, the lumbermen, city residents, hunters, fishermen, and owners of timber lands, clubmen and individual woodsmen? However you may like or dislike what has been done in the past, the matter has been referred to you now, and the past is mostly dead and out of reach.

How can such a plan for permanent forest conservancy be most wisely and economically carried into actual practical effect? The State can undoubtedly buy some of the land of the region in question, at prices not unreasonable, and the rest of it could be taken, I suppose, by right of eminent domain, if the people of the State so desire. But I am not a lawyer, and have no materials for an opinion on a legal question. What have the lawyers to say in relation to this subject of eminent domain, in connection with the effort to establish a great State Park in the Adirondack region?

J. B. HARRISON,

52 WILLIAM STREET, N. Y.

THE BRIDAL TOUR OF THE KENNEDYS.

[Concluded from Last Week.]

AND now, in the figure of the play actors, the scenes will have to be shifted, for my husband went a hunting, while I remained at the hotel with the B's, fellow tourists, whose acquaintance we made soon after we came to Wagon Wheel Park, and with whom we took many delightful excursions. His story follows.

I come into this story, not necessarily for publication, but as an evidence of good faith. The incredulity of the nineteenth century is nowhere more pronounced than in the presence of the hunting story; and it is only that the truth of this one may be placed beyond question that I consented to tell it myself. Much, however, is being done by the daily press toward rebuking this spirit of unbelief, by means of a series of hunting stories appearing in the Saturday editions. These articles are carefully prepared by a newspaper union, whose correspondents, owing to their geographical whereabouts, cannot be disputed. Some of us will not soon forget a late and graphic story from South Africa of a boa constrictor who enticed a three-year-old steer to a precipice by means of corn scattered along the ground, whereupon it took a turn around the steer's neck with its tail and a half-hitch about a tree with its head, and with the aid of a boa confederate pushed it over the edge and hung it. Aside from its having happened in Africa, the innate reasonableness of this anecdote carried conviction with it. The boa constrictor who furnished the account had a Kodak with him, and the paper was thus enabled to illustrate it.

Selecting a day when my morning meal occurred in the forenoon, attired in my Dutch Renaissance suit, slightly pulged out at the Renaissance with sandwiches, I mounted that celebrated calico horse Pinto, and, after some preliminary antics, succeeded in passing near enough to young Mr. Franklyn to enable him to hand up my rifle. At the base of the mountain fronting the Gap I found a bride path, up which Pinto deftly carried me for two hours. And then, for some distance beyond where the path disappeared, he struggled upward, tacking to and fro on the steep ascents, of his own volition, stopping occasionally to breathe and to crop a mouthful of grass or bushes, until the climbing became too steep for even Pinto. Here I found a small thicket which stood out well from the timber higher up; and removing the saddle and bridle I tied him securely. I soon had cause to sympathize with him, for the climbing in such an altitude was very laborious.

Going out on to a shoulder of the mountain to where I could command a good view, I sat down against a big pine tree and, with my glass, carefully scrutinized the opposite slope for game. Now, an object would attract my attention in that stretch of burnt timber, and long inspection would determine it to be a stump. A bush would move in a little clump in the ravine below me;

and I would lie there and focus my attention upon it for what seemed an hour, until a certain rhythm was discovered in its motion which told of the wind. Then it would be a brown rock in the black timber again. At last I satisfied myself that there was no live thing in sight, and went on up my own side of the mountain. And yet, lying down in the glancing sunlight in that burnt timber there was a blacktail deer. A buck, with pronged antlers a foot long, in the velvet.

But all oblivious to this I toiled upward and across a thicket of second growth. But who had been here before me in the early morning? There by that blackened log was a footprint. Who but a hunter can know the thrilling ecstasy of the sight! On your own mountain, for no one else is within miles of you; with a fair day and a fair chase before you, for your noble quarry is gifted with senses and instinct far more than a match for your crude cunning, and a speed that will outfly anything but a bullet, and the strength to carry that away with it unless rightly aimed. There in the path—for the primitive mountainside is full of paths—ten feet ahead is something—a shade of altered color in the earth—a crescent furrow in the hard ground that draws you thither, and as you stealthily obey, your eyes grope through the leaves into the open forest beyond and satisfy you that they are not so near. "They," because this crescent mark you have just trod over is smaller and lighter. It is the mother and her daughter who have breakfasted down this way this morning. Once at the edge of the thicket you can stop and get your glass and get down and crawl out carefully and take a long look into every corner of the visible world.

They have passed on.

You track them the best you can, but it takes an hour to demonstrate that the two of them have come to this sylvan grove with malice aforethought. There was breakfast here of a kind to their liking, and they have taken it up and down, back and across, like a weaver's shuttle or a brace of pointers. As you laboriously make out the Sanscrit, you speculate upon what running comments the wise mother made upon the hygiene of the forest's growth. Oh, to have taken part in that discussion.

Beyond the trees there is another bushy growth, a trackless waste of rocks. The ground might as well have been strewn with sleighbells and paved with tiles. Your approach is audible to a deer for minutes before you could see it, and to end the matter there are no tracks. Beyond lay another stretch of open timber with friable soil, but they have not passed up this way.

And here, on Aug. 17, it began to snow, and in a few minutes there was enough of it to drive me to shelter and to partially quench my thirst. In half an hour it was warm again, and, having come to the very top of the mountain, where one could look down the other side, I sat down and ate my sandwiches.

This little plat of ground at the summit is the "home acre" of the wilderness. I suppose that if the animals and birds have any real, primordial place that they consider as being where they are "from," as we Western nomads hold in memory and veneration some New England village or Reserve town, it is the top of the mountain. It certainly has that appearance. All the paths lead to it. The earth is as worn there as the dooryard of a large household. The very trees look as if they had been prematurely ascended by boys. And you can believe it or not as you choose, but there is a rat hole!

Yes, there is a fresh deer track leading down the identical gully of the opera glass.

And down I go after it. And he took a drink at a spring, a very tiny, attenuated trickle it is, and so do I.

We sometimes wonder how primeval Man, the Hunter, with his primitive weapons, ever kept the wolf from the door (though I suspect that when the wolf did come to the door he was killed and eaten). But Man the Hunter had the premonitions and instincts of his environment just as Man the Dodger of Tax Collectors has of his. From an early Cave Dweller by the name of Kennedy I must have inherited a trace of this psychic knowledge of a vanished race. I felt so entirely different going down the mountain on this track from going up on the other. Overtrained thinkers may attribute it to the fact that I had had my dinner, or that it is more inspiring to walk down hill than up, but that had nothing to do with it. This time I knew I was going to see a deer, and I did. The other time, I don't know to this day, scientifically speaking, whether there was any deer there or not. Those tracks might have been put there with a stencil for all I know. They were old tracks anyway.

Going up from the spring, he had trudged straight ahead around the brow of the mountain and into the blackened timber, and I followed with as little delay as was consistent with caution and absolute silence. I wore rubber tennis shoes that made no noise, the wind was in my favor, and there was nothing against me but my looks. And then, where the way was steep, some treacherous damp root or stone threw my feet from under me and down I came among the rocks with a crash. My gun, which was in my left hand, threw it against a rock, the whole weight of the gun coming down on top of one finger. Despite the pain, I was up in instant, and so, 200 yds away, was the deer from his bed among the trees. Of course I began shooting at him in an instant, but he had disappeared before I had three shots, and what with the trees, the distance, my poor shooting and my cracked finger, he trotted off unharmed (the blacktails do trot).

It was a fair chance and I had lost. I am sorry for the reader's sake that I fell, and that I missed him and that I cannot tell how I proudly carried home the trophy; but I fear that, between the trophy and the descendant of Kennedy the Cave Dweller, Pinto would have had a hard time of it getting back to the Gap.

As it was, when I got back to the ravine and up on the other part of the mountain, I had a hard time even to find him. Down there on the bare stretches there were at least twenty thickets that looked like Pinto's. So I sat down and watched a drove of horses meandering across the hills in and out of successive thickets until one of their pioneers quickly emerged from one of them in the direction he came from. I thought I recognized Pinto's heels, and so it proved, and, with a cigar in my mouth and an occasional mouthful of grass in his, we were soon wending our cater-cornered way homeward.

Our camp life was drawing to a close, and Henry had caught no very large fish. The station agent, Mr. Reynolds, had caught a four-pounder the day we arrived there. The local fisherman had made one catch of thirty

fish that averaged over a pound in weight, and several of Mr. Franklyn's guests had caught two and three-pounders. The trouble with us was that when we caught enough for our wants we had to stop. There was no one to give the fish to and they could not be wasted. One day some "valley people" drove into our little meadow and camped near us. They had nothing to fish with but a bare hook. Henry gave them some flies, and seeing that they were likely fish-consumers, we started down the river, he with his rod and I with my waterproof, umbrella and tin bucket, and while I picked some raspberries he caught an even dozen beauties. All the time he was doing it a tourist from the hotel whipped the water in vain. Going home we saw an elderly gentleman, a new arrival, fishing at the foot of a meadow. Henry stopped to look at him. He looked as if he had come two thousand miles to fish that stream. He was so eager. It did one good to see him. Henry said, "There is the best fisherman I ever saw, barring Northrup. See how he covers his ground and how surely he puts his cast over ever pool in the stream."

It was cloudy, and the current was mild where he was, and we called to him to put on a red-bib and go further down; but we were dressed so poorly that I fear he undervalued our advice, for he kept on catching "sardines."

A few days after that we caught seven fish that weighed just 7 lbs. One weighed 2½ lbs., one 2, one 1, and four smaller ones. We ate the smaller and better flavored ones and sent the larger to the hotel.

We were going to Antelope Park and Clear Creek Falls, thirty miles further into the mountains, in company with the B's, so early one morning we broke camp, left our things in the station, and started; Mr. and Mrs. B. and Miss Emily going on ahead in a two horse carriage with our small satchels and the camera and rifle, we following an hour later on Biddy and Pinto. Our first objective point was the Sowards, at Antelope Park, eighteen miles distant. It was a lovely ride. We overtook the carriage at Camp Sterry, deserted now, where I dismounted and Miss B. took my place on Biddy. It was a rather venturesome trip, as we did not know whether or not the Sowards could receive us, and there was no other place to stop. But when we arrived at 2 o'clock, tired and hungry, we found a warm welcome, and, a little later, one of the very best dinners we ever tasted; and this tribute to Mrs. Soward can better be appreciated when it is remembered that she was twenty miles away from a railroad and fifty miles from any store. There were young grouse fried, with cream gravy; ham and eggs, potatoes, delicious rolls, fresh butter, milk, tea and coffee, preserves and cake. How hungry we were! And shall I ever forget the funny things Mrs. B. said, or the surpassing kindness and geniality—surpassing even for Mr. B.—with which he presided at the feast.

That evening we made the better acquaintance of the Sowards. There were Mr. and Mrs. Soward and their two sons, the oldest, who is married, living further over in the Park. Henry and the two sons talked guns in the living room, where a rousing wood-fire made the house warm, and where there was a rack full of every description of firearm known to the American sportsman. We women talked and knitted in the cosy parlor with its two bay windows filled with flowers—a strikingly beautiful collection—and the windows, too, looked out upon a mountain covered with perpetual snow, and there was frost without nearly every night in the year. Flowers, wherever one finds them, tell their own story.

Our party started off the next morning with the carriage and the two saddle horses and a basket of provisions for Clear Creek Falls. We had not gone far until the road became so faint and withal, dangerous, that Henry had to ride back to see if we were not off the road. We were. Our second start took us for several miles up a gradual ascent into some timber, where Henry and I riding in advance, came across a drove of untamed horses. They were startled and broke through the woods precipitously at our approach, affording a truly beautiful picture. They were all of them as fat and glossy as they could be. One of them, a claybank—by no means a favored color in the cities—was especially handsome. A sharp descent brought us out into a snug little valley, on one side of which was a lake as unruffled as the sky, and which reflected every seam and fissure of the rocky mountainside above it. Off to the upper end was a ranch with its attendant cattle and scattered horses. On the side away from the lake it stretched away up to the mountain and the timber in a grassy slope. When we had reached its upper extremity we turned and did violence to our better feelings by trying to photograph it.

When we had once more descended into a valley we began to look for signs of the Falls. We first passed some deserted and fast decaying stage station buildings. Then came a treacherous appearing corduroy bridge over an impetuous stream which came down a chasm high above us to the right by such heroic leaps and lunges that we were fain to believe our journey's end had been reached. But we remembered that we had been told that the Falls were at the top of the hill, and parenthetically that this same hill was the only dangerous part of the way for the carriage. However, Mr. B. succeeded in piloting it safely to its summit. I had almost forgotten to say that I had exchanged the saddle for Miss B.'s seat therein at the lake. We drove out on to an apparently limitless plateau of bunch grass, having the final peaks of the Continental Divide for its background, seven miles beyond. But there was no water here. Off to the right a sunken line of willows indicated a stream of some kind. Henry came riding back to us with a puzzled look on his face, and Mr. B. sternly demanded of him Clear Creek Falls. And yet, despite the hopelessly level topography of the land spread out in front of us, we began to be conscious of a vibration, a roar of some kind, somewhere near. And then Miss Emily came riding back with the information that just beyond the little swell over there in the prairie she had come upon a fearful and ominous roaring. And so we left the road and ascended the brow of this little slope and, with those myriad and mysterious sounds in our ears, drove slowly down to where the earth suddenly opened out into a rock-walled and awful chasm, plunging into which, with a pent up fury born of all those miles of placid and unusual prairie, was Clear Creek Falls.

As we stopped at their brink for our rest and refreshment, the rage of the waters seemed to increase. One speculated upon what great tragedy there was in these upland solitudes giving birth to such tireless fury.

Mrs. B. had lost her shawl out of the carriage, and on

the way home in the evening Henry and I came across it in the middle of the road going up from the lake. It had the appearance of having fallen there the instant before. We had a jolly gallop down the long hill into the park. When the saddle and bridle were taken off the nimble-footed Biddy, Henry, much to my consternation, turned her loose. As she walked briskly away I had a vision of my husband walking back to Wagon Wheel Gap while I rode his Pinto. But after a twenty-five mile run under a side saddle the watering trough was good enough and far enough for Biddy. What a comfort must be a water trough in a dry land!

The next day Henry went hunting again, and I prefer he should tell his own tale and shoulder his own responsibilities.

Frank Seward, the younger of the two sons, had cut his hand and could not work, so, the next day, he joined in my hunt. His brother bade me farewell with grim humor, and vague hints about the way the young man rode; but I had had handshakings before upon occasions of mounting strange bronchos said to "buck," and did not give the weight to this one which, had I better known the temper of this seventeen-year-old Man of the Mountain, I should have given.

Three dogs followed us from the house, but, as we only wanted one of them, he "cut out" the other two rascals as deftly as if they had been a couple of stray cattle, and when they saw what was up, the way they tucked down their tails and scudded for the house, and, what is more, the way he put spurs to his wiry little steed and followed, almost cutting them down at every leap; and the way the dogs hurled themselves into the house, and the way he and his horse spread out their legs and got stopped with their noses barely without the door, gave me some foretaste of what was to come. Mr. B. and the young ladies were going down to the river to fish, and we walked alongside to direct them. But when we had said good-by to them until evening, my "chaperon" turned to me with a meaning and lively look and said, "Are you ready?"

We were on the bank which overhung the water some 3ft. or so. I saw no ford, but did see the point of his inquiry, and made ready for an immediate test of the mettle of this strange and scrawny little charger beneath me. Touching his horse gently with his spurs, it jumped its forefeet into the stream, stood thus on its head for an instant, and the next was splashing its way across to the opposite bank, where the process was reversed. One could see with half an eye that the two young partners in mischief had done the trick twenty times before. There was a certain smoothness about it that betokened practice. I touched Pinto and he timidly followed suit. Nice little Pinto. He was in a strange land, and would do what he could to keep company with another of his kind. Once upon the bank, he of the spurs disappeared with a rush down a willow-embowered path, Pinto instinctively pursuing. A minute, and horse and rider clambered out of the thicket, up a steep bluff, stopping at its summit. A handsome lad, a gray horse, a blue sky for a background. Then we galloped off over the prairie toward a line of willows, telling of a stream leading up into the mountains.

"Will these animals trip in these gopher holes?" I asked.

"I don't know," he giggled back. He was enjoying something or other, I know not what.

And then we were beside the little stream, passing along its steep and bushy banks, over places where I would not have tried to drive a cow, and always at that inevitable gallop. Or, if it became too steep for even that, the gait only changed into a momentary scramble. Still, at the very bad places, I soon noticed that he took his uphill foot out of the stirrup and leaned over, trimming ship as it were, and ready to slip off unharmed if his horse's feet went out. Once we slowed up, as the way led through a treetop, and shortly thereafter dismounted and securing our horses, climbed up into one of those mountain pastures so dear to the hunter. It is useless to go over the story. There was nothing there. There was a "yard" there in the trees at its edge where my companion said the elk had tramped the snow down hard the previous winter. A deer track inspired me with short-lived anticipation once, but it had a seedy, last week look about it. Kennedy the Cave Dweller again. After eating our luncheon at the stream, we started homeward, stopping several times thitherward in the foolish endeavor to shoot grouse on the wing with our Winchester. We took the other bank going home, possibly in order that I might have the benefit of an entire change of programme. For first there was a swamp, smooth enough on its surface, but hilly in its bottom, where Pinto fell. This pleased the two young people in advance greatly, although I kept my seat and Pinto quickly regained his feet. Then he began looking for a certain path into the bushes, and, when it appeared, spurred his horse at it and in they went. There, ahead of us, was the stream, with steep sides down to the deep water. A whether-or-no water-jump of five feet. They did it with that same suggestion of familiarity. There was no time to stop, and as I lifted Pinto over it my hand convulsively clutched the pommel of the saddle, for while Pinto seemed to have done such things before, I hadn't. As we hurried on the two in advance tossed their heads, and one of them called back that it was not fair to hold on. Then we got up on the bluffs and walked our tired animals until we came to a bank. I cannot tell how steep that bank was. If you are an elderly person, as most likely you are—this style of composition appealing more to the truth and soberness of age—you would most likely think twice before venturing down it, and rest twice before going up; and yet he turned his horse's head over it, and down they went at a hard gallop. And at the bottom he expended the energy he had expected to devote to the summersault they both richly deserved in leaning over, while they yet galloped forward, and picking up a stone from the ground, his other hand held aloft in mute disdain of the pommel.

Going up the level road to the house he said tentatively, "But you ought to be out here in May when we're bustin' bronchos!"

This last summer his elder brother wrote, "Frank says to tell you he has a three-year old that's the horse for you. A five-barred gate is nothing for him." And I wondered if it was the claybank.

When we had eaten supper at Alimosa, and were sit-

ting at the door of the sleeper, being whirled homeward, the sun set back in the cañon of the Rio Grande del Norte, painting the sky and the mountains in the most resplendent hues. Even the rails, as they spun out beneath us, turned into precious metal.

LOST ON RENOUS.

I WAS once foolish enough to rely upon the knowledge of one who, to use his own words, had put an Indian on the trail after he had strayed from it. Taking the risk, I suffered the consequences by letting him lose both of us in the wilds of New Brunswick. It was in July, 1888, when salmon fishing on the Renous River, and happened about as follows:

We left our headquarters one morning as soon after lunch as the demands of our big appetites would permit, on our way to a pool on the North Branch, about four miles distant. After crossing the main river, which at the starting point is not over your knees in depth, and passing through a mile or so of burnt woods with its attendant blackening of hands, face and clothing, we find good walking on an old portage for the remainder of the distance, arriving at the pool in a little over two hours from the time of starting. We saw several fish, but as the water was very low and clear and the sun fell on the pool, we could not get a rise. It was useless to keep thrashing the pool any longer, so after smoking a pipe and talking matters over, we decided to rest the pool until the sun went off of it again. First kindling a smudge, we passed the time pleasantly enough under the shadow of some large spruce trees, watching the parr (which on this branch are exceedingly plenty) continually leave the water in their attempts to capture food. Soon the pool was in good shape again, but for some reason, probably the low depth and clearness of the water, we had no better success than in the morning. Tired of this, we go down the river for perhaps a quarter of a mile to a smaller and deeper pool, and in short order save one fish and lose another.

The sun was now fast declining behind the hills; and as darkness sets in very quickly in these parts after sunset, I thought it would be wise to start for camp. My companion said, "Oh, no; just wait a little longer till I get that other fish; I know the way to the road, and once on it we can find our way in the dark easily enough." My confidence in his ability up to this time had not been shaken, so I acquiesced and remained another half hour. "Now," said he, "instead of wading back against this strong current to where we came on the river, we will cut in here and strike the road within fifteen minutes, as it runs with the river and is not mere than a quarter of a mile distant."

We had hardly gone a dozen steps through the thick brush, when right ahead of us was a perpendicular bank of at least fifty feet in height. We climbed it, of course, and for fifteen minutes or so traveled along the edge of a spruce barren, a place where nothing but the spruce grows around and above you, and moss, ranging from a few inches to a foot or two, below. Next to an old piece of burnt timber of say five years' standing, this is about the toughest walking a man can find, and extremely deceptive; for a few paces it is like walking on fur, then without the least warning down you go between the moss-covered roots of some tree almost up to your middle. For variety's sake you next find your feet in the air and your back or side on a nice soft stump, having slipped on some old moss-covered and fallen tree. This charming experience lasted for another fifteen or twenty minutes, when suddenly we find ourselves in a stretch of genuine old burnt woods. Verily "out of the frying pan into the fire." "Oh, never mind, we will be out of this in a few minutes," says my "guide;" but for nearly two of the longest hours I ever remember passing did I struggle and fight against bushes, briars and burnt trees; now balancing myself on some old father of the forest in my endeavor to discover a few feet of even walking, then going down between a couple of others, scratched and bleeding, besmirched from head to foot with the blackness from the charred wood, and almost blinded by the twigs continually striking my face and eyes. My rod of course suffered untold indignities, and it is a marvel to me to this day how it ever went through that ordeal without serious injury. At last we come to the end of this strip, and in a few moments, more from good luck than good management, find the portage.

To make up for lost time we go along the road at a swinging gait until we reach a point where it branches off in three directions. My "guide" now thinks it the proper time to air his knowledge of the woods again, and pointing says, "Oh, that is an old logging road and leads back to the river where we came from, so unless we want to waste precious time in retracing our steps we had better take the other." Which other? There were still two left, and one might just as well be wrong as "the other," they both being much overgrown with ferns and brush. Well, he took up the one that by the dim light appeared to be the least obstructed, and started as he informed me for headquarters. After going for about half an hour he suggested going back and trying the other; "this one appears a little strange to me." So back we trudge and start on the right track as I am now positively assured. A few words that I meekly let drop as to our being lost again brought the sharp reply that I could not be expected to know much about Canadian woods, never having had much experience in them before. So I shut my mouth for another hour or so, thinking a good deal in the meantime, however, and a man finds a good deal to ponder over under like circumstances. Visions of how long that salmon would last us; when we would ever get to see our companions again; whether we were on the road to the headwaters of the Little Southwest Miramichi, some thirty odd miles distant, or on some other equally pleasant mission. How my family and friends would take it when they heard of my bones being found by some old trapper; or whether this was not the beginning of a life of wandering which would inevitably end in serious disaster, having only a rod and knife to forage with. All these and many more of a like cheerful nature filled my thoughts for the next hour. The moon now began to appear, and after tramping steadily for two full hours and still not recognizing this as the road by which we came, I began to get just the least bit worried and told my "pathfinder" that I thought we were lost again. "Oh, pshaw! was never lost in my life," says he. With all due deference to his knowledge, I thought aloud that we both were lost this time, and stopped short.

It now seemed a most appropriate moment for me to venture something on my own responsibility, so I said, "We will go for one-half hour more, by my watch, and if by that time we do not strike the river, will build a shelter, cook our fish and go to sleep until morning, when I will be most happy to put myself in your charge again for the rest of the day." We walked a full hour nevertheless, when suddenly, as if struck dumb, my companion stopped and said, "Why, here is the river. Where in the world are we?" Surely enough, there it was right at our feet, about eighty feet down, and by a miracle only were we saved from going headlong down the steep bank. "Why, this is the main river," said I; but what part of it neither of us knew. Knowing that by going up stream we would sooner or later come to our camp, we scrambled down the bluff and started on our journey home at last. The moon just gave light enough to make those spots along the banks that were not directly in its rays appear darker than ever. To avoid the worst rapids and also the deep holes and pools, we were frequently forced to cross and recross, sometimes in water up to the knees and at others above the waist, slipping many times and occasionally going down on all fours. To travel along the banks was here quite impracticable, for what with the thick brush and large boulders and loose rocks, it would have been altogether too risky and tedious. We trudged and labored in this manner for over three hours, when finally we saw the camp-fire on the bank ahead.

"What time do you suppose it is?" I asked my companion. "Oh, about 8 o'clock I should think." "Well, isn't it rather strange that there should not be any one stirring about the camp and that the fire should not be burning brighter if it were not later?" By the time we reached and sat down by the fire, pretty thoroughly tired out, it was 11:30 o'clock and everything fast asleep, of course.

Being naturally somewhat hungry, I was not long in finding something to eat, and after putting fresh logs on the fire turned into my blanket bag and was asleep almost as soon as I lay down.

I don't trust myself any more with any one when in the woods, except a native; one such experience is apt to last an ordinary mortal a lifetime. Instead of a four mile walk with two hours to do it in, we disposed of eight and a half hours and covered about twelve miles.

Next morning I found my bed of balsam boughs much the best place, and neither was the anticipation of catching salmon or trout sufficient to get me out for the greater part of the day.

"Sore," did I hear you say? Well just a little, from the top of my head to the soles of my feet.

And the beauty of the whole thing is, that my companion is now so much put out to think that I should have mentioned our being lost twice on the same trip, that he passes me by without a look. BIG REEL.

"NESSMUK."

JUST a year before the day upon which "Nessmuk's" last visit in this life was made to his beloved hemlocks, he wrote the last letter that I ever received from him. It is pathetic in the last letter that I ever received from him. It is pathetic in the expression of hopelessness of again enjoying the joys that he so delighted in, and with the graphic description of which he had so delighted his readers. It is touching in its expression of thankfulness for being once more permitted to behold the miracle of spring, to see the coming of the birds, the opening of the flowers and to hear the rush of the awakened streams:

"WELLSBORO, Pa., April 30, 1889.—My Dear Brutin: I just drop a word to keep in line and ask how you find yourself after sucking the life out of the water, as you have. And, how has the 'Slang' pulled through, and are the marshes yet green, and is the boating good? I will not ask for the fishing and shooting because there isn't any. But there ought to be clear waters, green grass, spring flowers, etc. As for myself, I have scuffled through after a fashion, which is more than I expected. The winter here has been a pleasant one, and the spring is early. I gathered a lot of wild wood flowers the first of this month, with full intention of sending them to Mrs. Robinson, but procrastinated and dilled till the flowers faded and the good intent went to infernal pavement. Just now we are having a fine flood after a week of rainy weather, which broke up a six weeks' dry spell and consequent forest fires that were doing much damage."

"After the water gets clear the trout will work their way up the stream, for we still have some trout left, but I shall not be able to look after them. I seldom get more than a half mile from my favorite corner, and a little exercise exhausts me for all day."

"Ah, well, the green grass and the birds are here once more, and I am here to take it all in. Bismillah! but it is pleasant. Let me hear from you, if only a few lines to let me know you are existing and still able to enjoy the springtime of the year. Fraternally yours, the lame Wood-Duck."

The withered bunch of wild flowers, Hepaticas and rose-colored Claytonias, the latter strangers in our woods, that were inclosed with this letter, are a cherished memento of the rare old woodsman, to whom the simplest of nature's gifts was a treasure. One is reminded of Thoreau by the man and his writings, living so close to nature and so observant of her moods, so apt to learn her secrets, but he is more in sympathy with man than was the transcendentalist. One of the finest instances of his kind and loving nature was that when he allowed the bear to go away unhurt, as described in "Woodcraft." That little book ought to remain the standard guide for those who go outing in the bush. One of its best features is that it not only shows what is best to take in the way of "duffle," but also what need not be taken; for the mistake made by most people is incubating themselves with unnecessary things.

I never saw him, but I feel as if I had been made acquainted with him by the few characteristic letters received from him within the past ten years, and when the news of his death came to me it was as if a personal friend had passed away.

He fought a brave fight for life at heavy odds, and long kept the inevitable final conqueror at bay. Peace and eternal rest be unto him. AWABSOOSE.

FERRISBURGH, Vt., April 26.

I was much grieved on seeing in the last number of FOREST AND STREAM that "Nessmuk" is dead. Though not personally acquainted with him, I had for years past enjoyed reading his articles in your paper, and always hoped to meet him if I ever again visited America.

There was a peculiar strain in his writings, due, I think, to his sensitiveness to the sounds and sights of wild nature, and to the depth of his sympathies with both the lower animals and human beings. One of the finest instances of his kind and loving nature was that when he allowed the bear to go away unhurt, as described in "Woodcraft." That little book ought to remain the standard guide for those who go outing in the bush. One of its best features is that it not only shows what is best to take in the way of "duffle," but also what need not be taken; for the mistake made by most people is incubating themselves with unnecessary things.

A celebrated Arctic traveler once said that the more comfortable he found himself, and most of those who have traveled a great deal, with limited means of transport, must have come to the same conclusion. Last year a correspondent wrote in your paper about the "change of heart" which takes place in some sportsmen, causing them to lose all pleasure in killing animals except when they are in need of food. Evidently Mr. Seward had experienced that change. Judging from his writings, he seems also to have thought himself out of some orthodox superstitions in religious matters which cause so much uncharitableness, but he had found that "more excellent way" described by St. Paul in the 13th chapter of Corinthians, and also with beauty and brevity by a Hindoo writer in an ancient Sanscrit drama, where he says:

"He that to all living creatures naught but loving kindness shews, Hath the truest, best religion; good men pity e'en their foes."

I think this verse would make an appropriate epitaph for "Nessmuk's" tombstone. J. J. MEYRICK.

Natural History.

CAPTIVE CANADA JAYS.

IN his Cambridge museum, Mr. Wm. Brewster has two live Canada jays (*Perisoreus canadensis*) which he caught while encamped at Umbagog Lake, Me., last fall. I will call one of the birds Jack, a name by which he is locally known in the lake region, and the other Bob. Both are now kept in one large roomy cage, and up to last winter have appeared the best of friends, possibly owing to there having been no cause for a falling out, but recently they had a regular "set too," which I witnessed.

Both birds being naturally fond of flesh and having had none for several days, I shot an English sparrow with which to feed them. Cutting off the wings, feet, head and tail, and removing the feathers, I approached the cage with the body in my fingers. Immediately Jack came to the wire bars to receive the present which he undoubtedly believed was meant entirely and solely for him. He grasped it in his claws and hopping to a perch began tearing off pieces of flesh, and swallowing them with apparent relish and in great haste, while Bob looked on, evidently astonished at Jack's appetite, and wondering whether enough would be left to "swear by" when his turn came. Jack was at last forced to rest from his greedy efforts, and when this lull came Bob, who had been watching from the corner of his eye, made a dash at his companion and the food fell to the bottom of the cage. Bob was there, however, evidently intending to make the most of the situation, but Jack could not stand by and see Bob thus enjoying himself without making some effort in his own behalf, for like the dog in the manger he did not intend to let Bob have it all, even though he could not eat it himself. So he "jumped on him" and fastened his claws as firmly in Bob's back as he had previously done in the body of the sparrow, began pecking him in the top of the head. At first no attention was paid to this annoyance beyond an occasional shake or flutter of the wings, either made to dislodge his enemy or else to regain his balance or keep from falling over backward; but Jack pecked viciously, occasionally turning his head to one side after taking a good hold, as if endeavoring to tear out a piece between Bob's ears, and this too every time just as the latter raised his head to swallow. At last Bob could not stand this any longer.

The tremendous pecks received in the back of the head, and more than all the gripping pains in the small of his back where Jack's claws were planted, caused him to forget his appetite and raised his "dander," and turning partially over on the right side he caught Jack a "left-hander." This wrung from his victim a cry of pain and landed him sprawling on the bottom of the cage, where he tipped over the dish of drinking water, which soaked them both. Neither would let go his hold, but kept clawing, pecking, scratching, rolling over and over, all the while uttering loud discordant notes, which plainly indicated they were not only furious, but under great stress of pain.

At length, fearing the birds might in their anger destroy one another, thus ending the affair with a tragedy, I took the cage down from where it was hanging in order to separate them; but only with considerable difficulty could this be accomplished, it being actually necessary to pull them apart. They finally resumed their accustomed places on the perch, while the "bone of contention" lay upon the floor.

Both birds, with soiled and dripping plumage, were pitiful looking objects. Jack, who had the best of the fight up to the time of receiving the left-hander, appeared in the better condition of the two, but looked as though the food so hastily swallowed had become slightly displaced. As for Bob, he seemed to feel the abuse and shameful treatment keenly, hung his head, and, half closing one eye as though that member had been injured, refused to be comforted. SHELLEY W. DENTON.

WELLESLEY, Mass.

LARGE SETS OF EGGS.

IN your impression of May 15 a contributor notes the finding of ten crows or crow's eggs in a single nest of that bird. While on ornithological tramps I have not infrequently made similar discoveries with different birds. Other parties have informed me that they also have found large sets of eggs. Your contributor is undoubtedly of the opinion that these eggs are those of a single pair of crows, as he says: "These facts," referring to the eggs differing but little in markings and size, as well as to the failure of two pairs of crows to put in an appearance, "seemed to show that the eggs all belonged to the same crows." There are two solutions of the phenomena, either of which to me seems credible. The first is, that there were two female birds, and but one male. It does not, however, seem natural that the two birds should lay so nearly together, as though the one had waited for the other to deposit her eggs before laying her own. This fact—that the last six eggs were laid consecutively each day after the first four—gives great strength to the writer's view in your issue of May 15. For had two crows been laying, it is very probable that two eggs might have been laid the same day, or several days might have elapsed between the two settings of eggs. The most plausible explanation would seem to be that another crow having either lost or been frightened away from her nest, or having failed to construct one, intruded upon the nest in question, where these eggs were discovered.

That there were two sets of eggs, and not one and a half, would make it the more probable that two crows and not one were the cause of the "large set." A bobolink's nest found by the writer last June contained eight eggs, while a bluebird's, found the same season, had ten eggs. There is no reason to think that a bird which lays more than the number needed to complete a set should not lay a few less or few more than the number ordinarily attributed to two sets. Those readers of FOREST AND STREAM who are interested in ornithology would doubtless by recounting their experience in this matter throw much light on the subject. That I have never known of a nest being found to contain more than the number allotted to a set, or less than two sets, makes it appear to me that two different birds must have deposited there; for it is as probable for a bird to lay two or three eggs more or less than the ordinary number constituting two

sets. To the writer this would seem pretty conclusively to prove the work of two different crows. H. CASPER.
POTTSTOWN, Pa.

KILLED IN MIGRATION.—Cleveland, May 24.—*Editor Forest and Stream:* Last night was noted for a general and very late migration of land birds. For twenty-four hours previous the wind had been blowing gently from the south, accompanied with light and warm showers. The evening was dark and lowery, consequently the birds, in their passage north, had to hug the earth close for guidance, as a consequence great numbers must have fallen victims to the deadly telegraph wires, judging from the following list from quite a limited locality that happened to come under my notice. Eighty-three were picked off the pavements at the corner of Water and Superior streets, consisting of fox and white-crowned sparrows, catbirds, vireos, solitary thrushes, summer yellow birds, bay-breasted, cerulean, prairie, chestnut-sided and Maryland yellow-throated warblers. Two-thirds were male birds and in their best spring plumage. From the corners of Erie and Euclid avenues, where electric lights hang high and wires are over-abundant, an early boy brought me seventeen migrants, consisting of white-crowned and fox sparrows, white and red-eyed vireos, golden-crowned and hermit thrushes, brown-bellied nuthatch, blue, gray, worm-eating and bay-breasted warblers, all male birds.—DR. E. STERLING.

UNUSUAL NESTING PLACE OF JUNCO.—The black snow-bird (*Junco hyemalis*) usually nests on the ground, but there are several instances of tree nesting. The following, however, as far as I know, is without precedent. On May 9 I saw a Junco carrying straw to the cornice over one of the windows on the first floor of Chipman Hall, a building occupied by college students. In spite of all the boys and the consequent noise around its strange nesting place, the bird bravely held his own, completing its nest and laying its eggs. It is now very tame, seeming to know that no one could harm so trusting a bird. It comes to its nest when the students are in the windows only a few feet away, and is not in the least alarmed at their presence. The nest is composed of straw, etc., as usual. Who knows but that in a few more centuries, the Junco will have followed the example of the swallow and bluebird, and prefer to place its speckled beauties in the many inviting and protected places offered by our buildings, than to intrust them to the enemy-infested ground?—A. C. KEMPTON (Wolfville, N. S., May 26).

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

CLABROUGH 12, May 1, '90.	PARKER 10, hammer, June 6, '89.
CORN 12, July 25, '89.	PARKER 12, hammer, June 6, '89.
COLT 10 and 12, Oct. 24, '89.	REMINGTON 15, May 30, '89.
FOLSOM 10 and 12, Sept. 26, '89.	REMINGTON 12, Dec. 5, '89, Feb. 6, '90.
FRANCOTTE 12, Dec. 12, '89.	REMINGTON 10, Dec. 26, '89.
GREENER 12, Aug. 1, '89.	SCOTT 10, Sept. 5, '89.
GREENER 10, Sept. 12-14, '89.	L. C. SMITH 12, Oct. 10, '89.
HOLLIS 10, Nov. 7, '89.	WHITNEY SAFETY 12, M'ch 6, '90.
LEFEVER 12, March 13, '90.	WINCHESTER 10 & 12, Oct. 3, '89.

NATIONAL GAME LEGISLATION.

Editor Forest and Stream:

The suggestion that Congress should enact a national game law is so abhorrent to my ideas of the structure and powers of our Government that it requires some exertion on my part to consider the matter seriously.

I do not propose to enter upon the often fought field of what is meant by the clause of the Federal Constitution in regard to the General Welfare, but I will content myself with the statement that if the dead know anything of the living, Mr. Hamilton himself would be surprised at the claim now advanced that Congress can enact the proposed law.

No one can doubt the Federalism of Judge Story, but he never asserted the power of Congress to legislate as to any but national matters. The idea of a national game law is rather in advance of the most extreme Federalists, as their views have been made public.

It is difficult to imagine any subject more strictly local than the preservation of game.

A national law would be absurd, in view of the variety of climate and conditions obtaining in a country so extensive as the United States. What would preserve game in one State would be ridiculous in another, and Congress would only subject itself to ridicule by the attempt.

I have been devoted to hunting and angling all my life, and would do anything possible to protect the game of our country, but I must confess that this proposition is rather startling.

If the States will not pass and enforce laws upon this subject there is no remedy.

Congress has no such power and ought not to have it.

It would be just as reasonable to ask Congress to pass laws for inspection in the States, together with regulations, of marriage and divorce, and all sorts of police enactments. If we enter upon this we should make a new Constitution and dispense with the States altogether.

G. G. VEST.

UNITED STATES SENATE, May 23.

Editor Forest and Stream:

The right of States to legislate for themselves depends upon the non-compromising character of legal regulations. Upon matters that directly affect the country as a whole, and which may not be rendered uniform by separate and varied action, there is little question concerning the right of regulation by Congress. In the matter of bird protection effective legislation must come from a source that can control the entire boundary of migration. The efforts of the most stringent game protectors of one State are of small value if the birds protected cross in their migrations the territory of other States where they are exterminated. Mr. J. P. Applegate's excellent letter upon national legislation, in your issue of May 22, hits the mark, but I think that a finer aim at longer range may be taken. Why should not Congress protect all migratory birds, and for that matter all widely roving quadruped game and river-ascending fish. A few years ago when the subject of bird protec-

tion was first being agitated with zest, after some correspondence, notably with Mr. John Burroughs and the late Mr. Henry Bergh, I framed a bill to Congress for the protection of migratory birds at large by the Government, and sent the same to an acquaintance of my family, Representative Buchanan of New Jersey, only to receive in reply an opinion that the matter was unconstitutional. As with Mr. Applegate, I was not, and am not convinced of this, for it is surely a matter pertaining to inter-State law. Mr. Applegate's statement that a law of Congress would be better respected than State laws is worthy of belief and has its proofs.

Concerning local variations of the seasons and time of shooting, the national law should notice well-defined areas generally east and west at right angles to the line of migration. And why should not the Government place police surveillance over this jurisdiction? I believe that the non-migratory birds and other game, such as the grouse family, turkeys, quail, with rabbits and squirrels, should be taken care of by the laws of each State. I believe spring shooting should be done away with; the very nature of the thing seems gross and out of place, and the time of shooting being already too long, should of course be curtailed at this end of the season.

Regarding the inter-State law and the shipping of game, it seems to me as if the section wherein game was killed should have the say as to its distribution, but it is a subject for suggestions from wiser heads than mine. S. FRANK AARON.

PHILADELPHIA, Pa.

THE BLACK PARTRIDGE.

Editor Forest and Stream:

From an article in FOREST AND STREAM of May 8 there seems a probability of efforts being made to introduce the capercaillie and black game into the Northern States. Will you allow me through the columns of your paper to strongly recommend that attempts may be also made to supply the Middle and Southern States with one of the most beautiful of game birds, the black partridge (*Francolinus vulgaris*) of northern India.

It is common in some of the large plains covered with tall grass near the banks of rivers, and is found in the Valley of the Doon between the Sewalik Hills and the Himalayas. It is plentiful for a long distance into the interior of those mountains, and I have often shot it at a height of probably 5,000ft. above the sea, where there is a considerable amount of frost in winter. There is, therefore, little doubt but that the bird would flourish in the United States from Virginia southward, and also in California in any districts where streams are fairly plentiful.

There are minute descriptions of the black partridge in Dr. Jerdon's work on Indian birds, and in the book upon the feathered game of India written by Mr. A. O. Hume of Calcutta. The latter is illustrated with colored engravings.

If introduced into the States the black partridge would certainly become a favorite with American sportsmen, as it is remarkably handsome, requires quick and straight shooting to make a good bag, and is excellent for the table.

The crow of the cock bird is a series of hisses in something like this time: *Hiss-s-s-s, hiss hiss, hiss hiss hiss-s-s*. The recollection of it brings back to my mind days which will never return, spent amid the grand scenery of the glorious Himalayas, among mountains and valleys bathed in sunshine or shadowed by dense thunder clouds, the slopes covered with forests or built into terraces so as to allow of cultivation. Often when marching from one camping ground to another the crow of the partridge would be heard in front. I used then to send one of the natives in the direction of the sound and walk in a parallel line 50yds. below him. When flushed, the bird would spring up about 20yds. into the air, then make a long downward swoop toward the opposite side of the valley, giving me a shot as he passed overhead. NORTH DEVON, England. J. J. MEYRICK.

GROUSE SHOOTING INCIDENTS.

THE easiest and surest way to kill the ruffed grouse is while he is flying. This is my opinion. The main difficulty, to the beginner, appears to be to shoot the first one. After that the way is usually comparatively simple. But one is fortunate if, after he has shot his bird, he always gets him, as the following incidents will show: On my father's farm in Clifton Park I fired at a grouse which rose close and flew high, and although I saw him falling, yet when I sought him he was not to be found. I laid the gun carefully on the ground and renewed the search, going over a stone wall and on both sides along it in vain. When I returned for my gun there sat the grouse on the stock; he was alive. I took him up gently and he finally died in my hands. I shall never forget the look he gave me; his large hazel eyes almost spoke forgiveness.

On another occasion I fired at a grouse as he made a quick bolt from under an old scrub cedar. He was probably four feet from the ground when I shot, and although I was pretty positive I had hit my bird, yet when I sought him he was not to be found. I looked the ground well over to no purpose, and finally I set my gun up against another cedar, next beyond the one from under which the grouse had flown, and renewed the search. On coming for my gun, there sat the grouse just above it on a limb about five feet from the ground. Only one shot had hit the bird, and that had gone through his eye. I inclosed him gently with my hands, and when I afterward took him by the legs he fluttered loud enough to be heard a half-mile. DORP.

SCHENECTADY, N. Y., May 15.

COEYMANS JUNCTION, N. Y.—A rod and gun club has been organized at Coeyman's Junction, N. Y., for the protection of fish and game. The following is a list of officers: Prest., John Bishop; Treas., S. E. Crane; Sec., Geo. W. Post; Captain, Chas. J. McEntee. Directors, F. F. Wendell, Geo. Shear and Geo. Van Wile.

OMAHA, Neb., May 26.—The upland plover shooting has been capital here for two weeks past. I was out yesterday from 8 o'clock until 6 and bagged 21. The snipe have about all gone, but there are plenty teal here yet, and a few geese continue to linger along the Platte.—SANDY.

The first steel pens were all made with fine points. In addition to these they are now made with blunt, broad and turned-up points. Esterbrook makes them all in great variety.—ADD.

THE PITTSBURGH QUAIL CASE.—In the case of Com. vs. Wm. Wilkinson, charged upon oath of J. W. Hague, fish and game warden, with having 20 quail in his possession after the lawful season ended, there was a trial in the Quarter Sess. Court of Allegheny county, Pa., before his Honor Judge Thos. Ewing. The warden testified that the lawful season for killing quail in Pennsylvania expired Dec. 15. That the law allowed 15 days after that date to dispose of quail killed in the lawful season. That on the 8th of January, 1890, he went to the stand of the defendant and counted 20 quail in his possession. Defendant admitted these facts, but testified that he brought them by express from Missouri, and under the law and facts defendant was found guilty. The court directed counsel to prepare for an argument upon whatever points they desired and he would hear them. Hon. Thomas Hewcote represented the warden and the Sportsmen's Association of Western Pennsylvania and presented all the game laws of New York, Michigan, Massachusetts, Illinois and other States that he could find. D. Burleigh, Esq., represented defendant and urged that Missouri statutes allowed quail to be killed in January and the Supreme Court allowed "original packages." The court intimated that the Supreme Court decision in this case would not hold, and they would have to decide it over again.—J. W. HAGUE.

A FLORIDA GAME COUNTRY.—Tangerine, Orange county, Fla., May 12.—I am a devoted reader of your paper and find that when time drags a little on my hands, nothing fills it up quite so well as the columns of the *FOREST AND STREAM*. This country has clear water lakes, of which there are thousands, alive with fish, the principal kinds being black bass, bream and croppies. Colored people go out every day and bring in thirty or forty, with the rudest kind of tackle. A native caught a black bass a short time ago that tipped the beam at 13lbs. It is nothing uncommon to catch 10 pounders. Quail were never thicker at this time of the year, and "Bob White" is one of the most familiar sounds. The only trouble is there is no game law here that we know of, and if there is it would enlighten a good many to mention the fact in your journal. The people that cannot shoot the birds any other way, go around, listen to their whistle and pot-shoot them. I have a fine Sensation pointer that is hard to beat and when the time comes expect to make good use of him.—C. J. H.

MR. HENRY CATALOGUE SQUIRES appears to have made a stir with his catalogue, to such an extent, in fact, that he has brought out a supplement telling us what the country thinks about it. A *fac simile* commendatory note from Grover Cleveland is followed by letters of the same tenor from Harrison, Hayes, Morton, Blaine, Proctor, Wanamaker, Windom, Miller, Noble, Ingalls, Hisecock, Hoar, Vest, Morgan, Frye, Everts, and most of the other statesmen big and little, who appear for the moment to have thrown affairs of State to the demerol bows, while they rambled through the enticing pages of Squires his catalogue. The Army and Navy and Foreign Legations follow: then come letters from artists, clergymen, lawyers, business men and some folks who haven't much of anything to do but to go fishing when they take a notion that way. This collection is a novel and extremely interesting exhibit, and gives abundant testimony that somebody down at 178 Broadway has a great head for catalogues.

BEAR, COW AND TRAP.—Fredericton, N. B., May 22.—Last week a bear killed a large cow, the property of a man named Brown, who resides about 4 miles west of Boiestown, on the Miramichi. The first blow that he made was at the animals forehead. After killing the cow and feasting upon her, he left and retired into the woods. Brown set a steel trap for him next day. On that night the bear returned and got caught in the trap, which was a large one. There was a chain with a heavy maple clog attached to it. The bear went off with the whole of these, tearing the trees as he went. At last he got the trap fast, and finally succeeded in getting his hindleg out and freeing himself. The brute was of very large size, as was shown by his tracks, and the effect of his claws and teeth on the trees with which he came in contact.—EDWARD JACK.

CEDAR PARISH, LA., has passed the following ordinance, which will be strictly enforced: "That no person shall catch, kill, or pursue with such intent, or have the same in possession after it has been caught or killed, any quail, partridge or pheasant between the first day of April and the fifteenth day of November in each year, under the penalty provided by Section 960 of the Revised Statutes of the State." Such a law was rendered necessary by the wholesale slaughter of game which has been going on for some time, both in and out of season, and has nearly depopulated the parish of its game birds.—C. A. D.

UPLAND SHOOTING.

"SHOOTING ON UPLAND MARSHES AND STREAMS," edited by William Bruce Leffingwell is just received from the press of Rand, McNally & Co. Mr. Leffingwell is well known as the author of an excellent book on wildfowl shooting, a book that at once made its way into the libraries of many sportsmen. In the present volume he has associated with him a number of writers well known to the shooting press, and the result is a large volume of 475 pages, to which Mr. Leffingwell has contributed, besides the introduction, only three chapters.

A book made up in this way of necessity contains articles of varying merit and express widely different views on many subjects. On the whole, however, it must be said that this volume of Mr. Leffingwell's contains matter that is extremely attractive, and it is to be presumed that the work will have a wide circulation. The chapters and their authors are as follows: Bay Snipe, Coot, and other Wildfowl Shooting on the Atlantic Coast—Isaac McEllan; The Woodcock, William Jarvis; The Quails of California, T. S. Van Dyke; The Ruffed Grouse, C. A. Cooper; Inland Duck-shooting in the United States, John G. Smith; Bob White, Amory R. Starr; Sharp-tailed Grouse, Spruce Grouse and Partridge, Walter M. Wolf; Plover-shooting, E. Hough; The Wild Pigeon, William Bruce Leffingwell; Snipe and Snipe-shooting, Thos. G. Abbott; Western Field Sports in Early Days, Samuel C. Clarke; Field Etiquette, F. E. Peabody; Prairie Chickens—Pinnated Grouse, William Bruce Leffingwell; The Wild Goose, C. R. Tinan; Wild Turkey Shooting, George W. Baine; Concerning Pointers and Setters, John M. Tracy; The Onvasback Duck, William Bruce Leffingwell; Guns, Arthur W. DuBray; Coursing, G. Irwin Royce, M. D.

Of course it is impossible for us to take up these various chapters one by one and criticize and praise them as we would like to do. Most of the articles are charming in style and are evidently written by men especially selected as well acquainted with their subjects. At the same time, the chapters are quite uneven in merit, and the book should not be read through continuously, but one paper should be perused and then the book put aside for a few days and another one read and digested.

It would seem that the proofs of the different chapters were not read by those who contributed them. We notice a number of typographical errors that would not have escaped the notice of the authors, had they read their reviews, but might well enough have been overlooked by a proofreader. Such an error is *Shinnecock* for *Shinnecock*. Again in the chapter of the woodcock, the author speaks of them as a bird of "mighty wanderings and daily rest," while he evidently means to say, "nightly wanderings and daily rest," as was printed when this chapter was published years ago in *FOREST AND STREAM*. There are some rather startling statements in several of the chapters; thus, we are somewhat astonished when the veteran sportsman Isaac McEllan expresses the belief that there should be no law forbidding the shooting of sheldrakes, coots and old squaws at any season of the year, because they are not valuable for food in the New York or Long Island markets. He thinks it should be left to the discretion of the gunner when to shoot them. This is rather a remarkable doctrine to come from a sportsman of Mr. McEllan's experience, and if carried out to its legitimate conclusions, would result in the abrogation of all game laws. In the chapter on woodcock, Dr. Jarvis says that this bird does not breed commonly in the Southern States. This we are inclined to think is a mistake, although it is something which has been repeated for many years. We have, however, found woodcock breeding commonly in North Carolina, and it is well known that it has been found to nest in Florida. We think there is no question but that it is a common breeder in the former State. Dr. Jarvis's paper on this bird is pleasantly written and sometimes contains bits of description that are quite vivid.

In his capital article on the ruffed grouse, we notice that Sybil-line quotes Archer as an excellent authority on this bird. We rather fancy that if Mr. Cooper knew more about "Archer," he would be rather slow to quote him as authority for anything. An erroneous statement is made in this chapter when the author speaks of the ruffed grouse as being the only member of its family that plunges under the snow in winter. This of course is a mistake, for almost all the grouse do it. Certainly the sharp-tailed, the prairie chicken and all the ptarmigan have this habit. We are startled also by finding Mr. Leffingwell's chapter on the wild pigeon, headed "The Wild Pigeon" (*Columba livia*). The passenger pigeon has for the last thirty years been placed in the genus *Ectopistes*, and we presume the ornithologists retain it there still. *Columba livia* is the rock pigeon of Europe, an entirely different bird, which is supposed to be the ancestor of the familiar tame dove.

It is easy enough to find fault with a book of this kind. Not one man of course can know all about game or shooting and but few sportsmen are familiar with the literature of all game birds. Where the writers of this volume are relating their own experiences, they tell their stories well and with real feeling, and give information that is of value to all sportsmen. Moreover, while the literary merit of the chapters varies greatly, there is in almost each one a great deal of very charming writing. We may mention especially the chapter on sharp-tailed grouse, spruce grouse and ptarmigan by Walter M. Wolf, as one of the most delightful and true to nature in the book.

Mr. Leffingwell's chapter on pointers and setters is a valuable contribution to the literature of this subject and ought to be carefully read by every shooting man. The illustrations with which he has adorned these pages may be studied with profit by men who own pointers and setters. Exactly what the chapter on coursing has to do in a book on upland shooting, is a little bit hard to say. While the matter in it is quite interesting, it certainly seems entirely out of place in this volume, and we do not exactly understand how Mr. Leffingwell came to admit it. The book is entirely about bird shooting, and Mr. Royce's interesting article is no more appropriate to it than would be a paper on infant baptism in the columns of *FOREST AND STREAM*.

It may truthfully be said, that Mr. Leffingwell's new book is well worth reading and that it ought to obtain a very wide circulation among gunners. It is well informed, and may be, no sportsman can read this book without learning something that he did not know before, and the editor and contributors alike may be congratulated on the attractive form which they have given to this last addition to the literature of the shotgun.

The volume from the standpoint of the manufacturer is very handsome. The paper is heavy, the press work excellent and the illustrations as a rule are spirited and well executed.

Sea and River Fishing.

WITH FLY-ROD AND CAMERA.

IN size, interest of text, wealth of illustration, and beauty of production, the most notable work on salmon fishing issued. See advertisement elsewhere.

CONTENTS OF CHAPTER I.

Our First Night on the River—How to See a Salmon in a Deep Pool—Spearing and Gill-Netting Discussed and Condemned—Cape Breton Salmon Spearing—Hard Luck—The Boy Told a Straight Story—Destruction Caused by Seining—A Startling Splash in the Pool—Fly-Fishing by Moonlight for Trout and Salmon—The Delights of Angling—The Difference Between the True Sportsman and the Fish Killer—The Miramichi and its Tributaries—Some Fishery Statistics—Changes in the Life of the Salmon—Did You ever See a Female Grilse?—How to Drag a Salmon Fly—Favorite Flies—Habits of the Salmon—Kelts are Unfit for Food.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

TROUTING ON THE SIOUX.

Give me the babbling brook that plays
Sweet music to the ear,
And tempts us there to spend our days
All through the live-long year.

ABOUT ten miles south from Bayfield, at the head of Chagamegon Bay, the Sioux River empties into the great basin of Lake Superior after rippling for thirty miles or more through sunless woods and daisied fields. It is a noted stream for the spangled beauties, that range in size from nurellings to the more pretentious of a pound or more, and attracts many a devotee of the rod to its translucent waters and picturesque banks. No stream in the State of Michigan is fished with more persistency than this each season, and the wonder is that its waters are not entirely depleted, at least such is its deplorable situation when the season closes each year. As soon, however, as the early song birds form their pastoral choir, and the clustered buds upon the silver maples burst in their exuberance and fringe the graceful branches with their silver tassels, the golden-finned and crimson-stained *fontinalis* from Superior's icy basin again tenant the purling waters of this sinuous stream, which melliflently murmurs:

I come from haunts of coot and hern,
I make a sudden sail,
And sparkle out among the fern,
To bicker down a valley.

The piscatorial delights of the Sioux during my stay at Bayfield, a few seasons ago, were so elaborately pictured to me, that I resolved to make a raid on the golden-hued beauties, and so arranged with a disciple of the guild, whose acquaintance I made while here, to accompany me. He was not so much inclined to the rod as the gun,

his ambition being just then to bring down the bounding deer, instead of coaxing the speckled trout to feathery lure or baited hook, albeit he was no novice with rod and line, as the sequel of our trip developed. We concluded to start in the afternoon, immediately after dinner, and stop for the night at a farmhouse located on the river, which was a noted place of resort for the anglers who beguiled the lonely trout from this meandering stream. This would give us an entire day's fishing and enable us to return in the evening with the finny spoils, and indeed fortune smiled upon us. The distance being 70 miles, made it necessary for us to engage driver and team. This was soon arranged with the landlord, who had driver, team and wagon at the door as soon as our dinner was dispatched. Arrived at our objective point, the Angler's Lodge, we dismounted, and taking the hand of the good old matron who presided over it, were given a hearty welcome. As we had no use for the team for our return trip, having engaged a sailboat for that purpose that was to meet us at the mouth of the river, we compensated the driver for his services, and duly remembered him for many a day as one of the most ingenious and charming liars that ever drew the long bow. Did we think it necessary to give you some of his fairy talk, you would join us in the affirmative. He had so long been engaged in driving anglers and hunters, and so earnestly listened to those who dealt in questionable narratives, that he finally set up business in that line with eminent success.

We were charmed with our comfortable quarters, but more so with the good old lady whose every wrinkle was a smile and which satisfied us that we would be well cared for. She stated that her two boys, Mike and Tom, were out hunting and that when they returned they would post us about the trout. The news thus imparted about the absent ones, somewhat excited my friend Albert, who quickly inquired as to the piece of woods they had chosen for their sport. On receiving the information, he at once started in search of them, stating as he left that he was exceedingly anxious to learn something about the antlered breed that were reported so numerous in this locality. His heart was assuredly with his gun, not less rod, and I then well knew if he found the hunter boys, the pursuit of trout for the nonce would be conquered to oblivion. My observation has always been, that where a sportsman is both hunter and angler, he invariably loves the exciting sports of the fields and woods far better than the delights of streams and lakes. I admiringly watched him for a few minutes as he rapidly strode through the meadow, rifle in columbine and clover-blow, that separated him from the dense forest.

As the sun was a few hours high, I concluded to prepare for an immediate angle in the stream, which was within a stone's throw of the house. I soon had my rod ready, and was about to take up my creel and depart, when I heard a voice at my back cry out:

"It's a trout."

Turning around, I was confronted with as impish a looking little negro girl as I ever saw. So inexpensively black was she, that as the boys say, a piece of charcoal well applied would have made a white mark upon her. Her great dark sparkling eyes, thick lips and white teeth, with head defiantly thrown back, made a picturesque whole something akin to the romping Topsy of Uncle Tom fame. There she stood eying me with such a saucy and devil-may-care air, that I was satisfied she was a second edition of that droll and prankish black-amoor of literature.

"A trout are you?" I replied, and then adjusting my line, I sent it sailing toward the little ebony-hued, remarking at the same time, "That's what I am after."

The aim was good, and as the hook was about to alight upon her woolly head, she ducked it back, and catching the hook in her mouth immediately spit it out saying:

"You can't fool this trout!"

"All right, I'll try once more." And lengthening the line a little I sent it on its mission again, and this time it fell on her kinky hair, and giving it a short and quick jerk I had the saucy little imp well in hand, bawling out innumerable "ohs."

"You are a trout, are you? and a big black one you are; so come along this way and have your neck broken to keep you from spoiling." And I then reeled her in amid her cries and struggles, and on releasing the hook from her thick and tangled mass of hair she like a flash of lightning endeavored to give me a vicious slap on the face, but dodging her well-aimed blow it fell upon my hat and sent it spinning yards away, and then she darted off like a swallow on wing. The old lady who was standing in the doorway and a witness to the whole performance laughed at the little farce and declared the mischievous jade wanted a thrashing. My first catch terrestrial fully satisfied me with the black unfreckled game, and so with creel and rod I started up the road in hopes of soon basketing something more beautiful and palatable. After a walk of about half a mile I left the highway and took a direct line for the desired stream, which I soon reached, and which owing to its sinuities would give me near a mile of trouting, more, doubtless, than I then wanted.

It was a charming brook of rippling water and sylvan shore, and just the place where a jay would build her nest, or the woodpecker find the solitude he so dearly loves. Soft shadows from waving alders stretch across it, while a declining sun beautified it with its rays of glittering gold. It sweetly sang as it murmured along:

I chatter over stony ways,
In little sharps and trebles;
I bubble into eddying bays,
I babble on the pebbles.

As I stood upon the sloping bank, drinking in the beauty of the lovely brook and the charm of woodland arbors, a splash from trout was heard, and dancing ripples at once ran from some lapping bushes, betraying the lurking place of the leaping fish. My ambition was at once aroused, and putting on a "barn-yard" hackle, which was a necessity, owing to the overhanging branches, I sent it where the waters waved, and was soon rewarded with a vigorous bite, and an eight-inch trout was transferred from his azure realm to the grassy turf in my rear. As I turned to release the hook from my finny victim, I was amazed to see the grinning face of the frolicsome imp of the Angler's Ledge peering out from a cluster of bushes.

"What are you doing there, you sneaking Ethiop," petulantly inquired.

"Done want see you fish."

Immediately after this explanation she darted forward, and before I could wink she had the trout in hand and off the hook and its neck completely broken, after which feat she said: "Dat's de way to fix the trout."

This sudden revelation so upset my gravity that I had to indulge in hearty laughter that must have astonished the lisping buds in leafy haunts. I concluded, seeing that she seemed to know something about trout, to indulge in a hasty elf. Throwing my creel to her I told her to carry that, make no noise, and keep well away from the stream. She was pleased at my indulgent manifestations and implicitly obeyed my instructions, walking along in my rear with soft and stealthy steps. As I was on no pre Raphaelite trip, I again baited, and casting in the same place, another trout left the brook to join his departed companion in the creel. Once more I sought a victim at the same spot, but it yielded nothing, and so I tramped along till I reached a large and inviting pool, in which I found some debris of brush that had lodged against the exposed roots of a spacious elm that was fast being undermined by the flowing current. Evidently this was the home of trout, and when my bait went in search of them they responded most savagely, for out of this tangled collection I took four, which ran from 6 to 8 in. My assistant proved an industrious helper, for every trout I captured she promptly released from the hook, and breaking its neck had it in the basket in a twinkling. She had assuredly picked up much information as to trouting from the anglers that came here to sport, as she displayed a keen knowledge of it whenever the occasion required. She was rapidly growing in favor and would yet prove herself a jewel of no inconsiderable value.

Once more on the move, and this time we halt at an old log where the gentle cadence of a willow wren and the symphony of the white-throat are heard. It was an inviting place, and I was positive a golden fin or two was harbored under that prostrate trunk which nearly spanned the stream. Here I had the good luck to basket a ten-incher and an eight-incher, and was unfortunate enough to lose one that I was sure was well on to a pound. Of course the big fish are the ones that are always lost. Again I take my "joy-inspiring way" along this lovely brook, picking them out here and there until the count showed a total of twenty. As the sun was sinking fast and the shadows lengthening, I concluded to return to the road and hasten back to the lodge for supper.

As I was about to start on the tramp the little black-moor came forward and earnestly asked if I would let her catch a trout. I readily assented, and giving her the rod she approached the brook and carefully walked along looking for a pool to her liking, and when such was found she dropped the hook carefully in, and soon a trout glittering in the sun as it circled in air sought the grassy lawn in her rear. Not content with this the cimmerian little angler must have another, and so perforce I was compelled to await her movements. She quickly brought one, and a good one at that, it being a half-pounder, to mother earth, and then she was content, and on returning me my rod said, "Dat's de way to ketch 'em."

And then snatching up my creel she was off through the bushes on the home stretch like a flash. She was evidently *sui generis* and as surprising and amusing in her pranks as a Merry Andrew. I had but a brief walk in which to reach the house, and this through a beautiful woods, the freshness of which was infinitely delicious. Anon as I proceeded, a blackbird's whistle is heard, while a bulfinch with a black head and red waistcoat is trilling his notes from the top of a swaying maple. Now and then a squirrel, immovable on a branch, with his tail raised like a plume, looked at me with his little black eyes, or a terrified rabbit, his ears erect and stiff, scampered away at my approach. Such were my roadway acquaintances, and to me they were

A presence that disturbs me with joy
Of elevated thoughts.

My walk, alas! was only too brief, as I regretted parting with the sweet warblers and the wood-born violets that edged the path.

On approaching the house I saw Albert and Tom and Mike, as I supposed them to be, and the good old hostess on the spacious porch, while the freakish little angler was bending over a board on the ground industriously cleaning the trout, which I opine were to form part of our supper. I well knew that Albert was drawing a fund of hunting adventures from the boys, and doubtless was on his favorite theme, the bounding deer. It so proved, for as I stepped on the porch and was made acquainted with Tom and Mike, who were stalwart in frame and frank in feature, he had been listening to the recital of a famous shot that one of the boys had made last season, that brought down a deer with antlers of extraordinary size. I was fully satisfied that my friend was now lost to all the charms of trouting.

The hostess now set about preparing the evening meal, and it was but a brief time before she called us to the repast. Everything on the table looked so inviting and scrupulously clean, and the cooking was so delicious, especially the trout, that our appetites were thereby much increased. The tormenting Topsy, who rejoiced in the name of Henrietta, stood at our backs with some leafy branches, and busied herself keeping the flies from the table, as well as occasionally disarranging my thin locks, much to my annoyance and discomfort. I finally turned to her and said, "There are no flies on me."

"One on the shiny place," she responded.

At this silly illusion to the bald area on my caput the old lady gave her a rebuking look, saying at the same time, "You Henrietta, behave yourself."

After supper a smudge was started in the front yard to keep away the mosquitoes, while we sat around it and endeavored to entertain one another. My friend and the two boys again got down to hunting narratives, while I had a good chat with the old lady, when I could keep the smoke from blinding me. It had a perverse way of circling around, and when you felt safe from its encroachments it was almost sure to destroy your fancied security by storming you from an unexpected quarter. I stood this condition of affairs until my eyes were turned to fountains, and then sought my couch, where ensconced behind a bar I was sure of undisturbed sleep. Long before Albert retired I was in the land of Nod, for he could not tear himself away from the two boys, who were I presume constantly regaling him with the sports of field and forest. What time he sought his bed I never knew, but I do know that about midnight I heard one of

the boys call him to get up, stating at the same time that the hounds were running a deer. At this cheerful news he bounded out of bed, and soon as dressed went rapidly down stairs to join them on the hunt, which they at once organized. Two hours later he returned, but without the quarry. Again I went to sleep and soundly slumbered till time to arise. Albert got up at the same moment I did, and told me while dressing what a fine time they had last night working with the hounds. It evidently takes considerable enthusiasm to tumble out of a comfortable bed at midnight and go tramping through the tangled woods in the dark at the heels of baying hounds. I never got educated to that condition of sporting, though I have at times undergone much weariness and discomfort when there was no avoidance of it.

ALEX. STARBUCK.

[TO BE CONCLUDED NEXT WEEK.]

BLACK BASS FLY-FISHING.

SOME thirty-five years ago, while the writer was attending school at the village of Canandaigua, situated on the beautiful lake of that name, he happened to see one evening a gentleman standing on the little bridge that spans the outlet, casting a fly for black bass. The angler was the late Senator Lapham, and we believe he was one of the first to kill bass on the artificial fly. Later on that well-known sportsman, Andrew L. Williams, once a great chum of Frank Forester, initiated the writer in the mysteries of casting a fly, and together we killed many big bass on Canandaigua Lake and outlet. About fifteen years ago the sporting papers were full of arguments as to whether bass could be killed on the fly or not, but now fly-fishing for black bass is a recognized brand of angling and stands high in the estimation of fishermen, as well it may, for a small-mouth bass when fast to a fly is a very lively customer and not to be despised even by the veteran angler. He is quick as a flash, jumping about in a manner well calculated to try the nerves of a beginner. If near the boat he will endeavor to dive under it, or if a sunken log or treetop is convenient, he will do his best to get fast to it. It takes a cool and experienced hand to kill a bass of over 2 lbs. on an 8 oz. fly-rod.

Black bass are far more suspicious and sly than trout, and the angler should be able to make a long clear cast and keep it up all day, if he wishes to be successful. They are a very capricious fish and likely to rise when least expected. One may cast for hours without the slightest encouragement, and then kill half a dozen in quick succession.

It is very important when fishing for black bass, that the fly should be allowed to sink well under water, for they do not like to take it on the surface; and it is far better to fish with two flies than three, and if the angler is ambitious to kill big fish he will do better yet with only one. Bass, as a rule, prefer large flies, but the size should be in proportion to the depth of the water. In small ponds and streams flies on No. 5 or 6 sproat hooks are large enough, but on lakes or rivers like the St. Lawrence, for instance, No. 3 or 4 would be better, and some even use them dressed on No. 2 sproat.

The following list of flies has been carefully selected and thoroughly tried by good anglers on many waters: Dark-montreal, silver-doctor, Lottie, Holberton, silver-fairy, Dunning, post, Martin, grizzly-king, professor, scarlet-bis, royal coachman, orange-miller, Lord Baltimore, Governor-Alvord, Seth-Green, Rube-Wood, Brandreth, black-prince, Imbrie, Ferguson, bass-miller, orange-doctor and soldier, sometimes wrongly called Lake George. In some localities the hackles or palmer are good and on the Delaware River the bumble-bee is excellent.

Anglers are inclined to use rods too light for this style of fishing. It is very pleasant, no doubt, to be able to fish with 6 or 7 oz. rods, and there is no doubt that they will kill bass; but it is not fair to expect these little trout rods, however carefully made, to stand the strain of casting 50 or 60 ft. of heavy line and big flies, to say nothing of killing large fish, without getting out of shape.

A rather stiff rod, 10 ft. 6 in. long to 11 ft. and weighing 8 to 9 oz., is the proper tool. In some waters bass will only take the fly early in the morning or late in the evening, while on others they take best in the middle of the day. This the angler must find out by experiment. The best rule is to keep the line wet.

The cheap flies usually sold as bass flies are of no account, particularly where bass are much fished for, being generally clumsy, coarse things, very gaudy in color and only fit for trolling in new waters where the bass are not educated; and they are dressed on hooks that will not penetrate a fish's mouth. If the angler wishes to kill bass on a fly-rod, he must use sproat hooks and see to it that the points are as sharp as a good file will make them. Nothing is more trying than to have a big bass at the first jump throw the hook from his mouth and with a flirt of his big tail disappear in the cool depths of the water, while your line comes back as limp as your feelings. The small keen barb of a well-made sproat pierces the tough mouth of a bass better than any other hook made.

NAMES OF THE MENHADEN.—Dr. Hugh M. Smith, while engaged in collecting fishery statistics for the U. S. Fish Commission, has heard some names applied to the menhaden which are not to be found in Dr. Goode's monograph of this species in the "Fishery Industries of the United States." In Casco Bay, Me., the name blueback is shared by menhaden and one of the species of alewife. At Newburyport, Mass., Mr. Stevenson heard the terms pobagen and pauhaugen used, while in Greenport, L. I., school-fish is commonly employed. Long Island furnishes the term bunker, which extends into Chesapeake Bay, being varied sometimes with banker in the latter locality. About New York, New Jersey and the Chesapeake region we hear the name marsh bunker. At Beaufort and Morehead City, N. C., Dr. Smith heard the menhaden called shad. When we are advised to use the common English name of this fragrant fish we will ask: Which one of the 36 or more shall we adopt? The invention of man has been fertile in framing names for the menhaden and the menhaden has become fertilizer through a different application of man's invention.

TO SALMON ANGLERS.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—*Advs.*

CHICAGO AND THE WEST.

DETROIT, Mich., May 22.—A recent talk with Mr. F. H. Wherry, who is assistant State warden for Michigan, discloses the fact that there are a few violators of the game laws left yet in this big and tempting State. Mr. Wherry says, that one night last week he counted sixteen jack lights on one lake. That meant sixteen boats and about four men to each boat. The men were spearing bass. This water, Devil's Lake, is protected by a special law, but not much attention has been paid to it—not so much as will be when Mr. Wherry gets through with the season, perhaps. The following newspaper clippings were prepared by Mr. Wherry for submission to the State warden, but I begged them for publication in FOREST AND STREAM.

The Addison *Courier*, May 17, says, "Prohibition does not prohibit—fish spearing in Devil's Lake." In another paragraph of the same date, "H. S. Van Ethen and party captured 19 eels in Round Lake, Monday night, the average weight of which was about 5 lbs. (These eels were illegally speared.)"

The Hudson *Post*, of May 16, contains the following card, which we may hope is not merely an empty warning: "Fishermen, and especially spears on the south arm of Devil's Lake, take due warning! Having in years past been to the expense of planting both fish and eels in the waters of the lake covering land owned by me, and being within the following limits, *i. e.*, from Manitou Beach running north to the north shore, and also from Manitou Beach and running thence east to the highway between Devil's and Round lakes. Any one found spearing within said limits will be prosecuted by me as the owner of said described land covered by water, as a trespasser.—GEORGE R. BEARDSSELL."

A Hillsdale paper, about the same date, has the following straight and sensible talk. What a lesson it teaches:

"The time is rapidly approaching, says an honest fisherman, when the law-abiding sportsman who visits the many resorts around Adrian will find little to compensate him for the outlay of time and money. There are many residents about Devil's, Round, Sand, Wampler's, Evans and a host of smaller lakes, who look forward to a more certain harvest from city visitors, who spend money freely, than they do from any crops they can raise on their lands. If they expect summer campers to be satisfied for what they get in return, they must make some effort to preserve their game and fish. I know of some men who make a pretension to run summer boarding houses, at some of these 'fishing beds,' who are taking fish and killing game in and out of season, illegally. Some of them spear fish when honest men are abed; and in many ways they are destroying the very means of their support, by exterminating the game and fish that after all is the principal attraction of their patrons. It has nearly reached a point where more fish can be taken right on the banks of our River Raisin, in the city limits, in a given time, than from the waters of some of the boasted fishing resorts north, east and west of us. Do they expect us to be satisfied with cheap grub and fresh 'wind' when we go fishing? They are slaughtering the goose that lays the golden egg, but they can't see their mistake until too late. Let them stock up their waters and call off the 'uncanny lights' that tell the presence of spearing parties, and there will be no need of going to the Upper Peninsula for fish."

"And speaking of spearing fish, reminds me of a party of well-known Adrian young fellows, who went to Monroe a season or two ago, and after plying the spear to good advantage until late in the night, stopped at old Joe's, the Frenchman, to get lodgings. The genial mine host was everything that could be desired in the line of smiles until he saw the jacks and spears. Then shew was turned loose, and the boys were driven out of the house, and spent the night on the wet ground, under their upturned boats."

Mr. Wherry reports good work done during the past year in enforcing respect for the game laws, and it is very probable that something will be heard to drop over in the section above referred to. And now follows something interesting. Mr. Wherry is here at Detroit and has joined forces with Mr. John Parker, the hustling warden for Wayne county. Next week there is going to be a little expedition in the warden line, which FOREST AND STREAM is invited to join. Just where this is to be it is more discreet not to mention at present, but it is probable there will be some news in due time. E. HOUGH.

SOME ENEMIES OF TROUT.

WHILE engaged in studying the salmon rivers of Kadiak, Alaska, last summer we frequently saw flocks of gulls catching young trout at the edge of shoals. Some birds that we killed were gorged with trout so that when held head downward the fish would drop out of their mouths. A note in a recent number of the *Fishing Gazette*, of London, relates the killing of thirty-eight yearling trout by a heron for one meal. Fishes are very destructive to the eggs of trout, and among them is one called the miller's thumb or blob, that is found almost universally in trout waters, and is, perhaps, the worst depredator of all. This is a fresh-water sculpin of widespread distribution and unenviable notoriety. Excessively abundant and inconspicuous in appearance, it carries on its destructive work stealthily, but with sad effect. Mr. E. L. Marks reminds us, also, of another robber of the spawning beds in the 1890 report of the New York Fish Commission: "Nearly all the waters in the Adirondack region are filled with a fish familiar to every one, known as suckers. They are considered harmless to all other fish. I have watched these robbers for the last two falls, and find they make their appearance on the spawning beds soon after the trout arrive and remain there long after the trout have left. They will pick or suck up spawn from among the gravel successfully where it would be impossible for other fish to get at the spawn. I have caught them and examined them, and found them as full as they could hold of salmon and brook trout eggs. The bullheads are nearly as bad, and some way must be contrived to clean them out during the coming spring. I am sure this work would add greatly to the increase of trout in the lake."

WABAN LAKE, MASS., FISHING.—We have learned from a gentleman of Wellesly, Mass., that he is taking yellow perch in Waban Lake in great numbers, and the weight frequently reaches 1 lb. and over. The fish are in prime condition.

RANDOM CASTS.

WAS there ever a leather waterproof shoe really waterproof, after being in use a short time? If any of your readers know of such, from actual experience, he will earn the gratitude of the fraternity by making its whereabouts public. I have tried and tried, paid money enough for a single pair to get a good suit of clothes with, and still am no further advanced in the search than when I first began. Even the cheapest shoe can be made waterproof as long as it stays on the shelf, but it is when in actual use and the strain of the foot in the walking causes the leather and stitches to give, that the weak spots show themselves.

Catfish, although not in themselves detrimental to a lake where trout exist, become so from their great productiveness and consequent enormous amount of food devoured, which means, of course, just so much less for the trout. Fish cannot thrive upon an inadequate supply of food.

To preserve your bright hooks from rust when laying them away for the season, obtain a few cents worth of tinc. oil; dip them in it, shake to get rid of any superfluous moisture and hang up to dry. In half an hour they may be put away until wanted again, when they will be found to be in as good condition as ever.

In snelling hooks, first wax the silk well with shoe-maker's wax, then wind tightly and closely, and you will only need to carry the winding about half as far down the shank as is generally done. They are less liable to chafe and, of course, will last longer. Finish with two coats of spar varnish.

For large striped bass and other sea fish, an excellent plan is to first wind half a dozen turns around the gut and hook, as ordinarily done, then raise the gut and wind a few times on the bare shank, now replace the gut flat on the hook as before and wind over both again. Repeat the operation once more and you will have a snell that cannot pull out, for the reason that when the gut gets wet it swells above the windings and perfectly prevents slipping. Finish with spar varnish as before. BIG REEL.

VERMONT WATERS.

LAKE DUNMORE has been yielding lake trout (*Salvelinus namaycush*) in abundance. Up to May 25 Mr. Ed Thayer took forty-nine, the largest weighing 11lbs. Large-mouthed black bass and pickerel are to be found in this lake, and may be caught readily with minnows and the trolling spoon. Pickerel fishing through the ice is a favorite amusement here. The probability is that some of the so-called pickerel are really pike (*Esox lucius*), for the size of occasional specimens is too great for pickerel. At Brandon, for example, one weighing 16lbs. was recently taken; this, however, was considered unusually large.

Salisbury is convenient to the Otter Creek and Lake Dunmore fishing grounds, and prices of all necessities are reasonable. The Lake Dunmore Hotel has become a pronounced summer resort. Otter Creek has been very high for a long time, and the customary pastime of spearing pickerel in its waters has failed for the present. In former years a good many have been captured in this way. At Hancock, May 21, I saw four able-bodied and apparently sane men in possession of 150 very small trout—veritable babies, which had scarcely come out of the shadow of the protective law and perhaps had to be stretched a little to warrant their untimely taking off. And that reminds me of the fact stated by Williams in his "History of Vermont" and quoted by Thompson in his Natural History of the State, that the trout hog flourished in Vermont many, many years ago, when brook trout were scooped out of a certain pond by cart loads and sold at a shilling a bushel. Future historians may write: The trout have mostly gone, but the hog remains. F. H. KNOWLTON.

U. S. GEOLOGICAL SURVEY, Washington, D. C.

HARPOONING ALLIGATOR GARS.

Editor Forest and Stream:

I have just returned from a two days' fishing trip to south Alabama, and wish to give you an account of some fine sport my friend Howard Douglas and I had. I have read your valuable paper for the last two years, and have seen no mention of the Southern "alligator gar." This fish inhabits all the large fresh-water streams of southern Alabama, grows to immense size, and is the gamest fish I have ever tackled. Last Monday Howard Douglas and I went to the Bigbee River, in Washington county, Ala., provided with a light canvas boat, three good harpoons, and a trot line of the largest size—about 25yds. long—tied securely to our harpoon; this was our outfit and all we needed. The first fish we saw was a beauty, weighing about 225lbs. I was in the paddler's place, and Douglas in the bow of the boat, standing erect, ready to throw the harpoon. I paddled the boat up to within 10ft. of his "garship" and Douglas threw, striking the fish just back of where the head and body join, sending the harpoon several inches into the fish's body. Then, such a rush as I have never seen before—no use to try and stop that mad, headlong plunge; 'twould have done just as much good to have tried to stop an engine, so we just let him charge and plunge and throw water on us until he began to tire. This sport lasted for nearly an hour, and when he showed signs of giving up we cautiously got him up near the top of the water and stuck another harpoon in his body further back, so we could tow it to bank. We reached land after some hard work, and then thought we had our fish safe, but one of those cases of "a slip between cup and lip," occurred; we both caught hold of the harpoons and tried to pull our fish out on the bank, when it gave one big flirt of that magnificent tail, nearly drowning us, broke the line on one harpoon, tore the hold of the other, and went off with our highly treasured harpoon.

You can well imagine our looks of surprise, chagrin and disgust, after two hours' hard work, to lose our fish just as we thought we had him safely landed. We did better with the next one, landing her safely after a hard struggle of an hour. After worrying this one down we drew her up to the edge of the boat and shot her with our .32 Winchester. We skinned it and preserved the head, which will make a fine specimen. This gar was a female,

weight over 200lbs., and had about a peck of roe in her; she had swallowed a longbill gar weighing about 10lbs. We caught three of these grand game fish, average weight about 200lbs., and I have never before had such royal sport. These fish come to the top of the water and float about this time of year to get the sunshine. In almost all the eddies, if the fisherman is careful and don't make too much noise, he can see from two to five floating lazily around and frequently throwing their great bodies out of the water. I. M.

NASHVILLE, TENN.

[The alligator gar (*Lepidosteus tristoechus*) is the largest of the gar pikes, reaching a length of 10ft. It inhabits the rivers of our Southern States and extends southward to Mexico and Central America. The great *manjauri* of Cuba is now considered identical with our species. The chief interest attached to the bony gars centers in their relationship to an order of fishes most of whose representatives are extinct. We have sometimes heard fishermen express a wish that the whole worthless race were in the same state of oblivion. Harpooning alligator gars ought to be encouraged by a generous bounty.]

NEW HAMPSHIRE CAMPS.

COLEBROOK, N. H., May 31.—I met Mr. Watts, paymaster of the Connecticut River Lumber Co., at West Stewartstown this week. He was just in from the Connecticut Lake, and told me the company would open the hotel at the First Lake early in June; and the sportsmen who contemplate a trip that way will find ample accommodations. The fishing in that section is best through June and July, the best places being Perry and Indian streams and Round Pond, each being in easy distance from the hotel.

There are occasionally some good trout taken below the dam, near the hotel, and not a few lakera are taken by trolling every season. I am told that some good speckled trout are caught in places on First Lake, but I think it is very little fished except for lakera, and that principally in the winter through the ice.

From the Lake House a drive of eight miles takes you to Second Lake, where excellent sport may be had, as doubtless many of the readers of FOREST AND STREAM can testify. There also will be found good accommodations, comfortable cabins and plenty of "good grub," for with Uncle Tom Chester at the helm, how could it be otherwise?

Amasa Ward arrived in town from his camps on Dead Diamond Stream, at Hell Gate, last Thursday afternoon, having left his camp at 6:30 in the morning, and with his knapsack (weighing 40lbs.), rifle and axe, struck a bee line for Colebrook. He arrived at Mart Noyes's camp on Diamond Pond at 2 o'clock, having traveled about twenty miles through the woods by a route only known to Amasa and or two guides. He reached here about 5 o'clock in the afternoon. When asked how the traveling was through the woods, Amasa replied with characteristic brevity, "damp." He reports seeing the tracks of three moose on his way out, a cow, yearling and bull, and says that owing to the light depth of snow for the past two winters the deer are plentier than he ever saw them before, all through the northern section. Amasa left here a year ago the first of June, and this is his first appearance since, having spent the whole winter in his camp, only going out for a few days to buy his season's supplies. He reports high water in both streams and ponds, and says that good fishing will hardly begin before the 15th to 20th of June with favorable weather, but is at its best from the middle of July to the last of August; and the writer can testify to having found good fishing there all through the month of September. Amasa owns a fleet of twenty-five or thirty canoes and skiffs, scattered about on all the outlying ponds and near to some of his outer camps, everything being always in readiness for business. He has recently added more room to his camps, and can now accommodate about twenty sportsmen and guides. At some later date I would like to relate a little occurrence of two years ago, in which Amasa and a bear were the principals. I should hardly care to do so till Amasa is safe back in his "castle." If any of the readers of this should chance to be guests of his the coming season they might ask him in regard to it, but I would advise caution. ROE.

FISHING AND THE MOON.

Editor Forest and Stream:

I notice in your columns of May 15 an article on "The Moon's Effect on Fishing." I am glad to see questions discussed that are practical to the angler. In a few words I will give the conclusions drawn from a notebook I have kept for many years, when fishing on ponds, lakes and streams for trout, black bass and pickerel. I have made the best strings when the previous night was dark; either when there was no moon or when a full moon was darkened by heavy clouds. If there was light in the first part of the night the morning has been but medium fishing, but the afternoon would be good. If all night was bright with a full moon, the angling the following day would be poorest. Of course these conclusions are modified by winds, clouds, temperature, etc.; yet as a general rule they hold good. I conceive the influence the moon has on fishing is its light. I do not think the tides on ponds and streams are large enough to be calculated by the finny tribe. We know that cattle in the pastures and large game in the forests feed in the bright moonlight of the night; and the deer, caribou and moose retire the following day to the cover, and while hidden from their enemies enjoy their meal of the night previous. J. W. T.

DYNAMITE THAT COST MONEY.—A Steubenville, O., exchange reports: "Of all the persons engaged in poaching and uselessly destroying game and fish, the most despicable are those who engage in blowing out of water the innocent fish. Two boys, Robt. Philburn and Fred Mill-sack, were arrested to-day on affidavit of James B. Maxwell, deputy game and fish warden in this county, and fined \$100 each by Justice Love and committed to jail until fine and costs are paid. The dynamiting was done on Sunday last, in Cross Creek; although bushels were blown to pieces and floated down the creek, the boys only secured about 25 each, thus there was a useless waste of fish. The fish thus killed are not fit for eating as the dynamite loosens the flesh from the bones and the meat is rendered unfit for the table."

SMUGGLERS AND POACHERS.—Rat Portage, Lake of the Woods, Ont.—Editor Forest and Stream: There is work for the United States custom and fishery officers to do at Southern Bay on this lake. Southern Bay is wholly in American territory, and is the great spawning grounds for sturgeon and other fish that inhabit this lake. The Indians of "White Earth" reserve, Minnesota, depend almost wholly on fish taken in this lake and Rainy River for their subsistence. A party of Canadians, headed by one Reid, have built a large establishment on an American island in Southern Bay, and are rapidly exterminating the fish by taking them on their spawning grounds, which means starvation for the Indians unless the United States Government comes to their assistance either in the shape of supplies or promptly breaking up this nest of poachers and smugglers. This party make their headquarters at Rat Portage, Canadian territory, and smuggle all their supplies to their establishment at American Island. This man Reid first began his work of fish extermination in Lake Winnipeg, then transferred his operations to this locality, where he is safe from interference by the Canadian authorities. The White Earth Indians are already complaining about the scarcity of fish where they were formerly abundant, and will soon be obliged to call on the Government for supplies to keep them from starvation. The Canadian deputy minister of fisheries investigated this matter, and when he found that Reid and his party were carrying on their operations in American waters, he could not stop it, and if now remains to be seen what action the American Government will take to protect their rights.—STANSTEAD.

CALICO BASS SPAWNING.—We have recently mentioned the discovery of calico bass (*Pomoxys sparoides*) in the Susquehanna and Tide Water Canal at Havre de Grace, Md. We learn from Mr. Geo. H. H. Moore that these fish are found full of eggs in the canal at the present time. It may not be generally known to fishermen that this fish is the "Lake Erie or grass bass," which is especially named in the game and fish laws of Pennsylvania as one that must not be caught or killed in any of the waters of the State between the first day of January and the first day of June. Any violation of this law will subject the offender to a penalty of ten dollars for each and every offense. Give the grass bass or calico bass a chance and it will furnish endless sport for the fisherman. It is a nest builder, very hardy and prolific, but it must be protected during the breeding season. This fish is not well established in eastern streams north of Virginia; it has been taken in the Potomac and the Delaware, but was not considered as a native of the Susquehanna. It is one of the best game fishes of its size (about one foot in length and weighing a pound or two) in our water; in coloration it is beautiful, and for pond culture there are few better fishes.

SOUTHERN VERMONT.—Brattleboro, Vt., June 2.—The fishing about here has been very good for the last three weeks. Some large trout have been taken, among them one by A. M. McDonald from Green River weighing 2lbs. 7oz. I myself took a good one with a red-back last Tuesday from Green River weighing 2lbs. 4oz. The trouble with fishing about here is that fishermen go in for the count and not size, and consequently a great many fingerlings are taken. West River, about twelve miles above Brattleboro, is fished some this year, and good catches are the result. Frank Stoddard and Wood, the gunsmith located here, took 48 weighing about 30lbs. from the river at Newfane last week. It is surprising that no fishermen come here from the cities, for we have as fine fishing as anywhere in western New England. Among the Brattleboro fishermen, Ned Plummer and Jim Menzies left for the Rangeley Lakes last week.—J. F. H.

FISHING AT GLOUCESTER, MASSACHUSETTS.—There appears to be very little angling in this vicinity. At Cape Pond, which is situated between Gloucester and Rockport, white perch and bass are to be had in small numbers. In the brook which runs from Cape Pond and empties into Riverdale mill pond a few small brook trout are reported. White perch, bass and pickerel are found in the pond at Eastern Point, on what was known as the Niles estate, and also at Fernwood Lake, but these places are controlled by private parties. At Magnolia there is a trout brook belonging to Mr. Knowlton, and this contains some trout of good size; I am told that a 3-pounder was taken there recently.—E. F. LOCKE.

YELLOW BREECHES AND CONEQUOQUINET.—Mechanicsburg, Pa., May 23.—The two streams, Yellow Breeches and Conequoinet creeks, afford as fine bass fishing as any waters in the State. In this section the artificial fly—the only legitimate bait of the true angler—is almost universally used. I have seen strings of bass numbering forty and fifty, and running in weight from $\frac{1}{2}$ to 4lbs., all taken with a fly on a single rod in one day's fishing. The open winter has been very favorable; there has been no ice on the streams.—MINNIE MINGO.

NORTH SHORE OF LAKE SUPERIOR.—Mr. Alex. Starbuck writes: My desire is to take in another section of the North Shore of Lake Superior, for there is evidently the best trout fishing in the world, except of course the famed Nepigon. My choice of trouting grounds is the former, from the fact that it is really an indescribable luxury to there lure and play a trout. The Nepigon, in nearly every instance, presents such a rapid current that it militates much against the angler.

MAINE TROUT.—Upper Dam, May 25.—Yesterday was the first warm day since the season opened, and we had about the first good fishing. All parties took a good catch. Over 90 trout were brought into camp; they weighed 7, 4 and 3½lbs., and lots of 2lbs. were taken. Some very large trout were taken before in the narrows, in Richardson Lake; a Mr. Gould took one of 10½lbs. and one of 6lbs., and the same day his friend one of 7½lbs.—J. A. F.

OMAHA, Neb., May 30.—Marsh Kennard, J. S. McCormick, W. J. Hahn, E. T. Duke, Tom Bruner, Jeff Bedford and Fred Metz are whipping the trout streams of north Minnesota. The writer is indebted for a handsome basket (which arrived per express last night. The anglers will be absent until the middle of June.—SANDY.

The Kennel.

FIXTURES.

DOG SHOWS.

June 3 to 6.—The Cincinnati Kennel Club's Fourth Annual Show, at Cincinnati, O. Geo. H. Hill, Superintendent.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. R. W. Meek, Secretary.

Sept. 2 to 6.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 18.—International Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exhibition at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 10.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brumby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

EASTERN FIELD TRIALS DERBY.

Editor Forest and Stream:

Below is a list of the entries for the Eastern Field Trials Derby for 1890. There are 83 in all, 65 English setters, 6 Irish setters and 12 pointers. All were whelped in 1889:

ENGLISH SETTERS.

ADAM (H. Merriam, Weston, Mass.), black and white dog, July 25 (Orlando—Royal Myrtle).

ALPHA (A. P. Heywood-Lonsdale, Whitechurch, Salop, Eng.), lemon and white bitch, March (Delta—Empress Minnie).

ANDY (Memphis & Avert Kennels, Memphis, Tenn.), black, white and tan dog, March 29 (Jean Val Jean—Sheena Van).

ATLANTA (L. W. Smith, Morrison, Ill.), black, white and tan bitch, March 29 (Jean Val Jean—Sheena Van).

BABE MOORE (Moorefield Kennels, Philadelphia, Pa.), lemon and white bitch, Feb. 8 (Dick Roy—Caddie M.).

BESSIE HILL (J. H. & J. A. Hunter, Sanborn, Ind.), black, white and tan bitch, June 9 (Ben Hill—Daisy Hunter).

BETTINA (J. I. Case, Jr., Racine, Wis.), black, white and tan bitch, April 27 (King Dan—M'Iss C.).

BLIZZARD (Field Trial Kennels, Charlottesville, Va.), black, white and tan dog, May 9 (Roderigo—Belle of Piedmont).

BLUE DAISY (J. C. Gray, Appleton, Minn.), black, white and tan bitch, Jan. 12 (Gladiator—Lady F.).

BOHEMIAN PAUL (F. S. Brown, Philadelphia, Pa.), black, white and tan dog, June 5 (Paul Gladstone—Bohemian Girl).

BOLD BIDDY (P. Lorillard, Jr., Tuxedo, N. Y.), black, white and tan bitch, April 10 (Paul Gladstone—Belle of Stanton).

BUSTER (J. I. Case, Jr., Racine, Wis.), black, white and tan dog, March 12 (King Noble—Cricket).

CARDINAL (Memphis & Avert Kennels, Memphis, Tenn.), black, white and tan dog, April 30 (Roderigo—Bo-Peep).

CAYOTE (J. I. Case, Jr., Racine, Wis.), black, white and tan dog, March 12 (King Noble—Cricket).

CELESTE (Elmwood Kennels, Fort Wayne, Ind.), black and white ticked bitch, April 27 (King Dan—M'Iss C.).

COMO SU MADRE (B. Crane, Chicago, Ill.), black, white and tan bitch, April 27 (Roderigo—Maud).

DANUBE (E. Huidekoper, Meadville, Pa.), black, white and tan dog, Feb. 23 (Ben Hill—Isabella).

DELLAH (Memphis & Avert Kennels, Memphis, Tenn.), black, white and tan bitch, March 29 (Jean Val Jean—Sheena Van).

DILL (P. Lorillard, Jr., Tuxedo, N. Y.), black, white and tan dog, April 27 (Toledo Blade—Dashing Lady).

EDITH (Elmwood Kennels, Fort Wayne, Ind.), black, white and tan bitch, April 10 (Roderigo—Sue Gladstone).

FOLLY (Memphis & Avert Kennels, Memphis, Tenn.), black, white and tan bitch, May 15 (Roderigo—Countess House).

FOXIE MOORE (Moorefield Kennels, Philadelphia, Pa.), black, white and tan bitch, March 26 (Dick Roy—Mattie).

GOSSIP (Field Trial Kennels, Charlottesville, Va.), blue belton bitch, May 9 (Roderigo—Belle of Piedmont).

JENNY MAT (Memphis & Avert Kennels, Memphis, Tenn.), black, white and tan bitch, May 15 (Roderigo—Countess House).

KITTIE MOORE (Moorefield Kennels, Philadelphia, Pa.), black, white and tan bitch, Feb. 8 (Dick Roy—Caddie M.).

LUCERO (B. Crane, Chicago, Ill.), black, white and tan dog, April 27 (Roderigo—Maud).

MCGINTY (J. H. & J. A. Hunter, Sanborn, Ill.), black, white and tan dog, June 9 (Ben Hill—Daisy Hunter).

MEMPHI (P. H. Bryson, Memphis, Tenn.), black, white and tan dog, July 3 (Roderigo—Countess House).

MOPSA (P. Lorillard, Jr., Tuxedo, N. Y.), black, white and tan bitch, April 2 (Gath's Mark—Allie James).

NAHMKKE CHATTA (Nahmke Kennel, East Patchogue, N. Y.), black and white bitch, July 1 (Count Howard—Calico).

NAHMKKE CHILA (Nahmke Kennel, East Patchogue, N. Y.), black and white bitch, July 1 (Count Howard—Calico).

NAHMKKE DUTCHA (Nahmke Kennel, East Patchogue, N. Y.), black, white and tan bitch, March 31 (Roger—Chintz).

NAHMKKE MERCEDES (Nahmke Kennel, East Patchogue, N. Y.), black and white bitch, July 1 (Count Howard—Calico).

NAHMKKE OLGA (Nahmke Kennel, East Patchogue, N. Y.), lemon and white bitch, June 6 (Roy Monarch—Saddle Bags).

NAHMKKE WILFRED (Nahmke Kennel, East Patchogue, N. Y.), black, white and tan dog, Feb. 25 (Gene—Belle of Allendale).

NELLY BLY (J. H. & J. A. Hunter, Sanborn, Ind.), orange and white bitch, June 9 (Ben Hill—Daisy Hunter).

PAULA (P. Lorillard, Jr., Tuxedo, N. Y.), black, white and tan bitch, April 10 (Paul Gladstone—Belle of Stanton).

PAUL BO (T. M. Brumby, Marietta, Ga.), black, white and tan dog, June 5 (Paul Gladstone—Bohemian Girl).

PEARLINA (Elmwood Kennel, Fort Wayne, Ind.), black, white and tan bitch, April 17 (King Dan—M'Iss C.).

PEG WOFFINGTON (F. S. Brown, Philadelphia, Pa.), black, white and tan bitch, May 13 (Ben Hill—Nora).

PHOENESS (A. P. Heywood-Lonsdale, Whitechurch, Salop, Eng.), black and white bitch, February (Woodhill's Bruce—Lucy).

PRUELAMIE (B. Crane, Chicago, Ill.), black, white and tan dog, June 9 (Jean Val Jean—Little Gift).

QUEEN VICK (J. I. Case, Jr., Racine, Wis.), black, white and tan bitch, Jan. 3 (King Noble—Queen Vashiti).

QUE SERA (B. Crane, Chicago, Ill.), black, white and tan dog, June 9 (Jean Val Jean—Little Gift).

QUIEN SABB (B. Crane, Chicago, Ill.), black, white and tan dog, June 9 (Jean Val Jean—Little Gift).

RATON (Memphis & Avert Kennels, Memphis, Tenn.), black, white and tan dog, March 29 (Jean Val Jean—Sheena Van).

RAZZLE (H. Merriam, Weston, Mass.), black, white and tan bitch, July 25 (Orlando—Royal Myrtle).

REVELER (W. B. Hill, Frankford, Ind.), black and white dog, March 2 (Gath's Mark—Esther).

ROD GLADSTONE (W. H. Perry, Dallas, Tex.), black, white and tan dog, March 30 (Roderigo—Pet Gladstone).

RUPERT (Memphis & Avert Kennels, Memphis, Tenn.), black, white and tan dog, April 30 (Roderigo—Bo Peep).

SALLY LIMA (Field Trial Kennels, Charlottesville, Va.), black and white bitch, March 13 (Count d'Or—Mildred).

SAMR. (W. W. Titus, West Point, Miss.), black and white dog, March (Dash B.—Daisy Hope).

SAN-RAY (A. Duane, New York), black, white and tan dog, Sept. 6 (Orlando—Ray).

SINTRAM (P. Lorillard, Jr., Tuxedo, N. Y.), lemon and white dog, April 2 (Gath's Mark—Allie James).

SUSIE MOORE (Moorefield Kennels, Philadelphia, Pa.), black, white and tan bitch, Feb. (Dick Roy—Caddie M.).

TAN (A. P. Heywood-Lonsdale, Whitechurch, Salop, Eng.), black and white dog, Feb. (Woodside Bruce—Lucy).

THE ILL-USED (C. S. Cross, Emporia, Kan.), bitch, May 31 (Roderigo—Lufra Cross).

TORY CAPTAIN (F. R. Hitchcock, New York), black and white dog, Oct. 23 (Wallace's Mack—Hunter's Bride).

TORY DORA (F. R. Hitchcock, New York), black, white and tan bitch, March 13 (Roderigo—Belle of Bridgeport).

TORY LIEUTENANT (F. R. Hitchcock, New York), black and white dog, Jan. 29 (Jean Val Jean—Princess Helen).

TORY RENE (F. R. Hitchcock, New York), lemon and white dog, March 13 (Roderigo—Belle of Bridgeport).

TRAP, JR. (G. C. Gray, Appleton, Minn.), lemon and white bitch, May 1 (Ruby's Druid—Trap).

VANITY FAIR (W. Wilson, Atlanta, Ga.), black, white and tan dog, March 30 (Roderigo—Pet Gladstone).

WHYTE B. (P. H. Bryson, Memphis, Tenn.), black, white and tan dog, July 3 (Roderigo—Flourence Gladstone).

WONNA GLADSTONE (R. H. Alberts, Hoboken, N. J.), black, white and tan bitch, Jan. 14 (Gem—Victoria).

IRISH SETTERS.

BEN C. (J. L. Crugom, Milwaukee, Wis.), dog, Jan. 29 (Glencho, Jr.—Nellie C.).

BONIBEL (Max Wenzel, Hoboken, N. J.), bitch, June 29 (Chief—Bonnie).

EDNA H. (Dr. Wm. Jarvis, Claremont, N. H.), bitch, May 11 (Elcho, Jr.—Romaine).

PRAIRIE ROSE (G. C. Gray, Appleton, Minn.), bitch, June 2 (Brian Boromue—Biddy).

READY H. (Max Wenzel, Hoboken, N. J.), bitch, April 15 (Red Dash—Ready).

WILLIAM H. (Max Wenzel, Hoboken, N. J.), dog, April 15 (Red Dash—Ready).

POINTERS.

BARMAD (Field Trial Kennels, Charlottesville, Va.), white and black ticked bitch, May 13 (King of Kent—Hops).

BEACON (A. P. Heywood-Lonsdale, Whitechurch, Salop, Eng.), liver and white ticked dog, June 9 (Ightfield Dick—Polly Peachum).

EATON (A. P. Heywood-Lonsdale, Whitechurch, Salop, Eng.), liver and white dog, May 22 (Ightfield Dick—Perditia).

LEBANON BOY (Lebanon Kennels, Lebanon, Pa.), lemon and white dog, Feb. 8 (Lebanon—Penelope).

LEBANON, JR. (Lebanon Kennels, Lebanon, Pa.), lemon and white dog, Jan. 7 (Lebanon—Virginia).

MAIDA (N. S. Simpkins, New York), liver and white bitch, April 24 (Dexter—Seldom).

MAID OF KENT (Field Trial Kennels, Charlottesville, Va.), liver and white ticked bitch, May 13 (King of Kent—Hops).

PENELOPE II. (Lebanon Kennels, Lebanon, Pa.), lemon and white bitch, February (Lebanon—Penelope).

RAZZLE (N. S. Simpkins, New York), liver and white dog, April 24 (Dexter—Seldom).

TAPSTER (Field Trial Kennels, Charlottesville, Va.), liver and white dog, May 13 (King of Kent—Hops).

TYKE (A. P. Heywood-Lonsdale, Whitechurch, Salop, Eng.), liver and white dog, May 22 (Ightfield Dick—Duke of Westminster's Bess).

ZIG ZAG (Field Trial Kennels, Charlottesville, Va.), liver and white dog, May 13 (King of Kent—Hops).

W. A. COSTER, Sec'y.

THE TORONTO DOG SHOW.—Toronto, Ont., June 2.—*Editor Forest and Stream:* The second international dog show, to be held here Sept. 15 to 19 in connection with the Industrial Exposition Association, will in all probability be the finest exhibition ever held in the Dominion. The premium list will be out in a few days. It is a very liberal one, with some \$2,000 in cash, medals and plate, besides a number of valuable specials. Friend Stone, the genial and popular secretary of the Canadian Kennel Club, has been appointed secretary and superintendent, and nothing will be left undone that can add to the pleasure and comfort of the exhibitors. The judges appointed are Mr. John Davidson for all setters, pointers, foxhounds and beagles; Mr. E. M. Oldham spaniels and Mr. C. H. Mason the remaining classes. In selecting the judges the committee again had in view the first two qualities necessary to satisfactory judging, viz., competence and integrity, and it is hardly necessary to assure exhibitors that none of the serious blunders that have been committed during the past season will be repeated here. Mr. Davidson is very popular with the dog men here, and is sure of a hearty support. Mr. Oldham, I believe, has never judged, but his large experience during the past four or five years with high-class dogs should well qualify him for the position. Mr. Mason is the best judge we have ever had in Canada, and he is undoubtedly the best all-round judge in America. Up here we want the best dogs—not the best men—to the front, and we feel assured that with these judges the right end of the chain will get the ribbon every time.—ONTARIO.

THE PACIFIC COAST SPANIEL CLUB.—The spaniel fanciers of California have formed a club under the name of the Pacific Coast Spaniel Club. The association will publish a monthly paper, *The Spaniel Fancier*, which will be edited by Mr. H. P. Rennie, with Dr. A. C. Davenport associate editor. Following is a list of the officers of the club. Just elected: President, Dr. A. C. Davenport, Stockton; Vice-President, Mr. John Kerlin, Oakland; Secretary and Treasurer, Mr. H. P. Rennie, Oakland; Executive Committee, Dr. A. C. Davenport, Messrs. H. P. Rennie, Jos. B. McVay, G. W. Rennie, and F. W. Howlett.

OMAHA DOG SHOW.—Omaha, Neb., May 30.—The annual bench show will be held here during the second week of June, from the 10th to the 14th inclusive. The management states that the exhibition—and that is what the show really is—will surpass anything of the kind ever offered in Omaha before. There will be a much larger list of entries and many additional fine dogs from adjoining States. The business men have been exceedingly generous in donating prizes, and are lending much aid to the affair in innumerable ways.—SANDY.

SEA TROUT.—Fredericton, N. B., May 22.—The sea trout have made their appearance at the head of the tide in the Southwest Miramichi. Five weighing 5lbs. each were caught May 19 in a gaspereaux net, which fish are just now making their appearance in that river. Gaspereaux have been much more plenty than usual in the St. John River this season. Some very large hauls of shad also have lately been made in the harbor of St. John. The river is very high at present and likely to continue so for some time; so that a larger number of shad and salmon than ordinary will escape the nets at the mouth of the river and reach their spawning ground in safety.—EDWARD JACK.

SALMON CAUGHT IN A TRAWL.—A boat fisherman of Gloucester, Mass., took a 7lb. salmon on a trawl-line May 28. This is said to be the first occurrence of the kind in the Gloucester fishery. The trawl-line is similar to the out-line or trot-line sometimes used in river fishing. We have seen bluefish captured in the same way in Fisher's Island Sound, the bait probably having been taken while the line was going down or coming up. A more remarkable thing is the frequent capture of swordfish on bottom trawl-lines and even on handlines of the George's Bank codfishermen.

COLORADO FISH LAW WARNING.—Denver, Col., May 20.—*Editor Forest and Stream:* I inclose herewith a copy of warning which the Colorado Sportsmen's Association will post. Should any secretaries of gun and fish clubs in Colorado, Wyoming, Utah or New Mexico desire a supply, they can have same by addressing me.—C. M. HAMPSON, Pres. R. M. S. A.

NEW NAMES OF THE BESHOWE.—In the "Annual Report of the Canadian Department of Fisheries" for 1889, recently issued, we find the beshowe (*Anoplopoma fimbria*) referred to as the blackerel—a trade name for the fish in a salted state. Skil is another name used for the species, and the term black cod has been misapplied by association with the same fish.

QUEBEC STREAMS.—Quebec, Canada, May 27.—All the rivers and lakes are overflowing their banks and fly-fishing is out of question for some time. The same has been the case all over this district. River fishing (it is claimed and I believe) will be better than usual this summer, the fish being washed down from the lakes by the tremendous overflow.—G. VAN F.

MACKEREL FROM A SHARK'S STOMACH.—The schooner Lorna Doone arrived at Provincetown, Mass., from Georges, May 28, killed an 18ft. shark on the cod-fishing grounds and found a 17in. mackerel in its stomach in good order.—*Gloucester (Mass.) Daily Times*, May 28.

SEINING BROOK TROUT.—In Taunton River, Mass., a number of brook trout were caught with herring in the early part of May.

OMAHA, Neb., May 26.—Some big catches of pickerel are being made daily at Horneycreek and Horseshoe.—SANDY.

OF VALUE TO SPORTSMEN.—Every lover of rod and gun should secure a copy of a book just issued by the General Passenger Department of the Canadian Pacific Railway and entitled "Fishing and Shooting." In it all the best fishing waters and localities for big and small game in Canada are fully described, the best route to each pointed out, and a vast amount of valuable information presented in most interesting shape. The descriptive matter covers a broad and varied field, touching upon every noted sporting locality in Canada between the Atlantic and the Pacific oceans, and also refers to the States of Maine, Michigan and Wisconsin. It is bound in convenient pocket form and is handsomely illustrated. Other useful books are "The New Highway to the Orient" and "Summer Tours," issued for the benefit of travelers in general. Copies of any or all of these may be obtained free upon application to any agent of the Canadian Pacific Railway, or to E. V. Skinner, 355 Broadway, New York; G. E. McPherson, 211 Washington street, Boston; J. F. Lee, 222 South Clark street, Chicago; C. Sheehy, 11 Fort street, West, Detroit, Mich.; or to D. McNicoll, General Passenger Agent, Montreal, Que., Canada. **

Fishculture.

NEWFOUNDLAND FISHERIES COMMISSION.

Editor Forest and Stream:

It may perhaps interest you to know that I caught a squid a few days ago, and another one was taken in March. These were of small size—smaller than the general run of those that come into the bays of Newfoundland in the month of August. I believe that some squid winter in the bays in deep water. Capelin do so I am sure, because what the fishermen catch here in early spring and call whitefish is nothing but the capelin. We find the same thing on the northern coast of Norway. We are about to begin hatching cod, and are collecting fish at present; but the season is late and backward, so that not many fish are caught yet, the water being too cold. At 20 fathoms depth to-day I found it 37 degrees. The Commission intends to go into hatching lobsters in great numbers this year. I expect to hatch about 120,000,000. The hatching of lobsters on a large scale is practicable, and I have not the slightest doubt that the young will get along remarkably well if planted in suitable places. Such I hold to be sheltered localities with rich vegetation on the bottom. I consider places where there is plenty of goose grass best of all. The lobsters feed on insects on these plants, and have plenty of hiding places. If one wishes to find a large number of small lobsters, up to one-half inch and one inch long, he will always find them among the goose grass in the summer; therefore I consider such place to be their home in early life. Mr. Jansen went home to Finland last fall, and will not be back here again.

ADOLPH NIELSEN, Supt. of Fisheries.

ST. JOHN'S, May 22.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free of application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—ADV.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

FOREST AND STREAM, Box 2,339, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

ENGLISH VS. AMERICAN BEAGLES.

WHEN Gen. Rowett visited England to select beagles there were no bench shows of importance held in America, and consequently he selected the best that he considered adapted for the work of rabbit hunting in this country. Until within the past twenty-four months little, if any, interest has been taken in bench show beagles in the mother country, but the demand from the United States for good specimens has awakened interest in the breed, and the beagle classes over there have filled up wonderfully. I have not seen any recent importations of beagles. Judging from the portrait of the "only English champion of his race" published in the *Stock-Keeper* of Sept. 27, our English cousins are breeding on different lines from the ideal standard we have set up.

I quote what the *Stock-Keeper* says of this world-beater: "Considering the marked revival of the interest taken in this famous, but of late years much neglected, breed, as demonstrated by the extraordinary classes at Brighton and Southampton, we may say that in bringing before our readers the portrait of the only champion of his race we are satisfying a public demand. Without going extensively into the subject of the different strains and their origin, which is one of the most intricate tasks of doggy lore, we limit ourselves to-day to mentioning that, making a broad distinction, there are two kinds of beagles, viz., the north country beagle, of whom the 'County Squire,' in his observations on hunting says: 'He is nimble and vigorous; he pursues the hare with impetuosity, gives her no time to double, and if the scent lies high, will easily run down two brace before dinner;' and the southern beagle, a diminutive type of the old southern hound, and of this variety the subject of our illustration is a splendid specimen. These hounds are slower, but very sure, and if bred within a certain size—say not exceeding 14 in.—they are the most suitable kind to be followed on foot by people with ordinary stamina. It is a characteristic confirmation of our remark respecting the neglect which this breed has suffered at the hands of several generations, that so splendid a specimen, who has not only been eminently successful on the bench, but has also amply proved his worth at stud, should be entered in the K. C. S. B., with pedigree, date of birth and breeder unknown."

Among his best known descendants are Mrs. Mayhew's Blue Belle II., Mr. E. B. Joachim's Primrose Countess, both winners of many first prizes at leading shows, and Mr. C. H. Beck's Atalanta, second, Birmingham. We understand that several good ones of his stock are coming on. Since Ringwood has come into the hands of his present owner he seems to have taken out a fresh lease of life, and he has lately been shown in splendid form. We notice from our advertisement columns that he is still at the service of the public. Ringwood is a first-class worker, and on the bench the following are his chief victories: First prize at Warwick, Brussels, Barn Elms, Birmingham (twice), Brighton, Darlington, and prize in the challenge class at Olympia and Southampton."

Now compare the two types shown by the illustrations accompanying this article. One is a reproduction taken from the English *Stock-Keeper*, and is a portrait of champion Ringwood, the other represents that typical American-bred beagle champion Little Duke. The American-bred beagle, it seems to me, is about the nearest approach to a miniature English foxhound that has yet been reached. The English champion Ringwood, judging from the illustration, is simply a caricature of a bloodhound or a bad representation of one of our own old-style Southern foxhounds. If this type is correct then champion Bannerman is the nearest approach to it that has ever been brought to this country. But I want to say right here that I do not think the type is correct, and that if champion Ringwood was shown here a "c" would be about the highest mention he would get.

I do not believe that in a breed which has been so much neglected in the country where it originated as the beagle, modern English fanciers are as capable of sitting in judgment in regard to the correct type as a native born Englishman (a fancier of cattle, foxhounds and beagles all his life), who went over from this country some fifteen years ago purposely to select the best of the breed he could find. According to one of the best English authorities, there are at present but two practical working packs of beagles in all England. Here we can number them by hundreds.

Our English cousins take the bassets from France and dachshunds from Germany, fix a type and make so-called improvements on the breed, why cannot we be permitted to do the same? Instead of importing beagles from England, we should send back some to improve the few remaining specimens of the grand little hound now left there. There is no game in England as suitable for the beagle as our so-called rabbits. For this kind of sport the little hound is exactly suited. The beagles which General Rowett brought over are the foundation stones upon which our winning strain are built. There has a cry gone up lately that these beagles are gunshy. I have owned them for years and never bred but very few that were afflicted that way, provid-

ing they were placed under gunfire at an early age. It is all nonsense to suppose that a beagle or any other hunting dog can be kept as a house pet until two or three years old and then put in the field with the expectation that he will stand the noise of a gun and have a good nose for game. Few setters or pointers are of any use for field purposes after they reach two years of age untrained, and why should beagles be an exception? HIBERNIA.

TREATMENT OF DOGS AND THEIR BAD HABITS

[By a Lady Contributor.]

THERE is so much said and done in this nineteenth century civilization to protect all animals from cruelty,

a young pointer should be, when, one luckless day, he got into the kitchen where he excited the cook's displeasure, and she threw scalding water on him. He fled from the house, and could not be induced to return to it save in cowering alarm; later he was sent to a trainer, who was never able to overcome his extreme nervousness. Each dog represented a large sum of money, and was a great loss to his owner.

If these servants had defaced a carpet by throwing ink upon it in a bad temper, they probably would have been made to pay for it; still, the carpet would have served the purpose of covering the floor, is inanimate and insusceptible of being hurt, but the poor dog was made suspicious, broken-spirited and naturally vindictive by violent treatment.

Ginger was given to a family who petted him, but for years he always remembered his experience with the cook, and until he died always growled and barked at all servants in white aprons. Dogs know very quickly when they are disliked. There is an hotel that announces upon all its advertisements "Dogs not taken." The proprietor has some reason for his aversion to them, and has the hall boys drive any stray ones from his doors. It is amusing when sitting on the piazza of that house to see the dogs come along, they will cross the street, run on the other side, and recross, so as not to pass where they are not welcome.

In these days, even without the protection of a license, dogs are being considered personal property just as much as horses and cows are—to have them considered such rests with the owner—and he should enforce whatever laws there are in his neighborhood. There is a certain village not 100 miles from New York, laid out without fences between the houses and the road. In the spring when flowers begin to peer above the ground and the beds are all nicely raked, dogs run in and out, destroying the appearance of things. Some person took the law in their own hands and various dogs were poisoned. They are neither sheep nor cows, nor pets—as such it was impolite for the neighbors to make a fuss about it. It was all wrong, but the wrong would never have been righted if the village had not become a resort for city people, some of whom brought valuable dogs; when one or two of these were poisoned the matter was investigated. Now all this lawlessness comes under the head of cruelty to animals, and any one who condones it is only a little less culpable than the perpetrator.

I have been asked how to prevent certain bad habits. In the beginning, if you are to buy a dog, it is necessary to see where he comes from, and how he has been treated. It is not pedigree alone that is necessary. A dog who has been kept tied or closely confined in a small yard with others for months is worth less than one who is not so fine bred, but who has had a wider range.

The worst habit a dog can have is killing chickens, or kittens, and if the habit is an old one, cure is almost impossible. It may be stopped for a while to begin again.

The farmer's plan of tying a dead fowl around a dog's neck, and making him wear it for several days, has more disgust in it than wisdom. If you whip him he will kill it all the same but not bring it and show it to you. Usually it is not their own poultry yard that is invaded, but some other one; your own cats are safe while the little pussies in the barn are shook to death, and your neighbor's fine Angora comes to an untimely end. The habit should never have been begun. The very first time a cat is "treed" by a young dog, and his sharp bark is heard under it he should be called off and reprimanded, dragged away if he will not come, and led along by the collar. The same when going through poultry when meeting them on the road, make him walk quietly past them, saying "no, no," if he shows an inclination to flutter them; a long whip or a stick may be taken, driving him before you with it, touching him on the sides so that he turns neither right nor left, saying "go on," until the barnyard and the chickens are left behind.

Trained bird dogs will not go after chickens, also their training to let "fur" alone when in the field assists in restraining them from chasing cats.

Running away is another bad habit—difficult to overcome when it is a habit. I do not mean by running away alone for a quiet walk, or to some near by piece of water for a swim. I allude to the practice of going out for hours at night, or for a whole day, returning tired and shabby-looking, or running into the road and sneaking off at every possible chance. Whipping never breaks this up. I have seen it tried again and again on all sorts of dogs, have protested against it, and when persisted in have heard the dog was incurable. Why? because he is afraid to come home. They remember the sting of the whip much longer than what it was for. Bird dogs often go off hunting, usually with some companion. We had one who was sometimes coaxed off with a congenial spirit, usually disappearing early in the morning when the scent lay on the damp grass; before 2 o'clock he would be home, because he wanted his dinner. We used to say he carried a watch, so punctual was he. He came in looking ashamed, knowing it was wrong, but he got his dinner, was reprimanded, and then tied up a while.

The other dog got no dinner, but a punishment on his re-

CHAMPION RINGWOOD.

CHAMPION LITTLE DUKE.

thing else he owns, does not want it destroyed, which is done if his character is ruined, or perverted by ill-usage. I knew two valuable bird dogs that were bought from two different kennels, both of which were well-known for their fine stock; each of these young dogs went to their separate masters, where they received the usual amount of attention, and were making creditable progress in their education as bird dogs, when one day Ginger slipped into the cellar and carried off a raw beefsteak from the safe, the door of which the cook had left open. The demon of the kitchen, seeing Ginger running along with the meat in his mouth, she, with the usual illogical reasoning of that class, did not blame herself, but seized a stick and so beat poor Ginger that he was hurt, and had to be nursed; after that he became so nervous that he was useless as a bird dog.

The other one's fate was similar, he had become all that

turn, and so used to hide in the bushes and not present himself at his home until evening. Let any young fellow put the question to himself when I stay out late and when I get home find a good scolding waiting for me, does the knowledge of this hasten my return? Of course one cannot make a dog understand as you would a boy, that you are worried about his absence. The principal danger of a dog's running off alone is being hurt or injured in some way. The only way to prevent this is taking him to walk, or to drive with you almost every day. Another bad habit is being quarrelsome. It is in some natures more than in others, and is especially annoying in a ladies' dog for him to get into a row with another when out walking with her. A lady, or children, should always be accompanied by a reliable dog when walking or driving alone in the country, for protection sake. It will be found very easy to teach any dog not to commence or join in a quarrel with another one.

Take him to walk with you on the road, if a new dog on the first few times leading him; then when he is loose and running alongside of you, and you see another dog coming, call your own to you, saying, "Quiet, stay by my mistress." If need be the first few times, lead him; take no notice whatever of the other dog, and you will see him turn away. If you say "Go away," or strike at the strange dog, or notice him in any way, you will immediately see your own dog fly at him. If you are riding or driving call him to you all the same, and he will go close to the horse's feet. After a while yours will come beside you without calling when he sees another, and trot past him without looking. It is not cowardice, it is training. It is said that to stop a dog fight throw snuff in their faces. They will have to sneeze, consequently let go, and thus be separated. Pepper is also used, but it might get into their eye. A short-haired dog is unfairly matched against a long-haired one, the latter's hair protecting him from bites, while the other one stands a poor chance. For such a one it is well to have a collar with little spikes in it standing up around the neck. In getting a dog there may be much trouble in making him content in his new home. He will be homesick and try to run away; restless and unhappy. Much patience is required, and above all keep your temper. I had one who was so fidgety, so nervous, and every way annoying, that, although he was a valuable dog, I determined to send him away; but it not being convenient to do so just then, I thought of trying what a physician had told me, and gave him a few drops of belladonna in water. Very soon he fell asleep, sleeping and dozing for nearly twelve hours, awaking to be quiet and contented, soon becoming a very tractable and perfectly trained dog.

I think enough has been said concerning chastisement, there are I allow occasions when it must be done, and done on the spot, but be sure that you do not do it in a bad temper (they being bright enough to understand the moods of those they are with), more because you are vexed with him than to teach him, if so the lesson is lost. In such a case I would not blame the dog if he would fix his teeth in the hand raised against him.

One afternoon, last summer, I saw a tall, slight figure, dressed in the height of the rural masculine style, as made by a fashionable New York tailor, his soft moustache and fair skin would have marked a gentle nature, had not the slender white fingers held a riding switch, that was being laid upon the back of a poor, pretty little spaniel that was crouched at his feet; with every cut of the whip this cad was saying "I will teach you," until satisfied that his manliness had been asserted enough he marched into the house, followed by the little slinking figure.

The other day, down here in Virginia, I saw an athletic man with bronzed face and rough dress walking along, accompanied by a Chesapeake Bay dog and two setters; it was pleasant to see how they ran around him, looking frankly up in his face, showing the perfect friendliness that existed between them. I watched him pick up a stick that had drifted up on the beach. Although he switched it around in his hand they did not shrink, showing the perfect confidence they felt that a rod was not used on them. The party came to a wreck that was beached high up, one of the masts had broken and fallen over on the sand dunes, making a bridge. The man walked over it into the wreck followed by two of the dogs, the other, a young one, stopped irresolute and turned, coaxing being unavailing. The rough man came back and gently piloted the dog over the mast, and then soon all returned to the beach. It is needless to point the moral of these two incidents, of the city "gentleman" who would despise the coast guardsman—and vice versa.

In these little articles I have tried to show that a dog can not be treated in an inconsequent manner, and should not be treated cruelly. It is unjust to them not to look after their health and training. If a person feels that they have not time, or are not willing to take the time and care needful, they had better not get a dog.

G. L.

DOGS OF THE DAY.

WHAT is a novice? is a burning question with people who are defeated in a novice class and some who are only prompted by curiosity. A little over a week ago I received a letter from Mr. Shotwell which contained a sentence running something like this: "What was this dispute you had with Mr. —?" I decided against you." As Mr. — and I never had any dispute on any subject, I was puzzled, and sent a protest to the C. C. secretary against deciding any case in which I was a party in interest without giving me a hearing. Back came the answer that it was a question as to the eligibility of Prince Charlie in the novice class at Boston. In my reply to that information I said that Prince Charlie's win of a portion of a Collie Club stake was practically a special and not a prize to debar from a novice class. Mr. Shotwell's rejoinder was quite a warm one on behalf of his club. He is of the opinion that in passing over Collie Club stakes a slight is placed upon the club as a member of the A. K. C.

This question came up in a different shape before the London show committee, the Canadian Kennel Club and Mr. Vredenburg. The last named never brought the question to the attention of the A. K. C., but simply said that the protested dog had won a Collie Club stake and that that club was a member of the A. K. C., and such wins therefore counted. Unfortunately Mr. Vredenburg contradicted himself by issuing a list of shows which does not include the one at Rahway he says should be recognized. The little affair at Rahway was in no sense a show, but simply a decision of the club stakes, which are private affairs. It was not announced as a show nor can it be regarded as such.

The case of Prince Charlie differs only in this respect, that the stakes he competed for were decided at the New York show of 1889. At the same place this year he was entered in the novice class with the full knowledge of his previous stake winning and Mr. Vredenburg's reply to the Canadian query. No objection was made there, nor was there any at Boston, where he did win a prize in the novice class. The object of the novice class is just to give such dogs as him a chance of winning his entrance money. It is a class for which a much more definite and clearer rule is requisite to prevent such misunderstandings as the Roslyn Clara and Prince Charlie cases. Not only should it be made more explicit, but it might be changed with material advantage, making a beaten dog class instead of dogs which have never won, thus admitting a new comer to compete and occasionally sweep off so many prizes.

Mr. Sawyer has kindly sent me the information I asked

for regarding the bull bitch Dolly Tester. I had mentioned the peculiar tendency of a sea voyage to retard the usual return of the breeding period, and noted that Dolly Tester's case seemed to be an exception, as she was bred soon after she arrived here. Mr. Sawyer says Dolly arrived on April 10, first showed signs on April 13, and was bred to Harper on the 23d.

Miss Monarch was expected to come over for the River View Kennels, but before Mr. Sawyer completed the purchase she broke a stiffler. She subsequently had four dead puppies. A new face, however, in the kennels is Carisbrooke, purchased from Mr. E. Sheffield Porter, of New Haven.

An error of mine has been pointed out to me. The associate members are not entitled to get a fourth delegate until the membership is four hundred.

I am still more impressed than ever after reading Mr. A. J. Rousseau's last letter on Barzoi dogs that the abdication of the Emperor of Russia in favor of the only infallible is merely a question of time.

A judge in an English county court decided a suit for unpaid prize money in favor of the show committee on the score that the club did not make any money.

Mr. Perroy, of New York, has purchased Brokenhurst Quick in England, and also wanted to get Loughton Spice, but his offer was declined.

Mr. Ferris, an English detective, says dogs have no homing powers, but that stolen dogs which do find their way back are not taken far from home. Mr. Ferris is singularly at fault in this statement. We do not say all dogs find their way home—we have many a time wished they had the power, but some have the power. A case occurred in my own kennels a few weeks ago. A bitch I had placed out over two years ago was returned to me, being brought some eight or ten miles by a circuitous route to my house. A week later she disappeared and was brought back the following morning by her former keeper. In fact she was returned before we knew she was gone, as she was seen up to dusk. She repeated the trick in about another week. I know of a little rough terrier which has been sent miles away from his home sometimes in wagons and sometimes boxed up, and it wasn't until he was sent across Philadelphia, that he finally concluded to quit his old home.

The many friends of Mr. A. Clinton Wilmerding will be pleased to learn that he has pretty well recovered from the accident he met with two weeks ago. I have not seen any full story of the affair published, so give what Mr. Wilmerding wrote me about it: "I suppose my brother told you that I had had a bad fall from a horse. The brute got frightened, ran away, a stirrup broke and I was thrown and trampled upon. One of his hoofs took considerable skin and most of my heavy corduroy breeches off my right leg above the knee, and the other came down on the small of my back. When they got me home there were evidences of some internal injury, as I vomited clots of blood. It was about as near broken bones and 'solving the mystery' as I ever got, and I don't see how I escaped as I did. The horse was a large heavy animal and going at top speed. I am pulling out all right now, but slowly." All hands will join in wishing the popular spaniel judge a complete and speedy recovery.

Now that Wilmington has been admitted to the A. K. C. it is necessary for the show to amount to something. Last year it was passably good, being modest and unpretentious, the entering wedge as it were. The committee of the fair saw that the dogs "caught on," and are determined to make a bolder bid this year, and one that will draw the good dogs. Exhibitors have an excellent man at Wilmington in the person of Mr. Frank R. Carswell, who although not officially connected with the show that I know of, is steering it in the right direction.

Mr. Carswell has sent me a rough sketch of the classification, and asked for suggestions, and I think it might be well to afford others an opportunity of doing likewise. The entrance fee is to be \$2. This is right, for there has been a lot of grumbling at the \$3 tariff where the prizes have been small. The mastiff classification is as follows: Challenge class, dogs and bitches, \$8; open class, dogs, \$8, \$4 and diploma; bitches the same; puppies under 12 months \$5 and \$3. The same classes and money are given to rough St. Bernards, English, Irish, Gordon setters, collies and fox-terriers. Pointers are divided by weight in challenge and open classes, making seven classes. Pugs have \$5 for first prizes in challenge and open classes, \$3 for seconds in open and first in puppy classes. Beagles and cocker spaniels have similar classification. Single breed classes are provided as follows: Great Danes, \$8, \$4 and diploma; deerhounds, greyhounds, foxhounds, Newfoundlands, Chesapeake Bay, bull-terriers and miscellaneous, each \$6, \$3 and diploma; bloodhounds, Clumber spaniels, field spaniels, bulldogs, dachshunds, basset hounds, Irish terriers, Dandie Dimont, black and tan terriers, Yorkshire terriers, Skye terriers, toy terriers, Italian greyhounds, Japanese spaniels, King Charles spaniels and Mexican hairless dogs, each \$4, \$2 and diploma.

I do not see how the amount of cash could be split up to much better advantage and give everybody a chance to get a bit of the money.

By way of a P. S. to the story of the A. K. C. meeting, it would seem to be necessary, in view of statements made respecting Mr. Peshall's credentials not being in correct form, to give a copy of what he presented. Here it is: "A. P. Vredenburg, Esq., Secretary American Kennel Club. My dear sir: As Mr. H. Malcolm, our delegate, will not be able to be present at your meeting, we hereby appoint Mr. C. J. Peshall to act in his stead at your meeting, to be held this day, May 22. Yours truly, W. Stewart Diffenderfer, Secretary." It is a document that can be judged by everyone, and a good many will, I think, concede that Mr. Anthony did well to withdraw his motion that it was not in proper form.

J. W.

THE ENGLISH SETTER CLUB.—Melrose, Mass., May 29.—*Editor Forest and Stream*: I would like to extend through the columns of the FOREST AND STREAM an invitation to all interested in the breeding, hunting and showing of the English setter, to join the English Setter Club of America, a club formed for the improvement of the breed both in the field and on the bench. This club already has quite a list of charter members, and more will be admitted at once. Here is a long-looked-for opportunity, and it should be appreciated. Any information regarding the club will be furnished on application to the secretary. Following is the list of officers elected last evening: Pres., F. W. Whitlock; First Vice-Pres., F. Frazer; Second Vice-Pres., Dr. W. H. Power; Sec.-Treas., H. H. Brown; Executive Committee: A. R. Crowell, T. C. Critchendon, W. H. Case, J. W. Neal, J. Jarvis, and the above-named officers.—H. H. BROWN, Sec'y.

GREYHOUND OWNER WANTED.—A gentleman recently purchased a good-looking greyhound dog, with the view of restoring him to his owner, as the dog was evidently well bred and probably was picked up or stolen. Address Kennel Editor FOREST AND STREAM.

DOG TALK.

BY invitation of Dr. Warren H. Beede I have recently visited a number of dogs attacked by a peculiar disease, answering very nearly to that described by Dr. J. S. Niven. Thinking that dog owners wish to know of such epidemics, I will give a description of the disease from my own observations and those of Dr. Beede, who is well known in this locality as a specialist in canine diseases of some fifteen years practice. The owner invariably comes to the doctor with the idea that his dog has a bone in his throat and is choking, but investigation of more than fifty cases has failed to find a bone as yet. The dog first becomes languid, then, as in Dr. Niven's experience, they lose the use of their hindquarters, the throat becomes very much swollen and eventually the jaws become paralyzed, the tongue swells and hangs out of the mouth; the dog cannot swallow and the intense fever causes great thirst, the poor sufferer plunging his head into the water to the eyes. In several cases the doctor forced down a little water through a rubber tube, invariably sending the dog into fits; the bowels are constipated, and the cases that I have seen are at certain stages very restless. Some of them bark a little, but in a very unnatural voice. One bull-terrier that I visited had been sick about two days. She was constantly in motion, and would try to snap at imaginary flies and turn around until she fell over from exhaustion or weakness in the hindquarters. She appeared to be entirely out of her head, and did not recognize any one; the eyes were set and the eyeball greatly inflamed. Most all of the cases that have come under my notice have been cross and snappish during the first stages of the disease. One case in particular would chew anything within its reach, tin cans, chair legs, his kennel or anything. Several persons have been bitten by them, but no bad effects have resulted from the bite. In houses where more than one dog is kept, sometimes both dogs have it and sometimes only one. It is not confined to any particular variety, as black and tan terriers, bulldogs, mastiffs and nondescripts have all been affected, and none have lived over three days after being taken sick. If this is not dumb rabies, what is it?

The English Setter Club has set the setter men all talking of the combination dog, i. e., a combination of field and bench qualities. A great many are harping on the old saw that the bench dog is of no practical use. How about Mr. O'Bannon's Reverdy, Prince Belton, Father O'Callaghan's Irish setters or a score of others? and I see by the report of the recent English field trials that Sweep the Green, a son of Monk of Furness, has won the Setter Stake. A combination dog is rare at present, but entirely possible, nothing is needed but judicious mating.

"Brittle" "pitched into" the "cuts" of the Barzoi in a recent Western paper in a manner quite characteristic of "Blasted Britisher." I would like to ask how Opro-mote or Yassa manage to eat or drink. If their necks are no longer than they are represented they must get down on their knees for that purpose.

The Massachusetts Kennel Club, Lynn, Mass., have decided to hold their next dog show March 24 to 27, 1891, and claim those dates. NAMQUOIT.

"A DISAGREABLE PERSON."—*Editor Forest and Stream*: The American Kennel Club at its late meeting decided that Mr. Peshall was so disagreeable a person that it would not allow him to appear in its councils. In reply to a suggestion that some utterances as to Mr. Peshall were the outcome of personal feeling, the President disposed of this by the astonishing statement that Mr. Peshall was not worthy of his personal feelings! In other words, Mr. Peshall is too low and despicable an object for the President of the American Kennel Club to have any "personal feelings" toward! Who is this contemptible creature? Some dead beat, vulgar uneducated boor, dirty tricky rascal, or loud-mouthed brawling ruffian? He is an English gentleman born and bred, with more learning and greater accomplishments than nine out of ten delegates to the American Kennel Club. A man of the kindest heart, always ready to help the unfortunate, cheery and kindly in his intercourse with others and a man against whose absolute honesty, perfect uprightness, and thorough sincerity, no one has ever dared to breathe a word. Yet he is too contemptible for an A. K. C. official to associate with! Remember it is not intimated that his manners in A. K. C. meetings were offensive, that he indulged in profanity while participating in a meeting (as others have done who are full worthy of associating with "us") but because he entertained certain views as to the work of the A. K. C. and persisted in carrying them out in his own way, he is "not worthy of personal feelings"! Nor was he even allowed to be heard, after a motion by a delegate that permission be accorded to him! And the worst feature in this shameful performance was that it was entirely unnecessary and was a deliberate and malicious determination to humiliate Mr. Peshall. If preventing his participation in the meeting had been the object, it could easily have been accomplished by the evident insufficiency of his credentials. Of course, all independent lookers on laugh to scorn the idea that such a vote could in any way lower Mr. Peshall in public esteem. Let me say that I have never indorsed Mr. Peshall's modes of warfare vs. A. K. C. methods, and that I have been as hotly engaged against him as against any other honorable man I know, but the public shame of the governing body of American doggy affairs going out of its way to deliberately attempt the disgracing of an honorable gentleman, is a new feature in the personal government of affairs that produced the editorials in the A. K. C. Gazette.—W. WADE.

THE TAX ON DOGS AND BITCHES.—Eagle Rock, Pa., May 24.—*Editor Forest and Stream*: In a recent issue occurs the following paragraph by "J. W." in speaking of a heavier tax on bitches than on dogs: "When will the gentlemen who cultivate hayseed in their whiskers learn that bitches average not over a dozen pups a year, whereas a dog may produce two or three hundred, also that the male, not the female, is the sheep-killer." Now, I think that is just the point aimed at. One bitch and ten dogs in a neighborhood will produce say twelve pups, while one dog and ten bitches will produce ten dozen pups, using "J. W.'s" own figures. Another thing, if a man has to pay for a bitch he won't keep one unless she is pretty good, and will think enough of her to take care of her when in heat and not allow the ten (or twenty) dogs in the neighborhood to form a mob to range the country round killing sheep. In regard to the second clause of the paragraph quoted I think as large a proportion of bitches as of dogs will kill sheep. A bitch, too; if not confined when in heat, will gather all the dogs, good and bad, for miles around, and your pet setter or collie who if alone wouldn't harm a sheep, is liable to meet the fate of Old Dog Tray or you have a bill of damages to pay.—Mc.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Wonna Gladstone. By R. H. Alberts, Jr., Hoboken, N. J., for black, white, and tan English setter bitch, whelped Jan. 14, 1889, by Gun (champion) Gladstone—May B. out of Victoria Laverack (Tennet—Lilly).

Yorktown Fussy. By Yorktown Kennels, Buffalo, N. Y., for white, black ticked, fox-terrier bitch, age not given, by Ebor Splash out of Barmald.

Leo Stubbs, Gun Stubbs and Spider Stubbs. By G. L. V. Tyler, West Newton, Mass., for orange and white dog and two liver and white cocker spaniel bitches, whelped Feb. 23, 1890, by Captain Stubbs out of Flossie T. (Col. Stubbs—Pet).

Yorktown Kennels. By N. Hucker, Jr., Buffalo, N. Y., for his kennels of fox-terriers; also the prefix Yorktown.

BRED.

Prepared Blanks sent free on application.

Wonna Gladstone—Belthus. R. H. Alberts, Jr. (Hoboken, N. J.) English setter bitch Wonna Gladstone (Gun—Victoria Laverack) to his Belthus (champion) Rock—Cockerton's (Meg), April 7.

Cad's Pet—Gath's Mark. Moorefield Kennels' (Colmar, Pa.) English setter bitch Cad's Pet to H. Hulman, Jr.'s Gath's Mark, May 22.

Joyce—Don Quixote. Rosecroft Kennels' (Birmingham, Conn.) English setter bitch Joyce (Prince Foreman—Passion) to their Don Quixote (Rockingham—Donna), May 26.

L. X. L.—Cinecinatus. H. Hulman, Jr.'s (Terre Haute, Ind.) English setter bitch L. X. L. to J. E. Dager's Cinecinatus, May 23.

Nannie S.—Gath's Mark. H. Hulman, Jr.'s (Terre Haute, Ind.) English setter bitch Nannie S. to his Gath's Mark, May 11.

Blue Jennie—Roy Monarch. N. McIntosh's (Providence, R. I.) English setter bitch Blue Jennie (Royal Albert—Blue Nell) to C. C. Gray's Roy Monarch (Dashing Monarch—List), April 20.

Jill—Kildare. Dr. H. B. Nicol's (Cockstown, Ont.) cocker spaniel bitch Jill (Doctor—Lucy) to his Kildare (champion Brant—Bonita), May 12.

Romach—Dunder. L. Timpon's (Red Hook, N. Y.) Skye terrier bitch Romach to J. L. Banks's Dundee, May 7.

Marie—Bradford Harry. F. O. McGuire's (Bangor, Me.) Yorkshire terrier bitch Marie to P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beale's Lady), May 8.

WHELPS.

Prepared Blanks sent free on application.

Flossie T. G. L. V. Tyler's (West Newton, Mass.) cocker spaniel bitch Flossie T. (Col. Stubbs—Pet), Feb. 23, five (one dog), by Capt. Stubbs; two bitches dead.

Merry T. G. L. V. Tyler's (West Newton, Mass.) cocker spaniel bitch Merry T. (Rex Obo—Nellie), May 23, six (three dogs), by W. C. Piper's Jo (Ebony—Gem).

SALES.

Prepared Blanks sent free on application.

Topsy King Don. Liver and white pointer bitch, whelped Aug. 10, 1886, by King Don out of Queen Faust, by B. Proud, Anderson, Ind., to E. P. Madison, Indianapolis, Ind., same place.

Brighton King. Orange and white English setter dog, whelped Sept. 5, 1889, by Chautauqua Kind out of Brighton Queen, by W. D. Wright, Bremen, Ind., to Geo. M. Kilmer, Jr., Lansing, Mich., and resold by him to M. C. Byers, same place.

Max Gladstone. Orange and white English setter dog, whelped May 23, 1889, by Rush Gladstone out of Quail, by F. T. Madison, Indianapolis, Ind., to John H. Hildreth, same place.

Dinah. Black and tan Gordon setter bitch, age not given, by Brown Glen out of Compton's Nellie, by G. L. V. Tyler, West Newton, Mass., to A. McDonald, Rockland, Me.

Blaze—Gladys whelp. Red Irish setter dog, whelped April 10, 1890, by R. H. Burr, Middletown, Conn., to C. T. Price, Westerly, R. I.

Leo Stubbs. Orange and white cocker spaniel dog, whelped Feb. 23, 1890, by Capt. Stubbs out of Flossie T. by G. L. V. Tyler, West Newton, Mass., to Isaac Snow, same place.

Spider Stubbs. Liver and white cocker spaniel bitch, whelped Feb. 23, 1890, by Capt. Stubbs out of Flossie T. by G. L. V. Tyler, West Newton, Mass., to F. Hayes, Waltham, Mass.

Ruby Mixer—Lucky Reckon whelp. Black, tan and white fox-terrier dog, whelped July 10, 1889, by Hillside Kennels, Lancaster, Mass., to A. H. Vogel, Milwaukee, Wis.

Hillside Dandy. White fox-terrier dog, whelped June, 1888, by Ruby Mixer out of Warren Lady, by Hillside Kennels, Lancaster, Mass., to C. T. Barney, New York.

Hillside Mtr. White fox-terrier dog, whelped March 17, 1889, by Ruby Mixer out of Shamsy Hillside Kennels, Lancaster, Mass., to R. B. Sawyer, Birmingham, Conn.

Hillside Rascal. Black and tan head, body white, fox-terrier dog, whelped July 10, 1889, by Ruby Mixer out of Lady Reckon, by Hillside Kennels, Lancaster, Mass., to Wm. H. Fenwick, Columbia, Pa.

Hillside Ruffian. Black, tan and white fox-terrier dog, whelped July 10, 1889, by Ruby Mixer out of Lady Reckon, by Hillside Kennels, Lancaster, Mass., to E. H. Gilbert, Ware, Mass.

Ruby Mixer—Richmond Dazzle whelp. Black, tan and white fox-terrier dogs, whelped Sept. 6, 1889, by Hillside Kennels, Lancaster, Mass., one each to W. R. Trask and G. H. Tilton, Boston, Mass., and Miss R. H. White, Brookline, Mass.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, May 30.—A special rifle shoot was held to-day by the Massachusetts Rifle Association at its range, and a large number of shooters were present. The weather conditions were good, and several fine scores were made at rest and off-hand. Following are the best scores made to-day, distance 100yds., standard American target:

J Francis.....114	Record Rest Match.	S T Gray.....93
L R Avey.....102	W Pomeroy.....101	
J B Fellows.....89	Record Pistol Match—50yds.	W Hawley.....80
H Severance.....89

W Charles.....85	S P Wadsworth.....78	M T Day.....87
S D Martin.....84	L R Avey.....76	

May 31.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day, with a rather small attendance of riflemen. The weather conditions were unfavorable, there being a bad 9 to 12 o'clock wind. Following are the best scores made to-day, 200yds., standard American target:

J Francis.....106	S T George.....95	A R Long.....90
W P Thompson.....103	A H Ballard.....94	
H Severance.....89	Record Pistol Match, 50yds.	W Charles.....87

T S Mann.....79	F W Chester.....69	J B Hobbs.....61

WILMINGTON, Del., May 30.—Memorial Day at Headmore range was unusually lively. The range was open early in the morning for an all-day shoot, and the marksmen brought their lunches with them in preparation for a full day's sport. The shooting started until evening, with but a short intermission. Many very fine scores were out of the question on account of the difficult "fish-tail" wind, besides blowing directly in the faces of the shooters all the afternoon. Following are the scores, standard American target, off-hand.

F J Darlington.....96	Pistol Match, 50yds.	W Johnson.....77
J Evans.....88	H Jackson.....82	
E J Darlington.....93	Revolver Match, 50yds.	O E Garmy.....77

H Simpson (mil).....71	W Floyd (mil).....66	B Wilson (mil).....45

Military Match, 200yds., Creedmoor Target.

Sgt J J Mountjoy.....44	Pvt W Johnson.....41	Lieut W Lloyd.....38
Sgt H Simpson.....43	Cor J Ferguson.....41	Pvt B Wilson.....37

CREEDMOOR, May 30.—The New York Rifle Club held a match shoot at the Creedmoor Range to-day. The contest was the tenth of a series to decide the championship of the club, and was a handicap at 200yds. range, and variable at 100yds. range. The contest was directly across the range. In spite of unfavorable conditions the average was good, as the following score shows:

Score. Hdcp. T ¹	Score. Hdcp. T ¹
E D Barker.....82	6 88 M Harrington.....74
F J Klein.....78	8 86 W B Daly.....64
Angel.....75	32 82 C Kine.....64
Geo Shorty.....75	6 81 Arthur.....64
C E Finch.....81	1 83 Ed Chadbourne.....54
J N Ostrom.....67	9 76 J S Hamilton.....52

The series lasts throughout the season, and at the close the man having the highest average wins the championship.

MILLER RIFLE CLUB.—The fourth annual rifle shoot of the Miller Rifle Club, of Hoboken, was held at Schutzen Park, West Hoboken, May 30. Several free-for-all matches were shot, and in one of these upward of 100 riflemen contested. The nature of the day was a prize contest at 200yds. range, open to members only. Here are the highest scores, the maximum being 75:

T Fitzsimmons.....66	F W Hogle.....62	Fr-d Brandt.....55
Wm Frutak.....66	J T Vogel.....61	J J Tobler.....54
Wm Batty.....63	Geo Schlicht.....61	J Meyer.....52
Geo Pabst.....63	C H Rogers.....59	F Korboch.....52
David Miller.....63	C Miller.....58	Sam'l Benson.....52
August Meyers.....63	M Sinter.....58	M Stenecke.....51

ROCHESTER, N. Y., May 20.—Please find enclosed record of Rochester Rifle Club's opening day for the season, shot the 27th on a range of 175yds. It was a sort of go-as-you-please contest, but the participants enjoyed it and better skill may be shown when they get some practice. There were two events:

Briggs.....53	65 Wood.....82	74
Angel.....55	42 Marlin.....73	73
McChesney.....55	47 Cooper.....65	65
Redmond.....70	67 King.....57	49
Hoelm.....83	85 Hart.....91	83
Tarba.....66	77 Meyers.....32	46
Hooker.....47	54 Bettridge.....37	69

430 447 E. R.

MONTREAL, May 24.—The Montreal Rifle Association held the first of its present season's monthly competitions at the Cote St. Luc range to-day, when there was a large turnout of riflemen, some 200 showing up on the field. With the exception that the light was very variable, which made good shooting somewhat difficult, the day was all that a rifleman could desire. Concurrently with the monthly competition an open match was shot. The matches resulted as under:

K Mathews.....31	30 25 86	D M McMartin.....31	25 31 77
J Hood.....30	27 27 84	G Cook.....33	21 39 74
R McAfee.....29	28 25 82	C L McAdam.....27	22 25 74
D McCrae.....29	25 25 79	R Bimmore.....26	22 26 74
J W. Marks.....27	28 24 79	W S Dowker.....22	24 27 73
M Pope.....25	31 23 79	O McArthur.....27	19 17 73
J Rigby.....27	21 25 78	J Currie.....28	22 27 71
J Rigby.....27	27 24 78	E Pratt.....27	21 25 71
W M Blacklock.....24	26 27 77	E Desbarats.....24	26 21 71

Open match: K. Mathews 83, J. Hood 84, R. McAfee 82, H. Todd 79, D. McCrae 79, J. W. Marks 79, M. Pope 79, J. Riddle 78.

VANCOUVER, B. C., May 19.—The second spoon competition in connection with the Vancouver Rifle Association took place on the range at Lynn's Farm, Vancouver, B. C., on Saturday, the 17th. Dr. Bell-Irving won the spoon with the excellent score of 94.

200, 500, 600, T ¹	200, 500, 600, T ¹
Dr B Irving.....31	34 29 94
C E Tisdall.....31	31 26 88
W H Forest.....29	29 28 87
H Shelton.....25	30 24 79
H A Brocklesby.....30	21 25 78

All scores below 70 out of 100. CHAS. E. TISDALE.

SYRACUSE, May 28.—Some good scores were made at the Valley Forge range, although the wind kept the targets guessing. Taber won the gold medal in the rest match and Stillman the silver. These were the records made, 10 shots, possible 120, rest match:

Stillman.....93	Robotham.....75	*Smith.....55
Taber.....97	*Knapp.....63	*Rarnum.....72
Leighton.....85	*Ball.....61	*Koeberl.....77
Saeley.....92	*Off-hand.....57	*Grossman.....61
Ward.....92		

Off-hand match:

J N Knapp.....52	Smith.....66	Reynolds.....71
Stillman.....66	Burk.....86	Koeberl.....78
Ball.....53	Barum.....65	Leighton.....62
Dalley.....68	Taber.....69	Seely.....70
Lathrop.....58	Robotham.....40	Ward.....55

ST. LOUIS, Mo., May 30.—Big scores was the rule in the last shoot held by the St. Louis Pistol Club, Billmeyer and Summerfield tied on 89, but the former made 92 on the shoot-off, against Summerfield 81, and won. For all shooting the club uses a 12yds. standard American target, possible in 10 shots 100. The score:

M C Billmeyer.....89	S G Dornin.....84	D Barker.....77
M Summerfield.....89	A McBean.....84	Jay J Schaefer.....77
W Bauer.....83	H Stussell.....83	Ben Grainger.....66
G Alexander.....87	O Wallace.....80	John Dinan.....62
L V D Perret.....87	Fred A Fodde.....79	

ZETTLER CLUB, May 28.—The Zettler Rifle Club of New York took formal possession of its new quarters at 331 Bowery to-night. The members assembled in front of their old stamping grounds, 27 Bowery, and marched from there to the new stand. After inspecting the many improvements and facilities of the gallery, which promises to become one of the most popular in the city, they sat down to a well-prepared supper in the spacious meeting room. Mr. Gus Zimmerman, the well-known New York rifle shooter, was the guest of the evening, and many were the good wishes of his club mates that he might be successful in his efforts at the Berlin competition.

NEWARK, N. J., May 30.—The spring shoot of the Newark Shooting Club took place to-day and was a pleasant affair, though the attendance was not very large. The shoot of the Miller Club, at Union Hill, drew quite a number of the experts in the morning, though several of them visited the park and put up some telling scores. The first flag in the morning was made by L. Flach, of the Zettler Rifle Club, and was worth \$5 to him. The last flag paid \$1 to J. A. Boyle, and \$5 to C. S. Zettler, George J. Zettler, Overburg and M. Dorrer, of the Zettler Rifle Club, and S. J. Lyon, of Collinsville, Conn., were among the shooters from out of town.

CARVER'S RIFLE TOOLS.—Prof. James W. Carver has a whole line of rifle implements on which he has expended all the experience of an expert workman and all the skill of a clever mechanic. There are adjustable sights, loaders, bullet moulds and awges, ball seaters, wind gauges and rubber protectors from gun head bruises. His cartridge loader for rifles is a very ingenious contrivance and includes a re and decapper, an expander, loading chamber and a crimper combined, and all can be carried in the pocket and used in the field as easily as at home. A glimpse into Carver's catalogue will show the rifleman and shotgun man many knick knacks which he could not comfortably get along without.

The annual match between the North Arm Rifle Club and the Vancouver Rifle Association took place on the rifle range at Lynn's farm and resulted: Vancouver 721, North Arm 675, a win for the home team by 47 points. Nine men in each team, who fired 5 shots each at 200, 500 and 600yds.—CHAS. E. TISDALE.

ROCHESTER, N. Y., May 27.—The Flour City Club, of this city, and a number of picked sharpshooters from Scottsville and its vicinity, had a social contest Thursday, on the grounds of the latter club. Owing to the lateness in getting together, but one string of 5 rounds for each club was shot, by the teams of 11. The distance was 177yds. The following score out of a possible 550 was made: Flour City 402, Scottsville 370. The Scottsville Club will renew the shoot such time as they might choose.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

June 5-7.—Annual Spring Tournament of Harrisburg Shooting Association, at Lion's Club, Harrisburg, Pa. Mainmate targets. H. M. F. Worden, Sec'y, Box 468, Harrisburg, Pa.

June 9-13.—New York State Association Tournament, at Lyons, N. Y. W. S. Gavitt, Sec'y.

June 10-13.—Thirteenth Annual Convention and Tournament of the Iowa State Association for the Protection of Fish and Game, at Davenport, Iowa. J. W. Howard, Secretary.

June 17.—Middlesex Gun Club All-Day Shoot, at Dunellen, N. J. Live and clay bird race. Ten bird race, \$10 entry.

June 17-20.—Tournament Rocky Mountain Sportsmen's Association, at Cheyenne, Wyo. W. E. Ostrander, Sec'y, Denver, Colo.

June 24-27.—Tournament at Dayton, Ohio, under management of Rollo O. Helkes and W. Scott McDonald. \$1,000 guaranteed.

July 1.—Springfield, Mass., Shooting Club Tournament, with guaranteed purse of \$1,000. Sec'y, C. G. Corry, Springfield, Mass.

Aug. 18-23.—Third Annual Keystone Tournament, at Cory, Pa. Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E. Limberg, Sec'y.

THE ILLINOIS SHOOT.

CHICAGO, June 4.—[Special to Forest and Stream].—The Illinois shoot is a screaming success. There were 61 entries for the L. C. C. Smith cup race. The cup was won by Black, of Keithsburg, with C. E. Cahoon second. Sixty-eight entered for the diamond badge; shooting for that is still progressing. The weather is fine, everything is running smoothly, and the prospects are good for fun all the week. Will send full report for next issue.

E. HUGH.

THE MILWAUKEE TOURNAMENT.

MILWAUKEE, May 28.—To-day opened the fifth annual tournament of the Peoria Gun Club. The wind was the only thing the contestants complained of, for both live and bluebirds were strongly affected by it. Otherwise the day was perfect and delightful. The attendance at the tournament was large. Some of those who were in attendance have been here before and are well known for their good work. The most notable figure among them was D. Starin, of Whitewater, who lost both legs during the war, but still manages to get around very well. He is a passionate lover of shooting, and has become an expert in the handling of his gun. J. A. Ruble, of Beloit, was a member of the trapshooters' team that passed through here last spring. S. A. Tucker, who represents a gun manufacturer in New York city, M. A. Keller, of Batavia, and W. T. Don, of New York city, were among those present from the East. E. B. Harris and J. T. Anderson from Chicago. Others were G. S. Sperber, of Whitewater; E. C. Sherwin, Brandon, B. Anderson, Fond du Lac; J. H. Westover, Pawaukee; R. Godfrey, Whitewater; E. Wehmhoff, Burlington. Charles Fricker and W. A. Haig were scorers, and Henry A. Managold referee. When the day's programme had been shot through, John E. Burnham was the hero and proudest man on the field, having made four medals. He proved the crack shot of the day and captured all the first moneys in the second contest. Twenty-nine entries were made for the first contest at 10 single Peoria blackbirds, three traps, 18 ds. rise. The entrance fee was \$1, and three moneys, 50, 30 and 20 per cent.

E C Sherwin.....10	F Bove.....6	F Stuth.....7
Geo Atwell.....6	J A Ruble.....9	H F Seefeld.....8
M Westover.....8	E B Harris.....7	S Mennier.....8
Schmidt.....5	J F Burnham.....8	P F Stannard.....9
A Huse.....6	E J Baldwin.....5	H Man gold.....4
W A Bennett.....7	Dr J L Williams.....9	A W Friese.....9
B Anderson.....8	L J Petit.....7	R Godfrey.....8
W Clemens.....7	C H John.....10	A Bailey.....9
E Wehmhoff.....4	H Brand.....8	G Peck, Jr.....5
H A Schaefer.....10	E Stannard.....8	

The second contest was at 5 singles and 5 pairs standard targets, 3 traps, 18 ds. rise for single and 15 for doubles, entrance \$2, including birds, 3 moneys, 40,

The up-set race, which was to sail, capsized canoe, right it and sail to a stakeboat, was contested only by Butler, Gray and Goddard, and was won by Gray, Butler second.

Five good men appeared for the one-man double-blade paddling race. Knappe, of Springfield; Perkins, of Lowell; Putnam, of Lowell; and Corcoran, of Boston. The distance was 1 1/2 miles, with a half a mile. The five started together. Putnam was the best, except Perkins, who when two lengths behind developed great staying powers, crept up and collared Putnam. The last quarter a mile they paddled neck and neck. The half mile was finished closely, both men crossing the line apparently together, that Putnam was the victor. A decision must be given to the race. Perkins. A decision was subsequently rendered in favor of Perkins on competent testimony.

AMERICAN CANOE ASSOCIATION.

The unfinished programme of Saturday was finished Sunday, the principal event was a 4½ mile sailing race, for a solid silver cup, given by the Lowell and Dracut Sailing Club. The starters were: Paul Butler, Lowell; Vesper, Howard Gray, Lowell; V. C. E. Whitten, Lynn; Alema M. D. S. Goddard, Lowell; Blanche. The wind was fresh from the N.E. and very puffy. "All the little waves had their nightcaps on," as the boys sing. It was a hard race. Goddard was put out of it by the breaking of his seat, dumping him into the wet to windward. Whitten broke his rudder on the second round. The race was therefore between Gray and Butler. Butler led Gray a pretty race around to the last buoy on the second round, when a gifting, his sliding seat stuck fast and a puff laid him flat. Gray passed him, but himself shared the same fate on at the first buoy on the last round. Butler was able to regain his lead and he kept it to the finish. Time:

	Start.	Finish.	Elapsed.
Butler	1 04 25	1 54 00	0 49 35
Gray	1 04 28	1 54 40	0 50 12

A consolation sailing race, in which Brazer, Whitten and Campbell competed, was won by Brazer. It was not especially interesting. Knappe, Springfield, won the "any man, any boat" paddling race. Time and distance made Knappe his opponent. Perkins and Putnam defeated Knappe and Metcalf, Holyoke, in the tandem standing paddling.

The list of prizes and prize winners is this: Paddling, ½ mile straightaway, first, W. B. Perkins, Vesper, Somer, cup; second, A. L. Putnam, Lake Side, Worcester, mug; combined sailing and paddling, Knappe, Springfield, Gray, Vesper, Lowell, loving cup; second, Knappe, Springfield, mug; sailing, unlimited, cup, Paul Butler, Vesper, Lowell, cup; second, Howard Gray, Vesper, Lowell, mug; tandem, double blade, Cartwright, Putnam, Worcester, mug; tandem, single blade, first, Perkins and Brazer, Vesper, Lowell; second, Apollonio, Shu-Shu-Gah, Winchester, and H. D. Murphy, Putnam, Boston; sailing, upset, Howard Gray, Vesper, Lowell, mug; standing paddling, tandem, Putnam and Perkins, mug; novelty, H. H. Forbush, Puritan, Boston, cup; 100 yds. race, first, E. C. Knappe, Springfield, cup, presented by members of the Vesper Boat Club; consolation sailing, first, R. F. Brazer, Vesper, Lowell, mug; second, C. E. Whitten, mug; paddling, any man, any boat, Knappe, Springfield, spruce paddle; paddling in fours, first, Richardson and Apollonio, Shu-Shu-Gah, Cartwright and Murphy, Putnam, Boston, pins; Lowell and Draeut H. R. R. cup, Paul Butler, Vesper, Lowell. The prizes were presented Sunday evening around the camp-fire.

Among those who were present were the following: Arthur Gage, commodore; Ralph F. Brazer, purser; Paul Butler, Edward Ellingwood, Walter B. Perkins, Walter U. Lawson, D. S. Goddard, John R. Martin, S. D. Butterworth, G. H. Jenkinson, F. T. Walker, F. P. Marble, Howard Gray, A. S. Guild, C. F. Harris, J. C. Norcross, Vesper Boat Club, Lowell; E. C. Lowell, E. H. Heath and F. W. Merrill, F. H. Croby, Wameit C. C., Lowell; E. C. Knappe, Springfield C. C., Springfield; F. H. Metcalf, Holyoke C. C., Holyoke; Commodore Baxter, J. H. Hutchins, James W. Cartwright, H. D. Murphy, A. H. Forbush, S. A. Brown, Puritan C. C., Boston; Geo. E. Armstrong, James Craddock, Samuel M. Vales, A. B. Lyon, South Boston C. C.; J. H. Campbell, J. N. B. Lytle, Vesper, Charles E. Whitten, Sagamore C. C., Lynn; Clarence Murphy, Salem; R. K. Kim, stayed camp; E. A. Sawyer, Amesbury; H. W. Richards, R. Apollonio, Shu-Shu-Gah C. C., Winchester; A. S. Putnam, A. H. Lanke, Lakeside C. C., Worcester.

The meet was the most successful ever held by the Eastern Division; camping site, arrangements, everything in connection with the camp, was satisfactory. Those who could do so, and they were about two dozen in number, arrived Monday morning; then they reluctantly grasped hands in parting and promised to meet one another at Peconic Bay in August.

THE PASSAIC RIVER MEET, MAY 30, 31.

THE Passaic River plays an important part in the early history of American canoeing as, but a few years after the sport was introduced in New York, it took root on the Passaic in a quiet way, chiefly through the efforts of a few amateur builders of canvas canoes, Mr. J. F. West and others. In 1875 some long cruises were made, and in the following year a party of four or five cruised from the headquarters, the old Dutch house above Newark, by way of Morris Canal and Delaware River to the Centennial Exhibition at Philadelphia; returning by the Delaware and Raritan Canal and Staten Island Sound. In spite of this good beginning so long ago, the growth of canoeing on the Passaic was but slow in the early days of the American Canoe Association; but the last half dozen years have witnessed a revival, and now the Passaic is one of the best canoeing localities of the Atlantic States. Canoe clubs are numerous and generally in a prosperous condition, and on any special occasion the river turns out a very creditable representation.

A meet early in the season has been an institution for four years, that of the past week being very successful. The camp site is very small, as that of 1888, on the east shore of Newark Bay, just abreast of Paterson, where a high bluff looks a clear stretch of water 5 miles long and 1½ miles wide, with no interruption from traffic and with usually good breezes. The distance either way, up to Newark or down through the Kills to Staten Island and Brooklyn, is only 8 to 10 miles, so that the camp is readily reached, though nearly all the members are A. C. A. men, the camp was entirely independent of the Association, being managed by a committee chosen by the various clubs on the river. It was not, however, confined to Passaic canoeists only, as a number were present from Yonkers, New York and Hoboken.

The programme contained three record races, open to Passaic canoeists only, the prize for the greatest number of points being the new perpetual trophy cup to be held for the following year. Naturally the terms of the record were not understood by all, as many who entered, for a high bluff looks a clear stretch of water 5 miles long and 1½ miles wide, with no interruption from traffic and with usually good breezes. The distance either way, up to Newark or down through the Kills to Staten Island and Brooklyn, is only 8 to 10 miles, so that the camp is readily reached, though nearly all the members are A. C. A. men, the camp was entirely independent of the Association, being managed by a committee chosen by the various clubs on the river. It was not, however, confined to Passaic canoeists only, as a number were present from Yonkers, New York and Hoboken.

The programme contained three record races, open to Passaic canoeists only, the prize for the greatest number of points being the new perpetual trophy cup to be held for the following year. Naturally the terms of the record were not understood by all, as many who entered, for a high bluff looks a clear stretch of water 5 miles long and 1½ miles wide, with no interruption from traffic and with usually good breezes. The distance either way, up to Newark or down through the Kills to Staten Island and Brooklyn, is only 8 to 10 miles, so that the camp is readily reached, though nearly all the members are A. C. A. men, the camp was entirely independent of the Association, being managed by a committee chosen by the various clubs on the river. It was not, however, confined to Passaic canoeists only, as a number were present from Yonkers, New York and Hoboken.

The turnout of new canoes was something unusual, there being nearly a dozen new cracks to be tried in their first race. Messrs. Quick and Oxholm, of Yonkers had each a handsome Kingle canoe, the former winning most of the honors of the meet. Beside the Vesper canoe Lieda, owned by Mr. Schieffelin, Com. Nadal, N. Y. C. C., had a duplicate of her, built by Thos. MacWhirter, Mr. Schnyler, of the Arlingtons, had a new Everson racer; Dr. Cox, of the new Crescent C. C., had a new racer designed and built, a very good one, a very good piece of amateur work. Three of the new boats were of the same model, designed by Mr. W. P. Stephens and built, one by MacWhirter, for Mr. W. W. Howard, N. Y. C. C. and the other two by the St. Lawrence Skiff, C. & S. L. Co., for Mr. Palmer, of the Ianthe, and Rear-Com. Dorland, of the Arlington C. C.

These boats were designed for racing and cruising, in so far as the two can be combined, and while they promise to be fast there can be no question of their merits as to design. The design is for a tall mast to leap in the well, with ample storage space. Mr. Howard's canoe, Toltec, is fitted solely for racing, with a small oval well and a long board in the center of the boat. MacWhirter has done excellent work on the hull, following the Vesper construction. The two Clayton built boats are very handsome smooth skin craft, with the board well forward, two watertight compartments, and over 6 ft. between the bulkheads. In the design much attention has been paid to stability, and the boats are very stiff, but at the same time with fine lines. Toltec has her mizen mast well amidships, her sails, two Wilson leg-o'-mutton of linen, being arranged with the mizen larger than the mainsail. The other two have each a mast tube aft the well for a small mizen in cruising, and the near the middle of the boat is a movable thwart steering, the start being made down wind, the fleet running off wing and wing with a strong lee-going tide, under them. Toltec was one of the last over the line, but when the fleet strung out on the reach to second mark, stemming the ebb tide in mid-chan-

nel, she and Neriana ran to the front, and after a couple of long boards on the last leg the order was Neriana, Toltec, Uno and Beta. At the last mark Uno passed Toltec and took second place, finally taking first place on the second leg of the second round. On the Neriana now being fourth. On the final round Uno finished easily ahead, while Beta threatened to go to leeward of the buoy, Toltec being just to windward of her. She weathered it, however, and beat Toltec by several feet overlap, Neriana still being fourth. The full summary of the races is as follows, the prizes, it will be noticed, going largely to Yonkers:

Event No. 1. Unlimited sailing, 3 rounds, 4½ miles:	
Uno, H. L. Quick, Yonkers.	1
Beta, T. S. Oxholm, Yonkers.	2
Toltec, W. W. Howard, New York.	3
Neriana, L. B. Palmer, Ianthe.	4
Gyrus, F. A. Phillips, Yonkers.	5
*Passaic, C. P. Douglas, Ianthe.	6
*Lieda, S. Schieffelin, New York.	7
*Kisco, W. B. Dailey, Arlington.	8
*Mincola, Geo. Baxter, Ianthe.	9
*Sybil, E. W. Edinger, Crescent.	10
*Nipsic, C. V. Schuyler, Arlington.	11
Pterodactyle, B. H. Nadal, New York.	Withdraw.
*Crescent, C. J. Pockman, Crescent.	Withdraw.

Event No. 2. Sailing and paddling:	
*Passaic, Geo. P. Douglas, Ianthe.	1
Neriana, L. B. Palmer, Ianthe.	2
*Nipsic, C. V. Schuyler, Arlington.	3

Event No. 3. Paddling:	
Uno, H. L. Quick, Yonkers.	1
*Nipsic, C. V. Schuyler, Arlington.	2
*Passaic, Geo. P. Douglas, Ianthe.	3
*Crescent, C. J. Pockman, Crescent.	4
*What, W. Scott, Crescent.	5
*Water Witch, F. B. Collins, Bayonne.	6
*Neriana, L. B. Palmer, Ianthe.	7
*Sybil, E. W. Edinger, Crescent.	8
*Eligible for record.	9

Event No. 4. Junior paddling:	
Uno, H. L. Quick, Yonkers.	1
Sybil, E. W. Edinger, Crescent.	2
Water Witch, F. B. Collins, Bayonne.	3
Kisco, W. B. Dailey, Arlington.	4
Ibnel, J. Duguid, Jr., Ianthe.	5
Minerva, D. Kretzmer, Hoboken.	6

Event No. 5. Junior sailing:	
Kisco, W. B. Dailey, Arlington.	1
Nipsic, C. V. Schuyler, Arlington.	2
What, W. Scott, Crescent.	3
Mincola, G. P. Douglas, Ianthe.	4
Crescent, C. J. Pockman, Crescent.	5
Cynisca, Richard Hobart, Ianthe.	6
Lasata, George Merze, Hoboken.	7
Nadid, Geo. Abner, Arlington.	8
Sybil, E. W. Edinger, Crescent.	9
Sa Fox, J. Warnecke, Hoboken.	10
Yolande, L. Kretzmer, Hoboken.	11
Pterodactyle, B. H. Nadal, New York.	12
Bachelor, J. MacFarlane, Ianthe.	13
Mignon, E. Charles, Crescent.	14
Minerva, D. Kretzmer, Hoboken.	15

Event No. 6. Maneuvering:	
Lieda, S. Schieffelin, New York.	1
Neriana, L. B. Palmer, Ianthe.	2
Kisco, W. B. Dailey, Arlington.	3
Nipsic, C. V. Schuyler, Arlington.	4
Sa Fox, J. Warnecke, Hoboken.	5
—, O. F. Coe, Crescent.	6

Event No. 7. Sailing Upset:	
Passaic, Geo. P. Douglas, Ianthe.	1
Nipsic, C. V. Schuyler, Arlington.	2
Lieda, S. Schieffelin, New York.	3
Neriana, L. P. Palmer, Ianthe.	4

Event No. 8. Sailing, Unclassified: Not sailed.

Event No. 9. Tandem, Paddling:	
Uno, Quick and Simpson, Yonkers.	1
Water Witch, Collins Bros., Bayonne.	2
Mignon, Edinger and Chable, Crescent.	3

Event No. 10. Paddling, Any Canoe:	
Surprise, L. Simpson, Yonkers.	1
Aphrodite, C. V. Schuyler, Arlington.	2
Neriana, L. B. Palmer, Ianthe.	3
Red Ant, C. T. Hopf, Arlington.	4

Event No. 11. Paddling Upset:	
Kisco, W. B. Dailey, Arlington.	1
Nipsic, C. V. Schuyler, Arlington.	2
Lieda, S. Schieffelin, New York.	3

KNICKERBOCKER C. C. REGATTA, MAY 30.

THE annual spring regatta of the Knickerbocker C. C. was held on Memorial Day off the club house at 152d Street on the Hudson, a number of ladies and guests being present. Though there were but few entries the races were well contested in most cases. The paddling race resulted as follows:

Wraith, D. D. and T. A. Gessler, Lake Hopatcong.	1
Eros, F. C. Moore, Knickerbocker.	2
Midget, J. K. Hand, Knickerbocker.	3
Junaita, F. B. Smith, Knickerbocker.	4

Upset race:	
Wraith, T. A. Gessler, Lake Hopatcong.	1
Midget, J. K. Hand, Knickerbocker.	2
Eros, F. C. Moore, Knickerbocker.	3

Sailing race:	
Ronnie, C. B. Vaux, Yonkers.	1
Unnamed, E. B. Rossie, Yonkers.	2
Eros, F. C. Moore, Knickerbocker.	3

Wraith did not enter; owing to a broken rudder.

Tandem paddling:	
Wraith, D. D. and T. A. Gessler.	1
Eros, F. C. Moore and J. K. Hand.	2
Mirakra, Nelson Griffin and Hugh Taylor.	3

Hurly-scurry race:	
Wraith, D. D. and T. A. Gessler.	1
Midget, J. K. Hand.	2
Mirakra, Hugh Taylor.	3
Eros, F. C. Moore.	4

Tournament:	
Wraith, D. D. and T. A. Gessler.	1
Midget, F. C. Moore and J. K. Hand.	2

RED DRAGON C. C.—The spring regatta of the Red Dragon C. C. was held on May 30. The sailing race started at 2:30:	
Oscola, F. W. Noyes.	3 13 00
Valesca, H. M. Kramer.	3 19 00
Rambler, B. R. Fortner.	3 21 00
Thetis, D. M. Bond.	3 23 00
Nacoochee, D. A. McCormick.	3 24 00
Enid, A. S. Fennimore.	Not timed.
Cuckoo, C. Fleishman.	Not timed.

Triangle course, distance 3 miles.	
Tandem paddling:	
Enid, Fennimore and McCormick.	1
Valesca, Kramer and Bond.	2
Pencie, Norgave and Fleishman.	3
Thetis, Bond and Bender.	4

Class IV. Paddling:	
Valesca, Kramer.	1
Thetis, Bond.	2
Cuckoo, Fleishman.	3
Enid, Fennimore.	4

A. C. A. MEMBERSHIP.—Eastern Division: Henry Whiting, Fred W. Merrill, E. W. Huntington, Harry L. Talbot, Dr. Edward A. Lowe, James Stewart Murphy, E. B. Conant, W. E. Savage, Lowell; Edward A. Poyen, Amesbury; Frank E. Johnson, Joseph B. Center, Lynn; Herman D. Murphy, Winchester; George B. Heyworth, Waltham; George E. Webb, Worcester. Atlantic Division: Harry E. Haviland, Philadelphia, Pa. Central Division: E. D. Trencle, 11 D. McConnell, M. J. Wilcox, N. Y.; and E. Pease, Fred S. Payne and Frank Curtis, Ticonderoga, N. Y.; and O. Shaler, Jr., Troy, N. Y.

"NESSMUK."—Trenton, N. J.—*Editor Forest and Stream:* Sadly I read in your issue of May 8 of the death of the noble-hearted "Nessmuk." How true to the last to the love engrafted in his being by years of contact and study! It was to me like reading of the loss of a dear friend, for, knowing him as I did through his contributions to the *FOREST AND STREAM* and in his book "Woodcraft," I felt that I had lost a pleasure in common with many others. In following his accounts of camps and cruises, and will ever remember his kindly features. Many of my own camps have been cheered through the power of his verse and prose, truly the light of a happy disposition aptly caught in printed pages. And as we think of him about the camp-fire, on the cruise or following the trail, communing with phases of nature so dear to him, let us breathe "Peace to the ashes of the noble woodsman."—1640.

SCHENECTADY C. C.—A canoe club has been organized at Schenectady, N. Y., with an active membership of about thirty. The following officers have been elected: Com. Everett Smith; Vice-Com. Wm. H. Peckham; Sec., Edwin G. Conder; Treas., August Henke; Capt., Edgar D. Joyner; Lieut., Harry Fowler. Com. Smith has presented the club with a cup, which will be contested every year, and will be known as the Commodore's Cup. The Mohawk at Schenectady offers fine facilities for boating, and much interest is manifested in the new organization.

CRESCENT C. C.—This club, organized last fall at Greenville, N. J., includes a number of members of the late Essex C. C. A good house, 25-35 ft., with a second story over the rear part, has been built on the Newark Bay shore at Greenville, at the foot of Danforth avenue, and was opened on May 22.

NEW YORK C. C.—The new house of this club is nearly completed, and will be formally opened for the regatta of June 21. The old house has been sold to a boat club at Hoboken.

ORANGE C. C.—This young club opened its new house at West Arlington on the Passaic River on May 27, a number of well known canoeists being present.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price \$1.50. The Canoe Aurora. By G. A. Neide. Price \$1. Canoe Handling. By J. B. Vauz. Price \$1. Canoe and Camp Cookery. By H. Bishop. Price \$1.50. Canoe and Camp Cookery. By "Seneca." Price \$1.

Pachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden. U. S. Hydrographic Office. Large quarto, with 53 lithographic plates. Price \$1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FIXTURES.

JUNE.	
5. Seawanhaka, Special.	17. Cooper's Point, Kinsey Cup.
7. Quincey, First City.	18. Delaware River.
7. Massachusetts, Club, Dorchester.	18. Corinthian, Annual, N. Y.
7. So. Boston Mus. Fleet, Pen.	18. Columbia, Annual, Open, N. Y.
7. Savia Hill, Club, Savin Hill.	18. Pleon, Pennant, Marblehead.
7. Great Head, Annual Open.	19. New York, Annual, N. Y.
7. Great Head.	21. Quincey, 1st Cham. Quincey.

17. Atlantic, Annual, New York.	30. Great Head, Moonlight Sail, Great Head.

THE FLYING PONTON.

Editor Forest and Stream: In your issue of May 29, under the head of "Mosquito Fisher," I find reference to the yawl Bouncer, which the Builder "believes is the pioneer of an entirely new type of boat." From the description given she seems to be identical—except in rig—with two boats built by Mr. Geo. W. Shaw of this place, as far back as 1848. He built another in 1875.

These Shaw boats were—taking description of Bouncer: First—"Round bottom with dead rise." Second—"Sides not parallel or straight, but bent longitudinally, forming each a segment of a circle, making her much narrower at bow and stern than amidships." Third—"Had not square ends, bow and stern form segments of circle," etc.

Fourth—"Here is where the boats differ. Instead of sharpie rig they had the regular jib and mainsail rig."

You will see from the above that the descriptions tally in every respect except as to rig.

These boats were remarkably fast in smooth water, but were not so good in a chop sea.

In the Newburgh regatta of Aug. 1, 1876, with a westerly wind and smooth water, the A. S. Ring—the only boat of this model in the race—easily led the boats of her class until the skipper let the sheet jam just as a squall struck her, thereby finishing the race as far as she was concerned. In this race there were such boats as W. R. Brown, Susie S., Coquette, Sophia Emma, etc., thirty-one in all; the Sophia Emma being in same class with A. S. Ring. I write the above in regard to our Newburgh boat, not to detract from Mr. Clapham's reputation as a designer of fast boats, but that my city may have the credit for whatever merit they may be in this model, which I believe was originated here in 1848 by Mr. Geo. W. Shaw. The last of the line now lies propped up against a shed down at the shipyard.

Should the Bouncer cruise this way at any time I should be pleased to compare the models, and also tender her captain the freedom of the Newburgh Canoe and Boating Association club house during his stay.

NATE S. SMITH.

NO "FIELD" IN THIS.

IN the interviews lately reported, Mr. Geo. L. Schnyler ascribes all objections to the new deed to Mr. Dixon Kemp and the field. The following is an editorial from the *Morine Journal*, an ultra American paper, commanded by the "red" far and yachismen, Captain Samuels, who has always had a habit of forming his own opinions without help from foreign sources. The condemnation of the new deed is certainly plain and emphatic enough, and from a source whose nationality cannot be questioned. The *Morine Journal* says:

"Lord Dunmore has written to Mr. J. R. Bask, of the New York Y. C., giving his reasons for declining the America Cup. His objections are summed up in the fact of the excessive demands by the new deed of gift. The Englishman is right enough. Previous conditions were sufficiently exacting. There may be a generous disposition on the part of the members of the New York Y. C. to mutually waive, by common consent, all the later exactions, but even so, the challenger, in winning the cup and championship, would be bound by the 'red' in accepting any future challenge. It will not do to whip the devil around the stump; the matter cannot be condoned. New arrangements should be made if international yacht racing is to be continued. The discontinuance of this noble sport is particularly unfortunate just at this time, when shipbuilding and maritime matters are being discussed so prominently. A race now would be an influence on the right side."

MEMORIAL DAY, MAY 30.

THE weather this year throughout the country was by no means fitted for racing, the winds being light and fluky, but at the same time the most favorable for any sort of outing afloat, warm and sunny, but with a pleasant draft of air to temper the heat. The day was observed everywhere as the grand spring holiday of the great army of outers, oarsmen, canoeists, runners, ball players and picnickers, as well as yachtsmen; and if the pleasures of the latter were marred by the go of the winds, they were at least sacrificed to the good of the majority. But few of the races were of any great interest in many cases, they resulted in postponements or mere drifts, but every one who owned a yacht or knew a man who did was afloat, and all apparently enjoying themselves. Many of the clubs wisely gave up any attempt to race, contenting themselves with a sail and a dinner or reception at the club house. On the whole, the day served its purpose well as an introduction to the more serious business of racing, which begins this week or next.

ATLANTIC Y. C.—BAY RIDGE.

The new house of the club is still far from completion inside, the plasterers being in almost undisputed possession, but the plank walk from the bluff to the bulkhead is completed, the old basin is dredged out, the new one, with a large float in front of the house, is finished, while the flagstaff is in place with balliards rove, and a gun is mounted on the wide platform in front. The formal opening of the house under these conditions was rather a brief ceremony, but early on Friday morning the gun was fired and the flag hoisted for the first time, leaving to a later date the house-warming with which the Atlantic will open their new home. The opening sail, which has always been a feature of the club, was set for 10:45, the larger yachts rounding the Southwest Spit and the smaller buoy 14. No times were taken and no prizes given. The wind was very light, but a cloudy sky and a few drops of rain in the afternoon, but later the sky cleared, with more wind. Com. Lawton, in the 49-footer Chispa, led the fleet which included Tidal Wave, Crusader, Triton, Grayling and Cavalier, schooners, and the singletickers Shamrock, Rover, Hypatia, Marjorie, Chocotaw, Polly, Arrow, Frolic, Amaranth, Stella, Clara, Geni, Nepenthe and Bijou. The sail was a pleasant one, but not very exciting, the fleet returning about 4 P. M.

KNICKERBOCKER Y. C.—PORT MORRIS, N. Y.

The annual spring regatta of the Knickerbocker Y. C. was sailed successfully in spite of calms and light airs. The start was made at 11:35, over the 20 mile course around Gangway Buoy. Kathleen, Mr. Zerega's 30-footer, ran away from the fleet at first, but after a lobster and a half she was overtaken and became more exciting for a time. It was not until 3:30:55 that Kathleen turned the outer mark, the others being timed: Edna, 3:38 10; Myra, 3:40 10; Maggie, 3:40 18; Giggle, 3:40 18; Black Hawk, 3:40 47; Rosetta A., 3:40 47. On the way home Kathleen, finishing an easy winner of her class, prize and also Com. Rousseau's special prize for the fastest elapsed time. Though the race was very fluky, Kathleen did well in beating, in this weather, the fast catboat Edna. The full times were:

The judges were Capt. E. H. Bradley, E. H. Dayton, A. D. Sanford of Saugatuck, and Frances Leonard of Norwalk.

BROOKLYN Y. C.—GRAVESEND BAY.

The review and opening sail of the Brooklyn Y. C. took place off the club house, the fleet of twenty-seven yachts anchoring off Norton's point, where Com. Sutton and Pres. O'Reilly rowed through the fleet in a barge. After this inspection the fleet sailed around buoy 11, returning for dinner at the club house.

NEW ROCHELLE Y. C.

The calm weather postponed the start of the New Rochelle Y. C. special regatta until 2 P. M., when a very good race was sailed, the times being:

35FT. CLASS.			
	Start.	Finish.	Elapsed.
Eurybia.....	2 53 40	5 21 00	2 27 20
Aglaia.....	2 54 20	5 30 20	2 30 19
Wacondah.....	2 50 00	5 39 24	2 46 24

50FT. CLASS.			
	Start.	Finish.	Elapsed.
Kangaroo.....	2 51 43	5 34 31	2 42 48
Lena.....	2 51 20	5 45 30	2 44 10
Amazon.....	2 52 12	5 38 16	2 47 04

Aglaia is a Boston keel sloop, formerly the Maud. This was her first race in New York. Amazon protested Kangaroo for fouling. The prizes were \$50 in each class.

KILL VON KULL Y. C.—PORT RICHMOND, S. I.

This promising young club sailed its first regatta on May 30 over a mile triangular course on New York Bay and the Kill von Kull between Shooters Island and the long bridge. The wind was very light and the racing slow. The winners were: Cat-rigged yachts, 25ft. and under, Our Own, New York Bay Y. C., 3h. 55m. 20s.; corrected time 3h. 52m. 32s. Second, Bessie B., Kill von Kull Y. C. Cat-rigged yachts, 20ft. and under, Bon Ton, Kill von Kull Y. C., first; second Playmate, Staten Island Athletic Club. Cat-rigged yachts, 15ft. Galvater, New York Bay Y. C., actual time 3h. 50m.; corrected time 3h. 53s. second, Wike Wake, Kill von Kull Y. C. Jib and mainsail catboat boats, 20 to 30ft., Lydia D., Corinthian Y. C., 3h. 52m. 36s.; second, Lotos, Kill von Kull Y. C.

NEWARK Y. C.—BAYONNE-NEWARK BAY.

The Newark Y. C. has now taken up its quarters at Bayonne, on Newark Bay, where a pleasant and convenient house has just been completed, with a long gangway and float, a stern launch, carries the members to and from Newark. The club house was opened and the first race of the season sailed on Friday, the winners being as follows:

CLASS A—SLOOPS OVER 35FT.			
	Start.	Finish.	Elapsed.
Orestes.....	1 23 40	1 09 55	1 09 55
CLASS B—SLOOPS UNDER 35FT.			
	Start.	Finish.	Elapsed.

CLASS D—OPEN CATBOATS.			
	Start.	Finish.	Elapsed.
Triton.....	3 08 00	4 45 47	1 37 47
CLASS E—CATBOAT SLOOPS.			
	Start.	Finish.	Elapsed.
Edna.....	3 05 00	4 41 20	1 33 20

E. C. and T. A. Hine were judge and timekeeper respectively.

SOUTH BOSTON Y. C.

The open regatta of the South Boston Y. C. was sailed in a good west wind, being very successful. The classes and prizes were: First class, 40ft. and over, measuring 23ft. and up to 40ft. First prize, keels, \$20; second prize, keels, \$10. Same for centerboards.

Second class—All yachts measuring 23ft. and less than 23ft. First prize, keels, \$15; second prize, keels, \$10; third prize, keels, \$5. Same for centerboards. Third class—Centerboard yachts measuring 19ft. and less than 23ft. and all keel yachts under 23ft. First prize, keels, \$15; second prize, keels, \$10; third prize, keels, \$5. Same for centerboards. Fourth class—Centerboard yachts measuring 15ft. and less than 19ft. First prize, keels, \$10; second prize, keels, \$5; third prize, keels, \$3. Fifth class—All boats under 15ft. First prize, keels, \$7; second prize, keels, \$4; third prize, keels, \$2. The courses were: For the first class was out and return through the Narrows, 18 miles; second class 10 miles, third class 9 miles, fourth class 6 miles, fifth class 4 miles. The full times were:

C. P. H., Broke-Bow, Neb.—A bird of a species unknown in this locality was wounded and captured by a farmer in this city May 10. The description as near as I could obtain it is as follows: Bill about $\frac{1}{16}$ in. length, transparent red with dark band running transversely back from tip, curved slightly downward. Head black or very dark slate. Neck, breast, belly and tail pure white. Back and wing covers dark colored. Wing tips speckled black and white. Eyes color bright hazel, a narrow rim of white around the eye. Legs red. The bill red. Legs mahogany or deep red. Feet webbed. The wing tips and tail are a dusky tinge when folded crossing each other at root of tail. It is evidently a species of gull, but unlike the common sea gull of pure white, which is plentiful among our small lakes. The bird seemed tired, as if from a long journey, and must have been traveling alone, as no mate was seen. It was not timid, and ate freely from the hand. It died, from no apparent cause, three days after it was captured. It will be interesting to know if this bird is a new range in which it is commonly found? Ans. This is probably a black-tailed gull but it may be Bonaparte's gull, or possibly a term of some species. We cannot positively identify it from such a general description.

Near Thirteenth Street,

NEW YORK.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1, black bass; No. 2, bass and pickerel; No. 3, muscalonge, salmon trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction, one minnow having been known to catch twenty-five bass before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

Shells, Club "War Canoes," etc.

This cut is from genuine photograph of man standing on gunwale of skiff, weight of man 160 lbs. Boat 18 ft. long, 40 in. beam midship, weight 140 lbs. No ballast; no water shipped. Any person can do this. No trick. The easiest rowing and fastest sailing skiff made.
Agent for N. Y. City and vicinity, JNO. J. BOCKEE, 47 Dey st., New York. Boats on exhibit. Send for Catalogue.

SYRACUSE, N. Y., Oct. 14, 1889.
H. M. Sprague, Boat Builder, Parishville, N. Y.:
DEAR SIR—I can hardly say on paper how well I like your boats, and your Patent Rubber Improvement is just the thing, at least that is the way I find it by use of two of your boats the last summer on the river by all my family, and any boat that can stand the hard usage a boat gets with six or eight children in and out of same two months in summer every hour of day and have the boats stand the wear, is good enough and better than words.
Respectfully, S. B. MERRILL.

Now is your chance to buy a **Sprague Patent Rubber-Packed Boat**. Over fifty now ready for immediate delivery, from 10 to 16 ft. Over 50 in use giving perfect satisfaction; wherever known and used they are the established favorite. I am determined to have them placed before sportsmen more generally. Don't fail to send 2-cent stamp for 1890 catalogue. Address

H. M. SPRAGUE,

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES,
With Notes on the Origin, Customs and Character of the Pawnee People.

By **GEORGE BIRD GRINNELL** ("YO.")

Cloth, 417 pages.

Illustrated.

Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales, and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parallel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

ANSWERS TO CORRESPONDENTS.

THE OLD WEST AND THE NEW.
It is difficult, even for one who has seen the process go on under his own eyes, to appreciate the changes which have taken place in the West within a recent period. It is not necessary to go back fifty years to the day when Chicago was a village, to reach a time of great game plenty. Even within the memory of men now young, there was in the West an abundant supply of all the species of big game.
Only ten years ago there was still a West which could fairly be called wild. There was a frontier. In that West, and beyond that frontier, game was abundant. Ten years ago there were still wild Indians living in cow-skin lodges made from the hides of the wild buffalo, which even then in diminished numbers roamed over the plains. But ten years is a short time. Let us go back twenty years. Then, except along the lines of the Union Pacific and Kansas Pacific railways, there were but few settlements on the plains. Then the region of middle Nebraska and middle Kansas was as dangerous an Indian country as one could find. The wild Sioux used sometimes to come down to within one hundred and fifty miles or less of the city of Omaha. Indians were often seen in the streets of Omaha, Council Bluffs and Denver. Then the State of Iowa was more wild and unsettled than is Montana to-day. Dakota was a waste. In Montana, away from the mining camps in the mountains, the only settlements were the military posts, and Fort Benton, the old trading point, from which were shipped down the Missouri by boat the robes and furs collected in the Northwest. In those days there were few range cattle in Nebraska. The Texas drives had penetrated no further north than Colorado. The valley of the Platte river near Kearney, Plum Creek and Grand Island, was often black with buffalo. The white sterna of the antelope shone in the sun on the yellow hillsides; the white tailed deer lived in the willow brush of the river bottoms; in the sand hills to the north were the blacktail and the elk.
Almost within the life of FOREST AND STREAM we have seen the wave of settlement roll from this side of the Missouri on to the west, until it broke against the mountains of the main range and then dividing into streams, creep by cañon, pass and river valley, up on to the arid plateau of the central region. As the crest of this wave advanced it blotted out the buffalo, the antelope, the elk

and the deer. In their place the sportsman now seeks the grouse, the quail and the plover; little birds that one would hardly have thought of shooting twenty years ago, when the arm of traveler and hunter was the rifle. That weapon has given place to the shotgun.
While it is, perhaps, not true to say that the days of big-game hunting in the Western country are over, it is a fact that large game now exists only in isolated localities, and that such localities are so surrounded by settlements that the game cannot get away; its migration to other wilder regions is no longer possible. Large game is easily destroyed, yet usually it is more the settling up of the country that makes it disappear than the actual destruction of the animals. In the past the game has been crowded out rather than killed. This was not true of the buffalo, which were actually destroyed, not driven away; but it is true of many other kinds of large game.
The average hunter must now depend on birds, which, in the case of the non-migratory kinds, at least, are reduced in numbers by actual destruction. They are not driven away; and the supply will continue to exist for a long time. We commonly hear wonder expressed at the terrible reduction in numbers of our game birds; to us the fact that there are any birds left at all, seems astonishing. But in a country adapted to its mode of life, and where it is reasonably free from the attacks of natural enemies, any species of bird, even if it has been almost exterminated, will re-establish itself in a short time. A good example of this is the case of the prairie chicken of Illinois, which was a few years ago very scarce, but became after a brief period sufficiently abundant to afford good shooting.
We believe that a time is coming when there will again be good shooting in this country, East and West, but that time will not arrive until sportsmen shall have learned that one secret of successful game protection lies in thinking for others as well as for one's self.
GUN AND ROD IN THE WEST.
SPORT in the great West is a boundless theme. To do it justice in its entirety no single number of a journal, no, nor a bound volume of twenty-six numbers would suffice. And yet our issue of to-day, with its added pages, has so many vivid and comprehensive papers picturing the sport of slough and prairie and mountain, that it may well be set apart from the ordinary weekly issue as distinctively a Western number. These papers present in admirable style the use of gun and rifle in the West of to-day.
The several topics are discussed each by an acknowledged master of the subject. Of all the men in the West to-day—and for that matter, in the entire country—best qualified to write of wildfowl shooting, one would not hesitate to name the veteran Henry Kleinman, whose valuable paper giving "Hints and Points on Ducks" cannot be studied too carefully by novice and duck hunter of experience alike.
"Killing Antelope for Market" is a narrative by an "Old Timer," whose true name has become familiar to the public since he has given over killing game for market and taken to corraling and breeding it.
Of a like practical character is Prof. R. A. Turtle's essay on "Woodcock and Snipe in the Middle West." These notes manifestly give the results of a long and careful study.
"Italian Joe and 'de Plov'" is a racy account of a Chicago market-hunter, a genuine artist in his peculiar field.
"Prairie Chicken Shooting" furnishes Mr. Alex. T. Loyd a theme for discussing *con amore*, and the pursuit of that game bird of the prairies has never been written of more instructively. Taking them all together, these papers on Western game birds make up a manual of valuable instruction.
In "La Vega de Capulin," Mr. W. J. Dixon gives a lively account of a skirmish with the Cheyennes, a tribe, by the way, just now demanding the attention of newspaper readers by its movements against the whites.
"In the Rockies," by a Connecticut contributor, has in it the exhilaration for which the tired city man must go to the mountains.
"The Fishing Resources of the West" form the subject of an intelligent, feeling and comprehensive paper by Mr. E. Hough.
In "Some Western Sporting Boats" we are given a catalogue of different types of craft adopted by the wild-

fowl shooters on Western lakes and rivers. For many of the original sketches from which the drawings were made we owe acknowledgments to Mr. W. K. Reed, President of the Dime Savings Bank, of Chicago, and a member of the Hennepin Club.
Mr. C. W. Lee supplies an interesting review of the history of "Canoeing at Chicago." Mr. Lee is Secretary of the Chicago Canoe Club, the leading club of the Great Lakes.
"Features of Trap-Shooting in the West," as discussed by Mr. W. P. Mussey, in a thoughtful and well-considered paper, are found to be features of trap-shooting characterizing the sport generally throughout the country, and what Mr. Mussey writes may well be pondered by trapshooters everywhere.
This is a special Western number; but while it is notable for the scope and variety and amount of Western material actually contained in it, it is perhaps equally notable, from editorial insight, by reason of the generous supply of other Western papers, for which it has been impossible to find a place to day. In other words, we have on hand a rich store of material relating to the West, which will be published from time to time as space shall permit. This is only in line with what has been done in the past. Our files from the beginning show in each column a wealth of literature relating not only to the West but to every division of the country. In the future we mean to keep the FOREST AND STREAM, as it always has been and is to-day, so broad in its sympathies and so comprehensive in the geographical distribution of its correspondence that it may have no suggestion of sectionalism.
SNAP SHOTS.
MR. FRANK W. EMERY sent us one day last week a 38in. muscalonge, which he had taken from the St. Lawrence River while fishing for bass with an 8oz. rod. Mr. Emery was at the moment combining the two pleasures of fishing and reading the FOREST AND STREAM, holding the rod in one hand and the paper in the other. It appears that this journal is a mascot, and anglers who are ambitious of capturing large fish will do well to follow Mr. Emery's example.
A sequel to our list of stories of the "Man in the Hollow Tree," printed last week, comes from Coalstown, Pa.: A "special" to the daily papers from that town reports that two boys who were trout fishing on Black Creek, the other day, discovered in a huge hollow oak the skeleton of a man, and with it a box of gold coins. This manifestly was one instance where the bear failed to come to the rescue.
In his address before the Illinois State Sportsmen's Association at Chicago last week, the retiring president, Mr. Fred C. Donald, related how utterly foolish it was to attempt to hinder under present conditions the unreasonable slaughter of game out of season, which now goes merrily on, game laws or no game laws, wardens or no wardens. Mr. Donald's remedy for this condition of affairs is to stop all market sale of game and provide for enforcing such a system. As he puts it: "It is plain that reformation must come through the strong arm of the law. Then let us deal with cause, not effect; prohibit by law the sale or traffic in game in the State, or its exportation from the State for the purpose of barter or profit. Give to the people of the State the authority of enforcing the act, and if this measure should prove ineffectual, we of this Association may not worthily be termed sportsmen. This may seem a heroic remedy, but I beg that you will have in mind that it is an attempt to prescribe for a most desperate case, which has run the gamut of every species of diagnosis and treatment." There are two schools of game protection extremists. One believes in letting the game dealers make the laws to suit their business interests. The other believes in shutting off dealing in game entirely. The first plan is much more likely to prevail than the last one in a city like Chicago, where so much money is invested in the business of buying and selling game. Mr. Donald's plan is an ideal one in theory, but practically any attempt to prohibit game selling would be such an interference with large business interests that the prohibition could never be enforced. It is hard business against sentiment; and business will win the day every time. Game will be sold in Chicago so long as there shall be any game left to sell. It may yet prove practicable to restrict the traffic to proper times; but it can never be entirely prohibited,

GUN AND ROD IN THE GREAT WEST.

LA VEGA DE CAPULIN.

THAT means Cherry Haymeadow in Mexican, and I remember a very lively experience that I had at the Capulin Ranch in 1874, and one which, though it is very pleasant to look back on, was at the time too dime-novelistish to be enjoyed by a young man who had come to Colorado for health and not to participate in fights or indulge in promiscuous slaughter.

I had occasion to go from my ranch on Rita Azul, Colorado, to Ute Creek, New Mexico, to see if I could not make a sale of some cow ponies to Dorsey's foreman, who intended to go to Texas with a party of cowboys and fetch home a herd of cattle. It was sixty miles straight south over the Raton Mountains, and there were rumors that the Cheyennes had broken out and were coming over the range to kill off all the cowmen who were crowding the buffalo on the west. So I saddled my black race pony, which was fast and in perfect order, and reached Ute Creek ranch easily that night. The outfit, which was to start the next day, was short of horses and villainously mounted, but the foreman did not seem inclined to buy any horses, and so I devoted myself to taking care of my horse and then went to bed, that is to say, I rolled myself up in my saddle blanket and went to sleep before the fire in the cook house, so that the cook would have to kick me out before he got breakfast, and so insure me an early start.

I was roused before it was light; and after a remarkably good meal I saddled and started for home. My pony Dick, the old black rascal, had gotten loose in the night, and some other pony had kicked him in the leg. He was quite lame, and I hoped he would improve on the road, but he did not, so at dark I had made only forty-five miles and the horse was dead lame and very tired. It was five miles to the Caveniss Ranch at Capulin Vega, but I could not make it. And so when I came to water I stopped, unsaddled, took a large drink of the alkali stuff and chew of tobacco for supper and lay down, after picketing the black on good grass.

I did not sleep well the first part of the night. The horse was uneasy, came as close to me as his picket rope would permit, and got frightened several times. I had a good rifle, a .45 six-shooter and plenty of cartridges, but a man feels small and weak alone on the prairie at night, especially without fire or supper; but I went to sleep toward morning, and it was about 8 o'clock before I woke up. There was not a thing in sight but my pony, who had pulled up his picket pin, as usual, and a few range cattle about a mile away. So I caught Dick, saddled him, made my toilet—washed face and hands in the alkali water and wiped them on my handkerchief—and started for the Caveniss ranch for breakfast, as it was on my road home. The horse was not so lame now, and we got to the ranch in about an hour. When I rode up, Marion Bone, one of Caveniss's nephews, a young man of 25, was sitting flat on the ground near the cabin door with his rifle near him.

He asked eagerly, "Where did you come from?"

"Ute Creek."

"Seen any Injuns?"

"No."

"Well, they are around. We heard of them coming up the Cimarron cañon yesterday. Bill is out with Tige getting a load of wood, and left me to take care of the house; I wish they was back."

By this time I had unsaddled Dick, and Marion told me to put him in the stable and feed him. I soon had the faithful old fellow chewing away at a big feed of corn, and went to the house to get some breakfast. Mrs. Caveniss, who was very hospitable, as all Texas women are, met me at the cabin door, and tranquilly removing her long brier-wood pipe from her mouth asked, "Hullo, Dick, have you had any breakfast?" "No, nothing since yesterday morning." She at once seemed to wake up and told Marion to step to the milk house and fetch her a slice of steak, quick. Inside of fifteen minutes I sat down to a big broiled beefsteak, some hot coffee and biscuit, with butter and milk.

I had hardly begun eating before I saw a change come over Marion's face. He was looking out of the door in a sleepy way, when suddenly his eyes opened wide, and he gave a bound like a panther for his gun. I jumped and had my Winchester in a second, ran to the door and here they came—Bill Caveniss and Tige Bone, on the running gear of a wagon hitched to two sorrel colts. They had gone to get a load of wood about a mile from the house and had met twelve mounted Indians just before they got to the timber. Of course they whirled round and started for the ranch, and of course Lo started after them. From the house out the ground was smooth for 200 yds., and then came a *mal pais* prairie (*mal pais* means bad place), scattered over with rocks from some as large as a big marble to some as big as one's head; and the wagon road ran through it like a letter S. They had driven out slowly, following the crooked road, but when they came back they came straight. The horses raced at full run, Caveniss on the front part and Tige hanging on for dear life over the hind wheels with his face to the foe—the whole concern bounding about three feet in the air every jump.

The Indians were 400 yds. behind them, and running to catch. They seemed not to want to shoot yet; and Tige couldn't, because he was too busy holding on to his Winchester and the bounding running gear. As soon as the colts struck level prairie the wagon ran smoothly, and Tige opened fire as fast as he could shoot, and Bill began to yell, "Here we come!" The colts straightened out and came like the wind straight for the stable door, and Marion and I ran out and turned loose. I shot twice at a big buck with a feather war bonnet on his head. The first shot I missed, but when I pulled again I had the satisfaction of seeing him pull his horse around and ride off at a lope, bent over and reeling as he rode. And subsequent proceedings interested him no more. By that time the six-shooter balls were patting all around us, but the Indians were getting out of range or taking to cover as fast as they could, Caveniss could not stop the colts, and

they ran right into the stable door. The wagon stopped when it hit both sides of the door. The colts broke loose and banged up against the other side of the stable. Caveniss shot after them and piled up on the colts. Tige flew six feet in the air and landed on his head.

As soon as they pulled themselves together they ran for the house, and just about that time there came a rain of bullets from the Indians and we all went in. I ran to a small window, broke out a pane of glass by poking the muzzle of my gun through it, and commenced shooting whenever I saw anything to shoot at. The Indians were concealed in the rocks at distances of 300 to 400 yds., and were shooting occasionally. Don't imagine that the rest were idle. Marion had broken a porthole, and was making it interesting for a big buck behind a rock that was two sizes too small for him; finally it got too hot for Lo, and he ran for a hollow some distance further back, Marion shooting as he went; but I don't think he hit him, though I know that he hurt his feelings, for he jumped sideways and yelled every time a ball struck near him. Caveniss was shooting some and rubbing the side of his head, and swearing industriously the rest of the time. He had had a terrible jar when he landed on the colts, and one of them had stepped on his head a little. Fortunately the stable was never cleaned out and the colt was barefooted, so it didn't injure him seriously. At last the Indians stopped firing and we could not get a glimpse of them.

Caveniss said, "Well, old woman, that was a close call; but I am hungry, so get us something to eat."

"All the meat is in the milk house, except that piece on the table, and that belongs to Dick. He has had nothing to eat since yesterday; and he fights as well on an empty stomach as you uns do on a full one," remarked Mrs. Caveniss smoking. "I'll get you some coffee and biscuit though."

Marion said, "I'll go and get meat. I guess the Injuns is gone."

Tige took off his big white hat and put it before the open door on a stick for a reply; and a dozen bullets hit around it in a second. "Do ye want to go out there, Bud?" he asked with a wolfish grin.

"I ain't afraid to," responded Marion, "and I can fix it so I won't get hit neither."

"All right, get the meat then," said Mrs. C., "but I am afraid you will get shot; and we can't afford to lose a man."

Marion without reply proceeded to make up a man with a shirt, a pair of overalls and his hat. Then he unfolded his plan to us. Tige was to shove out the dummy and draw the enemies' fire. Caveniss and I were to return it, and Marion was to run to the milk house. When he wanted to come back he was to put his hand out so that we could see it, and we were to go to firing while he ran for the house. He took only a butcher knife. We drew their fire by exposing the dummy, and then we went to cracking away at the smoke of the guns while he ran for the milk house. He got there without a scratch, but when his hand came up and we showed the doll again, Lo wouldn't shoot, and when Marion started they made it very interesting for him. He had a steak in one hand and a can of peaches in the other, and when he got into the house he said with a horrified expression on his face, "I am shot in the hand." He held up the peach can hand and then looked silly. One of the gentle red men had put a ball through the can, not touching him at all, and when the juice ran into his hand he thought it was blood. We joked him a little, but saw he was mortified and Mrs. Caveniss proceeded to get dinner. Two ate at a time, and just as all were done Ross Blackburn rode up. He was another cowboy who belonged at the ranch. He had been out horse hunting and no one had disturbed him. So we concluded that the Indians had left. Caveniss got on Blackburn's horse, rode out, reconnoitred and reported all gone.

We then held a council of war; and decided to go to the Mexican town on Cimarron Cañon, six miles distant. The boys put the hayrack on the wagon, then some hay; and made a nest of blankets with a breastwork of sacks full of flour all around it; patched up the harness, which was not much broken; and hitched up the sorrel colts again. Mrs. Caveniss had kept the four children behind the stove during the fight; and they did not cry nor offer to stir, from the time she told them to sit down there till she told them to get up. We put Mrs. Caveniss and the children into the nest on the wagon; locked the house, and started. Caveniss drove; two of us rode on ahead as advance guard; two came behind driving twenty saddle horses. We reached Black Plaza in about half an hour; and found the Mexicans fortified up and terribly frightened. A band of twelve Indians, probably the same ones who ran Caveniss in, had charged into the town, killed one man and broken a boy's leg with a ball; and then had flown.

We stayed there that night and the next day. The next night I started for home after it was pitch dark, for I was anxious about my horses and Mexicans. I found everything quiet.

The Indians on that raid did all they could in two or three days in the way of killing men and stealing horses, and retreated east toward Camp Supply. There were about two hundred on the warpath, and they struck twenty places simultaneously. I heard of ten men killed by them whom I knew personally; and I don't know of any one that killed an Indian. I do know I tried to.

The timid deer still haunts the hillsides around the Capulin Vega, and the wild turkey gobbles every morning in the lonesome cañon behind the house. I camped in the deserted cabin one night while hunting last November. I knew I was safe from Indians, but the place seemed peopled with whispering ghosts. For Caveniss and Tige were killed long ago at a horse race in Arizona. Ross was killed by a lot of Mexicans and Jews shortly after. Marion Bone is settled in Texas, a rich farmer. Mrs. Caveniss mourned herself to death after Bill was killed. And I—well, I am quite well at present, thank you.

IN THE ROCKIES.

PROVO and I had been camping in the valley for some days. Before our camp ran the stream whose clear cold water ran swiftly along over rock and boulder, with many a leaping fall into purling pools. Its sight refreshed us homeward returning, and its musical song soothed us at night as we lay in our tent. It was an ideal mountain stream, but alas! it was like the great poet's masterpiece with the Prince left out—it contained no trout.

Our camp was just at the head of the great cañon, into which the stream fell; from a point above the tents, its frowning walls with their sheer descent of 2,000 ft. could easily be seen, a gruesome place into which to venture. Behind us stretched a wide valley, guarded round with tall mountains, whose brown and rugged peaks cut a jagged outline against the clouds and sky. In front, to the north, across the little river, the land rose gradually in bewildering swells of foothills, mile after mile, until like waves of the ocean they broke against the mighty Beartooth Range. Even at our distance from it the effects of the powerful agents of time and weathering could be plainly seen upon this great range, and the carving of its rugged ribs of gneiss into cliff and chasm and cañon, and the white setting of its ancient icefields formed on the northern horizon a wondrous picture, of which the eye never tired. Here we had lived for a week, exploring the country, climbing the mountains, riding our horses into distant valleys and through great forests of pine, but as yet no adventure of particular note had befallen us.

It was in the early fall, up here amid the mountains the frosts were falling every night, and all the aspen copes in the foothills were flaunting gorgeous shades of copper red and golden yellow. The country was very dry; dead sticks, brush and leaves rattled under our own and our horses' feet; it was almost impossible to get a sight of game, go we never so carefully. It had been much hunted and was very shy. And yet we needed meat badly in camp, we had been long out of it. We and our men had had huge appetites in that dry cold atmosphere, and our stock of provisions was suffering seriously.

One morning Provo and I started out to climb the mountain nearest to our camp. It had two peaks and a rounded, intervening ridge; and from afar off we had dubbed it Lynx, from a fancied resemblance to the back of a cat's head and two erect ears. We rode our horses upward for several hundred feet, then dismounted and led them up a sharp spur, and then rode again up a long slope. There was an excellent game trail going up, and now and then an old elk track to be seen, but nothing fresh as we would wish. By riding up the long slopes and climbing the sharp spurs we gradually came to the very foot of the peak. Here our course led us upward on a talus of fine limestone pebbles. It was tiresome work, feet slid and tumbled in the yielding mass; our horses showed their disapproval of the path, but we led them on, for they carried our loads for us. Up past rising cliffs we toiled, until finally the top was gained. A magnificent view of the valleys below us and the mighty ranges around us immediately broke upon the sight. The crown of the peak scarcely rose above timber line; and we now saw a long, wooded slope stretching down to the ridge and the other peak rising beyond. After taking our fill of the view before us we mounted our horses and rode down through the woods toward the ridge, intending to cross by it to the peak beyond. Provo rode ahead making trail, and I followed.

The country looked promising for game, and we rode carefully and kept a sharp lookout. Presently we came to the edge of the wood, and saw the long brown grass-covered ridge before us. Through the trees we could see that it made a sudden drop, forming a little hill to the left, and then swept down in a charming little park on the mountain side.

As Provo rode out of the woods ahead of me I saw him suddenly jerk his horse back and glance at his side where his rifle usually hung. He had lent it to one of our men that morning, that our chance of getting game might be increased by dividing our parties. The next instant brought me out of the timber, and glancing in the direction he pointed I saw three black-tailed bucks coming out of the woods on the hillside below us.

In an instant I was off my horse, had my gun out and shored up the sight to the 250 yds. mark, dropped behind a dead tree and fired. The deer were very much below me on the steep hillside, and I over-estimated the distance. I saw the dust fly behind them, and immediately fired again, holding lower, but with what result I could not tell. I had selected the center buck as he was the largest.

The deer discovered us at the moment I fired and stood fast, looking wonderingly up the hill. At the second shot one of them turned as if to run, and as he offered so much better a mark I instantly fired again, striking him in the neck and shoulder. He tumbled forward and the other two instantly fled into the wood. This, which takes time in the telling, occurred in a moment, while I was loading and firing as rapidly as possible.

The fallen deer immediately began to struggle, trying to regain his feet. I darted down the hill loading as I ran, and arrived in time to dispatch him before he succeeded. In the meantime Provo had dismounted and now came leading the horses down the hill, singing joyfully a low song of content. We got to work at once and soon had the buck bled and dressed. Then we dragged him to the edge of the woods and hung him up in the shade of a tree. After discussing the matter it was agreed that Provo should take my rifle and continue his exploration, while I rode back to camp and got one of our men and a mule to pack the meat into camp. It would have been very difficult if not impossible to have kept it on behind a horse over such a steep, rough country. The programme was carried out.

Before leaving I paced the distance from the spot at which I fired to where the deer fell, and found it about 200 paces or about 175 yds. I ought to have obtained the buck with less shooting, but I find it difficult to estimate distances down a steep hill, and under such circumstances I am apt to shoot over. That night we fed on fresh deer's liver with great content.

While we were seated at the table I happened to look up and saw one of those pests, a skunk, headed directly for our larder in some bushes by the stream. The cook in his excitement wished to shoot him, but we gently bu

W. J. DIXON.

firmly refused to allow him to shoot a skunk in camp. So thrusting our heads cautiously through the bushes we shouted at Mr. Mephitus and invited him to go away, which hint he was very slow to take. Finally, as the cook became very urgent in his entreaties, he consented slowly to retire into a crevice between some large rocks, when the cook ungratefully proceeded to at once wall him up. And unless he had diamond points on his claws with which he could tunnel through rocks he is still corked up there, for I assure you we did not disturb him, and peace reigned in the camp. PERCYVAL.

KILLING ANTELOPE FOR MARKET.

HUNTING antelope is one thing, and describing how it is done is another. In fact I don't believe it is within the possibilities of the English language to furnish words that would convey even to the most apt scholar the exact methods adopted by successful hunters in bagging this of all animals the most unreliable to kill. In fact the hunter makes no definite calculation in advance as to how he will proceed till he reaches the ground to be hunted over. Almost all other animals have certain fixed rules and methods of action when pursued. The deer runs with the wind, keeping in ravines and out of sight; his scent is so keen that no enemy can pursue him at any reasonable distance, yet by tarrying two hours on the trail the old hunter slips along and soon routs the buck from his lair; then if quick enough he generally gets his meat. The buffalo runs against the wind when he is pursued, looking back, first with one eye then with the other, as they could not keep the course they desire to travel if they continuously kept at any one angle. The same way when they walk, and lay out their trails, they always follow a zigzag course, consequently it makes no difference how thick and shaggy the locks that hang over their thin pates, they can look sideways, desiring an enemy either in the front or rear.

The antelope runs on the same principle apparently as the old Quaker prayed—"as the spirit moved him"—and never can be relied on in advance as to his course, unless by some chance you find a second time the same number on the same spot, with wind in the same direction, the same kind of atmosphere, and every element the same as before. Even then, nine times out of ten, they will fool you in your calculations. Yet there are some things that by long experience I found could be relied on in hunting antelope. The most important fact to know is that they cannot detect a moving object while they are in motion themselves, in other words, a man can walk while they are in motion and they cannot see that he moves; so by seeing the antelope first and standing motionless while it stands and looks, then moving as it moves; again take the same position before he stops to look (which can easily be done by close observation as to his motions), he will not discover that you have changed your position, but take you for a post, clump of weeds, or some harmless object. The same rule holds good while the animal is feeding, and the hunter can safely proceed at all times except while there is a head up and standing still. It is best to go as direct toward the animal as possible, with head stooped forward. When within shooting distance, the hunter should drop to the ground, rest a minute, and select his mark. The dropping down should be done while the animal is moving or feeding, as any motion while they are standing still and looking will make the hunter feel foolish as he sees his game skipping over the prairie. This is what we call "still-hunting."

I discarded this method years ago. It was tedious and laborious, yet very sure and certain to an expert, but I found by continual perseverance a much easier and more speedy way of killing the antelope, for I have tried every idea ever suggested, and hundreds of original plans of my own. The greyhound was thoroughly tried, and after expending much patience, money and experience, I found it took an almighty good greyhound to catch an almighty poor antelope.

The only satisfactory way of hunting this fleetest of all animals is in a sleigh on the snow. I have also been quite successful hunting in an open buggy and on horseback. The methods I have pursued are all my own that I learned by hard work and awkwardness. Knowing the antelope were unconscious of the motion of their enemy while they themselves were moving it was my endeavor to close upon them while they were moving. To get them in motion at a pace slow enough that I could double up on them would be "nuts" for me; so by continual experimenting I found by quietly following them that after a herd had made two or three desperate dashes away and no one pursued them they became careless and unconcerned. So when driving over the prairie I would sight a herd perhaps a mile away, I would trot my thoroughbred Kentucky horses carelessly along, guiding them so as to pass either to the right or left about 100 yds. The antelope would stand and look at me until I was perhaps within 100 yds.; then they would all dash off as if they had been shot out of a cannon. My horses trotted on at the same old trot, and especially were they at that gait when the herd stopped to take observation, if anything the gait had been slackened. Again I would casually trot along as if to pass them by; again they would dash away, but not with as much speed as before; then while they ran I would let the horses glide along after them on a fast trot until I saw them begin to slacken; then by reining the horses up quickly they would come down to the same old trot, and again I would quietly pretend to pass them by. By this time or after another dash or two they would be convinced that there was no enemy pursuing. Then they would go unconcernedly cantering off at right angles. Now was the supreme moment. As soon as all the herd had got in motion—and never before—would I give a loose rein to the steeds that had been taken for plugs by the keen-eyed and quick-witted antelope. They perhaps would have from 200 to 800 yds. the start, but by cutting in on them at an angle with the speed of a wild engine, before they had gone 100 yds. I was within 50 to 100 yds. of them. My horses were so well trained that at the word "whoa" they would stop so quickly that more than once a breast-strap was broken.

While the sleigh, vehicle or horse, was yet in motion, I was on the ground and had the balls whizzing after the herd, which was well in a group. I invariably killed from one to three the first shot. The balls flying low would pass beyond the herd with such a whiz that it always frightened the animals and set them running at right angles to me again. I always used a Winchester

and would then pour in the lead as fast as a ten-year-old boy could count. All the while the bullets would be whizzing beyond the herd, and that would press the antelope closer to the shooter. Then by the time my eleven loads were all out, I would calculate on having from six to ten antelope. I could not make certain calculations on either getting up to the game, or even killing them, when in good range while they flew past, until I had had years of experience, but I finally got antelope shooting down to a science, and of late years I would figure as confidently on a herd of antelope as a farmer will on going out to gather in his cattle; in fact, I can drive within 100 yds. of any herd of antelope, on the plains, providing the ground is not too rough to get a horse over at a reasonable canter.

I do not know how many I could kill in one day, that would depend altogether on how far I might be compelled to go, and how numerous they were when I found them. If I could find them as plentiful as I have seen them in Kansas, I would not hesitate in contracting to kill one hundred per day. When I made hunting a business I always averaged from ten to twenty per day. To be sure I could have killed many more, but never aimed to kill a single animal that I could not dress and care for on that day. I sold my meat and hides to commission merchants, usually in Kansas City, Topeka, St. Louis and Chicago.

You once asked me how I could calculate how to shoot an antelope running at right angles. Well, that is one of the things that cannot be explained, experience alone can teach, and it took many lessons before I could rely on anything of a certainty. Yet in later years I could throw the Winchester a rod or two rods ahead of the lightning velocity of the object with a feeling of assurance that when I chose to pull the trigger an antelope would roll and bound like a rubber ball. Should I pull the trigger at the wrong moment I knew it was wrong before the ball left the barrel of the gun. One rule I always kept in mind, i. e., I would always take a bead on the antelope's knee, then move the gun ahead at the same elevation, so that the ball and antelope would come in contact. The reason for this is, everybody is more liable to overshoot than fall short. The reason is a person must always keep a full view of the movement and velocity of the herd, calculating space, etc., and cannot make as fine a bead as when the object is standing still.

Not expecting to ever again make a business of killing wild game as an occupation, I am willing others should know how it was done, at least by one who always meant to kill and hunt little.

GARDEN CITY, Kansas.

OLD TIMER.

WOODCOCK AND SNIPE IN THE MIDDLE WEST.

ANY shooter living near the foot of Lake Michigan need not go very far to find good woodcock shooting. I shall not say much as to Wisconsin and Ohio, although there is good shooting in those States, but speak more for the localities where I myself have hunted. Along the St. Joseph River, across the lake from Chicago, there is remarkably fine ground for woodcock, and I have known very good bags made there, although the Michigan law, which opens the season at Sept. 1, of course bars one from the best of the shooting. For other localities, close to the city above named, I have found the Des Plaines River, say between Summit and Willow Springs, or from eleven to seventeen miles from the city, very good territory, bags of one, two or three dozen having been made there, not to say by just every one, but by careful and well posted shooters. Fifty miles south, in Indiana, there is grand woodcock shooting along the Kankakee, varying with the season as to its locality. I am well acquainted with the covers of this stream from Long Ridge, forty miles above Water Valley, to Lake Village, thirty-five miles below. The market-shooters say the ground is still better further up, above Long Ridge.

The Illinois and Indiana law opens the woodcock season at July 1. This is late enough for so fickle a bird, but this woodcock law is the cause of the practical extermination of the woodducks also, which breed on our streams in the summer. You will see dozens of boxes marked "woodcock," which are really shipments of woodduck, killed by market-hunters who found them while out after woodcock. A friend and I found a box of nearly four dozen woodducks thus killed by a market-shooter near Water Valley. These summer ducks are young and innocent, and the market-hunters jump them along the bayous and pot them. The market-hunters of the Kankakee are also very destructive on the woodcock. I knew two of them who in one day's floating down the river killed ninety woodcock, for the most part potting them as they sat along the bars near shore, as woodcock are very fond of doing in the evening.

Like many other birds, the woodcock feeds in one place, and rests and roots in another. Birds are more or less irregular in their hours of feed, like human beings. I think young birds feed earlier and eat more, and consequently feed later than old ones—just as young persons do. Roughly speaking, and depending somewhat on the day, woodcock will begin to feed about 4 o'clock in the afternoon. They will feed all night, and perhaps as late as 8 or 9 o'clock the next morning. In our country birch, prickly ash, or puckerbrush seems to be about the best feeding cover for them. The ground is more apt to be damp there and they find worms near the puddles of water. They will eat angle worms, but seem to prefer the little red sand worms, an inch or so long. They find these also on the bars along the river. About two days before or after the water has touched a certain line seems to be the best time for the birds there. They follow the line of the receding water when the ground is soft. In the evening they sometimes sit perched up along the sunny side of the bars, and once a friend of mine called my attention to two "owls" he saw squatted on the shore. They were woodcock, all fluffed up and looking twice as big as they were. The woodcock is a bird of shade and dampness, and is not afraid of water. I have many times seen them alight in shallow water, just enough to cover their feet a little, and hunch themselves up, never moving when the dog came up, but keeping that big eye on him all the while. At such a time it is very hard for the dog to locate the bird, and the latter will not fly until nearly stepped on. It is smart enough to know just what the water does for it by way of lessening its scent.

A woodcock, although it likes to be cool and quiet, also likes to be near a warmish place sometimes. If you will find a shady bit of cover on a cool day you will find the birds on the hot or sunny side, but two or three yards back from the line of the sunlight, though sometimes further in. On a hot day you will find them on the shady side, and it is funny enough they will usually be within a few yards inside the line of shade, where they get the desired temperature.

Woodcock arrive in this latitude about March 25 to March 31. They come in, like the snipe, on the bright moonlight nights. They look around, locate their feeding grounds, and with warm weather go to nesting. The female woodcock seems to pluck off the feathers from her breast and belly while sitting, whether to impart a director heat to the eggs or not I cannot say, but she seems to be naked at that time. The nest is usually a mere hollow or little indentation on a high ridge or dry ground. Market-hunters tell me it is often made on a stump in low ground. My friend, Mr. Douglass, tells me he found one in Michigan which was just a little hollow scraped on top of an old rotten log. Unless forced to do so, the old woodcock will not leave the young till they migrate south. At migration time the old and young seem to separate and go on each by itself that way. They usually leave at about the first frost, though I have often killed them much later.

Woodcock moult about August 1, and I know a great many shooters who think they then migrate, or leave their old covers. This is not the case at all, if their feeding grounds are not dried up, as I have more than once had occasion to prove. Once I was down at Water Valley with several friends at that season, and I started after woodcock. I hunted close, for a long time without starting a bird, and at length came on a little wet mud bar covered with water-pepper. I put up a bird here, and on examination I found the mud as full of borings as it could stick. I set to work here, and the birds began to go up "Br-r-r-r-r! Br-r-r-r-r! all around me. I killed 15 on a little place here, and as many more in a cover near there the following evening, much to the surprise of my friends. Yet those birds were moulting, so much so that I could see the white dust, or feather scales knocked out of them when the shot struck them. The fact is, when the birds are moulting, they are sore all over and they don't stir a foot more than they have to. They don't run and play, and when flushed by blundering on to them, they just light and sit still, with their shoulders hunched up and their long old bill stuck straight down in front of them on the breast. They will watch a dog then till he gets right on to them before they will fly, and you can hardly kick them up. They are too sore to be frisking about. That's all there is to the moulting-migration story.

In woodcock shooting, as the weather is hot and the cover dense, light and strong clothing is most suitable. I usually wear a suit of under-clothing, with overalls instead of trousers, and a light canvas coat. A small, close cap is best in crawling through the briers, etc. If I can I get hold of an old pair of patent leather shoes, because they don't draw when wet like ordinary leather. I cut the shoes full of holes to let the water out. The overalls I tie tight at the ankle. The mosquitoes are pretty bad, etc.; some use tar and oil for them.

I used to shoot a \$400 gun on woodcock. This gun was all shot out and scattered wonderfully. I now shoot a 16-gauge. A big, sawed-off, open, 10-gauge is a good gun. You have got to have scatter. For a 10-gauge I used 3drs. of power and 1oz. of No. 9. I never used any finer shot. I would not use black powder for woodcock under any circumstances. It scares the birds more and the smoke is bad.

We have good woodcock shooting along the Kankakee, if a bag of 30 to 40 birds a day means good shooting. Doubtless there are many other streams which afford good covers, but I have not found any so regular. The puzzling habits of the bird have always been a favorite study with me; and its abrupt and erratic flight and generally difficult pursuit have for many years tantalized me almost into thinking I would rather hunt it than any other bird.

The snipe shooter who lives in Illinois or Indiana is even better off than the lover of woodcock. The snipe grounds are so numerous that I dare not attempt general mention. All the country about South Chicago, around Calumet Lake, and clear over toward Englewood, is natural snipe ground, or was once. The Little Calumet is good also, and the "Feeder" and the "Sag," which work off west toward the Des Plaines River, are often very good territory, indeed, though much hunted. The Des Plaines about Summit, and clear on down about Lamont and Romeo is snipe territory of the first water. Lower down, of course, the Kankakee offers its great and usually abundant field. There was too much water on the Kankakee this spring.

Last summer and fall, from July 28 to Nov. 15, I killed 1,000 jacksnipe within eight miles of the center of Chicago, and all within the present city limits. This was between the old "Ten-mile Tavern" and Dauphin Station, also between Auburn and Englewood, and from near the end of the State street cable line on down two or three miles south.

The snipe is another peculiar bird. Snipe have two grounds to live on, a feeding ground and a sunning ground, which may be miles apart. Some people think the snipe have a sort of playground sometimes, but this is not the case. A snipe's playground is in the air. They take their exercise in the air. Even the females, full of eggs, exercise so. I have sat and watched them pitch and tumble that way in the air, making that strange booming "whistle," like a nail thrown in the air, all the time, and then come straight back to same spot and go to feeding or else sit down and rest. I think the noise in the air is made by the wings.

Irregularly speaking, snipe come on to the feeding grounds at about 4 or 5 in the evening. They feed all night and into the next morning. Sometimes on a good marsh they seem to come in in flocks, and sometimes a number of single birds scared up will band up into a flock and either light further on or else go off. When much disturbed in the morning they sometimes leave the marsh and go to their sunning grounds. Their time for rest is nominally from about 11 A. M. till 4 P. M. They then hunt out some dry and sunny ridge, and often sit there in the short grass among the daisies and buttercups, and bask in the sun, all cuddled up, with their bills held close

up in front of the breast, like the woodcock. On "Little Hickory," about six miles above Water Valley, I once killed fifteen birds out of a place not 40 ft. square, just such a little dry ridge. The birds seemed to be asleep. On a raw day, when you are unable to find the snipe, they are apt to be sitting on the warmest side of some dry knoll. Very often snipe hunters fail by sticking too close to the marsh, not knowing the habits of their bird.

In feeding, snipe must of course have soft ground, and like woodcock, they follow the waterline. They too seem to prefer the little sand worms. They are industrious workers, and one jack will bore apparently 400 000 holes in a night, much like the woodcock. I think that snipe sometimes eat red ants. I may be laughed at for this, but I have often found the ants in the stomach and throat of a snipe just killed. They may take them in by mistake, but they certainly do swallow them.

Jacksnipe are the wildest when they are not actively feeding, and tamest when they are fat but busy getting fatter. They lie closest on hot days. The best hours are in the evening or in the morning, but no strict rule can be laid down for a snipe's hours.

The snipe come in chiefly "on the moon," and spread over a country very quickly, sometimes disappearing quite as suddenly. The "second flight" generally comes in about April 10 to 15. They came in on the Kankakee this spring on March 26, and a market-shooter killed twenty-five on that day. The next day there was not a bird to be found. In the early spring they frequent warm, boggy pastures and black mud rather than the wider and colder marshes. They must find the worms which make their food. I think the snipe and woodcock have a sort of hearing for the worms that crawl in the ground. If you scratch on the end of a broom stick you can hear it at the other end if held between the teeth or close to the ear, when you would not catch the sound in the open air. Probably the sensitive bill of these birds acts in somewhat the same way, although to what extent I presume no one can say.

A dog is not necessary in hunting jacksnipe, but a good one may be useful in retrieving and a staunch one valuable in pointing. Of course a thoughtful shooter will hunt snipe with the wind, not against it, whenever possible. This gives him a per cent. of advantage, as the bird rises against the wind and therefore toward him.

Snipe shooting may be hard work and warm, and therefore the costume is generally light. Hip boots of light, pure rubber, that cling to the thigh, are best. For this shooting I prefer a 16-gauge gun, with not over 3 drs. of powder and $\frac{1}{2}$ oz. of No. 8 or No. 9. If the birds are wild, as they often are, No. 10 will not stop them, and on a hot day No. 10 leads a gun fearfully.

A wild, corkscrew jacksnipe is a hard bird to hit. After they have been on good feed for a while they get fat and lazy, and are then not difficult shooting. They are in these latitudes, where they are hunted so much, usually shy and swift enough to puzzle the best shooter. The States further west, of course, have good snipe shooting, but I do not personally know any territory so well as that lying within fifty miles about Chicago. Within that circle, certainly, admirable sport at jacksnipe may be had.

PROF. R. A. TURTLE.

PRAIRIE CHICKEN SHOOTING.

THE "chicken territory" is now to be found in Minnesota, Iowa, Kansas, Nebraska and Dakota. Birds are also fairly plentiful in portions of Illinois and Indiana, but here farmers decidedly (*i. e.*, with pitchforks) object to strangers pirating on their demesnes.

In the States first named, at least in such portions as are not overrun by visiting and native gunners, farmers generally do not forbid hunting on their lands, as they rarely waste much time themselves with guns, and but very few own bird dogs.

It is useless, however, to list specific localities as promising good sport, for the excellent reason that no one can predict the future from the past, as to chickens. The rotation of crops, from wheat to oats, from oats to flax, and the influence of local storms in the breeding season, with attendant high water just when it should be low, are factors which cannot be foreseen. Again, the amount of hunting done in a given year is a most material element in determining the quantity of birds left over for breeding purposes. Hence the very fame of well stocked grounds may have so attracted gunners that it was gleaned much too close, so that next season this paradise will be pretty much barren of feathered angels. On the other hand, the poorer grounds, being left undisturbed, carry over almost their entire stocks of grouse, to reproduce abundantly in the spring. It is therefore evident that the only trustworthy information under this head is that gathered just before each separate season opens.

Chicken shooting, as now practiced, is quite a different matter from what it was in the good old days of muzzle-loaders, when Illinois was considered a part of the Far West. Then one need only "put up" at a convenient farmhouse, with his "scatter gun," and kill what number he chose, without quitting the boundaries of the farms immediately surrounding him.

To-day, the sportsman should select some small town rather than a farmhouse, in known chicken headquarters. Here he can obtain quite passable accommodations at the omnipresent little hotel; and its invariable companion, the village livery stable, will supply those prime requisites, a long, light, roomy two-seated wagon, a span of good traveling horses, and driver experienced in finding "likely stubbles" and in marking down birds, which latter is a most important consideration. Board is generally \$1.25 or \$1.50 per day. A small "added consideration," together (and even more efficient) with a faculty of getting on with the pretty dining-room girls, will secure special favors in the way of extra early breakfasts and correspondingly belated suppers. But avoid overdoing your getting on, or the independent Western damsels will retaliate with the toughest of steaks and muddiest of coffee. For the team and driver the charge will be \$3 to \$4 per day, depending upon the length of time engaged.

A party of two shooters to a wagon is the proper caper. More than that number interfere with each other, while a single sportsman cannot work the ground to best advantage. For a trip of two or three weeks it is advisable to provide two dogs for each gun, as continuous work results in sore and often badly wounded feet, the harsh dry stubble frequently cutting like a knife. Take only one dog per gun afield each day, allowing the others to rest and repair damages.

At dawn, or as early as breakfast can be had, bundle dogs, guns, lunch and selves into the wagon, and drive three or four miles from town. It is wasted time to halt closer, for the villagers have gone over the near ground, usually before the season lawfully opened.

And now a preliminary word as to the habits of pinnated grouse. From dawn until about 10 or 11 o'clock the birds remain upon the stubble. They favor the edges of the field rather than its center, and even more the corners, especially the ragged, low lying ones, and those scattered over with patches of tangled, uncut grain. As the morning wears on, the birds are apt to walk a little way into the grass that borders the field, or into standing corn or flax, similarly located. They will do this earlier and more generally on bright hot days. About 10 o'clock, varying say an hour either way, which irregularity depends upon the clearness or cloudiness, warmth or coolness and other qualities of the weather, and whether early or late in the month, the birds quit the stubble and seek shelter in the grass-covered prairie, or the standing corn. On very dry hot days they are apt to spend most of their time here, visiting the stubble for the briefest time if at all. Late in the afternoon, about 4 o'clock, sometimes earlier, and on till dusk, they return to the stubble for supper.

With this much knowledge of the grouse's habits, you stop the wagon a hundred yards or so short of the stubble, which should have been approached at a corner by preference. Come to it against the wind, and so work it, for obvious reasons. The advantage of making your attack at a corner lies in the fact that such spots are favored habitats, and both guns are together at the start, and so can sing a duet if a covey is found. Once fairly into the stubble, one hunter, with his dog, takes down the lower edge to the far side, thence up to the top. His companion, with dog, of course follows the two remaining sides and both meet at the corner diagonal from the starting point. The sportsman should keep in the field, about 20 yds. from the edge. His dog should quarter well into the field on one hand, say 100 or 150 yds., and about a fourth that distance into the grass or corn on the other. This course will discover the birds on the field, those that have strayed into the edges of the grass, and will pick up the trails of others that have walked still further into the prairie or corn.

In the meantime the wagon slowly follows up the center of the field from the starting point to meeting corner. While birds are more rarely found here, still occasionally, especially in very large tillings, both coveys and scattered birds may be far in. It would be a waste of time to hunt such territory, and the wagon now serves a useful purpose in putting up these stragglers, which are marked down by the driver, and followed into the grass immediately or when the field is finished. The birds are safe to tarry at or near their alighting place for some little time.

When one stubble is thus exhausted, hunters and dogs get into the wagon and ride to the next, which is indicated by the conical stacks of gathered grain standing out clearly against the horizon.

The farms in these regions are simply cut out of the native prairie, which stretches, level and grass covered, on all sides for countless miles. And not a single fence bars your wanderings. You drive hither and thither at will, your only guide being a "likely" collection of grain stacks in the distance.

As it draws toward noon, repair to some convenient stacks for shade, for these vast plains are treeless; eat your lunch, rest your horses and dogs, and indulge in a siesta. About 3 or 4 o'clock set out again for the stubble, and work till dark. Then home over a "natural" road worn into the prairie, whose deep ruts occasionally toss you skyward. And now the well-earned supper, draw and care for your birds, a final pipe, and bed, for it is 10 o'clock or later, and daybreak comes only too soon.

We have seen there are several hours around noon when the birds are in the grass or standing corn. If you are out for a couple of weeks, better let them so remain in peace, and spend those hours, the hottest of all, in shady restfulness. But it is well to give occasional days to grass hunting, especially during long dry "spell," when the birds visit the stubble but little and rise wild if so found.

With so vast an area of prairie to wander over, the finding of coveys and scattered birds is generally difficult. One, or better, two very wide ranging dogs are desirable. Remain in the wagon yourselves while hunting at random, until the dog comes to a point; then drive to within say 100 yds. of him, and finish afoot. Be ready for unexpected chickens as you advance. A covey may be scattered all about you. If only a single bird rises before the dog, and especially if it be not an old cock, beat about thoroughly before going on.

When a covey is found in, or has been driven to, the grass, the conditions are ripe for the very perfection of sport. The birds are commonly somewhat scattered, and will rise singly, by twos and threes. It is not at all unusual to spend half an hour or more with such a dispersed covey and to bag six or ten birds from it. Deep ravines or gullies, called "draws," are frequently met with. In their grassy bottoms you often come upon coveys, and the conditions are then precisely the same as described above.

When looking for birds in standing corn, go only 10 or 20 yds. into it if dense, further if thin, and then up or down the patch, looking with especial care through low-lying corners. Your dog should work very close, or stay at heel. If he ranges wild and points, it may take an hour to find him. In any case, he is out of sight when a short distance away, and so his work is useless. Coveys in corn lie well, are usually more widely scattered than in grass, and when found afford a goodly number of shots. But it is, of course, difficult to discover an unmarked covey, and farmers are apt to object to your tramping through such fields. Yet here is where the birds are for several hours each day, and you may count on finding more or less coveys by searching, and still more surely on making good bags when found. Special care must be taken, however, to avoid accidents. Your companion, though only a few yards distant, is hidden from sight.

As to stubble, wheat is best of all, then rye and barley, next oats, and lastly flax. But exceptions prove rules, and you will occasionally find your best coveys on flax. Buckwheat is commonly sowed in patches in or at the edge of fields of other grain, and is uncut in September. This is the *crème de la crème* for the chickens. You may

with certainty expect them to be "at home" here. In standing corn you frequently find considerable so-called wild buckwheat. This is also a choice chicken delicacy, and birds may confidently be looked for thereabouts.

In long continued dry spells, when no dew, even, falls, birds give out but little scent to the dogs, and the best of noses will score more flushes than points. Then make your dog work very close, so you can get shots at many of the flushed birds, and give most of your attention to grass and corn hunting. A rain or succession of heavy dew falls will mend matters.

In "marking down" birds take notice of some object in the line of their flight, as a bunch of weeds, end of a distant corn patch, a hillock, etc., rather than attempt to locate the exact spot of their alighting. If your "line" is all right the dogs will readily find the game. Govern yourself by this line also if the birds pass over rising ground, a cornfield, or other obstacle, and are so lost to sight. Chickens, when flushed, travel in almost a "bee line" to an alighting place. If a covey scatters, or several separate birds are put up, mark definitely a single one or batch, and trust the rest to Providence, your companion and the driver. One bird marked down with certainty is worth half a dozen inexactly located. Birds flushed into corn are more apt to run some little distance than when dropping into grass. A good dog will readily trail them, however. When the driver has marked down birds let him remain where he is until you rejoin him. It is much easier to hold a mark down than to pick it up again.

When a covey is found in a field, remember its exact location. Pinnated grouse seem to have a strong affection for particular spots, often not apparently differing from the other portions of a field. When you return next day, or better after a day's interval, you will generally find your birds in or very near the old homestead.

When a covey has been repeatedly found and shot into, until but two or three pair are left, thereafter avoid that field, and leave the remaining birds for "seed."

If a bird is evidently hit, "dropping his leg," yet does not fall, mark him down carefully. You will often find him "stone dead," having literally flown while life lasted.

Provide boots of soft calfskin for the dogs, to lace about the legs. Their feet get worn and often badly cut on the harsh, dry stubble. In such cases a boot protects the wound or worn flesh from dirt, the cut readily heals, and the dog need not give up work. Lift your dogs from the wagon, or stoop over and let them jump on your back and thence to the ground. The high jump from the wagon upon sharp stubble frequently gives a very bad foot wound.

Carry a big jug of water in the wagon for dogs and selves. Water, especially good water, is seldom met with, and dogs require it liberally and frequently.

For foot wear, in early morning use leather shoes or boots, with waterproof leggings reaching to the thighs, or an old pair of high-top light rubber boots. The tall grass is dripping with dew, and wets one about as quickly and thoroughly as a mill pond. As the sun dries the moisture, change to leather or stout canvas base ball shoes, preferably the latter, with corrugated rubber soles in either case. The stubble soon makes a leather sole slippery as glass, and walking then becomes very wearisome. Carry an old overcoat, and have the driver provide blankets for lap robes. The early morning and late evening are here quite cold in September. Wear a hat with a wide, rather stiff brim, that it may not constantly flap in your eyes. Shortly after "sun up" daily a strong wind awakens, to die away as regularly at nightfall.

Walk around a field of standing flax, not through it, nor let your dog race in it. Thoughtless or wanton damage done to crops is naturally a source of great irritation to their owners, and has much to do with the hostility farmers bear to sportsmen. "Put yourself in his place" in all cases is also a paraphrase of the Golden Rule, and should ever be kept in mind, if for no better reason than self-interest.

Do not venture near the vast droves of cattle that are herded upon these plains. An old bull is apt to charge your dog, and so set up a stampede in the entire herd. Then woe betide the luckless hunter on foot, for the whole mass will pass over him in senseless fury.

Shot running about 325 pellets to the ounce (Chicago 7s, Tatham's trap 7s) is not far astray. Late in the month, and for second barrel especially, shot running about 250 pellets to the ounce (Chicago 6s) serve admirably. We would not recommend a smaller shot than the first named, for September shooting. Wood or Schultz powder is an advantage for the first barrel.

In the matter of guns, if you can make choice, select a 12 or 16-gauge, of about 7 lbs. weight, or a trifle less. Ounces become pounds and pounds tons as miles are piled up. But if your only choice is that of the famous Mr. Hobson, then that particular gun is just the one to fill the bill. As for dogs, a volume would not serve to set forth the superior qualities of either setter or pointer. Both are good, and each incomparably the better, according as your fancy dictates. The setter is good enough for us, however.

To draw birds, force middle finger up, remove most of entrails, then use fore and middle fingers to finish, and wipe out dry with a wisp of soft hay. If you use Preservaline, dust the cavity with the powder, and stuff rather tightly with a fresh wad of hay. Now sprinkle a little among the ruffled-up feathers, smooth them down again, put a pinch of the powder in the bird's mouth, and a little on any very bad wound or broken wing. Such birds will keep for a week in ordinary weather. Hang in a cool place until wanted for use.

September is the golden month for chicken shooting. Now, the tempered rays of the sun, the cool nights and morning, make walking and pleasure as lovably disposed one to the other as husband and wife (should be). About the first of October the birds begin to gather in masses, aggregations of many coveys (called "flocking") and are then almost impossible of approach. But during one long delicious month, the "season" is at its prime, and affords a sport so glorious that the hunter's whole catalogue has not one surpassing it.

ALEX. T. LOYD.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk Tales," giving a list of contents and excellent illustrations from the volume.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by GURDON TRUMBULL. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

FISHING RESOURCES OF THE WEST.

EVERY graduate of a college and every clerk or apprentice in a trade is familiar with the old axiom that "the supply will equal the demand." If potatoes are worth one dollar a bushel, everybody will raise potatoes and offer them upon the market until potatoes become worth only fifty cents a bushel. So says political economy. In the economy of nature the reverse is the case. The greater the demand for nature's rare and choicest products, the less becomes the supply. Hence a war between man and nature, not altogether unequal, because while nature is inexorable man is very patient. For instance, the people desire whitefish as food. That was the demand, and to meet it man pushed further and further out into the inland seas, extended the miles of twine, employed fast steam vessels, and in short made the notion of the palate a matter of business, and worked with all faithfulness to maintain the truth of the old axiom. After a while nature's side of the question came in view. The whitefish began to lessen and to disappear. What does man do, give it up? No indeed. He plants whitefish, humors nature, and to some extent wins the fight.

That is business. When it comes to dollars and cents man is ultimately rational. The shrewd summer resort managers plant fish also, for that is business. The matter will ultimately resolve itself to this all over the country. America, shame be the word; America, the grand and once trackless, illimitable apparently, the very heart of nature's heart, now belongs no longer to nature, but to man. We may as well accept the fact. The gates have been held too long open, and into the fold with what should have been America's flock, have crowded wolves, swine, beasts and all uncleanness. These have begotten and will beget, and it is one of the features of each such creature that it has a mouth and a stomach, ready to devour. These make a demand on every resource of nature, and nature will be drained in every easiest way until it is no longer business so to drain her. We will see our game and our fish disappear to the very point of extinction, and then will witness a gradual turning to an easier way of feeding the mouth and stomach of the great unclassified; and after that a gradual struggle on the part of nature, aided by man's possible business efforts, to build back again to some extent the balance in the ever swinging scales. It will be the market that will destroy our fish and game. It may be the market which will replace them. If not, then nothing. But let us await hopefully the day when the doctrines of the best sportsmen's journalism shall be found sensible and true, and when the people shall act intelligently and for the people's good. The game laws of to-day are a farce, and every intelligent man knows that in his heart. Why? Because we have not yet gotten far enough into the artificial day. But it must come to that.

In the older portions of the country the artificial day is already far along. If it were not for the restocking of streams, for one reason or another, how much trout fishing would there be to-day in New England or the Middle States? If it were not for the constant restocking of the Great Lakes, how many whitefish would the vast nets take ten years from now? Study this question in any one of a hundred ways, and you will come to the same answer. Go you into what was once the wilderness, seek out the wildest portion of the Rocky Range, and before you have cast your eyes upon the white waters of the Chama, the San Luis, or whatever favorite water you wish, you will have met a man with a burro-load of trout which he is taking to the nearest market. Not yet the artificial day, but it must come to that. The stomach and heart of man are pitiless, thoughtless, animal. There are few men who think, and there is no man who is unselfish.

It would be an unreasonable pessimism which would say that, in all of the great West, world of itself as it is, remain no regions where the angler may meet with success to any reasonable amount. Such a statement to-day would be not only unreasonable but untrue. Indeed, it is toward the West that the eyes of all sportsmen turn. There are few sportsmen in the West who go to the East for their angling or their outing, but there are many Eastern lovers of the rod who long to prove the newer waters of the newer land. The story of the Eastern waters is not so widely interesting, because there the artificial day has begun. The charm of the unexplored, the breath of the untracked woods, the music of a stream whose tongue is foreign still—these are the thoughts that lie closest to the sportsman's heart. What of this, then, lies now in that West of late so fresh and virginal? Much indeed, but not as much as those unacquainted with the West suppose. If with the experience of a man one united the lively sympathies attributed to the feminine nature, he could sit down and weep as he contemplated the change and havoc which the last few years have wrought. I do not know much about the South. I wish I knew more of that charming country and its still more charming people; but it has been my fortune to see a little of the North and West, and I do not think that individual experience differs from others when it is said that those regions visited have of late steadily and with alarming rapidity deteriorated in the essential features which make them attractive to the real angler. There is still plenty left, to be sure, in many localities, and there should be nothing in the foregoing statement to hinder or change the plans of any who seek to wet a line under the widest and bluest sky of all the earth; but it would be folly to say or think that any plenty can always exist where the drain upon the supply is so constant and so thoughtless. History would not bear that out, for history within a decade back has seen stream after stream, river after river, lake after lake in the West depleted and depopulated. They are hunting new mascollonge waters already, up in Wisconsin. Five years ago the cry was that the fish could never all be caught. Trout streams all over Michigan and Wisconsin have been restocked and re-depleted, once, twice and three times, and only a few are good in the original sense. New bass waters are in demand in Illinois and Iowa, and many a man in the Mississippi Valley now takes home a 2lb. pickerel, which once he would contemptuously have knocked in the head and thrown away. Citations of run-down waters are not necessary, for the facts are too common. The dawn of the artificial day creeps further and further to the westward.

Now let us look upon the other side, the past of nature in her struggle with man. A few years ago the grayling was discovered in Michigan. A few years later and it was announced that the grayling was practically extinct,

Upon learning that, the anglers philosophically packed their rods and went fishing for something else. A few years more, which brings to-day, we learn that nature has been at work and has now re-populated, to some extent, at least, the streams which once swarmed with that pleasant little fish.

If only man would work with nature, and not against her, this noble Western country would always remain full of boundless charm to the lover of quiet ways by new, unfretted waters. We may not hope for that, because there are so few men who think. Our lesson in the West must be severe. It needed a revolution for France to correct the evils that were destroying her. It will take a cataclysm of mournful fact and a change in the whole history of sportsmanship, before this Western country will be nearly what it once was and should always be for the angler sportsman. Time will prove the truth of this prediction.

It seems probable that in the West good fishing, variable fishing and poor fishing will be the story, until at last the lowest swing of the balance has been reached there, as it has been elsewhere. The West is not what many think. It has changed. Almost one might say that there is no longer any West. All the wild life will go. Can we not all see that; and how can we see otherwise? Then ultimately, perhaps, the people will begin to apply business methods where hitherto only boy's methods have been used, and perhaps then there will be a business-like treatment of one of the simplest questions in the world. But we must first have our lesson. Thanks to the natural magnificence of the vast, indefinite region long known as the West, that lesson has been long deferred. For the sake of those who do not like this sort of reading, it may be stated that the lesson is not yet at hand in all severity. E. HOUGH.

HINTS AND POINTS ON DUCKS.*

BY HENRY KLEINMAN.

I HARDLY see why I should be asked to write anything about shooting ducks, for shooting and writing are two different things, and I am more used to shooting. Even if I should work a long time at it, I might forget to set down the very things I would like to, and then again, at best it is hard to put down on paper the little things that you would be careful to do or would do as a matter of course while out for a day's shooting. But I am willing to say what I can for the younger shooters, who will probably never have the chances to learn that I have had, since there are not so many ducks as there were in my younger days.

I have shot ducks ever since I was big enough to carry a gun, and I am now 46 years of age. My father, John Kleinman—I am afraid most of the old shooters about Chicago will remember him better as "old man Kleinman"—came to this country in early days and settled near Calumet Lake, a long distance, by wagon, from what was then the city of Chicago. The town of Pullman, South Chicago and all the suburbs that are now crowding out toward old homestead, were then unknown, and the duck lands that now are worth \$1,500 an acre went begging for some one to pay taxes on them, then. There were John Jr., Abe, George, Will and myself in the family, and we all grew up big and stout here on the edge of the marsh. Our father was practical and turned his hand to using the natural product of the soil. This was chiefly ducks, in those days, and almost as long ago as I can remember, father used to haul ducks to the Chicago market, while we boys shot on the marsh and kept the wagon loaded. There never was a ground better suited for ducks and all wildfowl than this Calumet Lake country. The big lake is only about 6 or 8 ft. at its deepest and is even yet full of wild celery, though the boats have torn it up a great deal. Wolf Lake, Hyde Lake, and all the many streams and sloughs of the great marsh, helped to make a ground which once simply swarmed with wildfowl, and even to-day the birds show how they love the natural home for them. My home to-day is right on the bank of the Calumet River and that of my brother Abe is just across the road from me. This is in what is now known as Irondale, or Cumming's station. It was right around here that all of us boys got our training in killing ducks, and I may say it was of a very practical sort, for father expected every one of us to do his duty and help out on the regular load of ducks. Nowadays this country is simply hunted to death, mostly by the mill hands and people of that class, and there are so many guns and such a ceaseless firing, that it is a wonder a duck or snipe comes near. Later on in my experience I began to shoot in other territory, but all my shooting has been done in the Mississippi Valley. I have hunted on the Illinois, on the Mississippi at New Boston and further down, and later still, on the Kankakee. My shooting should therefore be called inland shooting, and what I may say is to be applied only to the country where I have hunted. I do not know it all. But I always liked to shoot, and I have studied ducks a good deal, from necessity and the pleasure of it.

There are different ways of shooting ducks, which depend on the time of year and the country where you are hunting them. The most common ones, or those which are the most practical, might be by jumping the birds out of the grass or other cover, either by boat or by wading; by flight-shooting on a pass or flyway; by calling or imitating their natural note, and by decoy shooting. A regular shooter may use any or all of these ways on the same day. He will have to adapt himself to the state of things as he finds them on each day. The way a man must hunt depends largely of course on the sort of ducks he is hunting. No one would think of hunting teal the same way he would bluebills, and the marsh or slough ducks usually need some different way of hunting from the deep water ducks.

The first duck to fly in the fall is the woodduck. These breed early, and often fly in July. They can be jumped along the sloughs and bayous or shot on a flyway. They sometimes decoy a little in early morning or evening. The bluewing teal come along about as early as any bird that does not breed here. They get in along this latitude with a good deal of regularity about Sept. 20. You can pot-shoot and jump these birds or sneak on them with a good deal of success. The greatest number of birds I ever killed in one day was of teal. I killed and brought

in 218 and don't think I was much over two hours in doing it, and I only had 60 empty shells when I got back. I followed one flock around through the grass and rushes, and shooting one barrel on the water and one on the raise I killed and gathered first 22 teal, then 24, then 12, then 6, then 14, then 26, then 32, all in a few minutes. I was in a hurry, for I knew other boats were following me. Teal decoy very readily, and they can also be shot on a flyway, and you can call them if you know how. They will decoy in the evening to a chirping whistle, but their regular call is a sort of cackling call. There is a good deal of fun in teal shooting, and the birds are not so shy as many others.

After the teal in the fall come the redheads and ring-bills. These are deep-water ducks, and are hunted most successfully in this country by the use of decoys, although sometimes you can catch a flyway for them. The mallards and all the slough ducks come before the canvas-back and bluebill, and about the same time as the red-heads. The bluebills, canvasbacks and butterbills then come down about the last, about Nov. 1, and they are hunted about the way the redheads and ringbills are, and some of these ducks you can work by just calling them, especially the redheads and mallards. These last birds call better in the fall than in the spring. Mallards also decoy better in the fall, though a good many shooters think that all ducks decoy best in the spring, in the mating season. That depends altogether on the duck. Any duck that is looking for flocks will decoy best in the spring. The mallards are more or less mated here in the spring, and don't care so much for flocks; and so don't decoy so well then. But bluebills decoy best in the spring, and so do pintails, although they are a slough duck. Teal decoy best in the fall. The redheads and canvasbacks and all the flock ducks decoy better in the spring. It will be seen that decoying and calling are two different things.

In the fall, the mallards, pintails, widgeons, gadwall, spoonbill and the greenwing teal come down pretty much at the same time together. On these, which are all marsh or slough ducks, the flyway, the decoys and the call will be used, and often they will be jumped in the marsh. I always shot these ducks any way I could get them best, or as I happened on to them, and will talk about that later on.

Among the last birds to come down are the golden-eyes, the sheldrakes and the little mergansers, which will do to shoot at, anyhow, even if the latter two are not very good to eat.

In the spring the order of coming of the birds is different altogether. The pintails and mallards are the first birds up. These marsh ducks don't seem to be so certain about the weather as the open-water ducks, and sometimes come here in the winter and see-saw up and down. Sometimes they go back further south at night, and push on north again in the morning as far as the ice will let them. Good pintail and mallard shooting is often had in this country in February. About the best mallard shooting was in February in this year, not far from here.

When the deep-water ducks, like the bluebills, etc., come up, it is pretty safe to suppose that the weather is going to stay open. They don't go back south again. The woodduck comes later than the mallards. The bluewing teal are up the latest; the greenwing is up much earlier than the latter, and is usually close along with the mallards.

Every man shoots ducks different from everybody else, and he may even change his own notions sometimes. For instance, I am rather getting out of the notion of liking such heavy guns as I used to shoot, and I now shoot a 12-gauge instead of a 10. For such reason, I find it pretty hard to go to work telling anybody else how to shoot ducks, although my way suits me well enough.

Now, I am sometimes asked what I think is the most important thing in duck shooting, or what is most essential to success. I believe that the first thing a duck shooter wants to learn is to keep still in the blind. A duck is very quick to see the least motion, although it will very often come close in to a shooter who is sitting perfectly quiet. It isn't the size or goodness of a hunter's blind that will get him close shots, but the way he sits in his blind. If he can't keep from bobbing up and down, or twisting around, he needn't expect much shooting. Some hunters can't help twisting their necks around, and screwing their faces up to see where the ducks have gone to when they draw past. That does not work well. If they would keep their heads down and stay perfectly motionless until just the right instant, they would find the ducks paid no attention to them but would come right in. I have many a time shot in a perfectly open boat, with no blind, lying flat on the hay in the bottom of the boat, and have killed plenty of ducks. Once I heard of plenty of ducks over on a wet school section, but the boys said they could not get them because there was no cover and no place for a blind near where they were feeding. I went out there in my open boat, and without any decoys at all I killed 100 ducks the first day I shot.

I have had ducks light right down by the boat. Once I was eating my lunch and sitting quietly on the boat seat, just within a light fringe of rice, when a mallard came and lit so close to me I could have struck it with a paddle. We looked square in each other's eyes for a minute, and neither of us moved or said a word. Then I reached for my gun. The mallard seemed to know that its best chance for safety was not in flying, so what does it do but make a big dive and swim straight out for the open water. It came up flying, a long way out, and I barely scratched it down. It may be that part of my luck at shooting is due to my ability to keep still and let the ducks do the work of lighting by themselves. An old Irishman who lived near here always called me a "witch," and wanted me to give him my hat, which he said would draw the ducks in close; because they would pass by him in his blind and let me shoot them out of an open boat. The reason was he twisted around to watch the ducks and I sat still and let the ducks do the twisting.

Another thing is about the kind of blind to use. I don't know much about the fancy blinds of an artificial sort, but think each of them might be good under certain circumstances, that is, if it happened to resemble the natural cover of the shooting ground. That is the main thing, that the blind shall look just like the country around it. So you don't want too high or thick a blind. A low, thin blind, with a quiet shooter in it, is better than a thick one with a twister in it. The blind never ought to be heavy enough to attract attention, and it

*Captain Bogardus considered Henry and Abe Kleinman the greatest duck shooters in the world. This article, from Henry Kleinman, makes the first word ever given to the public by any member of that remarkable family of shooters.

ought to be a part of the very spot where it is. For instance, my brother George and I were shooting on one of those wet pastures where there wasn't much cover, and we cut some brush and stuff and built a blind, out in the water. We couldn't get the ducks in close enough; so we just tore down that blind and lay in the boat, just putting a little grass and stuff over the ends of the boat, and then we got good shooting. The blind builder should usually not go far from his blind for his material.

There is a great deal in the way the decoys are put out, and many a duck is lost from the bag which would have been saved if the decoys were a little different. You always have to consider the way the ducks are flying, or will be apt to fly. If they are at a certain hour passing on the feed mostly from a certain direction, say from a large body of water to a smaller, so that the flight will be coming nearly all from that side, you should put your decoys out toward that side, and not straight out on a line with the front of your blind, because most ducks will pass in over a flock of decoys, and make as if to alight beyond or back of them. This is the case especially for bluebills and most deep-water ducks, but not so much so for mallards. A mallard will hover all around over a flock of decoys, and nobody can tell where he is going to light. He may light 100yds. away from the decoys, others get up and light right down among them. For mallards I usually put the decoys out straight in front of the blind.

At a different hour of the day or at a change in the wind, the ducks may be coming in the opposite direction, and then you will need to change your decoys over to that side. If the birds are coming about as much from one way as the other, or are working up and down, keep your decoys straight out in front of you.

The use of decoys, and the position of the blind in regard to the decoys, differs much, according to the wind. I never followed any particular order in putting out a flock of decoys, except that if you want to attract the attention of a distant flock of ducks, you naturally will want the long line of your fleet to be crosswise to the line of that direction the ducks are coming from. For instance, if the ducks are coming from the east, you want your decoys kind of strung out north and south. This is the case for most ducks; but if you are shooting bluebills, you want to be careful and not string out or scatter your decoys very much. You want to get a close shot into every flock that draws in, and to do this at bluebills you want to bunch your decoys and keep them pretty close together, for that is the way bluebills light and feed. A close fleet, toward the side where the birds are coming from, is the thing for bluebills. Then they swing in and light, very often just back of the fleet, and therefore just in front of you. A little noise sometimes makes them hold their heads up, and then is your chance for a water shot. The soft tap of a paddle on the side of a boat will sometimes make a flock of teal hold their heads up when you are sneaking up on them.

About any sort of ducks will come to mallard decoys. A mixed flock of mallards and bluebills is good. In putting out such a fleet some shooters would put each sort of duck by itself, the mallards on one side and the bluebills on the other. That is wrong. The best way is to mix them all up as you put them out. Ducks are less suspicious of a mixed flock of birds, and decoy much better to it. A duck has a rough sort of reasoning.

Sometimes ducks, especially bluebills, will decoy to almost anything, and the best decoying I ever saw was done to a flock of the very worst decoys that you ever heard of. Mike Whalen and a fellow by the name of Gough had this flock out near the mouth of the river. The decoys were just boards or blocks of wood with a stick nailed on for a neck and a cross stick nailed on that for a head, and the "ducks" were painted with coal tar, with a streak of green paint down the back, as a sort of national emblem, I suppose. Yet these Irish decoys brought in the birds all right. But of course the more natural a decoy is, the better it is. I like the very best decoys, made and painted as well as possible. A glass eye is a good thing in a duck decoy. There are no decoys like those with the bright glass eye.

I have spoken of the hovering of a mallard over decoys. A redhead is just the opposite to that. He will set his wings and go ker-splash right into the middle of the flock of decoys.

SOME WESTERN SPORTING BOATS.

IN writing on so broad and general a topic as that naming the boats used by Western sportsman, it is manifestly impossible to cover the whole field, for the fancy of the sportsman is as free in the choice or the design of his boat as in any other part of his outfit; but it may be pleasant to look at a few of the more unique or more useful individuals in the field, preferring those which may be termed types, and which seem to be well fitted to their surroundings, if not, indeed, evolved from the same.

Possibly the first sporting boat of the Western country, or that portion of it lying to the north, was the birch canoe. Indian, voyageur, trapper, hunter, traveler and explorer used it. Its model is too familiar to need comment. It may be of interest, however, to note one form of the birch canoe which, though not a sporting boat in itself, was obviously evolved from it. The old "North canoe" of the early fur-trading days was a colossal birch bark, built on such lines as one would hardly deem the material capable of carrying. It was 40ft. long, 30in.

NORTH CANOE.

deep, with a beam of 4ft. 6in. Its regular crew was eight to ten men, and its burden eight to ten tons. By its means, therefore, one man may be said to have carried a ton daily on all the long way from Montreal, up the Great Lakes and so on to Winnipeg or beyond. The merchandise in this great craft was packed in square bales, and these bales were arranged so as to leave holes for the paddlers' legs. The paddlers sat on swinging seats, one of which was lashed to the gunwale, the other

resting on the merchandise. There were usually six to eight paddlers (half of whom by choice paddled left-handed all the time), besides the bowman and the sternman. The latter two had thwarts lashed across the bow and stern. The ends of the North Canoe rolled back gracefully, and the builders took pride in ornamenting these boats lavishly. The rows of colored "points" along the sides usually denoted the approximate waterline when loaded. This was a grand seaworthy boat and a great traveler.

There are a number of boats which may claim the old Indian birch in their ancestry. Some of the duck shooters of Canada use a "Rice Lake canoe," which is near about a white man's canoe, without the teeteriness and skittishness of the birch, though a light goer among the rushes. Something like a birch is the idea of the Nee-pe-nauk boat, used by the Chicago club men on the Northern Fox

NEE-PE-NAUK BOAT.

River. This is a smooth-skinned boat, and the skin is made by screwing one longitudinal piece directly upon another, the boat being formed upon a mold. There are no ribs in the boat, and no braces except under the deck fore and aft of the cockpit. The deck is light, and the cockpit ample for paddling, which is the method of propulsion. About the cockpit is a folding canvas coaming, which can be raised in case of a sea. The boat sets low in the water. It is stiff, easy-going and suitable for its purpose, which includes a long journey daily to and from the club house, partly in open water.

The birch canoe, folded and closed at the ends and provided with cockpit and coaming, a sort of kayak model indeed, may have been in the mind of Mr. Alex. T. Loyd of the grand Calumet Heights, of Chicago, when he devised the racy lines of what we may call the Loyd boat.

LOYD BOAT.

This is a slender and graceful craft, about 18ft. in length. It is provided with out riggers and is very speedy under oars, being really a better river runner than marsh boat. Under sail it is very fast and stiff, being provided with a keel which is detachable at will. At night the captain of the boat usually employs the keel as the ridge pole of his boat tent, simply reversing the position of the rods which fasten it in position. The owner of this boat has two or three air-tight tin cases stowed fore and aft under the decking, and these would float the boat strongly if it were over-turned, which, however, it has not yet been. This boat was born of a necessity which implied long daily journeys over open water which was often rough, and it has often been out when the whole fleet of marsh boats were stormbound.

The birch canoe is a creature of the past. The dug-out is the aboriginal boat of the South. A queer little craft is the St. Francis River (Missouri) dug-out, and this is the type, too, of the boats used on the great New Madrid

SASSAFRAS DUGOUT.

duck marsh and in much of Arkansas. This boat is made of sassafras, and its size depends much upon the size of the tree handy to the builder. The boat is only 10ft. long and about 10in. deep, and as wide as the tree was. It is perfectly flat on top, the ends being simply spoon-shaped. It has no seats. For leakiness and tipsiness it is hard to beat.

A very highly finished and graceful dug-out is the little Mexican pirogue, which parts the water before the paddle of the hunter of the far Southwest. Our illustration is taken from a little boat made by some Latin hand near Vera Cruz, Mexico. This pretty little dug-out—for such a thing is possible—is used by Mr. George T. Farmer, of Chicago, as a marsh and river boat in duck

MEXICAN CYPRESS PIROGUE.

shooting. It is 12ft. long and 14in. deep. The thin edge is strengthened by a light strip for a rail. This is an easy sort of boat to fall out of.

Up on Wolf River, in Wisconsin, they have a hunting

and trapping canoe, for paddling or pushing, which is an odd-looking but serviceable boat. It is 16ft. long and about 20in. deep. It is decked about 3½ft. fore and aft of

WOLF RIVER CANOE.

the cockpit, which is protected by a coaming. This boat is clinker-built, but has only three strips on each side, the bottom being of one or two boards. This boat does well for the requirements of its locality.

If we should descend the northern waters until we struck the little open sea of Fox Lake, we should find a necessity for a boat which could upon occasion stand a good deal of sea and possibly some ice, and a good deal

BOB STANLEY, FOX LAKE, ILL.

of wind. Mr. Bob Stanley, an old-timer on that lake, had this in mind doubtless when he constructed the wonderful and ponderous inland ship, with which he sometimes

BOB STANLEY.

plows the main while in quest of a pot shot at the wily canvasback of that country. It is greatly to the credit of this boat that it can carry sail.

If we drop down the Fox River into the Illinois River country, and among the sturdy duck hunters who shoot early and late each year there, and therefore meet high waters and often fields or floes of tough, keen ice, we will find another type of boat evolved from such environment, and that is the Illinois River or Lake Senachwine sheet-iron skiff, which all shooters of that region pronounce the boat *par excellence* for their purposes. This boat is well shown in the cut. It is about 16ft. long, stiff and beamy, and weighs from 75 or 100lbs. up to 150.

LAKE SENACHWINE IRON SKIFF.

It is sometimes made with air-tight compartments, but the natives scorn this model, which is too heavy. The iron skiff is not hard running, but must be kept free from a breaking sea. It is valuable when it comes to an ice field, and is about as good a sled as it is a boat. The "Wood boys," old-time market-shooters of Swan Lake, use these boats always in cold weather.

The Hennepin duck boat, which is used in much the same waters as the above, is rather more of a fair-weather boat, but is a very good marsh boat for punting, being built with a long and roomy cockpit. It can also be put under oars. This is a local boat, and is built by Mr. Jas. Cunningham, the keeper of the Hennepin Club.

A very popular and very good marsh boat is that commonly known among duck shooters as the "Monitor"

HENNEPIN DUCK BOAT.

model, or more commonly still as the "Green Bay boat." This is a light, shallow boat, intended for no form of propulsion but the push-paddle or punting-pole. It is 15ft. in length, 34in. in width and only 7in. deep. Its cock-

it runs long fore and aft, to give the pusher room. Its total weight is 75 or 80 lbs. This, or Mr. Douglas's worthy and not very dissimilar "Waukegan boat," is the boat most used on the Kankakee marshes of Indiana. It is

MONITOR MARSH BOAT.

ood for a long journey up the shallow streams and bays, and in the covered marsh its well-fashioned bow cuts the rushes and rides down the drift about as well as any boat could do. The Green Bay is no deep-water boat, and is not calculated for sail or sea.

There is a pretty little red cedar boat made at De Pere, Wis., which is also the place where the Green Bay boat was made. This latter boat weighs only 64 lbs., is 15 ft. long, 32 in. beam and 9 in. deep. The cockpit in this boat

DE PERE RED CEDAR BOAT.

not so long, but the craft is a very tidy one. The drawings for this boat, as well as for a number of others, were made by Mr. W. K. Reed, President of the Dime Savings Bank of Chicago, who is an ardent sportsman and an apt artist.

Doubtless many readers have perused with pleasure the pages of Mr. W. B. Leffingwell's book, "Wild Fowl Shooting," and have noted there the remarks about his Mississippi River scull boat. It is pleasant to be able to own a picture of this solid and sturdy craft, from a photo

MISSISSIPPI SCULL BOAT.

nt on by the author. The manner of its use is well described in the work above mentioned, and the cut will show how able the boat is to carry the heavy load of brush and ice which the erection of the floating blind sometimes poses upon it.

A unique looking "boat" is the Koshkonong (Wis.) "flat-aft," but every sinkbox and sneakboat shooter will at once catch the idea. Twelve feet long and 8 ft. across its

KOSHKONONG FLATBOAT.

de "wings," this vehicle lies awash with most of its weight beneath the surface. The shooter lies in the box, below the level of the water. This is a light cover or in water boat, and is usually towed to the shooting point.

The "Koshkonong Monitor" is a businesslike duck boat. A deep canvas covering can be raised or lowered at will, and forms a protection alike against sea or wind. It is a bad rowing boat and slips easily through the rushes

KOSHKONONG MONITOR.

l weeds. The rowlocks are shipped in two upright positions of gaspipe, which offer no entanglements to the rowers, and permit of easy unshipping of the boat. The deck of this boat is sometimes made of canvas, though wood or tin may be used. The boat, with load on board, sits low in the water and attracts little attention. There are two or three varieties of this boat about Lake Koshkonong, but all conform practically to the type shown. They are a heavy boat, usually fitted with tin. They are suitable for their use, on a flow and not very heavily covered inland lake.

he Tolleston Club, whose grounds lie on the marshy Lake Calumet, below Chicago, has a light little three or four-board boat, on rather a simple, home-made model. It has no ribs or knees, and only one thwart, with a seat for the stern for a paddler, the latter seat coming pretty close up with the gunwale. This boat paddles easily up the river and punts well on the marsh. It is a good little like just a plain boat, but it is a very well made up boat.

FOREST AND STREAM.

The shooters at Grand Calumet Heights Club, on Lake Michigan, sometimes use an odd craft in shooting ducks on the open lake. On a low-lying platform, something like the Koshkonong flatboat, they build a deep cockpit, or roofless cabin, whose walls are about 3 ft. high. About the sides of this they arrange brush or material for a blind, and anchor the boat out in deep water, the decoys being arranged by means of another boat. This craft is called the "Merganser" boat. It will take a heavy sea, but is unwieldy and unmanageable.

We should be doing a great injustice to many manufacturers of good boats should we close our list here and claim to have named all the Western sporting boats. It has been the purpose to speak of the odd and unknown boats rather than those well-known to all. Mr. Rushton's

TOLLESTON BOAT.

canoes may sometimes get far enough into Western hardships to enter the field here claimed, and so indeed do Mr. Osgood's and other canvas boats. Mr. Douglas's boat has already been mentioned, nor should we forget the little 8 ft. "Still-Hunter" sneakboat put out by Messrs. Thos. Kane & Co. This is a modified Koshkonong flatboat, with little of the weight or depth left, and with the stern a fantail instead of sharp. This boat is propelled by oars. The Racine veneered boats are in use in many fishing and pleasure clubs, and the Spring Lake boat, stiff and staunch, is also popular on the open water. Indeed, there are many types, well-known and popular, which will occur to the mind of almost any Western sportsman.

Over on the Canada line they have two or three distinct types of boat. The Point Mouille boat is a double-ended, decked, made of three boards, sides and bottom, built light and shallow, and a bird of a boat on the marsh. The open water shooting of the St. Clair Flats is done from a very light and shallow sneak, much like a condensed and etherealized Koshkonong flatboat. This boat is intended to lie fairly awash in the water, and the shooter lies in it on his back. They call this a "lying-out boat." The fishing and sailing boat most popular on the "flats" is a trim two-master, 18 to 20 ft. over all and 5 ft. 6 in. or more in the beam. She has oars, but the long voyages to the bass grounds, ten or fifteen miles, easily suggest the sail.

There are boats and boats, and to study them is a pleasure even in so brief a way. KANK.

ITALIAN JOE AND "DE PLOV'."

"LOOK-A! Look-a! Dere goin' to come big flock-a de plov!" cried Italian Joe. "Sit-a down, sit-a down, an' I whis'!" And then wide over the green pasture field, and audible down wind three-quarters of a mile, to where the flock was swinging across a field of tender wheat, sped the shrill, plaintive plover call.

"Whit! whit! t'wit! whit-whit-a-whit-whit! whit, whit, whit-a whit! wheet, wheet, a-whe-e-e-t, whit, whit!" With marvelous distinctness and accuracy of note the wild call rang out. The moving black specks caught it. A swift turn in their course, and up the wind, bigger and blacker every moment, and now glancing in the bright sun and showing brown and gray and golden yellow, they came rushing on, searching for the source of the call which rang free on the wind.

"Whit! whit! whit-whit-whit!" called Joe industriously, and soon the flock caught the whistle and the decoys at the same instant, and like a long yellow bolt from the sky dropped and swung straight for the decoys.

"No! no! no shoot-a! no shoot-a now! wait, wait-a, I tell. Sit a up. De plov' no look-a on us, he look-a on-a decoy. Now, pull-a de string, make-a de bird jump!"

So I pulled the string, and the live decoy flapped up and down. And into his mouth of good white teeth Joe jabbed two fingers of each hand and whistled shrilly on. These four fingers of Joe's are always clean and devoid of blood and feathers down to the knuckles.

The flock swept swiftly by. I could have knocked down at least a few as they passed, but etiquette of the blind made Joe the master, for these were his decoys, this was his blind, and he was shooting for a business. His wisdom was soon apparent. A low, jumbled call of mingled plover voices was met by Joe's false "ok," apparently from the flock on the ground. Round came the long bolt, glancing again under the sun. They passed the scanty blind unheeded, passed over the decoys down wind like lightning, and nearly drew a shot which Joe frantically whispered me to hold.

"No shoot-a, I tell! Let-a come! Let-a swing in!" And round and in they swung, and with wings set and heads down, slowly passed over the decoys and dropped as if to alight.

"Now! Give it! Give it!" cried Joe. Bang! bang! went both barrels of the guest's gun, and boong! went one barrel of Joe's. Merciful powers! what a yellow rain of birds fell out at that deadly assault at thirty yards. Half the flock was down. The rest swept on. "Whit! Whit-a whit whit!" called Joe's plaintive whistle. Could it be? Yes, here they came back again; and again Joe held my arm till the flock had passed, turned, and come in slowly over the decoys again. Once more two barrels from my gun and one from Joe's, and once more a fearful lessening of the flying ranks. A swift wheel of the remnant of the flock, a longer shot or two, a dropping of two or three more birds, and the work for that flock was done. We picked up more than twenty of the big, plump and beautiful birds.

That is the way Italian Joe shoots golden plover. There

are plenty of men who will wager that there is no man on this green earth who can compare with him in this one art. That is his business, and has been for twenty-two years, ever since he was old enough to shoot. He sends into the Chicago market more plover than all the other shooters of the State of Illinois. They don't know how to hunt them, and he does. He is the great and unrivalled plover artist. He has killed 1,500 plover in a week, 300 in a day and thousands in a season. He is the only man in the city of Chicago who seems to thoroughly understand and love the work of plover shooting. Through the winter Joe sells fruit, but he longs for the warm days and the green fields, and April sees him afield early. For twenty years he has shot near Summit, or elsewhere near the Des Plaines divide, and never until this spring has he thought of making a change. A bag of 40, 50 or 60 birds per day does not suit him, even at \$1.50 to \$1.75 a dozen, which the big hotels pay him for all he can bring in.

"Italian Joe," or "Plover Joe," as he is interchangeably called, is a character in his way and is worthy of a graphic and a careful pen. His real name is Joseph Paoli, and he may be Italian or Corsican; certainly he is a Napoleon in his art. Of about middle height, and of a straight, spare frame, he is fair in complexion, with light hair, blue eyes, a clear skin and a singularly frank and pleasant expression of countenance. And he is a genuine good fellow, open-hearted and generous. He can kill more plover alone than by the aid of other guns in his blind, yet time and again he has taken eager novices into his blind, when every shot out of their guns meant a dollar out of his pocket. Let us be fair to all men. When we have been, we will be forced to admit that a market-hunter may still be a man. I know this the better from a day out with Joe. At the close of a rather poor flight, in which neither of us knew which gun had killed the most, but in which Joe had certainly always given me the first best chance, he tied a big bunch of birds on my string and utterly refused to take any pay for them, although they were the same as money to him. And Joe isn't rich.

Let me tell something about how Joe shoots plover, for it will be new to many, and especially so to those who have tramped miles trying to "sneak up" on a flock of these wary birds, with result of a light bag at night. A golden plover is like anybody else. It has a blind side. Italian Joe has simply learned the blind side of his bird. Close study of the habits of the plover has taught him that it decoys readily both to the note and to the decoy birds. Given this fact, he invented a system. It is the originator, the genius, whatever be his calling, that commands our respect.

Like other birds, these plover have a resting and a feeding ground. The decoys are put out on a flyway, where the birds, moving about on the way to feed, may catch sight of them. The decoys are never put out near the edge of a plowed field, for the birds are then apt to pass them and alight on the plowing. A fresh pasture or a young wheat field is a good place for the blind, and this should be chosen near the top of a ridge or high ground where the birds pass over. The decoys can then be seen further.

Early in the morning is the best time of the flight. Joe is always in his blind at 5 o'clock. He eats no breakfast but a piece of bread that he carries in his pocket. He has no lunch and eats no meal till supper, after dark. His work is not easy. Between 9 and 10 in the morning the flight is also good, and after that Joe goes to sleep in his blind till about 3 in the afternoon. From then till 5 he may be busy.

The decoys are not very lifelike. Joe has a dozen of the old time decoys, which open out and fold or nest into each other for packing. These are stuck on tops of sticks. Then he has about as many rough wooden profiles stuck up in similar manner. To these he adds a number of dead birds, which he mounts nicely on a stick thrust into the throat. The flock is put out in irregular form, but is always compact, so that when about to alight the plover will huddle together and not string out. The greatest number of birds to the shot is Joe's rule.

The decoys are put out to one side of the blind, and not up or down the wind. This is so that the plover, which alight against the wind, will not then be coming up or over the blind. The distance is about 25 yds. Joe uses a side snap scatter gun. A close-shooting gun would be a nuisance to him. The art of flock shooting he has down fine, and with the same gun he will kill half a dozen birds more to the shot than an inexperienced shooter. He always rakes the flock as it comes in, obliquely, and never shoots square through it. He uses No. 7s or 8s and never shoots but one barrel. He says he couldn't kill more than one or two with the second barrel, and besides, the noise would scare the flock more. He usually counts on getting two or three single shots on the same flock, as he calls them back again, and he nearly always drops his birds in about the same place each time.

The blind is very light and simple. A few weeds or willows, a little hay, and there you have it. The birds seem, indeed, to follow Joe's description and "look-a on-a decoys."

One original device of Joe's is his live decoy. This is cruel, but effective. He takes a wing-tipped bird and ties it by the bill to the end of a stick about 3 ft. long. He says it will not do to tie it by the feet, as it would then hang head down, and therefore not look as if it were alighting. He says also that a bird stuffed, with wings outstretched, would not do at all. "De plov' goin' to say, what a sort bird like-a dat, he keep-a wing out all-a de time? Den he go 'way." Thus he reasons, and doubtless from experience.

To the long stick a second stick is lashed, the two forming the legs of a triangle. The ends of these legs are tied to pegs driven down in the ground. The triangle is thus hinged. A string tied to a peg in front keeps it from being pulled clear over when the "dopping" is going on. A long string runs from the top of the stick back to the blind. The bird and the triangle lie flat on the ground till a flock is discovered coming in, and then the triangle is worked, the bird is pulled up into the air, expands its wings instinctively, and again closes them as it is allowed to drop. This gives the appearance of a bird alighting among the others on the ground, and by means of this simple but killing device the plover are induced to come in again and again, decoying as probably no other bird will do.

Italian Joe has some imitators now, but none equal him. Much of his success is due to his ability to call the

birds from a distance. The plover call is not hard to learn, but Joe has the faculty of making it so loud that it is truthful to say the birds can hear him a mile down wind. The above is all there is to the way Italian Joe shoots plover.

There may be some who do not think plover shooting is good sport. These do not understand it. Without wishing to justify the method or the amount of slaughter, one must still be interested in the way of work of one of the most practical naturalists that ever shot a gun; and any one who has passed a warm and mellow day with Italian Joe, in his blind on some wide green field, and who has seen him bring close to hand flock after flock of these swift and strong wild birds, will not fail to say that he has had a new and exciting experience in the field. Joe is a skillful and successful snipe shooter, and he probably kills also more woodcock than all the shooters of Chicago, but his one love is "de plov."

"I tell, I goin' to like-a shoot-a de plov," says he, his eyes shining. "I goin' to whis' 'whit-whit' and de plov' he come in." CHICAGO.

Natural History.

FOX SPARROW IN NOVA SCOTIA.

AFTER walking several hours without much success in collecting on May 27 I turned homeward. I had only gone a few steps, when a fox-colored sparrow (*Passerella iliaca*) flew up just in front of me and noiselessly disappeared in the surrounding woods. I went direct to the spot from which she had flown and there found her nest containing four eggs. I went away and did not return for about an hour. She flushed again and I shot her, thus removing all chance of doubt concerning identification, as her skin is now in my cabinet.

The nest, which is before me as I write, was placed on the ground between a small fir and hemlock, each only about a foot high. It was perfectly concealed by the lower branches. The location was a partially cleared hemlock grove on comparatively high ground. The outside of the nest is composed of spruce twigs, bits of dry rotten wood and coarse grass, the main body consisting wholly of grass, and the lining composed largely of the same, but intermixed with a few cow-tail hairs. The depth is 2.75 in.; the diameter of cavity on top is 2.25 in.; the average thickness of materials composing nest is about 1.25 in. These measurements show that this nest is rather deeper than those made by the white-throated or other common sparrows.

The eggs were four in number and were considerably incubated, so we may consider the set complete. They are almost the exact shade of the ground color of the chipping sparrow; in other words, they are light blue. They are also almost wholly unmarked. Dr. Coues, in "New England Bird Life," says: "The eggs are marbled with rusty brown, often so thickly as to conceal the ground color." Other authors agree with him. Either they are all wrong or this set is unusually plain, as the small brownish dots which do appear on these are so small and so far apart that they would be wholly overlooked by the ordinary observer.

Mr. Oliver Davie, after using almost the exact words of Dr. Coues as to colorings, places the size at .94 x .71 in. The measurements of my eggs are .89 x .67, .88 x .67, .87 x .67 and .86 x .67 in.

My observations previous to the finding of this nest led me to believe that fox color occasionally breeds in Nova Scotia and southern New Brunswick. I would like to hear from others with reference to the nesting of this sparrow. Is there any other account of its nesting so far south? A. C. KEMPTON.

WOLFVILLE, Nova Scotia.

HARE COURSING.—The articles with the above heading recall an incident of like nature witnessed by me last fall soon after the first snowfall. I had just stepped outside the camp, when a rabbit came along the trail in front of the camp, going at a clipping gait. He went about a hundred yards and doubled, not on, but parallel to his first track, and stopped within a few feet of me and about ten feet distant from his first course. As he crouched low down I saw a sable pass on his track with head low down to catch the scent. "Brer rabbit lay low" till the sable had gotten well by, then took along the way he came, but not in his first tracks, going about eighty yards, then returning in his latest track about half way to the camp, when making a long jump at right angle from the trail he landed in the brush and soon was out of sight. About that time the sable returned on the newest track, nose to the ground and eager, so eager that he overran the turn a little, then came back to where the rabbit left the trail. Here he was at fault, but for a moment, as he struck a circle and hit up the scent and was off again. Did the sable catch the rabbit? Well, this is how I size it up. Bunny has proved his superiority at running, he also finds his doubling serves him well, and is thus caught napping in fancied security. It is my belief that all the carnivora that seek their prey by a long chase are successful. Instinct never errs.—HUNTER.

RED SQUIRRELS ARE CARNIVOROUS.—Carleton, N. Y., June 6.—I had a pair of common blue-rock pigeons in a large cage in our back yard. One morning I found one of them on the bottom of the cage dead, and half eaten by some animal. The cage was suspended by a wire between two trees, and was fully five feet from the ground and about ten each way from the trees. The mesh of the wire netting on the cage was too small to allow the entrance of an owl or hawk, and a weasel or mink could not jump so high. The problem was solved sooner than I expected. The very next morning, hearing my mother call me, I ran out just in time to see a full-grown squirrel scampering up one of the trees. My mother, hearing an unusual noise in the cage, went out, and what was her surprise to see a red squirrel fastened to the pigeon's throat like a bulldog. When she called me he let go, slid through the netting, jumped down and ran up the tree. I did not suppose they ever ate flesh of any kind.—F. E. W. ["J. H. F.," writing from Renovo, Pa., asks if red squirrels are ever carnivorous. This is a well-known trait of the red squirrels; they are very destructive of young birds, and young chickens, too; and where their propensities are known war is waged on them.]

BULLETIN AMERICAN MUSEUM NATURAL HISTORY.—The first 64 pages of Vol. III. of the Bulletin American Museum of Natural History, dated May, 1890, has just been received. It contains an article on The Calciferous Formation in the Champlain Valley, by Ezra Brainerd and H. M. Seely of Middlebury College, which is illustrated by a diagram showing a section of the rocks; Observations on the Fauna of the Rocks at Fort Cassin, Vermont, with descriptions of a few new species, by R. P. Whitfield, with three plates of fossil shells, and two interesting papers by Mr. Allen on North American ground squirrels.

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

WITH FLY-ROD AND CAMERA.

IN size, interest of text, wealth of illustration, and beauty of production, the most notable work on salmon fishing issued. See advertisement elsewhere.

ADIRONDACK WATERS.

A DECORATION DAY OUTING.

I HAVE seen in the newspapers and have learned from many individuals that the trouting this season is very much better than usual, no doubt owing to the exceedingly favorable winter, and from personal experience I believe this to be true. Last Wednesday evening, in company with a couple of enthusiastic gentlemen, I left for Thirteenth Pond, in the North Woods, where we arrived next afternoon about 4 o'clock. We succeeded in capturing a couple of lake trout from Thirteenth Pond that afternoon; one weighed 5 lbs. and the other 2 lbs. A great many "lakers" have been taken from Thirteenth Pond this spring, and we saw two taken Saturday morning by a gentleman from Brooklyn, their combined weight being 20 lbs. The same gentleman also captured five smaller ones. Our object, however, being speckled trout fishing, we left Thirteenth Pond very early Thursday morning, and with the guides carried our truck and plunder to Puffer Pond, a distance of nearly five miles and a good part of the way up hill. We were somewhat fatigued with the unusual exertion, but did not allow that to dampen our eager anticipation of sport. We were obliged to fish with bait during the greater part of the day, but at about 4 o'clock in the afternoon the trout began to rise a little, and we then changed from bait to flies.

I had for a short time as fine sport as I ever experienced, the fish being eager and all of fine size. Indeed there are no small trout, unless one works his way up into the inlet. The fish will average from 9 to 12 in. in length and are very fat. They are the handsomest trout I have ever seen. The water of Puffer Pond is about 15 in. higher than usual at this season, and in consequence the fishing is not nearly so good as it will be later in the season. I made a great many inquiries of guides and from a number of fishermen whom I met going in and coming out of the woods, and from all I could learn I am convinced that the sport of Puffer Pond can hardly be equalled by any waters near New York. It is an exceedingly easy place to reach from this city. We took the People's Line of steamers at 6 o'clock—though one can leave by train at midnight—and had a good night's rest on the boat with plenty of time for breakfast in the morning, and arrived at North Creek, the terminus of the railway, where we were met by Mr. Maxam, the proprietor of the hotel at Thirteenth Pond. Mr. Maxam's address is North River post office, Warren county, New York. The reports from the many fishermen I met were almost universal that it was too early in the season for good fishing, that the waters were too high. The last of this month will undoubtedly be a most excellent time for trouting in the Adirondacks. H. S. C.

NEW YORK, June 5.

TROUT AND PICKEREL.

On Tuesday night, May 6, I left the Grand Central Depot for Meacham Lake via Troy, St. Albans and Moira. I spent two days there last spring, and had such a successful trip that I did not hesitate in deciding upon the same again. The railroad journey is interesting and comfortable, and the twelve-mile drive from Paul Smith's station (this name is repeated on the Chateaugay road at a station about fifteen miles from the one on the Northern Adirondack road and is confusing to tourists) to the lake is over a road that is pleasant despite the mud I had going in and the dust coming out.

From the reports I had received before leaving New York, I expected to find all the snow water out of the lake, the streams low, and bright sunny spring days, filled with the hum of nature's loom as she weaves her carpets and tapestries of brightest green. Bo! I have not got over shivering yet; for the two weeks and a half that I was there were made up of days that were cold and nights that were freezing, days that blew and nights that howled, days that rained and nights that poured. I do not say anything of a thunder storm fringed by a suspicious-looking white cloud which suggested the idea of land and an upturned boat; and when we were safely underneath the boat eating our luncheon, how this cloud pelted everything with huge ice balls. Neither do I complain of the billows that Boreas raised on the lake about every

other day, effectually preventing trolling for several hours at a time. I can forgive the lake for being at flood tide all the time, and the streams raging torrents, for even they must get full as a result of so much drinking. I did "kick" though when each Sunday morning I was there dawned warm and still and bright, but, of course, no fishing. Looking back seriously now to my trip, I can say it was eminently successful, though we only had three pleasant days.

The fishing in the lake had not begun, the speckled trout being still too sleepy to rise, and the lakers lurking away down at the bottom, waiting for warm water and suckers. In the outlet below the rapids, where there was a stretch of still water for a mile or two, there was good fishing, and every day found one or more boats anchored on the rim of the "pork barrel," near a small island, or dropping down with the current. The riffle above were best fished with waders; that is, if one could keep straight in the tumbling water. The rapids themselves were for the most part as foamy as a wash tub, but contained a goodly number of muscular trout. Fishing of all kinds was indulged in down on the still water. Some threw flies alone, some added a "smeller" or a bit of worm put on a fly-hook, still others angled without false pretense of any kind in the old-fashioned way, and some netted their fish from a certain native's creel with bank notes, and almost all allowed their guides to fish in order to swell their count. Now, I don't want to imply that the stream was "hogged," for not more than 200 trout were brought in any day, and most of the time no as many as that.

I fished for once in a purely scientific way, 7oz. rod and flies, no worms (except to catch one small trout), no guide to help fill the creel (for the Doctor was content to see my satisfaction besides keeping his boat just in the right position for casting), no bank notes. The trout were shy and had all the natural food they wanted, but after I had found some alder flies and gray-drakes the nearly matched the millers that were on the water, I had good luck, and on one or two days the fish were savage. The trout were all good fish at first, lots of half-pound trout, a good number weighing three-quarters, and once in a while a fish that looked to be a pounder. With thirty or forty such fish any one ought to be satisfied. The last day I fished there, though, only the little fellow were jumping, so out of the fifty-six trout caught thirty went back into the water again.

There was a jolly crowd at Fuller's, the rainy day were spent in swapping fish and deer tales, and so the time went pleasantly. I was, of course, tremendously disappointed at the weather, but I am convinced the Meacham is a fine place for trout, and will be for a year or two more; but one day while I was there two huge pickerel were brought in; and one cannot help looking forward to the time when these pirates will check the trout fishing to a great extent if not wholly. F. LIN.

ANGLING NOTES.

MR. SNEDECOR, a young Brooklyn angler recently returned from the Saranac region, also bears witness to the high water and cold weather in the wood. He says that during his visit there a carpenter who worked at the new hotel, now building on Saranac Lake, who rowing home one day had the good luck to hook on to a big laker, which after a long struggle he succeeded in getting into the boat. It weighed 26 lbs., and was one of the largest killed in these waters in many years. Mr. Snedecor had some fair fly-fishing and killed a 2 speckled trout in the Saranac River in front of Bartlett old place.

Mr. A. W. Dimmock, of whom we have made mention as spearing the great devil-fish and other monster fish of the Southern waters, has returned from his annual trip to Florida, where he has enjoyed great sport. He states that this season he had magnificent fly-fishing taking on one occasion not less than nine different kinds of game fish on the fly, including a redfish or chan. bass weighing 25 lbs. The rod used was a light split bamboo fly-rod. He thinks that this branch of angling is very much neglected, and that people do not appreciate the great sport that may be had with these fish. When there he saw two small tarpon killed on the fly.

We notice another poacher has come to grief at Clinton, and in addition to a good round fine will have to spend fifty days in jail.

It is very amusing to veteran anglers to read the articles that are printed in the various daily papers and magazines on the subject of shooting and fishing. In a recent number of one of the popular monthlies a writer describes how he goes fly-fishing with a 7-foot rod, on which uses a 12-foot leader. It would be very interesting to watch him land a trout in rapid water with such a combination. He also carries a small book with two do flies on the stream and leaves his stock book at home. This is good advice, but when he states that with this supply of flies he finds it necessary to take along one do leaders, he rather "gives himself away."

Mr. P. B. Acker caught last week at Key East, N. J. striped bass weighing 11 lbs. It measured 31 in. in length. "Big Reel" will have to look to his laurels, as this is the race so far by long odds. The present warm weather should furnish great improvement in salt-water fish which so far has been poor.

The reports of black bass fishing vary very much. anglers at Lake Hopatcong, N. J., seem to have done best. The capture of a 5-pound small-mouth bass is the score at present. The Deckers, famous professional fishermen, have taken a great many large black bass trolling with a good-sized lake herring on a gang of four hooks. They claim that dark leaders should be used in that lake. Quite a number of bass were killed on the fly there on Decoration Day.

TROUTING ON THE SIOUX.—The second and concluding part of this sketch is unavoidably deferred until our issue.

TO SALMON ANGLERS.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sacrifice until stock is reduced. Don't miss the opportunity.

Youngsters will give a good account of themselves at the
 ows next spring.

FUN AT DOG SHOWS.

COME in, Jock, take that big arm chair. It is just the sort a fellow wants to drop into after he's been to a dog show and listened to every fellow's "tale of woe." Lots of fun I've had in my day and generation, but none has been more lasting than that enjoyed at some of our dog shows. If I only live a little longer I certainly shall see and hear a great deal to excite my laughter as well as my sometimes indignation. Every breed seems to have helped to make me "laugh and grow fat," one of the funniest episodes having occurred up in Canada.

SETTERS.

"Once upon a time" Mr. Wenzel's Chief went up to Canada. He was champion, winning in his class, and special for best Irish setter in show. The judge and some four or five exhibitors were out in the open discussing the various "Irishmen," especially the second prize winner in the open class. This latter dog the judge said he did not like, and to support his decision by illustration requested one of the gentlemen to get the dog in question. "The foul fiend" must have taken possession of the messenger, for soon he appeared with Chief instead of the dog desired. The judge didn't discover the difference, for as he was approaching he began his criticism with—"Why, the dog walks badly. What else can you expect with such bad legs and feet. His shoulders, too, are all wrong set on." In this strain he continued, finishing his discussion with his usual "condition" phrase, contending the while that in charity alone he gave the second prize, instead of withholding it, as he should have done. Those present being satisfied with the criticism, Mr. started to return to the stall, when lo! and behold, there was no dog to go back with. All that was left was a chain and collar. Champion Chief no longer existed. Mournfully Mr. proceeded to the stall, the other gentlemen following and forming a sort of funeral procession. The chain was fastened to the ring and the dogless collar was tenderly laid on a little mound of straw. The judge had no sooner departed, however, than first came a smile from all present, then a titter, and finally a perfect roar of laughter went up that drowned the music of the dogs.

The champion Tim had a pretty hard row to hoe when he was first exhibited. His owner knowing full well his value was not content with the he. and c. cards he was getting at all the prominent shows, but continued exhibiting him till at last he was brought before a critic who raised him from his obscurity to the very highest notch. It took a deal of conceit out of some of the judges to note Mr. Mason's elevating the dog to his proper place, and it is very funny to see that not one of them has ever had the temerity to put the dog back to a c. card, therein acknowledging their own utter unfitness to pass upon the merits of the dog. As I stood at the ring guard I often wondered what Mr. Skidmore or poor "Idstone" would have said at such judging, and the price they would have paid for the previous winners. Type was entirely forgotten (if ever known); legs, feet and contour ignored, and the very worst specimens in many instances carrying off premier honors. This breed has suffered woefully from incompetent judging, but perhaps not as badly as the English setter.

Never can I forget the "bandy-legged robber," Thunder, with his crooked legs and wretched feet, winning hundreds of dollars all over the country, held up as the type of the true English setter, being bred to by a lot of ninnies, while such fine specimens as Emperor Fred and Plantagenet had to go begging and fall before such cripples as Thunder. And one of the would-be educators in the canine world in criticising Emperor Fred stated that "the feet of the English dog (Emperor Fred) are the least bit out at the toes behind." Did the brilliant editor want our dogs to walk on their spurs as does the cock? What a queer looking specimen we would have then, and yet not unlike the style of dogs that have won under our "best judges." I often wished Mr. Shirley, Mr. Lort or "Idstone" could just stand at my side and help me enjoy such sights as I have seen—see Mr. Tracy place that peculiar looking Daisy over Mr. Windholz's Cora of Wetheral—and by the way, what has become of that vanquisher of Cora? Is she so elated at her achievements that she is resting on her laurels, or is she too shame-faced to ever again appear in public? The latter version appears most probable. Those men who know a setter when they see one will never forget Mr. Donner's action in placing Mr. Gardner's rattling good setter Roger way back of fifteen dogs that he had mentioned, not giving him even a wee c. card, this dog that won a good second prize to Monk of Furness, one of the best setters that ever came to America. Isn't such judging enough to make a man profusely use the great big "D" and plead for competent judges? Fancy our English cousins submitting to such injustice season after season, and being satisfied with the old, old chestnut of "condition" as a loophole of escape! Fancy, also, Major Taylor giving Paul Gladstone premier honors, holding him up as a representative setter, when he is in fact a grand field dog, but built on greyhound lines. This breed has suffered terribly, but not more so than the

POINTERS.

It is strange that some of us are so slow to learn even with good specimens as guides. We give the highest prices and no doubt get the best that is going, yet every year what awful, unpardonable blunders are made. Some judges have become so overbearing, so almost insolent in the ring that some day there will be a jolly outbreak. Is there a pointer man to-day in these United States who does not know of the Meteor-Beaufort business! What a disgraceful affair it was! The American is supposed to be the exponent of fair play, but he dealt out little of it in this case. It is the one bar sinister upon the escutcheon of our fair fame. We all well remember that grand pointer Faust, of the St. Louis Kennel Club, and how Hon. J. S. Wise made him dip his colors to such pointers as Lady Dufferin and Croxteth. That beautiful Revel III., almost peerless, I might say, is bowled out by such a dog as Fritz, and that, too, at New York, where, the general impression exists abroad, the best judges are secured, while in fact it is too often the contrary. Graphie, considered in England one of the best, if not the best pointer in recent years, is made to take a back seat to Robert the Devil, where he may quietly look on and see Brake knock Duke of Vernon into a cocked hat. It is fortunate some of our pointers cannot speak our language and express their anger at some of the indignities heaped upon them. Perhaps if they did accompany their expression with a bite or two it might have a wholesome effect and rid us of some incompetent people whose excessive cheek keeps them afloat. Fancy Messrs. Price, Whitehouse or Arkwright rendering such decisions. What think you the London Field would say of it all?

GREYHOUNDS.

Suffered as much by incompetent decisions as other breeds have, none have been so mercilessly handled as the greyhounds, one of the most beautiful creations of the dog world. The judging is no better than it was in 1877, and in some instances it is very much worse. I never shall forget when the judge asked the owner of Clio if her broken leg interfered with her coursing, and then gave her first prize with a great flourish of importance, nor how Mr. Mason's Drooping Well received a like ribbon when she was two ribs worse off than the normal supply, nor how a certain Western dog named Major, pronounced by one of the to-day judges as being a perfect world-beater, was knocked to nowhere by such a dog as Bouncing Boy (a better specimen, however, than the redoubtable Major), a dog that could not get above a c. or a hc. card on the other side. It took the judge, Mr. Wise, an hour and twenty minutes to judge Droop-

ing Well, and neither judge nor critics missed the absent ribs. I never felt so sorry, as well as indignant, as I did at New Haven, not many years ago. That magnificent bitch Mother Demdike, I think, made her debut there. She was knocked all edgewise by a bitch called Begonia, from which the second prize at New York had but lately been withheld when there were but two bitches in the class; and I shall never forget the peculiar expression and utter disgust that diffused Mr. Smith's face when he saw his Mother Demdike beaten, nor the surprise of Begonia's owner as he saw the blue ribbon handed to him. The judge found shelter behind his usual "condition" excuse, which he finds a most valuable auxiliary whenever he tries to explain away his blunders. Had Mother Demdike's wonderful English record been known, she might have fared differently. The relative merits of the two bitches will be fully appreciated when I state, that it was publicly announced that Mother Demdike cost in Wales £75 (and a cheap bitch at that price, too), while Begonia was sold at auction for £25. The best judges and owners are out in full force at these auctions, yet £5 was all they wanted to pay for her, and their valuation is correct beyond question. I wonder what our friends Messrs. Swinburn, Hedley or Charles would think of such decisions! The "condition" racket, however, was not a "howling success" at New York last year, where the same judge placed Meadowthorpe Douglas Fleming, fairly alive and blooded with eczema, first over such dogs as Fleetwood and Highland Chief, and this year, when the same dog is in fine condition, honors him only with a c. card. Can it be possible that Scavenger, Master Rich and Babazon are such marvelous dogs, such types of the greyhound true and pure, that Douglas Fleming is only worth a c. card when shown against them in good condition? Can it be possible that the standard of our greyhounds has so miraculously advanced in one little year that last year's first prize winner is only entitled to a c. card this year? This is a question greyhound owners must decide for themselves. Under the same judge Lancashire Witch, one of the nearest perfect greyhounds that ever went before a judge, gets special at Boston over Mother Demdike, and that, too, when she was in wretched condition, yet at New York, under the very same judge and a year later, the decision is reversed, though Witch is shown in rare fine condition. In this instance it was the back that was all wrong, though it is the self same one she had the year previous. Drytime, too, does not even get a c. card at New York this year in a class of some sixteen, yet at Boston soon after and under the same judge she gets second to the very bitch that won first at New York. Not good enough for a c. card at New York, but good enough a month later to win second prize to New York's first winner!

The Bard, pronounced by his breeder and other competent judges to be the best greyhound puppy ever shown in America, gets nothing at Albany; and when the judge states that Mr. Mason in his New York report says that the dog is "a bad one," and goes to the secretary's office for the FOREST AND STREAM to convince the offended owner of the dog that he is indorsed by Mr. Mason, he finds to his utter dismay that the greyhound there described was a bitch and not a dog! This is but a sample of some of the "judging" that has been going on with greyhounds for the past ten years, and which will continue if the exhibitors don't rebel.

I remember well the revolt that took place in England not many years ago. Just such nonsense as above described had out-worn the exhibitors' patience, so quietly they banded together and at the next show there was a grand old time. Messrs. Lloyd Price, Waddington, Mason, Asbury and other prominent owners threatened to withhold their entries if the racket didn't cease, and if there had not been a change the pointer classes especially would have suffered greatly. The result was that the judge got mad, the committees got madder, the show projectors madder still, while the above named gentlemen stood calmly by and smiled serenely. We are fast coming to the same thing here, for Messrs. Thayer, Windholz, Huntington, Oldham, Hopf, Hornell-Harmony Kennels and other prominent exhibitors have already threatened to withdraw from showing if competent men are not put in the judges' ring. Such a wholesome lesson is needed, and I hope the newly formed National Greyhound and Beagle Clubs will be composed of workmen, and not make the name of "specialty" a farce.

It is about time bench show committees were taught that dog shows cannot be held without dogs. There were thirteen dog shows last spring; there have been only six this spring, and at the last meeting of the A. K. C. five clubs were dropped from the list of approved shows for being in arrears. These clubs have probably learned the lesson. Take warning ye men of Gotham and ye of our sister cities while there is time. Look at the entries at Rochester and Cincinnati! Not 300 at either show. It is said that the terribly hot weather has melted the dogs away from the latter show, whereas in the case of the former the excuse was "conditioning for Baltimore." Unfortunately for the originator of these hollow excuses we have had no hot weather and the benches at Baltimore were well nigh empty.

FOX-TERRIERS.

If greyhounds have had such queer treatment, what shall I say of the fox-terrier, the gamest member of the terrier family and a perfect little dandy? Through the rivalry of some of our wealthiest citizens we have now among us some of the finest fox-terriers in the world, but unfortunately they are all imported. We have yet to see a real good home-bred one, and the fault lies not in the stock, but in a lack of knowledge on the part of the owners how to mate them properly. The terrier fancy was startled by the advent of a rare good one yept Blemton Rubicon. The suffix of that name seems to have knocked out a lot of chaps. This Rubicon has gone the rounds of the shows, knocking all comers edgewise, winning hundreds and hundreds of dollars, winning valuable puppy stakes and medals without number. He was a meteor of wondrous brilliancy, but unfortunately, like the Meteor from St. Louis, his light soon dwindled down to a one-candle power. Mr. Belmont, who has many times officiated as judge of this breed of dogs, selected this specimen to accompany Mr. German Hopkins to England, there to compete for rich prizes and show the "Islanders" the sort of dogs we breed here, and which win great prizes under our most experienced judges. Mr. Mortimer speaks of Rubicon, in one of our Western periodicals, as "not going off but just coming on, and will do lots of winning by beating such company," and adds that he "made his debut by beating such acknowledged cracks as Dusky Trap, Raby Mixer and Reckoner. Rubicon is a grand puppy, the exact counterpart of his dam Rachel (the italics mine), with more bone and better legs and feet." But when the dog went to England, Mr. Rawdon Lee, one of the best, oldest, most respected and most trustworthy dog men in that country, and author of the best book on fox-terriers ever written, criticises Rubicon in the London Field as follows:

Blemton Rubicon, who came with considerable reputation from New York, is very moderate indeed, and barely deserved his high com. He is wide in front, has a moderate body and coat, an execrable stern, and his head and ears are by no means what one wishes to see in a first-class fox-terrier; the fact of the matter is Blemton Racket is the smarter terrier of the two.

Now it is worthy of note that in a report on this dog, when shown at Chicago last year, Mr. C. H. Mason had expressed substantially the opinion given by Mr. Lee. Mr. Mason's report in the FOREST AND STREAM of April 18, 1889, reads:

Fox-terriers introduced us to Blemton Rubicon, that beat all comers at the Saratoga fox-terrier show. We did not expect to see a first-class dog, because nearly every fox-terrier fancier with whom we are acquainted had told us that Rubicon never deserved the prizes he had won; but we certainly did expect to find a much

better specimen. He is not first-class in head, rather full in cheeks, a trifle weak before the eyes and round in forehead. In middle he is at present decidedly light, and if his stern had not been doctored very short it would certainly have been over his back; but in none of these points do we find his most serious defect. When given the chain he stands neither better nor worse than a bulldog. He has good feet, good legs from the elbows down, well-carried ears and excellent coat. We are quite prepared to hear that he has grown the wrong way. The fact is he was never right.

For this decision, or rather criticism, Mr. Mason was at once pronounced "incompetent and a know-nothing about fox-terriers."

Well, Rubicon went abroad with Mr. Hopkins, though why he could not persuade his employer that the dog was "very much no good" passes my understanding. To kill two birds with one great stone, so secure did Mr. Belmont and his brother judges feel in their intimate knowledge of fox-terriers, Rubicon was entered both in the open and novice class at the Crystal Palace, London, where Mr. Redmond, a friend of Mr. Belmont's, was to officiate. The cable advice reached us on a certain Tuesday; and the poor Rubicon was neither first, second, third nor fourth in the open class, nor first, second, third nor fourth in the novice class. Mr. Pim, another most excellent judge, a few days later at another show dismissed him without a prize. Six thousand miles of journeying is a long way to send a dog and then have him beaten by a cast off that one of the best judges in England sold for \$15. What must Englishmen, and Messrs. Redmond and Pim in particular, think of our judges when such a duffer can win everything here, and is called "a grand puppy, the exact counterpart of his dam Rachel, with more bone and better legs and feet." If we are made the laughing stock on the other side as well as the butt of ridicule, we have no one to blame but ourselves. Think of Valet, that grand dog of Mr. Hoccy's, getting at he. card at Hartford, and at the very next show (Newport) where Mr. Redmond (brought over at a great expense in order to insure correct judging) gives this very same he. dog first prize and special for the best fox-terrier in the show! Methinks I can see Mr. Geo. Raper convulsed with laughter as he sees Valet getting his he. card, and Mr. Redmond shaking from head to foot as Blemton Rubicon is awarded the special over Dusky Trap, Raby Mixer and Reckoner. What, too, would our clever friend Billy Graham have done when he saw Raffle and Diana being placed over Raby Mixer and Richmond Dazzle. I verily believe he would have said, "Look a-here, mon, what a lot of fools ye Yankees are!" and I could have said "amen" with all my heart. MEPHISTO.

[TO BE CONCLUDED.]

KENNEL FARE.

BY HIBERNIA.

ONE of the first problems that confronts a beginner in breeding dogs when the occupants of his kennels become too numerous to be fed on the scraps off the table, is how to feed economically and properly.

Of course, there are plenty of manufactured foods to choose from, but these, while very useful in their place, are unsatisfactory as a steady diet. Dogs, like human beings, to thrive need variety. A man soon gets tired of even beef at every meal, and so does a dog of one kind of diet without change.

TABLE SCRAPS.

The reason that dogs do so well on table scraps is because of the variety of foods they contain. If the fancier lives where he can obtain the scraps from a hotel, then he can get his dog feed cheaper and of better sort than in any other way. In making arrangements for this let me give him a hint. Never go to the landlord, but to the steward. The broken victuals are usually the perquisite of the latter, and if the order is given through the landlord you will get them in a very bad shape, all mixed up with egg shells, fish bones, etc., and often stale and mouldy. Tell the steward you want the meat, poultry, boiled or baked fish (never the small kinds with fine bones), bread and such vegetables as are not "mussy." Have the scraps kept in a covered barrel with which it is well to supply him, and delivered to you daily in summer time and three times a week in cold weather. If the hotel has no wagon the steward can make arrangements for the delivery of the scraps with some of the tradesmen who bring the supplies. I have arranged on this plan with a hotel in my own city for a barrel of scraps daily. The cost is \$3 per week and \$1 for delivering them. This is ample for sixty dogs of the size of a setter. Can any one feed dogs cheaper than ten cents a head per week? I am sure there is no food which will keep them in such good health and condition. Their muscle is hard, coat glossy, breath sweet, and I seldom have a case of eczema. If the kennels are situated at a distance from the city or summer resort, of course the feeding of table scraps is out of the question. Even then the fare can be varied with as little outlay as if one kind of food was constantly used.

COOKING UTENSILS.

In the first place, if you have a number of dogs you want to equip your kennels with a farmer's boiler, which come in various sizes and burns either coal or wood. Be sure to get one rather too large than too small. Have a tinsmith make a galvanized sheet iron pot to fit inside of the boiler proper, so there will be a space of two inches all around for water. This pot should have a wide, double thick rim all around the top to prevent it from resting on the bottom of the boiler. You can then cook anything without clover watching and constant stirring to prevent the food from burning. In addition you want a watertight trough of wood or metal into which the contents of the boiler can be emptied to cool or to be mixed with bread or other ingredients which do not have to be cooked. For this I know of nothing cheaper than a small iron bath tub. A second hand one can be had at almost any junk shop. For mixing food in this trough there is nothing more suitable than a broad-tined potato fork. To lift out the meat and bone from the boiler without disturbing the liquor I recommend a shovel made of strips of metal instead of one solid piece. It can be bought at any hardware store. A large strong iron ladle for soup and meat liquors will be the only other utensil you will require for your cooking arrangements.

FEED AND WATER PANS.

For feed pans I like the ordinary tin wash basins that can be bought for ten and fifteen cents each; they are light, can be placed one inside of the other when not in use, and therefore require very little space. To prevent them from rusting I dip them into a kettle of hot roofing cement which coats them with a black enamel as hard as stone. This applied only to the outside, as from constant use the inside remains bright and unruined. Feed dishes of this kind have been in use at my kennels for several years, and are just as good as new. For water I use stone crocks, such as butter is kept in. They keep the contents cool, and being heavy they are not easily overturned.

As I can think of no other utensil that is absolutely required in a kennel kitchen I will proceed with the buying and preparation of food.

FRESH MEATS.

In the first place, meat of some sort should be an ingredient of all food for dogs. Without it grown canines will not keep in good health, nor puppies after they are a few months old develop into strong healthy specimens. You can arrange with the nearest butcher for his offal and waste meat, such as heads, feet, udder, stomach, tails, lungs, etc. The hoofs which contain neatfoot oil, should be taken off, as this oil

DOGS OF THE DAY.

THE stories respecting the destruction of the Radnor Hunt foxhounds telegraphed from Philadelphia on Saturday evening had more truth about them than is usually the case, when rabies is the subject on which the daily reporter exercises his imagination and his pencil. The story appeared only in *The Call* on Saturday afternoon, Mr. Ed. Cole, of that paper, being the lucky man to stumble across the "good story." I have known Mr. Cole ever since I came to the city of Brotherly Love, and to use one of his own expressions, "what he says goes." He is one of the somewhat limited number of reporters who do not handicap the truth by a load of fiction. As by the time *The Call* story was out it was impossible to see the master of the hunt, Mr. Chas. E. Mather, all the local Sunday, and the New York papers had only Mr. Cole's plain statement of facts to go by and were thus happily confined to the truth.

To-day (Monday) I called upon Mr. Mather, and he gave me a few additional particulars. The hound that started the trouble at the kennel was a native bitch which as long ago as last March was bitten when out hunting. Before she died she ran amuck through the kennel. After her death another bitch showed symptoms of having the disease, and it was then that a new kennel man took charge, Frank Smith, who had taken hold the week after New York show, only remaining a month. Mr. Mather consulted the book authorities on the subject of rabies, and found that he had samples of both dumb and acute rabies. Matters went along from bad to worse, the English hounds showed that they had not escaped, and after more than half the pack of thirty couples had succumbed to the disease, it was decided that nothing but complete annihilation of the entire pack would do. Under the direction of Dr. Rush C. Huidekoper, formerly dean of the veterinary department of the University of Pennsylvania, a powerful poison was mixed with the hounds' food, and soon all was over. Not a dog on the place was left alive, terriers and pets all suffering alike. Happily no one was bitten at the kennels, and from the time of the first attack but one dog got away from the kennels. That was an old dog which was kept to run with the puppies. He never was known to stray away, but when left out one day by himself to let him nibble a bit of grass he started off. He was pursued on horseback and run down after an eighteen-mile chase, which distance he covered in two hours. When caught he was at once shot. Mr. Mather said that the marked symptoms in the great majority of the cases was the desire to bite things, nothing that could be destroyed being safe from their teeth.

Within half an hour of leaving Mr. Mather I ran across Frank Smith. Frank is well known to exhibitors as a handler of Philadelphia dogs, though he did not follow the shows this year. He said he did not know anything about the bitch having been bitten when out hunting, but that about a week before he left the kennel she was acting strangely. She wanted to fight every dog in the kennel. The bitches she did not touch so far as he noticed. The next day she was worse, and he got so tired leaving some work he was doing and going to the kennel to stop the fighting that he finally got a lead, put it on her collar and took her to the house, where he fastened her to the staircase. Within two hours he found her dead, but she had meanwhile gnawed great chunks out of the woodwork below the stairs. Smith further told me that she would rush at the biggest dogs in the kennel and knock them over with ease and then tear and bite at the body. He noticed this particularly, because these American hounds always fight at the head. When any of the English dogs got against the iron railing which separated the kennels the bitch would go for them too, biting between the bars.

"How was it that you wrote Mr. Mather that the bitch died in a fit?" I asked. "Well, I did not want to put in writing exactly what I had begun to think was the real cause of her death. I did not think it wise, not knowing who might get the news. When Mr. Mather came out to the kennels, I told him that although I had never seen a case of rabies in my life, I had come to the conclusion that the bitch had died from it. Before I left the kennels, another bitch was beginning to act strangely, and I told the new kennel man, who took my place, about her. I don't know anything more after that. We had 68 dogs all told at the kennels."

I made an effort to see Dr. Huidekoper, but did not succeed, but I hope to be more successful to-morrow (Tuesday). I must say that seems to be a very clear case of rabies judging by what both Mr. Mather and Frank Smith say, and Dr. Huidekoper's action in advising the destruction of all the survivors further strengthens it.

On Tuesday evening I found Dr. Huidekoper at home and heard all he could tell me about the mad dogs. Dr. Huidekoper was only at the kennels on the occasion of his advising that the thirty dogs still living be destroyed. None of them then showed any symptoms of rabies, but matters had come to such a pass that it was unsafe to take any risk with them. "There can be no question, taking the statements of those who saw the dogs, Mr. Mather and his kennel man, that this was a clear case of rabies," said Dr. Huidekoper. "I did not see one of the mad dogs. I have heard about the trouble, and I was promised one of them, but when the next one had it I was unfortunately at Boston, and as a party was going out to the kennels it was decided to destroy the animal to stop his howling."

I drew Dr. Huidekoper's attention to the statement of Namquoit regarding the epidemic down East, which Namquoit thought might be dumb rabies. For answer I got the information that in the Doctor's practice he had had more cases of dumb rabies than the other, probably in the ratio of three out of five or even five out of seven. Dogs affected with dumb rabies cannot bite nor chew things up. "A dog looks as if he had a bone in his throat and cannot shut his mouth when he has dumb rabies. In fact people bringing such dogs to me almost invariably in describing the case say they thought the dog had a bone in his throat." It is therefore pretty evident that the Canadian and Eastern cases are some form of rabies other than dumb.

Regarding the biting at the body, spoken of by Frank Smith, Dr. Huidekoper said: "The disease is dementia, and such things are to be expected. A man brought a dog to me one day on a string. I saw from the look of the dog that he had rabies. The man told me that the dog would sneak behind him and try to bite him, and every time he turned and faced the dog it would lie down, only to sneak away and get behind him again."

Mr. Mather had said to me that in Delaware county in this State there was a good deal of rabies. I asked Dr. Huidekoper if he could verify this, and he said that he had heard that there had been cases there for some time past.

The Maryland Kennel Club held its meeting last week, and its secretary was instructed to write to the A. K. C. secretary and get from him official information in regard to the treatment of the Maryland Kennel Club delegate at the meeting of May 22. A special meeting of the Md. K. C. has been called for July 10 to take up the case. From what I learn as to the feeling of the majority of the members I

gather that a vigorous protest will emanate from the Monumental City.

For a year or two the New Jersey Kennel Club has not been in a very flourishing condition, members dropping off or being dropped for failure to respond to the call of the treasurer. Within the past few weeks, however, there has been quite a revival among the old members, and already I hear murmurings about a show, some say this fall, some say next spring, and the location is anywhere east of the Orange Mountains and west of the Hudson. The N. J. K. C. was a real live organization at one time, but got hard knocks at its Newark and Waverly shows, and dropped out of the business.

This reminds me that I have quite unintentionally hurt the feelings of one of the best of the many good Jerseymen, the Spaniel Club president, by giving a portion of a letter which was meant as a return for the compliment of my making inquiry after his health and not for me as a newspaper correspondent. The trouble is not with me, but with the popularity of the S. C. president. John Jones, for instance, might have broken every bone in his body and telephoned the consequences across the Styx without a live appearing regarding his troubles, but we all wanted to know, you know, and it would have been cruel not to have drawn upon the personal letter for the benefit of the many who were still in the dark as to cause and effect.

Mr. Secretary Vredenburg has gone a-fishing. If he doesn't catch anything while away, I understand he will when he gets back, but there is no occasion for him to hurry home.

Your always interesting correspondent "Namquoit" said a week or two since that I had erred in saying a certain St. Bernard was not American-bred. If "Namquoit" will refer to what I wrote he will find that I was asking for information and not giving any opinion. Miss Whitney, in her report of New York show, said—I quote from memory:—"having been born in this country, and therefore American-bred." To this I responded by saying that the A. K. C. had not got beyond saying that the produce of a bitch sent abroad to be bred and whelped in this country was American-bred. "Namquoit" now says that the dam of the St. Bernard in question was owned by an American before she was bred, and the puppy was therefore American-bred under the St. Bernard Club rules. Perhaps the St. Bernard Club has a rule as elastic as that, but I do not think it is within the province of any one club to frame such a rule, for the reason that uniformity is essential in such things, and the A. K. C. is the one to make a rule for all. Some members, at least of the collie club committee, held the opinion that Clipper was not American-bred, and for that reason, although opposed to my own individual opinion, I did not show him as such. At the last Philadelphia show, and while I was engaged elsewhere in judging, Mr. Carswell, quite unknown to me, took Clipper into the ring for an American-bred prize. When he so told me I said I doubted his getting it, as I knew Mr. Shotwell had a year or two before said such dogs as he were ineligible. No protest was made, as I had expected, and not wishing to miss the opportunity of getting the point decided by the highest authority, I asked the Philadelphia Club to accept my protest and refer the matter direct to the A. K. C., so as to go before that body without the prejudice of a decision on its part. This was kindly done, and the full facts were given to the A. K. C. Mr. Anthony at once said that in place of throwing obstacles in the way of an owner sending a bitch to England or anywhere else to be bred, he should have every latitude possible and be commended for going to such expense for the purpose of improving the breed. I had had a previous litter out of the same bitch, but she had been bred before coming over, and I have never had any idea that they could be classed as American-bred. I think "Namquoit" will agree with me that there is a clear margin of difference between the two cases, and if the dam of the St. Bernard was never in this country, but was simply bought in England and bred there before being shipped, I do not think her resulting litter is American-bred.

Mr. Mayhew has written a long letter to a contemporary regarding a decision of the A. K. C. at its last meeting regarding the disposition of a prize belonging to the St. Bernard Club. He does not hold with the decision, but he has failed to obtain the full facts of the case. We were deciding upon a stated case which precluded investigation. The St. Bernard Club gave the facts and asked for an opinion. The facts were that a prize open to members only had been awarded to a dog owned by the wife of a member, and the St. Bernard Club had decided that the dog was not eligible. The question submitted was whether the prize could now be awarded to another competitor, no reserve number having been given, or did it revert to the donor. The A. K. C. decided that the cup could not be given to another competitor in the absence of a reserve, and naturally it reverted to the St. Bernard Club.

Mr. Mayhew draws attention to a case in which he was interested in England, when a judge was subsequently written to for a second award, his first winner being disqualified. Such a course is not admissible, for a judge ceases to be such when a show is brought to a close. It is analogous to a racing judge, having placed three horses, one of which is subsequently disqualified. He cannot then place a third. His term of office is over and the vacancy cannot be filled. Mr. Mayhew also quotes the case of Polyphemus, the one-eyed St. Bernard at Edinburgh show. In this case, however, the judge, Mr. Sidney Smith, changed his award before he had left the ring. I judge from what Mr. Mayhew says that when the case was taken to court it was there ruled that the first award must stand. It must be understood, however, that there was no question as to the eligibility of Polyphemus, nor was there any deception on the part of the owner. The judge was supposed to have been aware of the defect in the dog; if he was not he did not exercise much care in examining the dog. This legal decision, therefore, does not touch the St. Bernard Club case. Another case quoted is that of a collie dog shown as a bitch and awarded a prize. By some means the judge found out his error before the show was over and advised the committee to change the award. Here again we have the clear fact of the animal's ineligibility.

Clashing dates will come to the front again this fall when on Sept. 2 to 5 we have the Detroit, Youngstown and Wilmington shows. With exhibitions given in connection with fairs this is unavoidable, and we can only make the best of it.

In view of the fuss made about the Maryland Kennel Club delegate at the last meeting of the A. K. C. I would draw attention to an announcement made in the *Gazette* since to hand. In the list of members and delegates appears "Maryland Kennel Club, Delegate, Alexander Brown, Baltimore, Md." J. W.

DOGS.—NALDRES medicated SOAP for washing dogs, destroys all irritating insects, removes doggy smell and leaves the animal refreshed and happy. This prize medal soap, used by all the leading owners in Europe, is now sold by Park & Tilford, McKesson & Robbins, E. Fougere and all Druggists.—*Adv.*

is very apt to cause diarrhoea. The stomach or tripe should be thoroughly washed and cleaned before being put into the boiler. As soon as it becomes known that you have a kennel of dogs the farmers will bring you every now and then a horse, cow or sheep that has broken a leg or met with some other accident necessitating its being killed. In cold weather this will form a valuable and cheap addition to kennel fare, as it can be kept for a long time. Even in the summer, if you will take the trouble to salt the meat down, it will come in very useful when it happens that you are disappointed in getting the customary supply from the butcher. Never under any circumstances feed your dogs on the flesh of an animal that has died from disease of any kind. In regard to horse flesh I want to give a word of caution. Be very careful how you use it. When fed fresh and in the same quantity as beef it will cause dogs unaccustomed to its use to scour badly, and their evacuations will have a very disagreeable odor and in color and consistency resemble tar. I always use it very sparingly, never feeding more than one-half of the weight that I would beef, and in addition take the precaution of keeping it four five days before feeding it.

FISH AS DOG FOOD.

In some sections of the country heads, etc., of sturgeon, dog sharks, etc., can be had cheaply. There is no better animal food for dogs, and as they can be bought for a song, they should take the place of meat in a great measure.

PRESERVED MEATS AND FISH.

When the kennels are so situated that it is impossible to procure a regular supply of fresh meat, it is necessary to substitute animal food that has been preserved by heat or pickling. Desiccated meat (meat meal) can be bought from dealers in fertilizers. It consists principally of the flesh of horses, but is none the less valuable for that. Even if the flesh of animals which have died from disease is mingled with it, the great heat to which it is subjected in the process of desiccation kills all the disease germs. This ground flesh is the meat ingredient of nearly all dog biscuit. Beef and pork scraps, often called "cracklings," can be bought cheaply. Before being used they should be soaked at least twenty-four hours, otherwise it will take too long to cook them in the boiler. Pickled pork that is a little "off," salted beef not up to the standard, fly-blown hams, shoulders, bacon and dried beef can sometimes be had for a trifle, while rusted fish and smoked fish not fit for human food are always to be found by those who will search for them among the grocers. These are all useful, and if soaked twenty-four hours, and the water changed two or three times, and then put in the boiler with a peck of broken charcoal, they will come out sweet, and be much relished by the dogs. This ends the list of all the available animal food I know of.

DOG VEGETABLE FOODS.

Of course the dog should be fed on something besides animal food. In fact, not over one quarter (in weight) of his fare should be of this sort.

The best of suitable vegetable food is as good for a dog as for a man, and with both, bread stands at the top. If there is no baker in your vicinity you can readily arrange for a supply to be shipped regularly in bags from the nearest city. Of course we are speaking of stale bread, which can be had at prices ranging from 25 to 80 cents per barrel. A two bushel bag will hold a barrel. In hot and muggy weather you should have the baker to cut the bread into slices and thoroughly dry it in his oven, otherwise it will mould, often within 24 hours. Ship biscuit (hard tack) are not expensive, and if placed in a dry place they will keep indefinitely. It is always best to have a barrel of these for a case of emergency. Broken crackers and cakes can sometimes be bought low.

Flour of good enough quality for dogs can be bought at prices varying from \$2.50 to \$3.50 per barrel. Corn meal is valuable in winter, but we advise you to use it very sparingly during the summer, as it is apt to cause skin trouble. Coarse oatmeal, while comparatively expensive, is one of the most valuable cereals that can be fed to dogs. Broken rice, damaged peas, beans, etc., are very valuable dog foods, and can be bought cheaply. Linseed and flaxseed meal are very fattening and make glossy coats, but they should be fed only very sparingly and not oftener than once a week. When I feed either I use a teaspoonful of meal for each dog, putting it into the boiler and cooking it with the regular food.

GREEN VEGETABLES.

Green vegetables are very useful at all times of year, but especially so in the spring. There are scarcely any that cannot be fed with beneficial results.

Onions and onion tops are excellent. In the spring of the year, when you will need them most, sprouted onions can be bought by the barrel at almost any price you choose to offer. Cabbages are cheap and good. I know the owner of a large kennel who every fall buys several thousand soft cabbages, for which he pays \$5 to \$10 per thousand, and puts them in pits so as to secure a sure supply of green vegetables for his dogs during the winter. Beets, mangles and turnips are about the cheapest sort of vegetable food I know of. Spinach and kale too are cheap and wholesome. In the fall it is always advisable to lay in a supply of white and sweet potatoes. The small size of the former, known as hog potatoes, can be bought at ten or fifteen cents per bushel, and are just as valuable for dog food as if they cost four times the money. The unmarketable sweet potatoes in the sections where they are grown can be had just as cheaply. I have fed my dogs cooked apples, and they relish them. Carrots and parsnips are two other cheap sort of vegetables. I have never used pumpkin or squash, but I should think they would be most excellent, especially the former, if fed to growing puppies, on account of their well-known anti-worm properties.

MILK.

Of course the puppies must have milk, but where the kennels are situated in a dairying country and it can be had cheaply, milk is one of the best possible things a grown dog can have for a change. Skimmed, sour or in clabber, it is all equally relished and beneficial. Dogs can soon be taught to drink buttermilk, and puppies that have it two or three times a week seldom are troubled with worms. If you are near a creamery you can procure it very cheaply.

This closes the list of cheap and available raw materials for kennel fare. Some time, soon, I will tell you how to prepare and serve them.

THE MARYLAND CLUB DELEGATE.—*Editor Forest and Stream:* When I said last week that Mr. Peshall's credentials from the Maryland Kennel Club were "evidently insufficient" I did so on the strength of the reports of the A. K. C. meeting. Since then, having seen the copies of the original paper, my statement must be qualified. In a body that really and honestly does what the A. K. C. pretends to do—considers the welfare of American dogdom in general; in a word, the A. K. C. of Mr. Elliot Smith or Mr. W. H. Child—such a paper would have been accepted as fully sufficient; but I can see how in the present personal A. K. C., existing for the gratification of personal piques, the narrow technicality that the Maryland K. C. could only be represented by its original delegate until that delegate resigned, could have been used as a shunt to get rid of "a disagreeable person," and with due respect to the Maryland Club, I still think it would have been less intolerable for the meeting to have done this, than to adopt the course they did.—W. WADE (Hulton Pa., June 6).

PACIFIC COAST FIELD TRIAL DERBY.

Editor Forest and Stream.

The Pacific Coast Field Trial Derby closed on June 1 with 26 entries, 7 pointers, 15 English setters, 2 Irish setters, 1 Gordon setter, and one dog breed not stated. All were whelped in 1889:

POINTERS.

LADY L. (D. A. Leonard, Bakersfield), bitch, Aug. 20 (Professor—Gracie Bow).

MABEL B. (G. W. Bassford, Suisun City), bitch, Aug. 20 (Professor—Gracie Bow).

NED (R. E. Wilson, San Francisco), lemon and white dog, Sept. 4 (Roscoe—California).

NICK WHITE (J. M. Bassford, Jr., Vacaville), white and lemon dog, Aug. 8 (Scout Croxteth—Blossom).

OLD BLACK JOE II. (J. E. Watson, San Francisco), black dog, June 11 (pedigree not stated).

QUEEN'S LAST (J. M. Bassford, Jr., Vacaville), liver and white bitch, July 18 (Mountain Boy—Beautiful Queen).

RENA B. (G. W. Bassford, Suisun City), liver and white bitch, Aug. 8 (Scout Croxteth—Blossom).

ENGLISH SETTERS.

DANDY R. (M. D. Walter, Galt), white, black and tan dog, Sept. 1 (Rodney—Phyllis II.).

DASHING BROLLA B. (A. Peri, Marysville), black and white dog, Oct. 9 (Jasper B.—Pride).

ELITE (G. G. Goucher, Fresno), orange and white dog, May 8 (Loadstone—Enid).

EL RAY (F. B. Dexter, Fresno), orange and white dog, May 8 (Loadstone—Enid).

FRANCE R. (J. S. Dunham, Stockton), white, black and tan dog, Sept. 1 (Rodney—Phyllis II.).

LEO R. (M. D. Walter, Galt), white, black and tan dog, Sept. 1 (Rodney—Phyllis II.).

LORD CHUMLEY (N. Rideout, Marysville), blue belton and tan dog, May 7 (Loadstone—Janet).

MANFRED (California Kennels, Sacramento), black, white and tan dog, July 16 (Harold—Miss Druid).

PETRONELLA (California Kennels, Sacramento), orange and white bitch, May 15 (Harold—Sunlit).

PRIERRE (J. W. Harper, Suisun), orange belton dog, May 15 (Harold—Sunlit).

PROMISE B. (A. Peri, Marysville), orange and white bitch, Oct. 9 (Jasper B.—Pride).

SARABAND (California Kennels, Sacramento), orange and white bitch, June 16 (Loadstone—Sweetheart).

STREN (California Kennels, Sacramento), orange and white bitch, June 16 (Loadstone—Sweetheart).

SUBRETT (D. M. Pyle, Bakersfield), orange and white bitch, June 16 (Loadstone—Sweetheart).

SUNBURST (H. C. Chipman, Sacramento), orange and white bitch, June 16 (Loadstone—Sweetheart).

IRISH SETTERS.

RIO (E. G. Schmiedell, San Francisco), red dog, July 30 (Mike T.—Lady Elcho T.).

SHAUN RHUE (E. J. Roy, San Francisco), red dog, May 30 (Nat Glencho—Red Fanny).

GORDON SETTERS.

FANNY (R. Liddle, San Francisco), black and tan bitch December (pedigree unknown).

NOT CLASSIFIED.

AL FARROW (C. Stударs, Rontier's Station), Nov. 20 (pedigree not given). H. H. Briggs, Secretary.

DOG TALK.

THE news from this section this week is mostly bad. Mr. John Williams, of Somerville, while taking a walk Sunday, had the misfortune to lose his promising black cocker spaniel puppy Ardell, by Wilkes Obo out of Gypsy Obo. A horsecar ran over her killing her instantly. He has since purchased Mr. E. L. Crowell's Aida, a bitch of the same breeding of a former litter, in whelp to Prince Obo. He has sent his English setter bitch puppy Princess Royal (Royal Prince II.—Pansy) to his trainer, Mr. Taylor in Virginia.

The Fleet View and Reading Pointer Kennels have had the misfortune to lose five of their pointer puppies the past week, three of them being by Nick of Naso out of Belle Randolph.

The secretary of the English Setter Club reports several more applicants for membership.

Messrs John and D. A. Williams had the misfortune to lose their beagle bitch Trixie last week. She was by Kisco out of Lady, and was in whelp to Frank Forrest. She died in parturition.

Mr. Fred Frazier, vice-president of the Setter Club, and an all-around dog lover, is building and furnishing a room in the rear of his cigar store under Proctor's Opera House, Lynn, Mass., for the benefit of the Lynn dog men. All the leading papers will be on file there, and dog men who visit Lynn are cordially invited to drop in and make themselves at home. I made a short call there the other night, and the air was fairly blue with gunpowder smoke, feathers, No. 8 shot, etc. As I strolled down the street I could still hear the music of C. K.'s yellowleg call.

Another bud of promise in the canine world is young Mr. Kent. He has recently started the Merry Mount Kennels at Wollaston Heights, Mass., and has some excellent rough-coated St. Bernards. Among them Berlin (Hector—Bernie), winner of fourth at Boston; Riola, an orange bitch, and Chequassett Marigold, in whelp to Beauchamp.

The Woburn Fauces' Club are talking of holding a bench show in connection with their poultry show at Woburn, Jan. 21 to 23, 1891.

In my note re Divas's puppy last week the printer translated my "best Sir Bedivere puppy" into "best St. Bernard puppy."

We think the English Setter Club of America made a judicious selection in offering the presidential chair to Mr. F. W. Whitlock, of Waterbury. He is well known as an officer of the Waterbury Fish and Game Club, and of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, a former member of the Hartford Kennel Club, and city surveyor of the city of Waterbury. He has been from his youth an admirer and breeder of the English setter, and owns at present writing Berkshire (Foremost—Normal), Beauty of Orleans, a fine liver and white bitch in whelp to Paxtang, and a black and white ticked grand daughter of Dashing Monarch, in whelp to Berkshire.

Lynn is fast filling up its ranks with good English setters. Mr. Henry Wilson has purchased another of the Buckleley—Vic Vic litter, a promising bitch puppy. Mr. Westbrook has left an orange and white dog of the same litter with Mr. Wilson to complete his education.

When Mr. H. B. Tallman's buff cocker bitch Bessie was

bred to Mr. C. G. Browning's red cocker Cherry Boy, I had quite a curiosity to know what color the pups would be. I learn to-day that she whelped six dark red puppies; no blacks or buffs.

I see by the *Hunde Sport* of May 7 that the Berlin dog show rivals that of the Westminster Kennel Club. The entries number 1,202, of which number the English setters constitute 24, Gordons 26, Irish 12, pointers 53, griffons 20, dachshund 126, fox-terriers 96, Newfoundland 25, rough St. Bernards 48, smooth St. Bernards 30, mastiffs 10, bulldogs 21, Dalmatians 8, poodles 30, spitz 20, schipperkes 2, bull-terriers 8, black and tan terriers 21, schweissunde 14, windhund of the various varieties 254. Among the specials I notice one of 200 marks (about \$50) for the best hunting dog in Württemberg, and others of 100 marks and less. The Germans are not much behind the English in the number of entries.

About everybody else has had a word to say about the Stud Book, and now I think it is my turn. I like to see independence in all things. I would not like to see the American Kennel Club Stud Book the exact copy of the English Stud Book, but I would like to have my own country come somewhere near the mother country in this respect. Frankly, I think the Stud Book a disgrace to the American kennel world. The English Stud Book not only gives the winnings of the dogs entered, but also the winnings for the current year of all former entries, together with a complete list of all winners at all shows held during the year under K. C. rules, all winners at field trials, a complete list of recognized shows, a list of regular and associate members, and the rules governing bench shows and field trials. And again, what winnings are published in our Stud Book are not correct. I can name several that are in this issue that were won at small "hen shows" not under the rules of any kennel club.

The English Setter Club of America will hold their first annual meeting at the Quincy House, Boston, Mass., on the evening of July 1. There is some very important business to be brought up at this meeting, and every member should be present. The adoption of a standard and amendments to the constitution will be in order.

When one compares Sir Tatton, Belthuss, Bohemian Girl, Roger and Rodrigo, does it not look as though an English setter club was sadly needed to at least try to secure a more uniform appearance? A foreigner might well ask, which is the setter?

Why is it nobody has brought over any Landseer Newfoundland? They are a noble breed, black and white in color, nearly as large as the St. Bernard and full as intelligent.

We are sorry to hear of the illness of Mr. Chas. Ackerly, of the Iroquois Kennels, Tonawanda, N. Y. That he may soon be about again is the earnest wish of NAMQUOIT.

COLLIE IMPORTATION.—We received a call last week from Gen. Henry Mac Iver, of England, who brought over the collie dog Brankie, a very nice sable and white of excellent breeding, his sire being the well-known Metchley Wonder and his dam Miss Charlemagne. He was not in first-class condition owing to his recent voyage, but still he looked well enough to give some of the cracks a good fight for a place. He should do good service in the stud as he is closely related to a large number of English winners.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES OBLAINED.

Prepared Blanks sent free on application. Hair's Ideal Rock and Hair's Petrel. By Dr. Jas. E. Hair, Bridgeport, Conn., for blue belton English setter dog and bitch, whelped May 23, 1890, by Ned Laverack (Perfection—Lit Laverack) out of Belle Laverack (Ned Laverack—Dora). Quintrin, Kenneth, Reginald, Jeffery, Eric, Keturah, Tryphosa, Corinda, Kestah, Faustina and Griselda. By Connemara Kennels, Middletown, Conn., for red Irish setters, five dogs and six bitches, whelped April 10, 1890, by Blaze out of Gladys B. Connemara Kennels. By R. H. Burr, Middletown, Conn., for his kennels of Irish setters.

BRED.

Prepared Blanks sent free on application. Juno—Kimmerly. Warwick Kennels' (Bridgeport, Conn.) pointer bitch Juno (Young Don Juan—Venus) to O. Kinsell's Kemmerly (Whiskey—Payne's Blush), May 20. Daisy—Fritz. Alex. Wynkoop's (Leesburg, Va.) pointer bitch Daisy (Joker, Jr.—Maggie) to C. W. Littlejohn's champion Fritz, Feb. 5.

Rosa May—Fritz. J. P. Cartwright's (Augusta, Ga.) pointer bitch Rosa May to C. W. Littlejohn's champion Fritz, May 28. Daisy—Hemmore Shamrock. T. Heery's (Pittsfield, Mass.) Irish setter bitch Daisy to E. L. Cheney's Hemmore Shamrock (Muskerry—Avoca), June 5.

Spright—Cherry Boy. C. G. Browning's (Worcester, Mass.) cocker spaniel bitch Spright (Ebony—Jessie) to his Cherry Boy (Ebony—Fanchon), May 11. Hornet—Cherry Boy. W. West's (Philadelphia, Pa.) cocker spaniel bitch Hornet (Champion Doc—Lady Pluto) to C. G. Browning's Cherry Boy (Ebony—Fanchon), May 13.

Brown Bess—Cherry Boy. G. H. Whitehead's (Trenton, N. J.) cocker spaniel bitch Brown Bess (Champion Doc—Lady Pluto) to C. G. Browning's Cherry Boy (Ebony—Fanchon), April 24.

Buffalo Lass—Buffalo General. A. W. Smith's (Buffalo, N. Y.) black and tan terrier bitch Buffalo Lass (Punch—Young Luce) to his Buffalo General (Halifax General—Lady Lottie), June 5.

WHELPS.

Prepared Blanks sent free on application. Bar Maid. Field Trial Kennels' (Charlottesville, Va.) pointer bitch Bar Maid (King of Kent—Hops), May 31, six (four dogs), by J. A. Perkins's Mainspring (Alder—Rouge). Daisy. Alex. Wynkoop's (Leesburg, Va.) pointer bitch Daisy (Joker, Jr.—Maggie), April 10, five bitches, by C. W. Littlejohn's champion Fritz.

Lillian B. N. K. Sperry's (New Haven, Conn.) English setter bitch Lillian B. (Buckellew—Frolic Bondhu), May 23, eight (four dogs), by Warwick Kennels' Hair's Belton (Yale Belton—Polly Rho).

Nell Warwick. Warwick Kennels' (Bridgeport, Conn.) English setter bitch Nell Warwick (Warwick Albert—Princess Belton), May 22, six (three dogs), by their Ned Laverack (Perfection—Lit Laverack).

Belle Laverack. Warwick Kennels' (Bridgeport, Conn.) English setter bitch Belle Laverack (Ned Laverack—Dora), May 23, six (three dogs), by their Ned Laverack (Perfection—Lit Laverack); one dog and one bitch since dead.

Wonna Gladstone. R. H. Alberts, Jr.'s (Hoboken, N. J.) English setter bitch Wonna Gladstone (Gun—Victoria Laverack), June 4, eight (three dogs), by his Belthuss (champion Rock—Cockerton's Meg).

Venus. J. B. Blossom's (New York) Gordon setter bitch Venus (champion Argus—Rhoda), June 2, ten (six dogs), by Beaumont Kennels' champion Beaumont.

Bessie. H. B. Tallman's (Providence, R. I.) cocker spaniel bitch

Bessie (Billy Obo—Rhoda), May 25, six (two dogs) by C. G. Browning's Cherry Boy (Ebony—Fanchon). Doone. Mr. McAlester's (Philadelphia, Pa.) fox-terrier bitch Doone (Hatter—Warren Vaughn), May 26, five (one dog), by his Telford (Raby Mixer—Temptation); dog since dead.

SALES.

Prepared Blanks sent free on application.

Prince Barry—Countess Sequa whelps. St. Bernards, age not given, by H. S. Pitkin, Hartford, Conn., a dog each to W. E. Sessions and J. H. Sessions, Bristol, Conn.; C. B. Peabody, Philadelphia, Pa., and Dr. C. T. Smith, Thomaston, Conn., and a bitch each to W. A. Gordon, New York, and J. Van Velsor, Jr., Buffalo, N. Y.

Duke. Blue belton English setter dog, whelped Feb. 14, 1889, by Warwick Albert out of Princess Belton, by Warwick Kennels, Bridgeport, Conn., to Chas. Fredericks, same place.

Albert's Duchess. Black, white and tan English setter bitch, whelped Feb. 14, 1889, by Warwick Albert out of Princess Belton, by Dr. J. C. Hair, Bridgeport, Conn., to Dr. J. A. Hartman, Latrobe, Pa.

Rosa Galt. English setter bitch, age not given, by Galt's Joy out of Rosa, by Dr. J. A. Hartman, Latrobe, Pa., to Dr. J. E. Hair, Bridgeport, Conn.

Garth. Black cocker spaniel dog, whelped June 4, 1889, by Obo, Jr., out of Tough, by Corktown Cocker Kennels, Ont., to Wm. Ledyard, Bath, Me.

Corkey. Black cocker spaniel dog, whelped Jan. 19, 1890, by Bob Obo, Jr., out of Tough, by Corktown Cocker Kennels, Ottawa, Ont., to U. Bonnevillie, Danville, Quebec.

Thora. Black cocker spaniel bitch, whelped Sept. 21, 1889, by Lobo out of Cleo, by Corktown Cocker Kennels, Ottawa, Ont., to U. Bonnevillie, Danville, Quebec.

Rifle and Trap Shooting.

RANGE AND GALLERY.

A WORTHY REPRESENTATIVE.

SAN FRANCISCO, May 24.—Philo Jacoby, the well-known sportsman and rifle shot, left this city this evening in company with Mr. John Utschig, both representatives of the California Rifle Club. They are expected to be on the way to the great European shooting festivals which take place in Berlin, Fraunfeld, Hanover and Bremen. They will shoot as the representatives of the Schuetzen Club of this city, and their many friends expect that they will return home crowned with laurels of victory. Jacoby has competed with the crack European rifle shots of Germany before, and distinguished himself on more than one occasion by carrying off first honors. A short sketch of the life of the man, who is known by every sportsman in this city, will interest the lovers of rifle-shooting.

Philo Jacoby was born in Pomerania, Prussia, and arrived here June 18, 1859, as a sailor on the clipper-ship Whirlwind. He first learned to handle the rifle as a member of the San Francisco Schuetzen Club in 1864, Joseph C. G. and John Bach being his teachers. In nine months after joining the club he took second prize, making most bullseyes in the yearly festivals, Joseph Hook being first. Severin, Moirs, Schneider, George Schmitt, and other good shots, gave him odds, and were beaten even.

In 1865 he shot a 600-yard match (the first long-range match in California) with Moirs and Schneider, and won. He also won the return match, the same distance, in 1866. In 1868 he went to the East and made a tour of the great shooting festivals, and won many of the principal prizes. While in Berlin he competed with the needle gun against military marksmen, and won. He received from the Prussian Government a needle gun, the first ever brought to America—which he owns yet—and 200 cartridges. In 1870 he went East and became shooting king of the great festival in Washington, D. C., won first prize in the New York rifle-shooting festival, making three successive 4-inch bullseyes, and in Cincinnati.

In 1873 he went to Europe and won nearly all the first prizes at the Silesian Shooting Festival in Breslau; won third goblet in Solothurn, second grand prize in the honorary target, besides many goblets and money prizes. At the Vienna World's Exposition he made a record in the rifle and shot, and besides the other fine prizes at all distances. In the great German Shooting Festival at Düsseldorf he won the first goblet (the only American rifleman who ever got that honor), also became shooting king by making 304 bullseyes in one day against 172, which was the next highest score. He also won many honorary prizes. In 1870 he took a rifle team to the Philadelphia Centennial shooting. His team was composed of Messrs. P. Jacoby, A. Schroeder, A. Rabywyler, Wm. König, Wm. Struelli, Wm. Ehrenpfort, J. A. Bauer and F. Greiner. The California team won the Champion Centennial Cup, beating the next team badly. Jacoby was champion of the team, making 193 rings, or an average at our targets now in use of about 22 rings.

He commanded the California Schuetzen Club rifle team against the police rifle team, commanded by Capt. Douglass. The Schuetzen Club team won on all ranges—200, 300 and 600 yds. The Nevada National guard rifle team having beaten the California militiamen three years in succession, P. Jacoby issued a challenge to them to pit 20 men against 20 men of the California Schuetzen Club, with military rifles. The match came off at Alameda and the California Schuetzen Club team won by about 50 points. A return match was arranged the next year and again Philo Jacoby's team won, with an average of 57½ points per man.

P. Jacoby organized the California Schuetzen club for the purpose of representing California at the Centennial Exhibition of January 6, 1876. In the last shooting festival of the California Schuetzen Verein, May 11 last, at Shell Mound Park, he took the first prize with 95 rings out of a possible 100.

New Jersey and New York will also be well represented at the shooting festival of the North-German Schuetzenbund to be held in Berlin on July 14. The contest is expected to be one of the affairs of the kind ever held, and shooters from every country in the world will be represented by its most expert marksmen, and the competitions will be very close. Newark will be represented by August Begerow, first shooting master of the Newark Shooting Society, Otto Krauss and Fred P. Laute, of the same society. Gottfried Krueger will also go, although not as an active shooter. He can do delicate shooting, while Mr. Laute will take the independent to-day, as will Mr. Krueger, while Mr. Begerow will start on June 19. The first regular excursion party to start for the Fatherland was the New York Central Schuetzen Corps, which left New York on May 27, in charge of Captain George Liburg. The New York Independents will start to-day, and the New York Schuetzen on the 18th.

With the Independents will go the experts who will be expected to sustain the honor of the American eagle. These will comprise among others, the following shooters who are well known to Newark riflemen: Bernard Waither, president of the Zettler Rifle Club, who now holds the American record for 100 shots on the Standard American target with a rifle, under N. R. rules; David Miller, president of the Miller Rifle Club, of Hoboken; very fine marksmen: Gebhard Krauss, Williamsburgh Schuetzen Verein; Alex. Stein, Seventh Regiment (N. Y.) Rifle Club, an expert military, sporting and pistol shot; Gustave Hombrighausen, Baltimore Schuetzen Verein; Fred P. Laute, Newark Shooting Society. Messrs. Miller, Stein, Krauss, Laute, Begerow and Hombrighausen will devote themselves to the various targets whereon they can do delicate shooting, while Mr. Waither will go in the competition for the honor goblet, to win one of which it is necessary to score 180 points at 175 meters distance inside of from 14 to 18 minutes.

Gus Zimmerman, of the Bullshead Rifle Club, of New York, sailed on Wednesday, May 28, for Germany. For rapidity and accuracy with a single-loader Mr. Zimmerman is undoubtedly the 8th shot in the world, having made 84 shots and 601 bullseyes in three hours never having been approached. He is booked as a sure winner of the premier honor goblet, this being the prize of all others that is coveted. Recently at Cypress Hills Mr. Zimmerman, while shooting under German rules, made three trials on the point target; in his first he scored 180 points in 13 minutes, in his second trial in 12½ minutes, and on his third trial in 12½ minutes. Mr. August Begerow will take his family with him, and will remain abroad until Oct. 1.

The Americans will be handsomely received on the other side, and innumerable festivals and receptions have been arranged in their honor. At Bremen they will be received by the Bremen Rifle Association. Thence they will go to Hanover, where they will attend a prize shoot on June 23 to 24. On July 2 the sovereigns will go to Berlin, where they will have a grand reception. The shooting festival will last from July 6 to 13.

NEW YORK RIFLE CLUB.

THE New York Rifle Club has concluded its in-door competition on the 100ft. range of the German-American Shooting Society at 12 St. Mark's Place, New York. The long-distance handicap competition will be continued at Creedmoor, L. I., during the summer, and on the following dates: June 7, 14, 23, August 2, 23 and 30. The in-door match was at a handicap match, but as proficiency of the members at the short range was not well known, Mr. T. J. Dolan invented a novel, ingenious and unique plan, after which all members started from scratch, the man making the highest score being handicapped 10 points, while the man with the lowest score received an allowance of 10 points at the next shoot. The shooter who had the score nearest to the mean between high and low was handicapped 5 points at the next shoot. The medals were three medals of handsome design, the first, of gold, to go to the man making the highest score the greatest number of times; the second, of silver, with heavy gold rim, for the shooter who made the score nearest to the mean between high and low the greatest number of times; the third prize, the leather medal, not only handsome, but also valuable, to be won by the man who made the lowest score the greatest number of times. The medals were won as follows: Gold medal, V. B. Daly three times; V. B. Daly twice; M. O. Herrington, J. S. Case, A. H. Isbell, C. C. King, J. N. Ostrom and Dr. E. Chadbourne one each, Dolan winning the medal for good. The silver medal went to M. O. Herrington, who captured it four times. The other winners were King twice; Isbell, Daly, Gensch, Huyler, Dr. Chadbourne, each once.

The winner of the leather medal was Mr. A. L. Huyler, three times; Dolan, Herrington, each once. The medals were also given to the following: Gold medal, V. B. Daly three times; V. B. Daly twice; M. O. Herrington, J. S. Case, A. H. Isbell, C. C. King, J. N. Ostrom and Dr. E. Chadbourne one each, Dolan winning the medal for good. The silver medal went to M. O. Herrington, who captured it four times. The other winners were King twice; Isbell, Daly, Gensch, Huyler, Dr. Chadbourne, each once.

The following table shows the number of shoots attended, the highest actual score made during the competition by each marksman, the actual average of the highest scores at the respective competitions, and the average of the scores with the handicap added:

	No.	Highest Actual Score.	Actual Average.	Handicap Average.
T. J. Dolan	10	245	239.10	225.10
M. C. Herrington	11	247	234.91	226.21
J. S. Case	3	233	230.00	223.33
V. B. Daly	11	238	225.45	225.73
N. O. Herrington	6	231	226.50	225.50
M. O. Herrington	6	231	226.50	225.50
A. H. Isbell	6	236	231.43	226.43
C. C. King	9	235	229.22	221.89
J. Macaulay	3	215	211.00	217.67
J. N. Ostrom	7	232	227.71	223.43
Geo. Shorley	3	231	210.33	213.67
H. Gensch	3	229	226.00	226.00
Dr. E. Chadbourne	2	235	224.00	221.00
A. L. Huyler	5	206	194.80	208.80
E. B. Barker	2	223	218.50	218.50

GERMAN SHOOTERS.—The thirteenth annual prize shoot and bowling contest of the Deutsch-Amerikanische Schützen Gesellschaft came to an end at a late hour on Tuesday evening, June 3, at Lion Park, New York. The names and scores of the winners:

King Target.			
Kanzler	54	Steinbach	48
B. Zettler	54	Haefer	48
Gully	53	Knochenhauer	46
Ph. Schneider	53	P. Meyer	47
Eisele	52	B. Kleinfelder	47
Stahl	51	Schilling	47
B. Walther	51	Von der Liehn	47
J. Wagner	51	Larch	46
O. Hintz	50	Hansen	46
G. G. Zettler	50	Muller	46
Grimm	49	Stich	45
Renner	49	Stutz	45
Norack	48	Rappstaedter	45
Medal Target.			
Zettler	53	E. Arnold	52
Quosbath	53	V. Steinbach	52
B. Walther	53	Stich	52
Kahn	53		

Prize Target.			
Dr. Boyken	53	C. Rheim	51
Tabler	53	V. Steinbach	51
B. Walther	53	Quosbath	50
W. Weber	52	Hansen	50
F. Eisele	52	F. Armbrust	50

C. Zettler	52	L. Vogel	49
Hinz	51	J. Wagner	49
R. Eggers	51	P. Meyer	49
G. Nowarth	51	Nelner	49
Premiums—F. Eisele, O. Armbrust, L. Enders and B. Walther.			

CANADIAN LEAGUE.—The second of the home range matches of the Canadian Military Rifle League took place on Saturday, May 31. The conditions were:

Favorable and scores ran:	
Essex Centre, 21st Batt.	830
Quebec, 8th Batt.	799
Windsor Mills, 54th Batt.	799
Hamilton, 13th Batt.	770
Halifax, G. A. 1st.	757
Halifax, G. A. 2d.	700
Toronto, 12th Batt.	744
Toronto, 10th R. G. Ist.	732
Toronto, 10th R. G. 2d.	732
Lindsay, Team No. 2.	730
Quebec, B. Battery.	727
Bowmanville, 45th Batt.	725
Charlottetown, 82d Batt.	757
Pt. Arthur, 96th Batt.	747
Ottawa, 43d Batt.	738
Montreal, 1st P. W. R.	733
Montreal, 33d Batt.	731
Ottawa Guards.	731
Peterboro, 57th Batt.	734
Montreal, G. A.	665
St. John, 62d Fusiliers.	681
Charlottetown, G. A.	672
Halifax, 63d Rifles.	670
Sherbrooke, C. C. 2d.	670
Prince Albert (NWMP) F. Div. 633	663

The following are at present the six highest teams:—

54 Regiment, Windsor Mills	1,004
Halifax Garrison Artillery	1,351
63d Regiment, Artillery	1,352
21st Battalion, Windsor, Ont.	1,449

BOSTON, June 7.—The Massachusetts Rifle Association held its regular weekly shoot to-day with a large attendance, and some fine scores were made at rest and off-hand. The shooting conditions were good. Mr. Dohrman won the bronze victory medal. Next Saturday the spring meeting of this Association will begin at 7:30 A. M. and close Tuesday, June 17. There will be four hand, pistol and military rifles. Following are the best scores made to-day, distance 200yds., Standard American target:

*Record Off-hand Match.			
C. H. Eastman	88	H. Severance	78
J. B. Fellows	80	S. C. Sydney	76
*Record Rest Match.			
L. R. Avay	109	H. Severance	101
J. Francis	108	A. H. Ballard	96
(R) All-Comers' Rest Match.			
J. Francis	113	V. Peters	105
S. Wilder	113	L. E. Avay	102
D. Daniels	110	P. C. Towne	101
V. P. Thompson	107	S. W. Carney	98

(R) Practice Pistol Match, 50Yds.			
H. Severance	89	A. R. Long	86

*Only one entry allowed each week, (R) Re-entries allowed.

CREEDMOOR, June 7.—The eleventh contest in the New York Rifle Club's annual match for valuable prizes was shot to-day. A tricky, fish-tail wind was blowing all day, interfering greatly with the making of good scores. In addition to those whose scores are given below, Mr. S. Ward, Dr. Chadbourne and A. L. Huyler practiced experimentally with new rifles and cartridges:

	200yds.	Allowances.	Total.
G. A. Strong	70	8	84
J. J. Dolan	80	5	80
Geo. Shorley	75	5	80
T. Lloyd	77	3	74
T. Lloyd	78	6	74
A. Isbell	70	3	73
O. T. Mackey	62	9	71
E. W. Barker	63	8	69

KING CITY, Ont., June 3.—Bradford, Aurora and King City shot an association match under the rules of the O. H. F. A., on the range of the latter, to-day. The day was fine, the shooting was good, and it was the best match of the season. The three clubs enjoyed themselves as only riflemen can. The score is as follows: Bradford 889, King City 827, Aurora (8 men) 564. The next match will be shot at Aurora, Tuesday, Sept. 2.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

June 9-13.—New York State Association Tournament, at Lyons, N. Y.
June 10-14.—Thirteenth Annual Convention and Tournament of the Iowa State Association for the Protection of Fish and Game, at Davenport, Iowa. J. W. Howard, Secretary.
June 17.—Middlesex Gun Club All-Day Shoot, at Dunellen, N. J. Live and clay bird race. Ten bird race, \$10 entry.
June 17-20.—Tournament Rocky Mountain Sportsmen's Association, at Cheyenne, Wyo. W. B. Ostrander, Secy., Denver, Colo.
June 24-27.—Tournament at Dayton, Ohio, under management of Rollo O. Hoikes and W. Scott McDonald, \$1,000 guaranteed.
July 9-10.—Springfield, Mass., Shooting Club Tournament, with guaranteed purses. H. A. Penrose, or Corry, Pa., Manager.
July 4.—The Red Hook Gun Club's Tournament, at Red Hook, N. Y. R. J. Carroll, Secy.
July 15-17.—Saratoga Gun Club Tournament, at Saratoga Springs, N. Y. \$1,500 guaranteed. All money prizes, no merchandise. W. A. Coster, Secy.
Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa. Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse, Wm. E. Limberg, Secy.

FEATURES OF TRAP-SHOOTING IN THE WEST.

THE present condition of the sport of trap-shooting, a sport which is recognized the world over as essentially a diversion of gentlemen, has become so thoroughly discredited for many years past various abuses have crept in and gradually undermined the interest which formerly attracted all lovers of the gun. In many cases these abuses have been recognized as they appeared and have been met with vigorous protest, but all to no avail. In other particulars, the evils which assailed the sport were at first welcomed as friends, although now, seen in their true light, they are hated as enemies. Yet no remedy has been found for the various ills, and hence, as if the sport were afflicted with an incurable disease which must result in its eventual death.

There have been, as I say, many ills to contend with, and most of them, in spite of various well meant efforts at reform, yet remain cankers eating away the life of one of the most interesting, exciting and gentlemanly of all sports. The professional expert, who attended all the tournaments, was among the first enemies that the sport had. His methods were well known. The sport attracted him primarily, but the almighty dollar was his god. No device too mean, no advantage too slight, but what he would use it to his own ends. A few dollars either way influenced his actions, and made honest shooting impossible. The expert was after the dollars, not the sport. When, later, a combination of expert sharks was formed, to work the same circuit of tournaments, the sum of each tournament was made to be the same, and the expert, who enjoyed the sport for the sport's sake, their methods were recognized and an effort made to prevent them. At that time, in a sweepstake where, for instance, four moneys were offered, the four highest scores took the prizes in order. Thus four experts, by making straight scores in the main event, could be reasonably certain of shooting out their amateur opponents in the main event, and thus the sport was lost. At all events, they had so much the best of it that the combination was pretty sure to secure the bulk of all the money.

To prevent this the system of class shooting was adopted. In class shooting, a straight score or the highest score in the main shoot gets first money; the second high score in the main shoot second money, and so on. In such a case, ties on the same score are an particular either shot out or divided. The system became a snare, the expert, who was now in a combination, by shooting so that each one of them would get into a different one of the four ties where four prizes were offered, became reasonably sure that between them all a handsome profit would be realized. This system has been worked for years and has wrought vast injury to the sport. No amateur had half a chance, as when with a professional, he was almost certain to be beaten in the shoot-off. Thus the expert has for years been able to "work" the shooting tournaments which have been organized by amateurs and to the fullest extent supported by amateurs. Traveling in squads from city to city, where tournaments were to be held, their presence has finally become a signal of danger to the non-professionals, and as a rule, he now maintains a very secluded solitude. The problem for solution in trap-shooting is how to keep the expert away from the amateur, and how to prevent the expert from holding them in check that the amateur may have a fair chance. The American Shooting Association has attempted to accomplish this result by its system of classification of shooters on the basis of previous records. On the face of it, this seems the fair and only method, and it is to be hoped that it may yet prove successful. The results so far attained in the way of increased attendance at the tournaments and the interest in the sport, under different auspices, seem to indicate that the true road to success has at last been found. When artificial targets are used, a record of a shooter's abilities can be established and he can be properly classified. In such a manner the expert can be effectually kept out of the road of the amateur, and some inducements are offered the latter to induce him in his favorite sport.

But live-bird shooting is different, and conditions prevail. The shooting is not uniform, and no estimate of a shooter's ability can be made from any record he may have made. Many shooters are remarkably expert when they shoot at none but easy birds, such as are apt to be furnished at the summer tournaments, and can make a long record of kills. Yet put these men at the swift, strong and hardy birds of the winter, and they will go all to pieces. The expert, who is a shooter of similar conditions must prevail, and this is not possible in the winter shooting. It is not an even day. When wild pigeons furnished the sport of the trap, a man was certain to have good hard birds at almost all times. Under present conditions, with the domesticated pigeons, nearly all of them as tame as chickens, and during the summer, when the majority of the birds are young, poorly-fledged and barely able to fly, the expert has a chance to knock over a sharp shooter as the traps open. Such shooting is not sport, it is a mere murder. Occasionally, of course, mixed with the poor weak squabs, a man finds an old and strong bird which tests his skill. Thus the result of a shoot depends entirely on the luck in birds, and that has caused many ardent shooters to desert the sport. It seems like brutal murder to deliberately blow to shreds a poor, weak squab of a pigeon, who is helpless and trusting, and to turn toward the crowd of human beings whom it has not learned to regard as enemies. So long as such shooting is regarded as sport, just so long will pigeon-shooting be fought by the humane societies, frowned upon by true gentlemen and avoided by the men who claim the title of "sportsmen." When in the winter, with birds fully fledged, strong on the wing, quick in getting away, and old enough to know that men are the inveterate enemies of all the feathered tribe, a pigeon shooter has the conditions become different. It is then the shooting assumes the character of a sport, and it is one which may well engage the ardent devotion of an admirer of the manly qualities. A keen, quick eye, a steady nerve, excellent control of the gun, and a

thorough concentration of the mental faculties then become the attributes of a good shot. Relieved of the brutality of slaughtering fledglings, pigeon-shooting becomes even more than a sport. It is an art, and as such deserves the appellation it has received, "the sport of gentlemen."

But as the conditions of live-bird shooting vary with the season, and, to a vast extent, with the weather, no accurate classification can be based upon a shooter's record. Therefore, the American Shooting Association's plan will not work on live birds under existing conditions.

The fact is, that the present system of shooting live birds is, in my opinion, radically wrong. It is based upon the English plan, and is wrong for the reason that the English conditions do not obtain here. In England the birds for pigeon shooting are of a peculiar breed, and are trained especially for the sport. Under all conditions the English birds are quick, lively and hard to shoot, comparing favorably with the wild pigeons which we no longer get. None of their birds are incomers, and but few cross the line of fire. The shooting is difficult and their rules have been framed to favor the shooter. We have copied their rules as closely as possible, and in many cases adopted them without change. These rules, framed especially for difficult shooting and intended to favor the gunner as far as possible, are not suited to our wants. We have had easy birds. We should, therefore, handicap the shooter, not the bird. A fairly good shot, with a 10-gauge gun heavily loaded and bearing directly on a poor bird while it is being persuaded to open its wings long enough for a charge of shot to reach it, really ought never to miss, especially as he has a second barrel to use if necessary. When a bird gets away the instant the trap is opened, of course the case is different; but such is seldom the case in summer, when most of the pigeon shooting is done.

The only argument that can be advanced in favor of placing the gun at the shoulder when the shooter calls "pull," is that it avoids technicality and possible ill-feeling, owing to poor judgment by a referee. In England, the rule was designed to give the shooter a fair chance to score a bird which was certain to be a rapid flyer as soon as the trap was opened. In this country the rule favors the expert, and the inexperienced trap-shooter, who has no man whose experience has been gained in the field, and who has not yet learned the knack of covering a bird on the ground and pressing the trigger the instant a wing is spread.

In the old days when the sport of pigeon shooting reached what has so far proven its highest development in America, and when business men traveled hundreds of miles to attend a tournament, the expert was compelled to hold his gun below the elbow until the bird took wing. Under such rule, the squab was compelled to open its wings and hop up a foot or so could not be ruthlessly murdered as at present. The rule insured that the bird be able to fly.

The policy of the rule makers of late years has been to increase the advantage of the shooter over the bird. Favored thus, the expert makes such long records of straight kills that the amateur or inexperienced shot becomes discouraged and misses, through lack of the necessary stamina.

It has almost become a question of staying powers and not of skill. The constant drift in this direction will most certainly kill the shooting of live pigeons. It is the constantly increasing number of straight scores that alarms the occasional shooter, and keeps him and his money away from the shooting tournaments. The expert should be offered the smaller boxes and lighter weights, the methods of shooting harder, and not easier as the past policy has been. The 10-gauge cannot must be, or should be, discouraged, and driven out of the field, as the old 8-bore was. The 12-gauge should be made the standard, and its distance should not be less than 20yds. from the trap. The vast improvements made recently in guns and ammunition make a 12-gauge of the present day fully as effective as the old 8. Extra inducements in the way of handicaps should be offered the smaller boxes and lighter weights, thus encouraging superior skill. The attempt of the American Shooting Association to fix a standard shot load for different gauge guns is not, in my opinion, a wise move. Encourage the small gun, don't kill it. Everything points to a renaissance in guns. The 12-gauge, in spite of all opposition by interested parties, is winning its way, and new converts are daily made. The expert should be offered the smaller boxes and lighter weights, the methods of shooting harder, and not easier as the past policy has been. The 10-gauge cannot must be, or should be, discouraged, and driven out of the field, as the old 8-bore was. Extra inducements in the way of handicaps should be offered the smaller boxes and lighter weights, thus encouraging superior skill. The attempt of the American Shooting Association to

targets from five traps, angles and traps unknown; use of both barrels allowed. It strikes me that this is well worthy a fair trial. At present target-shooting is decidedly monotonous. Some improvement in the system should certainly be found and adopted.

Much talk has been wasted, and much space in the various sporting papers occupied in the last few years in a futile effort to devise some plan to prevent professional shots from walking away with the money in a sweepstake. The "fucker system," the "Lloyd system," and various other plans and "systems" have been tried and found wanting. Of all these so-called "systems" it strikes me that, under present shooting conditions, the "key-system" is the only one which is fair to all. This provides that when a shooter in a tie for any money prize finds that on an equal division with others in the same tie he could realize as much or more than his entrance money to the main shoot, he may withdraw his proportion, leaving the others to shoot out for the balance. This method offers a fair chance to the amateurs or non-professionals. Under the usual plan one man could prevent a division and prevent the shooting out of the ties to the end. It is hardly probable, however, that any "system" except the one in vogue will be commonly adopted for a long time yet.

The country shooters without a doubt are deserting the big tournaments in the cities. A few years since they formed an important part of the attendance at "sweeps," but few of these appear. They have found that they are handicapped by inferior guns and much poorer ammunition. The city sportsmen progress in these respects, but the countryman has not the same opportunity. He has therefore given up the fight.

Trap-shooting, to my mind, is as yet undeveloped. I believe it has a brilliant future among the sports of the country. Let the true and best interests of the sport at heart, get together, discuss the difficulties of the situation, look for the remedies and endeavor to place trap-shooting where it properly belongs, in the front rank of the sports which appeal for support to gentlemen. Drive out the packshots, make the range more pleasant, give the good and the mediocre shots all a chance, but place a premium on skill, encourage match and team shooting, and take what other methods may seem feasible to make trap-shooting a clean and honest sport, possessing an attraction for every man who owns a gun. It may be too much to ask, but such is the earnest wish of

W. F. Mussey.

Chicago, Ill., May 17.

ILLINOIS STATE SPORTSMEN'S ASSOCIATION.

CHICAGO, Ill., June 7.—For sixteen consecutive years the chief sportsmen's organization of the State of Illinois has held annual convention and tournament. The meeting for 1890 is at an end to-night. During these years, covering a period of fluctuation in matters germane to its purposes, this sturdy band of shooters has left on record widely divergent stories of its yearly meeting. The event of the present year's meet was anticipated with great interest, the more especially as it has of late been thought that shooting at the trap was on the wane. It was believed by some that a kind of large attendance and steady shooting in such matters was a thing of the past, and there were a few who found in this or other causes ground sufficient to make them doubt the full success of this year's meet. Now that the meet is over, it cannot fail to please all these that the result has been quite beyond their anticipations; and it certainly is a positive pleasure to any sporting journal to chronicle the successful and unobtainable success of so old and worthy a sporting fixture. In the past, for instance in the days of wild-pigeon shooting, there may have been larger entries in one or more main events, but the steadiness of the attendance from day to day has not been surpassed and in most years has not been equalled. For instance, if memory serves me aright, on the fourth day of last year's shoot there were but about seven entries in a live-bird event, and, year on, the same day, there were 53 entries at \$10. Last year, upon memory again, there were 65 entries in the great Board of Trade badge shoot; this year there were 78. Such things do not point to a rapid decadence of the art of trap-shooting, or suggest any very violent delinquency on the part of the management. They indicate a steady and a performance which should make all interested in this yearly congregation feel cheerful in the extreme.

The Illinois State meet has long held fast to the customs of the past. There is no more conservative a meet held anywhere in the country. Some of the target-circuit followers grow impatient at this and wish more time put at their line of business. In past years the total of targets shot in a live-bird event, when compared to the totals of target tournaments pure and simple. The reason for this is obvious and two-fold. The rapid-firing system has not been adopted in the first place, and in the second place a mixed tournament breaks up the system of rapid firing to a great extent, the shooters being here and there and often absent at the live-bird event. The live-bird shooting is usually rapidly. There has been quite the greatest target-smashing shoot ever held here, thanks to Mr. Penrose and his lightning scheme, so much so that more targets were broken in one day this week than were broken in the whole week last year. In looking over the target shoot entries it should be borne in mind that they do not show all the shooters on the ground. Many of the shooters are at the same time shooting either one or the other set of traps and the showing would compare very favorably with that of any recent tournament of whatever nature, if indeed it did not surpass the latter. Three or four thousand targets a day is not so much, but it must be borne in mind that at the end of the fourth day there had been 1,500 live-bird shots at all. That is an extraordinarily large number. The live-bird shooting was unusually rapid. There was some good shooting done in it; for instance Mr. C. A. Burton's run of 43 straight, which was first average work. The scores run the lower by reason of a strong wind which prevailed throughout most of the week and served to skate many a dead bird out of bounds.

It would be useless to seek the names of all the gentlemen who were present from abroad, but a few of the familiar were Mr. R. Irwin, of Philadelphia; Mr. C. W. Parent, of Marshall, Mo.; Mr. Geo. C. Beck, of Indianapolis; Mr. Cartwright, of Boston; Messrs. W. S. Cannon and W. Fred Quimby, of New York, with the old standbys, Messrs. Budd, Heikes, Courtney, Tucker, Benscotten, etc., etc.

The annual convention was held at the Sherman House, Tuesday evening, June 3, and was very well attended. There was something of the old talk and bluster about game protection. This is perfectly harmless and everybody understands it. It is in the play. On motion of Mr. Pierce it was resolved that the president appoint a law and legislation committee of five, with Mr. Volstead N. Low as chairman of the same. It was further resolved that this committee be empowered to appoint sub-committees all over the State. The object of this was to secure united action in game legislation. It was also resolved to watch carefully and intelligently the efforts of artificial target companies to secure the passage of a law in Illinois prohibiting live bird shooting. The committee was also charged with the duty of making a report and was discharged. The report of the committee was read and was discharged. The report of the committee was read and was discharged. The report of the committee was read and was discharged.

Chicago was selected as the place for the next meet, the latter to be held under the auspices of the Audubon Club.

A vote of thanks was passed to the donors in the different purses, and to the Sherman House for courtesies.

The officers elected for the ensuing year were: Dr. N. Rowe, President; Mr. A. M. Hoffman, of Chicago, First Vice-President; Mr. Thomas A. Marshall, of Keithsburg, Second Vice-President; Mr. W. L. Shepard, Secretary and Treasurer.

By far the most interesting feature of the meeting, in my opinion, was the address of the retiring president, Mr. E. C. Donald. It so well presents the actual state of affairs in this section that it is given in full. Mr. Donald said:

Gentlemen of the Association:

As the chief executive of your organization I have the pleasure and distinction of extending a fraternal greeting and an official welcome to the membership assembled on the occasion of your sixteenth annual convention.

An intelligent review of the organization and history of your Association calls for a review of the sixteen years, would seem an appropriate theme to present to this assembly. I regret exceedingly that my comparatively brief association with this most important factor of the social interests of our great commonwealth, will necessarily confine a retrospection to mere generalities. Organizations of the character of the Illinois State Sportsmen's Association are few and far between. Their objects primarily, the inauguration and maintenance of certain reforms, or the enforcement of special laws, partake in a singular degree of the phenomena attending individual existence. The hopes and expectations born of the inspirations and suggestions of to-day are dissipated by the proven utility of practical application to-morrow, seasons of apparent progress alternate with periods of discouragement and utter disappointment. This is a word I may assert, reflects the experience from year to year, of this organization. Through its agency and the persever-

ance of its active members, laws have been enacted in the furtherance of its proposed philanthropy. Influential membership, secured throughout our broad State, representative citizens of their several communities, have sought by moral suasion and the precept of individual example, to stay the wanton, unseasonable, and unsportsmanlike destruction and annihilation of a God-given patrimony. And yet, despite the exertions of the sportsmen of our State as represented by this Association, in derision and contempt of the penalties prescribed by our law makers, this merciless slaughter, this barbarous unrelenting war of extermination against every creature wearing fur, fin or feather has gone steadily and merrily forward. That this Association should for nearly two decades perpetuate its organization in the face of apparently insuperable obstacles, renewing each succeeding year its pleading for the law giver and the law breaker in behalf of the nesting bird and the spawning fish, is in my mind a more eloquent attestation of the patriotism and good citizenship of the true sportsman than could be avowed by the burning oratory of a Patrick Henry.

This Association, gentlemen, embraces within its membership scores of men of mature experience, unerring judgment, and unqualified intelligence. Men who have successfully solved the two problems of business preference and social distinction, men who may if they will yet guide this storm-beaten ship of reform from its sixteen years of contention with adverse currents and unfavorable winds, to a safe harbor, and a permanent anchorage in the safe port of every humane and intelligent citizen of our commonwealth.

Frankly speaking, brother sportsmen, it is not true that during the interim of your annual beating to quarters for the election of officers and the enjoyment of your trap contests, your good craft floating the pretentious ensign, "Protection to the game of Illinois," has drifted as idly and purposeless as the poet's "painted ship upon a painted sea." It is not my purpose to disparage this enjoyable feature of the annual convocations of this Association; perish the thought; but rather to suggest that as consistent members of this organization the principles it seeks to inculcate and make permanently operative should during the intervals of your annual meetings command your consideration to the extent of inciting individual action whenever and wherever a blow may be dealt in support of the reform we have undertaken to inaugurate and perpetuate.

It is proper that the Association should have from its retiring officers an account of their stewardship. Having no session of our Legislature during the past winter, your administration escaped the responsibility of interfering with our law-makers. In August last we undertook a decisive test of the value of the existing laws by seizing several packages of contraband game from the stores of two reputable South Water street dealers. The case of the people was ably represented by our Association counsel, Mr. W. N. Low. Result, a non-suit, while your chairman found himself in the ludicrous position of having made himself liable to an action for damages for having unlawfully interfered with the traffic in half grown quail and snipe. In view of this experience, I feel it incumbent upon me to suggest to this Association the opinion that the legal provisions for the protection of the game in Illinois are worse than a useless incumbrance of our statutes, and serve no purpose other than to attest the ignorance or insincerity of its creators. The right of the people to enforce the act is denied, and vested instead in three game dealers, with no compensation other than the privilege of the fines assessed and collected. Obviously there is more profit in these so-called wardens to assume the relationship of protectors of illegal game dealers than to enact the rôle of public prosecutor with possible remuneration contingent upon a successful issue of the case. Having boldly declared the prevailing laws incompetent, and in the last degree farcical, I feel it incumbent upon me to suggest to this Association a substitute. It is plain that reformation must come through the strong arm of the law. Then let us deal with cause, not effect; prohibit by law the sale or traffic in game in the State, or its exportation from the State for the purpose of barter or profit. Give to the people of the State the authority of enforcing the act, and if this measure should prove ineffectual, we of this Association will courageously be foremost to support any legislative remedy, but I beg that you will have in mind that it is an attempt to prescribe for a most desperate case, which has run the gamut of every species of diagnosis and treatment. Lawlessness is largely the outgrowth of opportunity and temptation. The unseasonable and unsportsmanlike destruction of game is almost wholly instigated by the possibility of gain. Destroy the market, and the game hunter's avocation becomes profitless. As a natural sequence the question arises, How may the enactment of so stringent and arbitrary a law be encompassed? By proceeding in a political manner as a politician would proceed. Let each community of sportsmen pledge the ambitious legislative candidate to these measures prior to the casting of their ballots, or putting it candidly, let each community of sportsmen pledge the ambitious candidate who upon election will give his vote and influence to the passage of adequate game laws.

In March last, prairie chicken, quail and other contraband game appeared regularly on the bills of fare of many of our Chicago hotels and restaurants. Having absolutely reliable information that at least two of our leading South Water street dealers were stocked to the roof with this illegal plunder I made a diligent search for our game warden. After the exercise of some patience and the loss of much time I succeeded in ferreting him out in an obscure section on the north side of our city, and by dint of exaggerated representations as to the importance and grave responsibilities of his office, if you please, gave your support, leaving him to the justice of his office and swear out two warrants, leaving him an officer of the court on their way to serve the papers. The returns were very prompt, and consisted simply of bills for the service, with the report that not a feather was to be found. Evidently the present laws and the provision for their enforcement are to the liking of the game dealers.

It is hardly necessary to discourage the experience of your chairman, to commit to the wisdom and wider experience of the Association the responsible task of devising ways and means of securing the enactment of adequate laws, untrammelled by impotent conditions.

For their loyalty, cordial support, and intelligent, harmonious cooperation, looking to the success of this annual convention and tournament, I am indebted to you, gentlemen, for the entertainment of our guests and the promulgation of the principles of our institution in the face of unexpected and ill-timed antagonism. I desire to tender to the officers of this Association my sincere thanks and assurance of profound appreciation. To this goodly assemblage of congenial spirits who have gladdened us with their presence I tender the warmest welcome and a most grateful welcome. Gentlemen, I thank you for your presence.

The incoming president made a brief and appropriate speech of acceptance.

Below is the record of the shooting. The weather throughout the week was mild and pleasant. The arrangements at the grounds were better than usual. The Gun Club kept open house for the guests of the Association, and the Lake George Club also had tents. John Watson rarely had a better lot of birds, though he was nearly cleaned out by Friday night. The lunch counter was very well provided also, and everything was very pleasant.

First Day, Tuesday, June 3.

Shoot No. 1, for the Board of Trade diamond badge, emblematic of the individual championship of the State, the winner of the badge this year to receive the proceeds of next year's tournament. First prize, \$100; second prize, \$50; third prize, \$25; fourth prize, \$10; fifth prize, \$5; sixth prize, \$2.50; seventh prize, \$1.25; eighth prize, \$0.625; ninth prize, \$0.3125; tenth prize, \$0.15625.

There were 78 entries in this shoot, and 9 ties on 10, viz.: Torkington, Parvis, Burton, Anderson, Bartell, Smith, Turtle, Airey and Abe Kleinman. These drew \$40 each before the shooting was begun in the ties. The ties were then shot as follows:

A. Torkington..... 112210..... J. J. Smith..... 0
R. J. Purvis..... 210..... R. A. Turtle..... 210
S. Barton..... 210..... S. Barton..... 1210
M. K. Anderson..... 121111111..... Abe Kleinman..... 2120
B. Barton..... 0

Mr. Anderson cut down his last 5 birds, all hard ones, in grand style, and won amid great applause. There is no trophy in the West so valuable or so valued as this great one of the Board of Trade badge.

There were 13 ties on 9, but at the end of the first 5 tie birds only 6 of these remained: Black, E. J. Reeves, L. C. Willard, Ike Watson, Geo. T. Farmer and J. J. Kleinman. These six divided the money, \$75, and shot for the merchandise prize, which was won by Geo. T. Farmer with 15 straight. Mr. Geo. T. Farmer crowding him close with 14.

There were 19 ties on 8. At the end of 5 birds Messrs. J. E. Price, E. P. Jaques, J. P. Card, Grif Harris and F. M. Thompson divided the cash, \$50. Card and Harris then tied on 5 more and divided the merchandise prizes.

There were 7 ties on 7, and at the end of 5 birds Messrs. Ludin, Desteiger, Franklin, Loveday and Organ divided the cash. Messrs. Franklin and Loveday remained tied on 13 straight and then divided the plunder.

Shoot No. 2, for the L. C. Smith cup, emblematic of the individual State championship at inanimate targets, the winner of the cup next year to receive 50 per cent. of the cash which he is a number of per cent. of the contest at next year's tournament. The winner to execute bonds in the sum of \$500 to guarantee the production of the cup next year; 20 Keystone targets, entrance \$5, Illinois State rules. First prize, the L. C. Smith cup, value \$500; second prize, cash and merchandise, \$98; third prize, cash, \$50.

F. Black won first, the L. C. Smith cup, which carries 60 per cent. of next year's entry; C. E. Cannon won second alone, \$70 in cash; L. C. Willard, W. S. Duer and J. J. Kleinman div, third, \$50, and shot off for the merchandise prizes, Duer being absent when the ties were called, forfeited his rights in the merchandise prizes. The tie went to J. J. Kleinman, who broke 4 out of 5 birds, and won the tie. S. Harmon, W. G. Payson and H. R. Babcock div, the cash, \$35, on fourth, and shot off for the merchandise prize, Babcock winning with 5 straight in the ties. Babcock, who won the cup last year, this year carries off \$820 cash clear for himself and his club. This is believed to be the largest tournament winning of any recent time.

Wednesday, Second Day, June 1.

Shoot No. 4, diamond badge donated by Montgomery, Ward & Co., Chicago, Ill., value \$100; 20 Chicago tin pigeons, entrance \$5 (birds free); subject to conditions. The person winning the badge shall receive 50 per cent., the balance to be divided 40, 30, 20 and 10 per cent. The trophy won at the coming tournament to be competed for once every three months. From the purse 50 per cent. shall be awarded to the previous winner of the trophy, the remainder to be divided 40, 30, 20 and 10 per cent. The trophy shall become the personal property of any contestant winning it three times. A bond of \$100 shall be required from the winner for the prompt return of the trophy at each shoot, until won three times by the same person:

The full programme of the target shooting was run through at the end of the third day, and for the two following days sweeps were shot as they could be run.

WELLINGTON, Mass., June 7.—The first contest in the merchandise race for June, took place at the grounds of the Wellington Gun Club to-day, and the weather conditions were favorable for good scores. In this match, which is at 10 stages and 5 pair blue-locks, the following scores were made: Barrett and Bradstreet 17, Bond 16, White, Warren, Scott and Stanton 15, Purdy and Chase 14, Porter 13, George 12, Hooper 11, Dill 9. Sweep-stake matches followed.

JACKSON, Mich.—Mr. Carleton Gilbert, of Jackson, Michigan, announces that on the second Tuesday of July the Jackson Gun Club will give a tournament, open only to residents of the State of Michigan. There will be \$1,000 guaranteed in cash and prizes. Keystones will be shot. There are forty or fifty good clubs in Michigan, and this should be a good event.

MOUNT HOLLY, N. J., June 8.—The regular shoot of the Mount Holly Gun Club took place on the Fair Grounds here to-day, and the score was as follows:—Isaac W. Budd 12, Henry Darnell 12, Chas. E. Travis 11, J. Earl Forsyth 10, H. S. Quicksall 8, J. L. Anderson 5, A. A. Anderson 5, Henry Thornton 3.

NEW YORK STATE SHOOT.—Lyons, N. Y., June 9.—The thirty-second meeting of the New York State Sportsman's Association for the Protection of Fish and Game was held here to-day. About forty clubs were represented, and two valuable were elected to membership. Rome will have the next tournament.

DEFERRED REPORTS.—To appear next week: Harrisburgh, St. Louis, Pine Grove, Lyons, New Haven, Towanda; Bridgeport, Ephrata.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings, races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

CANOEING IN THE WEST.

PERHAPS the earliest canoeing done in the West was by Mr. Henry B. Curtis, widely known as an athlete, and who is now, I believe, connected with the Wilkes's *Spirit of the Times*. Mr. Curtis had a paper canoe built by Waters, of Troy, New York, and he can be called the father of the canoe in the West, and extremely narrow—a mere cockleshell—requiring an athlete of the Blondin style to keep right side up. Mr. Curtis's voyaging in this country was begun early in the '70s—I think about 1872. He cruised a good deal on all the western rivers and among the beautiful lakes of Wisconsin. About 1876 canoe Clytie passed into the hands of Mr. Frank Root, who used it for cruising and sailing, crying out, "I wish I had a canoe."

It was about 1878 before canoeing began to take much of a growth in this country, but in that year there were several other paper canoes added, and there were numerous cruises made around Chicago, in Wisconsin and northern Michigan. In 1880, the year in which the A. C. A. was formed, there were several new canoes launched at Chicago, the products of local builders, and one from Evanston, which was nearly as big as that time equal to anything afloat. There were several more races that time and during the year of 1880 great advancement was made. It was about this time that the first marked increase of sail area was noticed. Up to that time the boys had been afraid to use much sail on their little craft.

The formation of the A. C. A. had stimulated the sport very much, and in the year 1881 some of the most prominent men joined the sport in this city. Among them were Mr. N. B. Cook, and his son Mr. H. B. Cook, Mr. J. B. Keogh and Mr. J. W. Keogh. The latter gentleman purchased a Sandy Hook from Mr. W. P. Stephens. This was a fine seaworthy boat, 14ft. x 23in., and is in perfect condition to-day, a model of good and reliable workmanship. In the year of 1881 there was a great activity, and the increasing interest manifested itself in numerous races, and in cruises of considerable extent. The popular sails of that time were the lug, lateen and sprit. The sailing, it should be borne in mind, was done chiefly on the rough and open waters of Lake Michigan.

During the next three years the sport flourished admirably, and many gentlemen joined its ranks. There was considerable improvement in model, fittings and rigs, and ideas on these points were exchanged with interest—especially after the publication of the *Western Canoeist*. The clubs were formed, and in fact there are now many isolated canoeists scattered through the West, but the Western canoeists seem to be troubled with great modesty in the matter of public writing, and thus persistently allow their light to be hidden.

During the winter of '83 and '84 there began to be considerable talk about the advisability of co-operation among all these Western canoeists, and the result was the formation of the Chicago Canoe Club. A banquet, proposed by several of the club, was held at the Mattheson House, Jan. 11, 1884. There were only 24 present at this banquet, but these had a glorious time, and amid an enthusiasm which was practically unbounded, the club was organized. Mr. G. M. Munger was chosen as its commodore. This organization stimulated canoeing very greatly in this country, and the club soon grew to a membership of 53. The first club cruise was given May 10 and was very large, and the course was down the south shore of the lake to the parks, and very long but a very pretty cruise. After that, annual cruises were taken early in June down the Rock River, through Wisconsin and Illinois, after the usually successful and well-attended regatta at Madison, Wis. The annual club regatta was held July 10 and this was marked with many entries, and the regatta was a great success. The shores were lined with enthusiastic spectators. In the meantime the club had not secured a clubhouse owing to the difficulty in agreement upon a site, the membership being widely scattered, some in Hyde Park, Evanston and in other parts of the city.

The season of '84 was very active. There were a great many informal sails, races and cruises, and a great many new canoes came in. There were regular meetings during the winter of '85, and at these meetings there was considerable enthusiasm manifested, but it must be confessed that they finally resolved themselves into a debating society, in which the question of the site for a clubhouse figured largely. There were two champions of the large and the small sides present regularly, in the persons of Mr. Seelye and Mr. Keogh.

In the season of '85 there was no diminution in membership, but there was a notable lack of common interest, and the want of a good boat house doubtless had much to do with this. There were a good many individual cruises, and the annual regatta of 1885, Aug. 15, off the Pippy C. C. club house was quite successful. There were a number of medals and flags put up as prizes. The attendance was large, and the races were popular, though folding and dagger boards were also used. The sails were sprit, lateen or batten lug. It was at this time that the deck position in sailing

racas began to be first adopted. The inside position with ballast was usually mostly used.

In the meantime the Tippy C. C. had been organized, in April, 1884, with a house at Thirty-fifth street. The membership of this club was limited to 18, and it was always full to the capacity of the house and membership. This club was possessed with the principles of vitality and did not die out as its predecessor before named, the enthusiasm and interest never waned and does not wane to-day. This club has been very successful in the races, taking a majority of the prizes, silver, etc., at the Western Canoe Association meets. The members being charter members of the Chicago Canoe Club, this year adopted the name of that old association, as they thought such a name would convey a better idea of identity and be better suited for a leading club, as this is the only one destined to be the present vessel. Since then undoubtedly be an active season for this club. The opening race was given on Decoration Day. There was a big time, plenty of enthusiasm, etc. Weekly races will be given throughout the summer months.

In the meantime also a second club has been organized. This is the Pappoose Canoe Club, which consisted of a dozen members and was organized in 1885. As the name would indicate this club was composed of young canoeists, and the members were all under that feature until to-day. These boys have their house of Thirty-ninth street, and although not so prominent in age or experience as some of their brethren, they are very fair sailors and made of good stuff.

At the Western Canoe Association meet, in July, 1885, a dozen or more enthusiasts meet at Ballast Island for a two weeks' camp, and an organization was formed at the time, with Mr. Geo. W. Gardner, the Mayor of Cleveland, as its commodore. Since then the W. C. A. has held a meet yearly at the same place, with 50 to 100 in attendance. There is one week of racing, and one week of cruising, loading and general good time, some of the most charming sailing and cruising waters in the Western country being close thereabout. The membership of the W. C. A. is now over 100, and in spite of several malcontents, who insist that unless their own private views are carried out they will withdraw, they go home, the meets are usually marked by the best of good fellowship, and they have been the occasion of the best and heartiest union in sport and in ideas. At these meets the stranger is made welcome and cannot fail to feel entirely at home from his first arrival until the time of his departure. There are sailing and paddling races, with challenge cups and many prizes of silver and gold. There is an annual winter meeting of the executive board and committee, which ends with a banquet. This year Cincinnati did the honors, and very handsomely she did them. Next year comes Chicago's turn, and a royal greeting will be extended to the fellowship of the W. C. A.

The above random notes have to do chiefly with Chicago. There remains much to be said about canoeing in the West outside of that city. Among Western cities, particularly those of Cincinnati and as a pioneer in the West, the Cincinnati C. C. was organized in 1878. Mr. Nicholas Longworth and several other canoeists cruised down the Allegheny River in 1879, and the same year Lucien Wulsin, with Messrs. Siegfried and Barnes, of St. Paul, traversed the whole region of Lake Itasca and the headwaters of the Mississippi, they being the first white men to follow these waters in a wooden boat. The Cincinnati C. C. has a flattering record, its members having won prizes in many a race all over the country, and in the last few years it has won the Pacific. Judge Longworth, better known as the "Skipper," was one of the organizers of the A. C. A., and for the past twelve years has devoted his time very widely to cruising. After his death, which occurred last June, the Cincinnati Club out of respect to his memory, changed the name of their organization to that of Longworth Canoe Club. The Cincinnati boys are good fellows and possessed of the distinctive qualities of the canoeist for tinkering and monkeying" around generally. The Longworth club house is probably without a peer, and its large and well-lit storeroom attests the enthusiastic inventive genius of these genuine canoeists.

As I have said before, there are many solitary canoeists scattered throughout the West whom we never hear of, who are not given so much to making us our Eastern brethren. They get a good deal of enjoyment out of the beautiful sport, although it must be confessed they miss the pleasure of comparing notes, talking rig and discussing how this or that race was lost or won, which all can only be gained in the fellowship of a club or through the wider fellowship of the regular meets.

The tendency in the West, especially where sailing must be done on the Great Lakes, is now toward larger boats; 16x40 is a size of boat, and is now being built for the present season, but really better adapted to the purposes in hand and more comfortable since it furnishes enjoyment in its peculiar field of sport. So large a canoe is in many instances not only a comfort, but a necessity on these equally Western waters, if one values safety and a dry skin. Frequently a companion is taken in one of these large sailing canoes, and this is by many thought an additional pleasure, and a very large boat of this class seems to fill the bill exactly, and they probably have come to stay in this particular field. Especially in Lake Michigan is this class destined to become popular. All the sailing there is on open water, and frequently in very heavy sea.

There is a very good club at Cleveland known as the Cleveland C. C., and at Dayton, O., there are two good active clubs—the Stillwater and the Luckawa. At Springfield, O., there is the Jabberwock C. C., which in one way or another is pretty widely known over the country. The sport seems destined to a healthy growth, and the near following years will doubtless see large accessions in clubs and club membership, both in the region about the Great Lakes, in the Mississippi Valley, and in many of the numerous Western regions blessed with natural adaptability to the bright and breezy sport. C. W. Lee, Purser Chicago C. C.

CHICAGO, Ill.

CHICAGO C. C.—Decorated Day in Chicago will long be remembered by the canoeists assembled at the cosy quarters of the above club. The weather was remarkably fine, in strange contrast to the same day in the past years. A clear sky and a warm breeze from the west were all that could be desired in such conditions. The wind was strong and puffy as is characteristic of offshore breezes, requiring full ballast and lively hiking to keep on an even keel. Two races were sailed in the morning and resulted in a tie between the Dorothy and Lark. At the conclusion of the second race lunch was announced, and a merry party gathered on the shore, and the Lark, in the boat house. The occasion was graced by the presence of the ladies, and they were enthusiastic in their praise of the sport and the entertainment provided, declaring that they could now readily understand the fascination of canoeing. After lunch the passenger races were sailed, victory perching on the Lark. The races were hotly contested and exciting from start to finish, the strong wind keeping the boats constantly on the edge of the water, and a few narrow escapes from capsizing on adding to the interest of the race. At the close of the day the weary members had a refreshing swim, the first of the season, and voted the day a magnificent success.

A CANOE TRIP FROM OTTAWA TO MONTREAL.—Four canoeists utilized May 23-24 to paddle from Ottawa to within a few miles of Montreal. The party was composed of Messrs. D. Ross, A. F. May and J. D. Hilbrock, of Ottawa, and J. G. Ross, of Montreal, the former two in one canoe, the latter two in another. They left the boat house of the Ottawa Rowing Club at 8:30 A. M., on May 23, at 7:30 P. M. reached Greenville, 62 miles down. It commenced to rain an hour after they started and continued to do so nine hours out of the eleven, and were in the canoes, which they did not leave at all, eating lunch while the canoes drifted down stream lashed together. On Saturday morning they left Greenville at 9 o'clock, and at 8 P. M. they reached their destination, at Valois, on Lake St. Louis, 13 miles above Montreal, and 51 miles from Greenville. Although the distance this day was shorter, the work was harder, as six portages had to be made. The lake of Two Mountains a smart headwind, while on the lake of Three Rivers, which raised a sea, the canoes could not live through. The party were pretty well played out on Saturday night, not having had any sort of preparation for so extensive an effort.—Ottawa Free Press.

IANTHE C. C.—The spring regatta of the Ianthe C. C. will be held on Saturday off the clubhouse foot of Grafton avenue, Newark, N. J. Trains leave foot of Chambers street, N. R., at 11:30 A. M., 2:00, 3:30 and 4:22 P. M. The programme is as follows: Event 1, Paddling, any canoe, exempt from "one man, one canoe" rule. 2, sailing, record event. 3, sailing, juniors, record event. 4, sailing and paddling combined. 5, sailing, juniors' record event. 6, paddling, record event. 7, paddling, juniors' record event. 8, paddling, tandem. 9, hurry scurry and upset. A. C. A. rules will govern all races. Events are open to all canoeists. Regatta committee: Richard Hobart, chairman; Wm. J. Stewart, H. S. Farmer. The Ianthe C. C. filed a certificate of election with the County Clerk last week. The trustees are: John McFarlane, George W. Baxter and J. Henry Stipp.

MARINE AND FIELD CLUB CANOE REGATTA.

THE open canoe regatta of the Marine and Field Club, held off its handsome grounds on Gravesend Bay on June 7, was a success in spite of the heavy sea and very strong N.W. wind which brought several canoeists to grief, though as a rule the capsize entailed little more than a delay while bailing out, the modern boats being readily righted, every when on their beam ends. The course was a triangle of 14 miles.

The first race for unclassified canoes. The two starters were H. P. Allen's 18ft. canoe yawl, M. and F. Club, and Dr. Denison's 17ft. canoe yawl Galloux, Crescent Athletic Club. The M. and F. boat crossed the line at the signal, carrying full sail and a crew of three men. Galloux, with a crew of two men, was delayed several minutes before the signal by stopping to arm in the second reef. The M. and F. boat won, though Galloux made a better time over the course.

The second race, junior sailing, had for starters F. K. Moore, K. C. C.; B. H. Nadal, N. Y. C. C.; W. H. H. Warner, Crescent Athletic Club; H. H. Smythe, B. C. C. Smythe upset before crossing the starting line, Nadal upset in gybing at the second mark, and Warner met with the same misfortune after passing the home mark on the second round. Moore sailed a good though safe race and finished alone in his class.

The third race, senior sailing, brought out Beta, T. S. Oxholm, Y. C. C.; Kelpie, Paul B. Rossie, Y. C. C.; Truant, W. S. Elliot, M. & F. Club. Beta crossed the line first, closely followed by Truant; Kelpie was too impatient and got away before the signal, and had to return and recross, and was practically out of the race. Beta carried a standing rig on both sides, and led throughout. Truant with a hoisting rig reefed on about boom, and by having a heavy bunch of wet sail on both booms, and did well to finish only 1m. 39s. after the winner.

The invitation race, started at 5:22, was the event of the day, and brought out as handsome and smart a fleet of canoes as has ever been seen in New York Bay.

The course was three rounds of the triangle, about 4½ miles, and started at 5:22. The first round was given at 5:22. The first away, almost together, with the latter to windward. Cyrus crossed third and the others in a bunch with Seabright last. All held the port tack for a long leg down the beach, except Fly, whose skipper was forced to go about by that troublesome launch. At the first turn Uno led, and Seabright, having drawn away from the others, was a good second. On the second round Seabright vented his card, a steady turn of the windward mark side by side. Beta carried a standing rig on both sides, and led throughout. From here out the Uno sailed with a loose-footed mainsail, the lacing having carried away, and Seabright continued to increase her lead to the finish. Bonnie and Cyrus had a close and stubborn fight for third place, the latter having the better of it for the second and third rounds and until near the finish, when the former, by clever maneuvering, was forced into a good position and passed her rival almost on the line. Seabright finished first at 5:55, Uno second at 5:58½, Bonnie third, Cyrus fourth, Fly fifth, Spider sixth, Passaic seventh, Neriana eighth, Wraith ninth and Vagabond and Guenn withdrew. The result adds fresh laurels to the crown of builder Ruggles, the winners of first and second prizes being his handiwork, new this year.

Uno, H. L. Quick, Yonkers..... 1
Uno, H. L. Quick, Yonkers..... 2
Bonnie, W. M. Vaux, Yonkers..... 3
Cyrus, E. Master, Yonkers..... 4
Fly, Paul Butler, Vesper..... 5
Spider, E. C. Knappe, Springfield..... 6

Neriana, L. B. Palmer, Ianthe..... 8
Wraith, D. D. Gessler, Knickerbocker..... 9
Vagabond, C. J. Stevens, New York..... withdrew
Guenn, W. M. Vaux, Yonkers..... withdrew
The upset race was won by D. D. Gessler in the Pacific, with C. P. Douglas second in the Passaic. The judges were Rear-Com. I. V. Dorland, Atlantic Division A. C. A.; Com. Rossie, Yonkers C. C., and Com. Wilkin, Brooklyn C. C., who were on board Com. Dickey's sloop Madcap. The prizes were handsome silver cups.

The yachts of the club at anchor were handsomely decorated, and in the evening the large grounds and various houses were resplendent with Chinese lanterns and fairy lights. President Cowling presented the prizes with an appropriate speech, and speech-making and congratulations were in order till a late hour. The club is to be congratulated upon the success of its first regatta, and canoeists will not forget its cordial welcome and hospitality.

IRRAWADDI C. C.—On June 8 this club, located at Davenport, Iowa, gave its second annual regatta in its clubhouse. A very excellent musical programme was rendered by some of the leading musicians of the city. The programmes were unique affairs, being printed on miniature paddles, and the guests carried them away as souvenirs of the occasion. The canoe club is making itself popular by these little entertainments.

A. C. A. MEMBERSHIP.—Atlantic Division: Charles L. F. Robinson, New York city; W. G. Wenck, Northumberland, Pa. Northern Division: R. J. Kass, Aleck Irving, E. C. Fairbanks, F. W. Stewart, Montreal; Gerwood, St. Anne. Eastern Division: Fred A. Butler, Chas. F. Harris, Lowell, Mass.

LAKE HOPATCONG C. C.—The third annual regatta of the Lake Hopatcong C. C. will take place July 4, being open to all canoeists.

New Publications.

CAMPING AND CAMP OUTFITS.

MR. G. O. SHIELDS of Chicago is well known to the shooting life in the mountains. He has recently published a little book with the above title which contains matter which will be of interest to persons who are going into camp for the first time. The volume covers a good deal of ground, containing eighteen chapters on the following subjects: Clothing and personal equipments, bedding, camp equipage, guns and rifles, fishing tackle, horses and their equipments, guides, food, on choosing a camping site, how to make camps, how to make a camp, a good camp, a good camp, check lists, camp cookery, camp hygiene, medicine and surgery, and the diamond hitch. The book contains practical information on all these points and Mr. Shields states that the instructions given in the volume are based on twenty-five years experience in camping and the study of camp lore and woodcraft.

While it is true that this volume contains a great deal of information, it is scarce, less than many of the books on the subject. Many of the chapters are very brief, and to our minds, quite inadequate. For example, that on guns and rifles occupies only three pages. That on fishing tackle considerably less than one. That on guides three.

Mr. Shields has camped enough to appreciate the desirability of having a tent in which a fire can be built, and for this reason he has written a chapter on the tent. The States army Sibley tent, which shall be hung by a ring, is the best, and the only one that is set up outside and not touching the canvas. This form of tent, of course, is an excellent one, but it is open to the grave objection, that in a wind-swept country—and a very large portion of the West is wind-swept—it is sure to be blown down, unless securely guyed in three directions. Moreover, this form of tent is apt to smoke badly, although this objection might be obviated by the draft arrangement given by Mr. Orin Balknap. On the whole, we have never seen anything that combines so well as the Indian Indian teepee the essentials of room, stability and comfort, and in most parts of the Rocky Mountains it is possible to cut each day the lodge poles for such a shelter, while if you are camping on the plains lodge poles can be transported in your wagons.

The chapter on camp cookery by Col. J. Fry Lawrence is open to the objection, that it is too much of a recipe for cooking food, such articles as eggs, milk, cream and butter must be carried in, while every one who has been in camp knows that these are usually not by any means accessible.

Very much more to the point and much more useful is the chapter on hygiene, medicine and surgery by Dr. Charles Gilbert Davis. This contains remarkably good ideas, and treats of what should be the basis of the camper's habits, eating habits and exercise, on shelters, and finally how to make a camp, what is needed in camp, with advice as to the medicine chest and what it shall contain. This chapter is to our mind worth all the rest of the book. Mr. Frisbie's chapter on the diamond hitch, while quite fully illustrated, is not likely, outside of the cuts, to be of much assistance to the young man who is trying to learn to pack. The book, however, and although they have rather a familiar look—and the concluding advice is a little too much like a lesson—learn how to throw the diamond hitch, namely, that he should make a miniature horse and practice packing on that, is certainly practicable and useful.

FOREST AND STREAM, Box 2392, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is announced by "Nanit," "Glean," "Dick Swiveller," "Sybilene," and other competent authorities to be the best treatise on the subject extant.

Yachting.

"West India Hurricanes and the Great Mariner Bizzarr." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

BUILDING TO LENGTH CLASSES.

THE matter of building to a fixed limit of waterline length has been of increasing importance for some time, but this season it is likely to become a very important factor in the racing, especially in the classes under 40ft., in which the competition is most keen. The bright steel tape of the official measurer, as rigid and unrelenting as fate itself, has worked dire havoc in the racing fleet within the past ten days, as may be seen by the wrecks along the shore in all places where a race has been held. At Bay Ridge, Staten Island, City Island, Tebo's dock and other places, the bulkheads are strewn with fragments of spinnaker booms, varying in length from 6in. to 20ft., with cabin bulkheads and joinder work, with tanks, lockers and waterclosets, the latter in particular offering a shining mark for the ruthless hand of the racing man. So much of this work has been done lately that it would be in vain for the clubs to replace the official insignia of the measurer, a silver M, by an adze rampant crossed by a handsaw, as an appropriate badge of office.

The racing fleet as a rule was measured early last season, many of the smaller yachts being new and in the water for but a month or so, and though some crowded the limit very closely, all were safely under it when measured. As the season advanced it was an open secret that some of the racers were dangerously near being over the limit, but in no case of any important yacht was a protest made on measurement, the subject being one that nearly all felt a little delicate in stirring up, as it was not altogether certain how any given boat might turn out. This year, when it became necessary to re-measure many of the fleet, after a winter's convenience and comfort. By dint of hard work all kept in their respective classes, but with no certainty in some cases that a re-measurement a month or two later may not show them to be again over the limit. The subject is of importance to all parties; to the measurer who is called on to measure a yacht two or three times in a couple of days; to the captain and crew who are obliged to strip a boat to the bone in the morning of the race; to the designer who may see his boat deprived of a prize she has fairly sailed for because she is a little over the limit; and most of all to the owner who pays the bills, who sees his handsome yacht almost wrecked in order to enter a race, and who may be deprived at any time of a hardly won prize on a protested measurement.

Yacht racing could not be carried on for a week without a complete and accurate system of measurement, and yet the most serious troubles and annoyances of racing are connected with this same matter of measurement, the extra work imposed on the busy measurers, the labor and annoyance of regatta committees over missing measurements without which no complete results are possible, and the troubles of the owner, who, after stripping his boat and having a hull a quarter of an inch over the limit, until it is officially determined whether his craft is a quarter of an inch under or over her class.

It is evident that this state of affairs might be entirely avoided by the very simple matter of keeping the boats a couple of inches shorter, so that a measurement may be quickly and accurately taken early in the season, and no danger that at any time will the yacht be found over it. This, however, would be a benefit to all hands would be most substantial, while on the other hand the loss of speed by a reduction of less than 1 per cent. of length in a 40ft. yacht, making her racing waterline but 39ft. 5in. instead of 40ft., would not be appreciable.

The principal causes which operate to make a yacht over her length are the following: first, errors in the original calculations of displacement and weights of construction and ballast; second, errors in building, such as an excess of length through careless measurement, or too great weight of construction; third, additions by the owner to the original weights, in the form of furniture, ice boxes, etc.; fourth, the natural increase of weight by continued immersion in all wooden vessels. In looking over these four heads it becomes evident that they are all to a great degree under the control of the designer, and it is on him in nearly every case that the responsibility must fall. The calculations are entirely within his control; the displacement is easily calculated, the weight of hull for any of the usual methods of building are known within very narrow limits, and in the case of any experienced method a margin may be left by taking a little less length in the design, or by leaving a little loose ballast inside. In regard to the errors of the builder, if the designer's part is merely to furnish specifications to be built from at a distance, he must be relieved of all responsibility for excess of weight; but it is usually the case that the designer superintends the construction, in which case he is justly shouldered the responsibility of keeping the weight short enough and the hull high enough. There is one fruitful source of error to be guarded against here, the builder is apt to use a common two-foot rule or a linen tape in measuring his waterline when the frame is set up, regardless of the fact that such tapes are always incorrect, while not only is the rule likely to be equally out, but a second source of error may creep in from the frequent repetition of one small measurement in order to lay off a long one. In a 40-footer, even the error due to measuring 40ft. with a two-foot rule and a common pencil may make the boat out of her class. The only safe way is to use a standard steel tape to lay off the length, either on the stem and sternpost direct when they are erected, or on a convenient battens or one of the many ways ago it was a difficult matter to get a yacht built of the modern light sculling, most builders being used only to heavy construction; but the difficulty has largely disappeared, and a builder may easily be found who, under the eye of the designer will turn out a boat in accordance with the specifications.

At first sight it might seem that the designer had little control over the wishes of the owner in regard to extra furniture, but now that it has become the fashion to strip for all important races, the designer can in a great measure control this detail also, by keeping the fixed portions of joinder work as few and as light as possible, and providing that the extras and ornamental portions shall be readily removable. A yacht fitted in this way will mean some extra labor to the owner in stripping, but by good judgment the designer may so arrange that when stripped the hull is in racing condition and not over her loadline. Should the owner insist in

filling the yacht up with a large fixed icebox, stove, elaborate carved oak and such shore duffle, the designer is helpless, but this is the exception in all boats built for racing to-day, the rule being light and simple joinder work and a minimum of furniture and fittings.

The last item, the increase from immersion, must be dealt with wholly by the designer, the builder has nothing to do with it, and the owner very little save that he decides whether the yacht shall lie afloat or be hauled up each winter. In justice to himself and the owner, the designer must allow an ample margin for the added immersion due to a couple of seasons afloat. In the case of a yacht which was on the limit last spring, and all summer, and has since laid in the water, will set deeper and be longer than when first fitted out. How long this gain of weight will continue we cannot say, it depending on the amount of hauling out and drying which the boat gets from time to time, and on the care with which she is painted inside and out. In the case of most wooden yachts this gain will go on certainly through the second season, stopping finally through the third, the drying of all parts below water, and being offset a little in time by the drying out of spars and topsides. The only remedy for it is to build sufficiently short in the first place, so that after a couple of years the limit of length will still be a safe distance off. How much allowance is necessary must be determined by the experience of designers and builders, the amount varying a little with the amount of inside planking and the type of hull. Where a certain amount of inside planking is used, there is no trouble, as the boat can be readily lightened, but in all the new yachts the total ballast is on the keel, and where time is too short to haul out and cut off some lead, or where the boat is not stiff enough to allow of such a reduction, there is nothing to be done save to rip out the interior. If the present boats, in their second or third year, run from 1 to 3in. over the limit, it must be a simple matter for the designer to determine how much shorter his next design shall be in order to come inside the limit by a safe margin.

There are some odd things, by the way, about this "designed length," nearly all the forties, for instance, are given as 39ft. 6in. in designed length, while when afloat most of them are over the 40ft. We have seen the designer put the tape line himself on the stem, under the class limit; we have also seen the stem and sternpost of the yacht some time later, after the adze had been freely used on both in order to keep her in the class.

If there were any great advantage in a couple of inches of length, there might be some excuse for crowding the limit, but the gain is so trivial compared with the expense, trouble and annoyance on all hands that must follow a doubtful or protested measurement. As the case now stands three courses are possible. The absurd force of the "exemption clause" that has been enacted for several years in the 70ft. class may be extended to the forties and thirties; every year the clubs can pass an amendment providing that all yachts built up to date and not exceeding the class limit by over a fraction of a foot may still enter the class. By repeating this each time a new boat is built, the absurd result is reached that the nominal limit is 30 or 40ft., while a boat may deliberately be built 9 or 10in. longer. Another plan is to place an arbitrary handicap on all excess of length, thus if a boat originally built for the 40ft. class proves at any time to be an inch or two over she will be allowed to remain in the class, but her length will be set for each excess of 3in., for instance, over the proper length. Such a plan would still allow the boats to race, but would offer very strong inducements to owners and designers to keep their craft within the limits. A third plan is to measure every boat fairly and liberally, giving her the benefit of doubt wherever any exists, but promptly disqualifying her if she exceeds the limit. If this course be rigidly adhered to for the present the trouble there will in all probability be an end to the trouble next year.

WHY THERE IS NO YACHTING AT CHICAGO.

IF I were asked to write about a real live sport, if it was nothing more than a race between a dug-out and a yawl, I might possibly write on the subject with some enthusiasm, but to answer the FOREST AND STREAM's question is like digging bones in a graveyard—an entirely dead subject—the bones once had life and so did yachting at Chicago, and in drawing on my memory for the delights and exhilaration of the sport, I am forced to conclude with the beautiful old song, "Memory is the only friend which grief will know." Lake Michigan at this point is a wide, deep and entirely open expanse of water, no islands, no bars, no sounds, and I would say with truth, no harbors. This I have no doubt is the immediate reason why there is no yachting. If we were situated as are many of the cities and towns upon the great lakes, with islands lying off shore, as Toronto or upon a bay, as I am sure our beautiful lake would be dotted with yachts, which in time of necessity could fly for refuge to a safe shelter. As it is, our only harbor is the basin, protected by the Government breakwater; and during any considerable storm this is no harbor at all, as many a would-be yachtsman has found to his sorrow, to say nothing of his cost. This is the sad condition of affairs, and yet, if we can lie in the basin, they must at all times be guarded and protected with proper signals and lights, and this is expensive and keeps away the younger element, from which our enthusiasm and education must be obtained, or we cannot get material from which to organize yacht clubs.

Notwithstanding these disadvantages Chicago has had many a hard contested yacht race and has looked upon as pretty a fleet of yachts as can be seen off Sandy Hook on a Sunday afternoon; but, alas! where are they now? Only one left—the beautiful schooner Countess, formerly Countess of Dufferin, built at Belleville, Ont., to carry off the America Cup. She could not take the Cup, but she does take many a merry Chicago party out for a sail during a hot summer, and usually makes at least one trip to the harbor of Capt. Sidney Woodbury, of the Board of Trade, being her owner.

The large schooner yacht Idler, which was once enrolled in the fleet of the New York Y. C., purchased by Mr. Archie Fisher, of Chicago, has been with us for several years, but for the past two seasons not fitted out. She has lately been sold to Mr. John Cuddey, and it is supposed she will be at anchor off Macnaul Island, as he has summer residence there, although she may again be taken East to breast once more the briny ocean.

Then there was the schooner yacht Viking, belonging to our Colonel John Mason Loomis. For two years she hovered along our shores, visiting every nook and cove on the upper lakes and then back again to her native salty element, where she still is, although still owned and kept in the water by Colonel Loomis, and so they all go and none can take their place.

The beautiful sloop Frolic, the most graceful yacht I ever saw, now probably reduced to a fisherman; the swift Ina, of Capt. Tim Bradley, the father of yachting in Chicago, both in their old age, calmly resting on their well-earned laurels; the Ina housed for several years on the beach, and good Captain Tim fast failing in his old age, no shelter for this venerable old vessel, who knows and does not remember Tim Bradley, and who ever wanted a sail that Tim did not make room for him in fair weather or foul. It was pretty wet sometimes sailing with Tim, but we always got there, unless perchance we tackled the Frolic. Captain John said Tim dropped some of his men overboard, and Captain Tim said John poured his sand ballast down through the centerboard box; but the Frolic was in a sea, and the Ina on smooth water, as I think both will now say.

Then there were the large sloops Cora and Wasp, both I believe now on Lake Erie, also the handsome sloops Mamie, Vera, Volant, Fleetwing, and at least a dozen other small ones—now all gone.

As I said at the beginning, I believe the cause is that there is no safe harbor, no shelter for this venerable old vessel, who knows and does not remember Tim Bradley, and who ever wanted a sail that Tim did not make room for him in fair weather or foul. It was pretty wet sometimes sailing with Tim, but we always got there, unless perchance we tackled the Frolic. Captain John said Tim dropped some of his men overboard, and Captain Tim said John poured his sand ballast down through the centerboard box; but the Frolic was in a sea, and the Ina on smooth water, as I think both will now say.

This will, I think, surely account for the absence of small yachts, and as for large ones who will cross before we can get a boat, the boys must learn to love a small yacht before the men will enthrone to any great extent.

One reason why the larger boats have left is that we have had so few interesting points to visit; but during the last few years many lake summer resorts have sprung up, as at Macnaul and Red Bay, Silke in third, while Bay had a sail over in fourth class. The judges were: W. H. Besarick, S. W. Holman, R. K. Rice, H. S. Patten, S. L. Carr.

CHICAGO. E. C. J. OLENER.

SEAWANHAKA C. Y. C. SPECIAL, JUNE 5.

WITH the present deadlock in international racing, and with the lack of competition in the large schooner class, the coming season would be but a dull one were it not for the smaller racers. The 70ft. class is likely to furnish some good racing, but besides it the only really live class is the 40ft., and to its races, which promise to be both numerous and exciting, yachtsmen must look for most of their amusement this season. Last season the races sailed by the 40ft. class numbered 31, a total far in excess of any class in the past, and this year the number will be still greater, as extra events are announced and special matches made from week to week. The Seawanhaka C. Y. C. was the first to recognize the need of more races this and the 30ft. class, and last year held a very good race on the Monday following the annual regatta. This year the race committee determined to do still more, and in addition to repeating the special race, which will be sailed on June 23, announced an earlier race, on June 5, intended to open the season in these two classes.

The prizes offered were a first and second of \$200 and \$100 for the forties, the second being conditions on five starters; and one of \$50 for the thirties, 25 per cent. of first prize being given for a sail-over. It was also announced that the start would be from one gun, and also that this gun would be fired promptly at 11 A. M., except in case of fog. The courses were from a start off Chaven's Shoal Buoy, just outside the Narrows, down the Main channel and by Southwest Spit and North Spit, to the 30ft. class, and for the forties to the Narrows, rounding Buoy 5, just off Sandy Hook. The race committee furnished to each yacht a lithographed chart of the course inclosed in a small tin case; a very excellent idea. All the forties and thirties were invited to enter, but the final turnout was by no means what it should have been, only seven yachts being ready. The only Boston boat was Helen, the recent winner of the M. A. C. Y. C. regatta, and the only New York boat, the plucky little hurried her around to New York to try the result of the many alterations made in her last winter. Ventura, the new Burgess narrow centerboard, did not come round; Gossoon is just launched, and Moccasin, the new Burgess boat for Mr. Morgan, is still on the ways. Besides Helen the entries were Minerva, Liris, Tomahawk, Marquitta and Chocotaw, and a Burgess centerboard, named Lure, of the 30ft. class, neither Lure nor Tomahawk sent any competitor for the Gardner boat Kathleen, and Mr. Zerega, who is racing her this year, was obliged to sail over alone.

Thursday morning was clear and warm, but with a very light breeze. The fleet were at anchor off Bay Ridge, Minerva and Liris looking much the same as last year, both, however, with new Laphroaigh canvases. Helen showed very well as she lay at anchor, being no unlike Liris above water, though with less sheer aft. Tomahawk has been wonderfully improved in appearance by the change from white to black, and is now a very handsome and stylish craft. The tug Dalzell, with the race committee aboard, came down about 10 A. M., and steamed off for the start, four miles below, but in spite of the light air, the racers portered about as deliberately as though the start was to be of the usual wait-for-the-lazy-man kind. Minerva and Chocotaw were under way first, Liris took the mud in getting out of the basin, and Marquitta's naphtha launch went to her aid, finally pulling her off but delaying the latter yacht considerably. Helen started off late, just in company with Liris; Kathleen lagged astern somewhere; Marquitta managed to get a tow, and the last of the fleet, the Lure, stayed in attendance on her, started to sail down at the last moment.

The leaders reached down with a very light breeze, and but little force to the ebb, the minutes meanwhile running rapidly toward 11 o'clock. The boats astern finally caught a light northerly breeze, squaring off booms, but Liris and Helen were nearly becalmed, and the Lure's Head, which was gratefully towed by a garbage scow on its way out to sea; the two, with towering white canvas and glossy black sides, making a striking contrast with the homely scow and its load of mud.

When the whistle blew at 11 o'clock, the only boats at the line were Minerva, steered by Mr. A. Bryan Allen, and Chocotaw, steered by Mr. Edmund Fish. Chocotaw had been at the line for some minutes, named Lure, as taking a breeze and setting her spinnaker. Chocotaw followed, while Liris and Helen made a tack to windward up into Raritan Bay. Tomahawk was far astern and started for home about noon, while Kathleen, under working topsail, pegged away in the rear. The times at Buoy 10 were: Minerva.....12 14 15 Helen.....12 40 58 Chocotaw.....12 38 22 Kathleen.....Not timed. Liris.....12 38 22

Inside the Hook the wind was still very tricky, Minerva was obliged to shift her spinnaker after setting it to starboard, Chocotaw finally running up very close to her. Outside, however, the wind drew up the beach, making a beat to the Scotland, while it was much fresher. With sheets in, Minerva soon drew away from Chocotaw, leading her by 4m. 35s. at the Scotland. The times at the mark were: Minerva.....1 33 50 Liris.....1 46 35 Chocotaw.....1 38 25 Helen.....1 53 49

The fleet ran in with spinnakers and balloon jibtopsails set, Minerva hugging the Hook shore, while Chocotaw and the others held out further. When around Buoy 5 and inside the Hook, the leaders hugged the shore as closely as possible, and at the tide, the result of this move was that she turned Buoy 10 in the lead, the times being: Liris.....3 50 00 Minerva.....3 52 00 Chocotaw.....3 51 45 Helen.....3 52 45

Liris followed Liris closely all day, and now came in for a share of the other's gains, being even with Minerva at the mark. Liris started straight for home from buoy 10, the wind being light S.E., but Minerva and Chocotaw luffed out to the eastward considerably. Here they struck a much stronger air, and soon ran by Liris. When well up the bay a long luffing battle ensued, Minerva and Chocotaw running close together, and once Minerva luffed sharply away to run through Chocotaw's lee, but failed; the luffing beginning again until one was reminded of Titania and Katrina last year. Finally they resumed their course, Minerva to leeward, but at once she picked up and ran away from Chocotaw, crossing the line in ahead of her. Liris was but 2m. 15s. astern of Minerva at the finish. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Minerva.....	11 00 00	6 10 34	6 10 34	6 10 34
Chocotaw.....	11 00 00	5 15 55	5 15 55	5 15 55
Liris.....	11 00 00	5 17 10	5 17 10	5 17 10
Helen.....	11 00 00	5 23 20	5 23 20	5 23 20
Tomahawk.....	11 00 00	Withdrew.		
Kathleen.....	11 00 00	Not timed.		

The actual times over the course were: Liris 6:04:30, Helen 6:06:00, Minerva 6:14:45, Chocotaw 6:15:55. As a test of the boats the 6:06:00, Minerva, 6:14:45, Chocotaw, and even with a good start it would have been inconclusive. Mr. Alley sailed Minerva for the first time in a race, but did very well with her; while Mr. Fish handled Chocotaw very skillfully.

Under the circumstances the conditions of the start have some in for some criticism; but in order to consider the matter fully it is necessary to take separately the start and the starting at a fixed hour. The failure of the start on Thursday was in no way attributable to the "one gun" start, the case might have been as bad with the usual ten minutes to cross had the same delay prevailed in the fleet. In matches such as this, with six or eight picked boats, the "one gun" start is in all ways the best, and it is an open question whether it is not as good as the "one gun" start, which is the best, if very large boats are started in two or three divisions, each starting from one gun.

The question of a fixed hour for starting, regardless of all considerations, is a very different one, but of increasing importance. In the majority of races in our climate, about New York in particular, the best plan is to start promptly at the advertised hour, and to allow the committee full discretion in the matter of delaying the start in case of fog or calms. The custom is to start at 11 A. M., but it very frequently happens in summer that there is no wind at that hour, while by waiting until shortly after noon the breeze comes in from the sea. Under such conditions, and particularly in the case of a time limit race it has often proved possible to get a good race by waiting until the wind is strong enough to allow of a satisfactory start. This was the case in several of the later international races, where there was no wind

but the Valdo, a 21-footer, Mr. Duggan has built for himself and had built under his eye by a local builder, is the more interesting craft of the two. She is a first-class-built vessel, is extremely light, while it is to all appearance as strong as its necessary. She has a very broad, flat keel, with 800lbs. outside and about 1,000lbs. inside, and is probably as roomy, comfortable and capable as the first class skiffs built on 21ft. waterline and 30in. draft.

The first class skiffs were first built two years ago, and have since that time existence the best racing craft it had. The first two years of the club's existence has been made to it, the Freyja, a most beautiful three-masted canoe, which Sauvé has recently finished for Mr. W. J. Wallace, and last year in the Yukwa made such a splendid record for himself.

The newly-formed St. Lawrence Skiff Association promise to make the first class skiffs and men canoes (they are in build, rig, appearance, fittings and lines racing canoes) a very popular type of boat on the St. Lawrence.

HUDSON RIVER Y. C., JUNE 9.—The spring regatta of the Hudson River Y. C. was sailed on Monday in a fine S.W. breeze, the course being from Ninety-third street, New York, to Yonkers and return, 20 miles. Avalon lost her topmast and withdrew, while the J. T. Corlett parted her throat halliards, but still won easily. The times were:

[illegible]

CORINTHIAN NAVY.—The fleet of this organization assembled at New Rochelle, N. Y., May 31, and made a two-days' cruise. The Roamer, J. W. Welde, Foam, Uno, Germanic, Io, Nanita, Tourist, and the Demorest and Cruiser were present. The fleet left New Rochelle at 10 A. M. on May 31, and proceeded to Larchmont, N. Y., where it arrived at 1 P. M. The fleet then sailed for Greenwhich, at the latter place the Whim joined the fleet. From here a good run was made to Cold Spring. Next morning, Sunday, the squadron was disbanded after a thoroughly enjoyable and successful cruise. On June 28 the navy gives its spring regatta at the New Rochelle. Entries may be made with J. W. Gibson, Commodore, at the New Rochelle Yacht Club, 100 West 125th Street, for Broadway; all boats under 23ft. are invited to participate. Handsome prizes will be awarded in each class. The fleet will sail at 10 A. M. on June 28. The fleet will consist of the fastest yawl, ham's championship pennant will be awarded to the fleet. The Staten Island Yacht Squadron will hold its regatta on June 16 at the Staten Island Yacht Club. Entries may be made with Mr. Louis Berg, the Alpine, Broadway and Thirty-third street. Mr. Harry Marks, of the East River Squadron, is building a boat house on Mill Creek, near the foot of the East River. The Commodore of the Canarsie. This which empties into Jamaica Bay is open to members; sleeping accommodation will be a port stowage as boat care can be found here. The following are proposed for membership: Robt. Rogers, Dr. Edwin Fowler and A. B. Boell.

MOSQUITO FLEET Y. C., FIRST PENNANT REGATTA.—South Boston, June 7.—Course triangular, Dorchester Bay, distance 5 miles. Weather clear. Wind S. E. to S. W., fluky:

FIRST CLASS:			
	Length.	Elapsed.	Corrected
Tantrum, J. F. Small.....	15.00	1 39 42	1 39 42
Lottie, E. H. Rich.....	14.05	Did not finish.	
Wally, O. H. Ransom.....	14.11	1 53 00	1 52 55
Nellie, W. Leary.....	14.11	Did not finish.	
Minnie, J. Bertram.....	14.11	Did not finish.	
SECOND CLASS:			
Bessie, W. Cherrington.....	11.11	1 55 00	1 52 31
Bugs, G. G. Garraway.....	12.11	Did not finish.	
Snar, J. E. Robinson.....	12.03	Did not finish.	

THE NEW FORBES STEAM YACHT.—The steam yacht just designed by Mr. Burgess for Mr. John M. Forbes will be a decidedly novel one, being fitted with a practicable sail plan, a centerboard and a feathering propeller. She will be a steel craft, 140ft. l.w.l., 25ft. 6in. beam, and 8ft. 6in. draft, with a 10-horsepower engine. The interior arrangements will be very commodious, a forward saloon 20ft. long, with 3 guests' rooms, the owner's room, 12ft. long, with two suiters' rooms adjoining, and a ladies' cabin aft. The yacht is intended for cruising in the West Indies and southern waters.

AZALEA AND VIATOR.—On Saturday a match-race will be between the Azalea and Viator, between the schooners Azalea, Mr. Edmund Blunt, and Viator, Mr. W. G. Brokaw. Azalea is a centerboard craft, designed and built by E. J. Lawlor in 1857, being now 31 ft. l.w.l., 17 ft. 7 in. beam and 5 ft. 6 in. draft. Viator is a cutter, built by Wm. Eddy at Marblehead in 1888. She is 65 ft. l.w.l., 9 ft. beam and 10 ft. draft. Above has lately been purchased by Mr. Brokaw. We learn that the match-race has been postponed, owing to necessary work on Viator's mast.

KULINDA.—George J. March's new cutter Kulinda is 7in. over the 30ft. limit. This is the reason her entry was not taken for the Marblehead sweepstakes. It will be impossible to lighten her up as she carries her sail none too well.—*Boston Globe*.

NEW YORK, Y. R. A.—A meeting was held on June 6, at which the following arrangements for the cruise were made: Yachts remaining at anchor during Saturday afternoon, July 26, off College Point, on Tuesday, July 27, off the Battery, and on Wednesday, July 28, off the Narrows. Yachts for Lloyd's Harbor, on Friday for Indian Harbor, and on Saturday for Sea Cliff, where the cruise will disband. Delegates from the Yankers Y. C. applied for admission to the association. Their request will be acted upon at the meeting.

NORTH SHREWSBURY Y. C.—The first race of the season was sailed on May 29, between the boats Nameless, Yum Yum and Clytie, over a 3 mile course. Nameless won, with Yum Yum second and Clytie third. The second race, sailed on June 5, for the pennant, held by Annie B., was sailed on June 5, over a 5 mile course in light weather. The starters were Annie B., Clytie, Gem, T. Chadwick, Razzle Dazzle, D. D. Chadwick, Edward Terhune, Yum Yum, and Clytie. Clytie, F. Fusher, Only and Yum Yum finished the race. The race was postponed on June 10. The racing on the Shrewsbury promises to be very active.

SOUTHWARK Y. C.—June 7.—The sixteenth annual regatta of the Southwark Y. C. was sailed on the Delaware River on Monday, the boats starting from Dickinson's wharf, around Buoy No. 1, to Chester Island. The wind was fresh S. W. The winners were: First class tuckups—Patterson 3:04, Ledyard 3:07; Second class—Nobre 3:04:50, Key 3:10; First class—Emma H. class—Nobre 3:04:50, Key 3:10; First class—Dealy 17:30; Second class—James L. 14:4, Thomas Boardman 3:17, J. Dealy 17:30. The Iron steamer Richard Stockton accompanied the race.

ALMÉ.—The new steel steam yacht Almé, building by Harlan & Hollingsworth, for Mr. Frederick Gallatin of New York, was launched at Wilmington on June 13. Her dimensions are as follows: Length 176 ft., beam 34 ft., depth of hold 18 ft. Her engine will be of the horizontal, surface condensing type, with cylinders 17 in. diameter and 42 in. in diameter, and 22 in. stroke. She will have a 100-hp. boiler with a working pressure of 170 lbs. to the square inch. Her rig will be that of a two-masted schooner.

NEW JERSEY Y. C.—The nineteenth annual regatta will be sailed to-day. The judges are, Com. A. J. Princ, Yonkers Y. C.; C. Theophilus Butts and George E. Gartland. The courses will be the usual ones of the club. The steamboat Fort Lee will accompany the yachts over the course. The regatta committee includes Messrs. John Ortlieb, Richard C. Greten and Gilbert S. Brown.

BUFFALO, July 4.—The following events are announced for the present season: June 7, pennant regatta, all classes; 21, cruising race to Point Albino, second and third classes; 25, third class pennant, postponed from last season; July 4, open regatta; 26, handicap race to Point Albino; Aug. 2, club regatta; 23, annual cruise; Sept. 13, club cruise to Stone Dock. The regatta committee in charge, F. W. Calkins, E. F. Bishop and C. B. Graves.

YORKVILLE Y. C.—The postponed race of the Yorkville Y. C. was sailed on June 8 over a 20-mile course, from Oak Point around the Gangway Buoy and return, in a light S.W. wind. There were 9 starters. In Class A the winners were Emma and Alice; Class B, Nettie Thorp and Restless; Class C, Jessie. Jessie wins the Sultzer cup for best elapsed time.

PHOTOS OF MINERVA.—We have received from Mr. N. J. Stebbins, of Boston, two excellent photos of Minerva, taken when she was lately hauled out at Lowley's. One shows her broadside and the other one head on. Another very interesting photo taken by Mr. Stebbins is from a drawing of the sail plan of the 30ft. cutter Elf, made over the sail plan of the Cape cat Harbinger, showing the relative areas of the two.

MASSACHUSETTS Y. C.—This club at a meeting on June 10 adopted the Seawanhaka rule of measurement. Messrs. C. J. Tweed, A. Cary Smith, J. Beavor Webb and William Gardin were elected honorary member. The race set for June 7 was postponed to June 24.

NEW RACERS.—Lawley & Son have the keel out for a 30 footer for Mr. W. H. Wilkinson, former owner of Elf, from a new design. She will be of 9ft. 9in. beam, 7ft. draft, with 14,700 lb. of lead on keel, with moderate rake of sternpost and rather strog forefoot. The 30ft. racer building by Smith is for Mr. Hen Chase.

MASSACHUSETTS Y. C. REGATTA.—The regatta committee of the Massachusetts Y. C. has decided upon the following classification for their open race at Nahant, June 17: First class, 40 ft. l.w.l.; second class, 35 to 40ft.; third class, 30 to 35ft.; fourth class, 25 to 30ft.; fifth class, under 25ft.

ST. LAWRENCE SKIFF CHAMPIONSHIP.—A letter from Mr. Bain in answer to Mr. Jones's challenge is crowded over us next week.

WEST LYNN Y. C.—The following races are announced: Ju
21, July 19, 26, Aug. 23, Sept. 30. The cruise will take place
July 4.

WAYWARD.—Mr. Sears's new cutter will have a hollow bottom from Lewley.

MOPSA.—Mr. Lyman's 27-roster will have a larger pig year.

CORINTHIAN MOSQUITO FLEET.--In the regatta of May 31 at Larchmont the Clapham yawl Bouncer won easily, beating Clytie and Kittie B. Mr. Whitlock, in the Guenn, won the prize for the best sailed canoe. Bouncer was sailed by Mr. Clapham alone, the other boats carrying crews of two each.

UVIRA.—Like Vreda the new 42ft. Uvira has put back to Fowey on May 22, after sailing from Southampton on May 13.

Answers to Correspondents.

 No Notice Taken of Anonymous Correspondents.

T. M. P., Portage, Pa.—We know of no book that gives the positions for fancy rifle shooting.

R. H. M., Brooklyn. We have no information that the New Jersey non-resident law has been repealed.

G. A. S., Pittsburgh, Pa.—You will find good fishing on the line of the Chicago & Northwestern. Passenger Agent Carpenter, of that line (at Chicago) will send you a pamphlet of information about it.

J. A. G., JR., Cambridge.—Will you kindly answer in the columns of your paper whether I am right in saying a horse raises his feet higher if he is shod with weighted shoes? Ans. Yes.

S. J. U., City.—Would you kindly give me names of one or two of the nearest good open trout streams in Long Island and New Jersey, and the best point at which to commence to fish? Ans. Go to Glen Cove or Freeport, Long Island; or better to Canadensis, Pa. See paper entitled "Pocono," issue of May 29.

J. K. T. Ambler, Pa.—Kindly inform us where is a good snipe shooting meadow most convenient to Asbury Park along line N. S. R. R., for golden back plover, gray snipe, yellowlegs and mew? Ans. Tom's River, Barnegat, Waretown or Forked River stations on Toms River Branch of N. J. So. R. R. Address Henry Eismen at Waretown, N. J. Good shooting near any of these stations.

C. W. L., Oneonto, N. Y.—Will you please state in your paper what is the best record of long distance fly-casting made at any of the previous tournaments in this State, also, the best record of bass casting? Ans. In 1889, single-handed fly-casting, R. C. Leonard, 97½ft.; T. B. Mills, 100ft. In 1887, switch fly-casting, H. W. Hawes, 102ft. Fly-casting for black bass, 1889, Jas. L. Breeze 90ft.

A. E. E. Lodi, Ohio.—Will you please inform me where and what kind of fishing I can get near Milwaukee, Wis., in the first part of July? Ans.—Near Lisbon, Wis., about 10 miles from Milwaukee, you will find pickerel, perch, catfish, rock bass and rock bass. The fishing is continuing good in July. Fox River is not far off and furnishes about the same species. Waukesha is a point of departure for several lakes varying from 4½ to 10 miles distant, where you can pickel, black bass, rock bass, perch, etc., and about Milwaukee and Menomonee rivers and the Fox and the former is 100 miles long and contains many of the fishes already mentioned. The Wisconsin Fish Commission has distributed brook trout and walleyed pike, and a large share of them were sent to Milwaukee pike. In Lake Michigan are lake trout, pike, pickerel, yellow perch, white bass, etc. Trout of small size are abundant in the 300s are best taken on the rock running from Racine to the North shore from shore 5 to 10 miles.

E. S. W., Garretttsville, O.—1. In next issue will you fully describe the fish known as the "croppie" and give the other names by which it may be known in various localities? The croppie is known in the Ohio Valley, and I would like to write for information to the Ohio Game and Fish Commission, and write for information. I can advise names and addresses of other parties that know of the croppie. I have trout fry for sale. Ans. 1. The croppie or crappie is variously styled speckled perch, strawberry perch, chinquapin perch, bridge perch, Campbellite, New light, sac-bell, bachelor, etc., etc. 2. The croppie is a member of the crappie family. The foregoing names with its relative, and has all the following: Sand perch, grass bass, calico bass, barfish, bitterhead, tin-mouth, John Demon, shad and goggle-eye. It belongs to the sunfish family, but is longer-bodied and larger than the sunfish foot in length. The croppie is very variable in color, but the males and females are usually colored like the body and the fish is very handsome one; it is an excellent food fish and game enough to suit the average angler. The first one mentioned is common in the Ohio Valley, and the other is abundant in the Great Lakes region. Both species are very hardy and are found in the Ohio Valley. Both species are very hardy and are found in the Ohio Valley. Good illustrations of the croppie are given in the Fishery Industries of the United States, plates 150 and 160, also in Dr. Goode's "American Fishes," and in one of the Ohio Fish Commission reports. 2. Col. E. B. Hodge, Ohio Game Commissioner, Reynolds, N. Y., has sometimes sold a fish as a trout and called it a croppie. Write also to Frank N. Claiborne, Garretttsville, Mich. for names of establishments in the West.

THE COMING HAND-GRASP.

Cork and celluloid, cork predominating. Patent applied for. Improvement over all other rods. Not affected by water or heat. Cork is protected by celluloid. Will not blister the hands. By using the combination can get a more perfect hand-grasp. Rod will not sink. Hand-grasp can be made to match windings, and more durable than any other hand-grasp made. Admitted by expert anglers to be the coming hand-grasp. This season we make this hand-grasp only to order. We shall make no other next season.

Geo. Price,

1438 Third Ave., cor 82d St., New York.
Importer of Silkworm Gut and Hooks, manufacturer of and dealer in Sportsman's Goods of all kinds. Only reliable bait headquarters up town. *Mention Forest and Stream.*

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the angler chooses.
THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other reel.
FIFTH.—It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1, black bass; No. 2, bass and pickerel; No. 3, muskallunge, salmon trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction, one minnow having been known to catch twenty-five baits before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

J. B. WISE, Watertown N. Y.

What's the News?

The news is that somebody writes us, that we shouldn't call it a photographic trading post, but a photographic exchange. Oho! Well, all right, "exchange" it is, if anybody likes it better. We like "trading post." It seems to suggest 'out of doors,' and that's the place for photographic fun. At any rate it's the place to come for photo goods of all sorts. Scovill & Adams Co., 423 Broome street.

J. R. SMITH & CO., Knoxville, Tenn.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understood of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

PAWNEE HERO STORIES AND FOLK-TALES, With Notes on the Origin, Customs and Character of the Pawnee People.

By **GEORGE BIRD GRINNELL** ("YO.")

Cloth, 417 pages.

Illustrated.

Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales, and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parallel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

Charles Daly Automatic Hammerless.

Made under DEELEY'S PATENT, the strongest and simplest, equal in every particular to any other AUTOMATIC HAMMERLESS costing DOUBLE the price. No. 150, price \$175. No. 250, Diamond Quality, price \$275. Charles Daly Hammerless, \$100 to \$225.

Charles Daly Three-Barrel Gun.

Shotgun Sizes

10, 12 & 16-BORE.

Length of Barrel,

28 to 30 Inch.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers: Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

OUR SHOT COUNT.

THE table presented in our gun columns is a natural outcome of our work at the gun-testing screen. From the first it was decided not to mislead those who were watching the results of the trials at the FOREST AND STREAM's gun-testing range by saying that such and such a charge of this or that number of shot was used and giving no further particulars. Instead of this, accurate count and weight figures were taken in every instance and published in connection with the charges as given by the loader of the cartridges. In not a few cases the shot-gun owner was surprised when he discovered that what he had a notion he was using in the way of quantity of shot was not there at all. There is no end of confusion on the whole subject, and the result has been that many previous gun tests are now shown to have been practically valueless because of their lack of this exact data about the charges used.

It is no new discovery that shot size and shot numbers bear no sort of relation when coming from various factories. The New York State Association some years ago took up the subject, discussed it somewhat, and took some inconsequential action, and then the companies went on making each its shot in its own peculiar way, being a rule unto itself in the matter of size.

In no other class of manufacture would such an absurd fashion of nomenclature be followed as in shot making. Shoe sizes run even throughout the trade. Collar sizes do not materially vary. In any one of hundreds of callings a general agreement has been reached in the matter of trade sizes, and this is followed from one end of the country to the other; but when a man holding a fine shotgun has after long experience and experiment reached definite conclusions as to the best load, and fixed upon a standard sort of ammunition, it then becomes a mere gamble on his part, when he goes to buy a new supply of shot, whether he gets within 40 per cent. of what he had been using, and upon which his conclusions as to a standard load had been based.

Our investigation is up to date; it is accurate and com-

plete. It shows the status of the shot business, on this question of nomenclature, as it exists to-day. What may be done, what can be done, we cannot now state. That it would be a satisfaction all around to secure a uniform standard cannot be doubted. A congress of shot makers might do something, State associations might help on toward the desired end, and it certainly looks as though the question is one which the American Shooting Association might take up and on which it could score a success. Our mission now is to give the news side of the topic, and when we have completed our series of tables, from No. 10 to No. 6 shot, there will certainly be text enough for the proper action by the proper agency.

FISHING RIGHTS.

THE question of fishing rights in trout streams is exciting much attention in certain districts in Connecticut, as it has done in other States. Clubs or so-called "syndicates" of anglers—in most cases city residents—have leased the fishing privileges in certain streams, paying to the farmers, who own the lands bordering on the streams, annual rental for such rights. One case which has recently attracted attention is that of the Muddy River in Wallingford. The fishing rights on that stream were leased by a club or "syndicate" of anglers, and the adjoining lands were posted by the lessees. For a while the system worked; but after a time, when, it is said, the rents were not promptly paid, the landowners permitted their friends to fish in the Muddy waters. The club brought suit against the fishermen, seeking to punish them for trespass. The case was tried at Wallingford and the verdict given was in favor of the defendants. The judge held that while the club had leased a right to fish they had not leased the exclusive right; and that under the law the stream must be posted by the proprietors in their own names, not by the club in its name. If this is a correct statement of the case, it is plainly seen that a club can still secure to itself exclusive fishing rights in a stream, by leasing the same, and providing for the posting of the waters by the proprietors in their own names.

In a word, the whole problem of maintaining exclusive fishing privileges depends upon the trespass laws. The statutes declare that a landed proprietor, by conforming with certain prescribed rules, may protect his lands from trespass by outsiders. If a person or a club of persons can induce the landowner to post trespass signs and keep all others off, the desired exclusive privilege may be acquired.

But while the legal phase is thus perfectly simple and clearly defined, there is another side of the question, which is more complex, and which in reality is that in which the Connecticut anglers are most interested. Aside from the purely legal rights, which must be conceded, has a landowner a moral right to shut out his neighbors in favor of the city men who pay for their privileges? This is one of those questions which is viewed altogether differently by the several parties involved. The local man, who has been used for years to fish in a trout-haunted stream, rebels when on repairing to a favorite stretch of these waters he is confronted by a sign forbidding him to trespass. He denounces the lessees as monopolists, and the landowners as selfish, unneighborly and mercenary. On the other hand, the lessee, who has perhaps grown weary of making journeys into a far country without reward, is glad enough to have an interest in a preserve, and stoutly contends that to lease the stream from the landowner, fairly and honestly paying him to post it, is just as legitimate as it would be to buy the land and post it himself.

Perhaps a person who himself never went fishing and cared absolutely nothing for it, and thus being in a position to judge impartially, might suggest that each party had reason for holding to his opinion. The truth is that changed conditions have arisen; under a new order of things, there is inevitable friction; disputes will be fomented until society shall have adjusted itself to the changes. Briefly stated, the new conditions are these: Interest in angling has been enormously stimulated. There are tens and hundreds who go fishing to-day, where formerly there was one. No adequate provision has been made to supply fish for the fishermen. Waters have been depleted, fished out, ruined by pollution. With an ever-increasing host of anglers and a steadily diminishing supply of available waters, the individual angler does not enjoy, cannot enjoy, the freedom of old. Those who

can afford to buy or lease fishing privileges, naturally do so. Those who cannot or do not buy or lease are shut out. Both classes are impelled by motives of personal interest. It is asking too much of human nature to demand of the lessees that they shall abandon their system because it works hardship to others. It is equally unreasonable to expect that those who are deprived of their accustomed free fishing shall regard with equanimity the usurpation of these privileges.

The dispute is one which can never be settled by argument about the right and wrong of the leasing system. It will last as long as there shall be more fishermen than waters to fish in. If all the waters of Connecticut, for instance, which were by nature suited to the support of a fish supply, were redeemed from their present factory pollution, protected from unlawful fishing, and stocked and fished only in a legitimate way in a proper season, it may be that there would be fish for all, and contentment and harmony for all. Is not the present condition of affairs simply an inevitable result of the foolish mismanagement and squandering of fishing resources? And is not the wise and sensible course now to pursue to consider in what manner the inland fisheries may be restored?

A SONG BIRD DECISION.

A DECISION of great interest to small bird protectors was recently made by Chief Justice Barnard, of the Supreme Court of New York. Some time ago a suit was brought by the Long Island Game Protector against a Mrs. Fishbough, of Brooklyn, who exposed for sale in her store seventeen living yellowbirds. Before a Police Justice, the Long Island Game Protector charged Mrs. Fishbough with violating Chapter 437 of the laws of 1886, but in that court she was acquitted on the ground that the birds were living, the Justice holding that the prohibition against exposing song birds for sale applied only to those that have been killed. However, the case was carried up, and Judge Barnard decided that Mrs. Fishbough had violated the law; that it is an offense to keep for sale live song birds, and that such action renders the offender liable to fine or imprisonment, or both.

It is to be hoped that this decision may put an end to an abuse which has flourished greatly in and near this city of late years. This is the trapping during the season of migration of numbers of native song birds. These little captives after being taken are either sold for a trifle to the keepers of bird stores, or more frequently are at once destroyed and their skins sold to the dealers in feather millinery.

- SNAP SHOTS.

OUR esteemed contemporary, *Our Dumb Animals*, deprecates the "sad sport" of killing seals as described by some one who had participated in it. We never knew before that any one looked upon the clubbing of seals as a "sport" of any character, sad or joyful. It is an industry followed for profit, to obtain furs or oil, the sealers being actuated by the same motive which govern butchers in an abattoir, and justified by the same considerations of profit and usefulness for mankind. The only people who club animals to death for sport are the summer tourists in the Adirondacks and their guides. Many people besides professed humanitarians consider it an abominable style of "sport," but it will be followed as long as the peculiarly constituted tourists visit the North Woods, or until we have succeeded in reforming the laws.

An innocent correspondent of one of the New York dailies telegraphed from the meeting of the New York State Association for the Protection of Fish and Game at Lyons, one day last week, that the Association had taken a stand against the market sale of game, and that this was a move which would create consternation among the game dealers. As a matter of fact the game dealers are not in the least alarmed by any of the stands taken by this Association. The organization has to do with game protection in its name only; as an association, in its official capacity, it cares not a flip about game protection. The dealers understand this as well as the members. The game protective pretense embodied in the society's name is a harmless fiction. The New York Association is made up of trap-shooters; and in organizing and carrying through a big tournament, it is a rousing success, as the Lyons meeting demonstrated. By the way, what has become of all that brood of sapient soothsayers who were once heard foretelling that artificial target shooting never would draw attendance at State tournaments?

The Sportsman Tourist.

"NESSMUK"—NOT GONE.

AROUND the old woods-haunter's home
Save on one mound of fresh piled mold,
The grass is green as ere of old
When soft the breath of May had come.

In meshed brown shadows of the woods
Are blooming now the flowers he loved,
As bright as when among them moved
The feet of one, whose happiest moods

Were found when close to nature's heart
In forests old, whose shadowed streams
Are rarely touched by noontide beams,
Far from the world of man, apart.

As blithely now as when he heard,
The hang-bird carols on the elm,
The bobolink rollicks o'er his realm,
And woods with thrushes' notes are stirred.

Calm nature gives no sign of loss,
Though it would seem that she must mourn
When lover such as he the bourne
Of this world's life has passed across.

She feels no loss—his better part
Lives still with her, in sweet commune,
With all her voices in attune,
And taken to her inmost heart.

MAY 24, 1890.

AWAHOOSE.

A WAR PARTY.

CLOSE under the shadow of a great mountain, by a little stream, the camp was pitched. On either hand the unbroken prairie stretched away a long distance: and far to the eastward, in a vast expanse of plains and level ground, could be seen the three Sweetgrass Buttes. It was a warm summer day and the children were running about among the lodges and playing in the water of the little brook. Groups of men were seated in the shade cast by the lodges, smoking and talking, and everywhere the women were busy tanning buffalo cowskins for new lodges. Near the outskirts of the camp was a small hut or shelter, hemispherical in shape, and thickly covered with cowskins. Two or three women were standing near it, and close by a fire was smouldering. It was a sweat-lodge, and in it were a number of men taking a medicine sweat. If you had drawn near you could have heard the hiss of steam as the medicine man sprinkled water on the red hot rocks; and you could also have heard him praying to the Sun and other gods for the success and safety of the party.

"Hear now, oh Sun," he said. "Listen all above persons. We have built a sweat-lodge for you directed. It is round; inside the ground is flat; above us the lodge arches from all directions; thus do we represent the world, your own, as you long ago directed; and as you further—in the long ago—said should be done, we now purify our bodies for we ask you something. Let us live! Let us survive the perils!"

"Even as you sink behind the mountain tops, your children here gathered will depart for war. They will be to be revenged on our enemies. They will fight our enemies who live in the south. Now hear our prayer. They will leave their relations and friends to make war with our enemies. Pity then these relatives, that they may bear the sorrow of their leaving us. Pity them, that they sit not with covered heads in their lodges mourning. Let them go about and say, oh young men have gone to make war, and they will soon return with scalps and many horses."

"Hi-yu, oh Sun, look down upon us. Let there be high-growing sage brush to conceal our warriors from the enemy. Teach them to travel like the coyote through tall grass and bushes, and in the low places that they be not discovered by the enemy. Now we have built a sweat-lodge, as you directed, and here we give you presents—even parts of our body—as a sacrifice. Pity us. Let us live. Let us survive."

While the old medicine man was repeating this prayer, the warriors sliced bits of flesh from their bodies as an offering to the Sun. At last the pipe was out and the stones cold, and the women having removed some of the coverings of the lodge the men filed out dripping with perspiration and jumped into the stream to cool off.

The sun had set, and while the western horizon was still aglow with his last rays, the war party silently filed out of the village and headed for the south. Silently, and with bowed heads they turned their backs on all they loved. And as silent and sorrowful their fathers, mothers and wives sat in their lodges with covered heads, for all were thinking of the dangers of the far-off trail and praying for life and success.

From the distant hills came the long mournful howl of the wolf and the quavering yelp of the coyote. Darkness settled over the earth, and above the stars twinkled brightly. The great wolf road¹ was white with starlight. All through the night the little band moved on in single file, without word or jest; and in their lead was the greatest warrior of their tribe, a brave, yet cautious man, powerful of frame, keen-eyed and proud, proud of his skill and name, for among many tribes White Wolf was known and feared. Even the animals in some mysterious way must have learned of his skill with the bow, for from afar the buffalo took fright and thundered away through the darkness; the antelope looked not twice, but hurried away with mighty bounds, and from the reedy lakes the ducks arose with startled quacks and flew off through the night.

At last from the horizon Epi-sti'-ah-ts² arose, and hung in the eastern sky like a ball of fire. Then after a while came the light, and at length the sun arose, and it was day once more. Near by were some thickly timbered buttes, and there in the densest cover the party sought shelter for the day. A large bull elk stood feeding among the brush; too late he saw them approach. Twang! went a bow, and a feathered shaft was buried in his heart. Two men were now chosen to ascend the hill and keep a sharp lookout for enemies, and the rest cut up the elk and retired into the thick timber. By a little spring they built a fire and cooked some meat, and having finished eating they rolled up in their robes and went to sleep. At noon the leader awoke and sent two men to relieve those who were watching, and again laid down. As the sun approached the mountain tops, one by one the little party arose and washed in the cold spring. Then they cooked more of the elk, and, as darkness settled over the land, they put on their war sacks and pouches of pemmican, slung their quivers and shields, and once more struck out over the broad prairie.

Now at daylight of the third day they came to the Big River (Missouri) where Pile of Rocks River (Sun River) empties into, and they had no fresh meat. True, each one carried a little pouch of berry pemmican and *depuille*, but that was kept for a time when perhaps they dare not build a fire, or when they might be surrounded by the enemy. Close by the river a large bull was feeding, and he looked fat. Then said White Wolf: "A fat cow would be better, but now the sun has already risen, and perhaps even now some enemy is watching us; let us hurry, then, and kill this bull. And he crept near and shot an arrow into him; but the bull never raised his head, he kept on walking slowly toward the river, stopping now and then to eat a bunch of grass. And all were much astonished. Again White Wolf shot an arrow into him, and then they all shot him, but still he paid no attention to them. Now he reached the shore and waded slowly out deeper and deeper, and finally sunk out of sight. "*Su-ye' stum-ik!*" *Su-ye' stum-ik!*" they all cried; "we could not kill him; he is one of the fearful kind," and they were afraid. And some said it was a bad sign and wanted to return home, but White Wolf would not let them. "True," he said, "it is not good for man to see these strange and fearful animals. But what we have seen is done—it cannot be helped. Let us now place the watch on two hills, and we will build a sweat lodge. We will purify our bodies and sacrifice to the Sun," and they did as he said. And after they had made the lodge and given the sacrifice, White Wolf called the watchers down, and they went down the river below the place of high falling water, and they shot a blacktail deer and cooked and eat until all were satisfied. Then they dragged down to the river's edge logs which had been left dry by the high waters, and they lashed them together with their lariats; on top of of them they piled sticks, and last on top of all they placed their clothes, their water sacks, pouches and weapons, and pushing the raft into the water each one grasped the logs with one hand and swam with the other, and swimming thus, they crossed over to the other side. It was now long past the middle of the day and all were very tired, so White Wolf said: "We will rest here until another night, and I will watch till dark," and he went up on the bluffs alone to watch, and the rest went into the thick willows and slept.

Now on the seventh day they came to the Yellow River (Judith), and they found a broad trail where many people and horses and travois had lately passed going east, and then they were glad, for they knew that they were near the enemy. Crossing the Yellow River they crossed over a little point of land and came to the Warm Spring River, and here they rested for the day, two of them going on to a high butte to watch.

Soon one of the watchers came back and awakened them, saying, "Uneasy the animals, a band of buffalo run toward the south, and also many antelope, running swiftly as if much scared." Then all arose and cautiously ascended the hill, and they looked carefully in all directions. The day was uneasy, the buffalo were running one way and another, ravens and eagles flew about screaming and croaking, a band of wolves came sneaking into the river bottom, and last they saw many persons on horseback riding swiftly east. "Ah," said they, "there they are; a war party perhaps, or may be returning hunters."

"Their lodges may not be far off," said White Wolf. "To-night we may arrive there; let us sleep again," and while some watched the others rested until the sun had gone out of sight beyond the mountains. Then they ate a little of their pemmican and took the trail to the east, traveling fast. Near daylight they came almost to It-fell-on-them Creek⁴ (Armells).

"On this creek," said White Wolf, "I am sure they are camped. It is now too late for us to do anything to-night, so let us turn up to the mountain and build a war lodge⁵, for we are now in the midst of danger. So they went high up on the side of the mountain in the thick timber, and by a little spring they built the lodge. First they put up the poles—many of them and close together—and over these they placed balsam and spruce boughs in thick layers, so a fire could be built inside and yet no light be seen from the outside; and while they were making it White Wolf went out and killed a deer. Then inside they built a little fire of dry quaking asp, and cooked pieces of the deer, and after they had eaten White Wolf went up the mountain to a ledge of rocks to watch while the others slept.

Far below him in the valley he could see the lodges of the enemy. Two hundred and ten he counted, and he saw great herds of horses feeding on the hills close by them. And he looked carefully at the hills, the coulees and ridges, to know which way would be best to approach the camp. "Listen, oh Sun!" he prayed; "make me of good sense. Let my eyes be keen and my arm strong. Let me take many scalps of those men; let me drive away many of their horses."

At sundown they ate a little of the deer and then they opened their war sacks and put on their war head-dresses of eagle feathers, and their war shirts of fine buckskin, painted with strange animals and decorated with fine fur, and they painted their faces. Then White Wolf filled a pipe, and they smoked to the Sun and prayed, and each one gave a present to the Sun, and when it was dark they went down the mountain and traveled toward the lower ridges near the camp. Very slowly and cautiously they crept along, keeping in the coulees and low ground. They were now near the camp. The firelight showed dim and red through the lodge skins, and from the smoke holes streams of sparks arose in the still night air. Dogs barked, horses whinnied, there was a loud confused hum of sounds, people talking, singing, children shouting and laughing, drums beating, the mourning of some for the dead, the loud shouted call to a feast—all this they heard as they neared the camp. And now, close to them they could see the shadowy outlines of some horses and hear them eating. Then they took their lariats and caught each one a horse, and these they led, slowly and silently driving the others ahead of them away from camp; and when they had got some distance away they stopped, and leaving the four youngest warriors to guard the horses and keep them from straying away, the others went back. Cautiously

they approached the outskirting lodges. In one were seated many persons, for they could see their shadows on the new lodge skins. It was perhaps the lodge of a chief, and there were feasting warriors and principal men. The war party came close to the lodge, most of them stood on each side of the doorway and a few stood round and behind it. Then raising his hand to his lips White Wolf sounded the war cry of his tribe. Shri! and loud it echoed through the still night air and was heard by all the people. It made the mother's heart beat, as she grasped her little child in her arms. Young and old were filled with terror. The warriors grasped their weapons and rushed forth into the darkness.

Now from that Chief's lodge the feasters poured out the doorway, but as fast as they came White Wolf and his warriors shot them down and scalped them, and the rush for the doorway was so sudden that those behind could not get out, so they cut slits in the back of the lodge that they might get out unperceived, but even there the enemy struck them down, and the air was filled with war cries, and groans, and shouts for help. Then came warriors, hurrying from all parts of the camp, and White Wolf cried out, "Enough, run," and they ran swiftly and disappeared in the darkness, and the Crow warriors followed them but a little way, for they could not see them in the dark, and all know it is foolish to chase a person in the dark, for he can stoop in the grass or hide behind a bush without being seen, and so can shoot down the pursuer when he comes along. So the Crows returned to their camp and from afar the Piegiens heard the great mourning, wives and children, fathers and mothers crying for their dead; and the warriors shouted war songs and prepared to follow the enemy when day should come.

Now White Wolf and his warriors came to the horses, and mounting, they rode swiftly away, driving the many loose horses before them, and when they had gone some way they fired the prairie to hide their trail. All through the night they rode, stopping now and then to change horses, and when the sun rose they stopped by a little creek to rest and eat. All through the day they rode, traveling east, and when the sun was getting low they came to the Big River, near the place the Bear River (Mississippi) joins it, and they crossed to the other side. No, not all of them crossed; there in the deep, dark water live the *Su-ye'-tup-pi* (under water people), and they took the chief. White Wolf was riding a large strong horse, and when in the middle of the river they both sank slowly out of sight. They reappeared, and the horse made some powerful lunges to escape, but again they sank beneath the water and were seen no more.

"White Wolf has sunk!" the others cried. "The *Su-ye'-tup-pi* have seized him," they cried, and they sat down and mourned for him. Then after a time they went along the shore, thinking, perhaps, to find his body, and when night came they turned out their horses and built a little fire in the timber and rested. But their hearts were sad; they could not eat; they sat around the fires in silence and mourned. By and by, far off they heard a horse whinny; again and again, nearer and nearer, and then they heard the tramp of his feet. Nearer and nearer and then there was a voice saying, "Are you there, my brothers?" Then what a shout went up. What a glad cry was there in the night, and they rushed forth to embrace their friend and leader, who had returned to them.

"Strange, strange have been my adventures," said White Wolf. "You saw me sink under the water and you thought I was dead. So did I. I felt my horse sink beneath me, and I tried to rise, but something held me down. My ears rung. The water strangled me, and then I found myself in a great lodge, and in it were sitting two old people—a man and his wife. They were very small and their hair was thick and long. Then I knew the *Su-ye'-tup-pi* had caught me. Said that old man: 'Sit down my son, and let us eat,' and his wife placed before me a piece of turtle and some small lizards. But I could not eat them; you know they are fearful things that we may not touch nor eat, and I was afraid. 'You do not eat, my son,' said the old man. 'Why not?'

"Pity me," I said, 'I am of the prairie people and such as this we greatly fear. We may not touch such food.' 'Ah,' he said, 'I forgot; our food is not the food of the land people, yet one thing we have you like,' and he placed before me four strawberries.

"How queer," I thought, 'only four berries, and I could eat many handfuls.' But I ate one and looked around. The lodge was new and made of strange material. There were parfeches of fish skin, their robes were of otter, bowls they had of turtle shell, and many strange things I saw in the lodge. Then I took another berry, but instead of three, there were four remaining; and although I ate many, always four remained, and when I had finished the Old Man took the four and put them away.

"Then said the Old Man to me, 'From what direction comes my son?' And I told him all, of our going to war, and I showed him the scalps.

"Give me one," he said; and I gave it, and my shield, that I also gave him. Then said he, 'My son, you have given me presents. You shall live. You shall return to your people; but after this, you and all your tribe must not cross the rivers until you have given us presents. When you reach the shores throw into the water something for us, and you shall cross safely over. But if you do not this, we will take a person and you will see him no more. And now I have said. Shut your eyes and I will lead you to the shore.'

"Then I did as he said, and he took my hand and led me out and up through the water. Soon I felt the water part. I breathed again. I opened my eyes and I stood upon the shore. Close by fed my horse. There was still a little light. I found your trail and followed on."

In the camp of their people the absent warriors were not forgotten. Often the Bear Man unrolled the sacred pipe and prayed for their safe return. Often he stood outside his lodge and shouted out their names. And every day, as evening came he mounted a horse and rode slowly through the camp shaking a medicine rattle, singing a war song and shouting out their names. Thus were the absent ever in the minds of the people.

One day far out on the prairie were seen a band of swiftly-moving objects, at times half hid by the clouds of rising dust. Nearer they came. Hark! Listen to the war song! See! It is our absent warriors; they return with many horses! And all the people went out to meet them, singing loudly the war song with glad hearts, and

¹The milky way.²Early riser—the morning star.³*Su-ye' stum-ik*, under water bull. Supposed to live in the water and to belong to the under-water people.⁴So named because once a number of women were digging natural paint in a cut bank, when the earth gave way above, and many of them were buried beneath it. Many of them being killed the name of the creek in Blackfoot is *Et-tis'-ki-ots-op*.⁵In Blackfoot *Op-im-an-sit* inside place.

shouting out the warriors' names. Then was there great joy, and to their relations the warriors gave many horses, and to those who had lost relatives by death from the enemy a scalp was given; and they danced the scalp dance and were comforted.

Natural History.

HABITS OF BEAVERS.

IN a former number of FOREST AND STREAM inquiry was made as to the practicability of securing some specimens of young beaver for transfer to meadows of the inquirer in Pennsylvania. There is no difficulty in securing as many as required, but it would be at some trouble and expense. When a family of beavers is found in a favorable place the method and labor of getting them are much the same as in getting a family of young woodchucks.

On many of the mountain streams of the West where beaver are still found, there are meadows with dry perpendicular banks along the stream. In such places the beaver builds his dam of brush and mud. From the bottom of the pond he makes his hole into the bank, running it up to near the surface of the ground and then a foot or less under the surface for a yard or two, where the nest will be found. If a mound of earth rising higher and higher than the surrounding surface lies near by, the nest will be found there; and generally the nest is only a few inches under the turf. On the margin of one creek I have seen scores of such beaver holes exposed from the top of the bank to the nest by cattle walking over and stepping through the turf into the hole. In the nest it is common to see a single skeleton of a beaver. It is probable when from old age or other cause a beaver dies in its nest, the other members of the family remove to other quarters.

To secure a family of beavers alive, the whole opening into the pond must be found and quietly but securely closed up. When that is done, dig to the hole from near the top of the bank, and close it thoroughly. Prepare a wire sack for the kittens and some protection for our hands. The young ones now can be soon uncovered and secured. The old ones will be permitted to escape, and if caught it will be well to bear in mind the immense cutting power of their teeth. The young ones are not likely to try to leave the nest until they are nearly uncovered, and all chance for escape by their road to the pond has been cut off. This method of capture would do where they live on wet marshes subject to overflow, and where beavers build themselves houses of mud and sticks.

No animal is at more pains to have a dry place to live in, and none live on coarser fare or show so much patience and industry. His sagacity and intelligence are proverbial. An example came under my notice while trout fishing on a mountain stream a few years ago. A young man noticed a fresh beaver dam near the house and coaxed me to help him trap a beaver. The dam was of mud and alder brush and ran across the creek, some 5 yds. wide at that point, with perpendicular banks and bordered on each side with dry land used as pasture land. We broke out one end of the dam by an hour's hard work, and set our trap, using a large green alder bush for a stake, which we forced into the mud out in the pond as far as the chain would permit.

The next morning we found that the break in the dam had been carefully repaired and our trap with the stake was woven into the very bottom of the break. The repairs were so well done that it took us about an hour to recover the trap; and we reset it in another place. The same result followed for five nights in succession. On the sixth night the dam was repaired as usual, but about the middle of the dam was a semicircular groove cut through the well-packed bushes and mud forming the top, true and smooth as no man could do it, and lowering the water in the pond some 6 or 8 in. Of course, by so much it relieved the pressure on the dam. The beaver concluded the dam was too high for the strength of his material (though the young man and myself knew the fact to be decidedly otherwise) and he made the pressure less in the safest way. The trap cut no figure in the experiment beyond its being attached to a fine green alder bush, just what the beaver needed to repair with, and so he dug it up every night and dragged it with the trap to the break; and it was the first and easiest material he could get hold of to help make his repairs, the other bushes which he needed to cut for repairs to the dam grew at quite a distance from the creek.

Above the dam on this creek are meadows, and a gentleman in hunting grouse was walking over them and was startled at the sight of an animal coming toward him in a path leading through the tall grass that appeared like a little old man. On a better view, he concluded it was not human and shot it. The animal turned out to be a very old, gray-bearded beaver, which had lost both of his forefeet by steel traps, and was now walking on his hindfeet and carrying a few sticks in his stumps of arms and evidently trying to provide for his future subsistence. Intelligent as beavers are, if they could be domesticated no animal would attract greater interest. The instinct for dam building might make him troublesome. But the object of that labor is to protect the entrance to his home from his enemies and to provide a place for his winter's supply of food, where he can use it in safety and below the reach of ice. When the necessity no longer exists for his protection, in a generation or two, it is likely there would no longer be the desire for dam building.

G. H. W.

GOLD IN A GROUSE'S GIZZARD.—We have recently received from Roland Ryder, a resident of British Columbia, the contents of the gizzard of a blue grouse (*Dendragapus fuscescens fuliginosus*), which is of rather unusual interest. The gizzards of gallinaceous birds commonly contain gravel or small stones, together with the comminuted fragments of the seeds, grains and other food on which the birds have fed. The contents of this gizzard, which had been washed before we received it, consisted of small late and quartz pebbles, among which are four little nuggets of gold. This specimen came from near the Skagit mines, close to the United States boundary line, and was originally in the possession of Mr. John Chance, the discoverer of the Granite Creek Mines, near the Milkameen River. Mr. Chance killed the grouse high

up on the mountains near the mines. He was alone when he cut the gizzard open, but happening to see one of the little gold nuggets as he did so, he called to him two other miners who were working near by and showed them his odd find. The gold is quite coarse and the pieces range in weight from that of a No. 8 to a No. 4 shot. This gold was no doubt picked up with the quartz on some gravel bar in a river or brook near the spot where the bird was killed.

WESTERN BIRD QUESTIONS.—Edgar, Neb., June 12.—*Editor Forest and Stream:* Your correspondent from Broken Bow, Neb., in issue of June 5, who inquires about a bird captured near there, evidently refers to the black-headed or laughing gull, as about that time a pair of those birds were killed near this place and brought to me. The only difference in the marking of the two brought to me was that the female did not have the narrow rim of white around the eyes. I saw a flock of birds in the mountains of southern Wyoming last fall, which, as I did not succeed in getting a specimen, I have been unable to name. They were pretty well up, and appeared to be feeding on the pine trees. The males were dove-colored, with crest, wings and tail of a cinnamon red—as near as I can name it—females solid dove color, and appeared to be about the size of a Baltimore oriole. I only saw the one flock in a month's tramp. Can you name them?—H. [It is of course very dangerous to attempt an identification from so general a description as the one given by "H.," but it is possible that the birds which he saw in Wyoming may have been pine grosbeaks (*Phyrhula enucleator*), or perhaps they were red crossbills.]

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN IN MAY 1890.—Purchased—Two wolverines (*Gulo luscus*), one Rhesus monkey (*Macacus erythraeus*), two beaver (*Castor fiber canadensis*), four water moccasins (*Ameiurus pictetorus*), one harlequin snake (*Elops fulvulus*), one copperhead snake (*Ameiurus contortrix*), six ground rattlesnakes (*Crotalophorus ulitatus*), one crowned fan-tail (*Pantilia coronata*), six pine snakes (*Ptyophis melanoleucus*), two indigo snakes (*Spilotes erchenius*), eleven blacksnakes (*Bascantion constrictor*), one common hog-nosed snake (*Heterodon platyrhinos*), ten king snakes (*Phibolus getulus*), one scarlet king snake (*O. dolitus coccineus*), three coachwhip snakes (*Bascantion flagelliforme*), four water snakes (*Tropidonotus speidon*), one cyclops water snake (*Tropidonotus cyclopum*), three chicken snakes (*Coleuber quadrivittatus*), two Allen's snakes (*Lindys allenii*), one garter snake (*Eutania si talis*), three alligator snapping turtles (*Macrochelys lacertina*) and one striated turtle (*Chelepus insculptus*). Presented—One opossum and young (*Didelphis virginiana*), two screech owls (*Scops asio*), one red-tailed buzzard (*Buteo borealis*), one loon (*Columbus torquatus*), one blackbird (*Quiscalus versicolor*), two Canary birds (*Serinus canarius*), two catbirds (*Galoscops carolinensis*), three alligators (*Alligator mississippiensis*), one diamond rattlesnake (*Crotalus adamanteus*), one Leconte's snake (*Thamnophis lecontei*), one California king snake (*Ophibolus getulus boylii*), two garter snakes (*Eutania striata*), one black snake (*Bascantion constrictor*), one water snake (*Tropidonotus speidon*), one Skilton's skink (*Eumeces skiltonianus*), one horned lizard (*Phrynosoma cornuta*), two musk turtles (*Aromochelys odoratus*), two red-eared terrapins (*Pseudemys elegans*) and one diamond-backed terrapin (*Malacoclemmys palustris*). Born—Three prairie wolves (*Canis latrans*), one Virginia deer (*Capreolus virginianus*) and three prairie dogs (*Cynomys ludovicianus*).

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

CLARBOUGH 12, May 1, '90.	PARKER 10, hammer, June 6, '89.
COLT 12, July 25, '89.	PARKER 12, hammer, June 6, '89.
COLT 10 and 12, Oct. 24, '89.	REMINGTON 16, May 30, '89.
FOLSON 10 and 12, Sept. 26, '89.	REMINGTON 12, Dec. 5, '89, Feb. 6, '90.
FRANCOTTE 12, Dec. 12, '89.	REMINGTON 10, Dec. 26, '89.
GREENE 12, Aug. 1, '89.	SCOTT 10, Sept. 5, '89.
GREENE 10, Sept. 12-19, '89.	L. C. Sargent 12, Oct. 10, '89.
HOLLIS 10, Nov. 7, '89.	WHITNEY SAFETY 12, M'ch 6, '90.
LEFEVER 12, March 13, '90.	WINCHESTER 10 & 12, Oct. 3, '89.

HINTS AND POINTS ON DUCKS.

BY HENRY KLEINMAN.

[Concluded from Page 410.]

ONE thing I have always noticed, and that is, that ducks watch the mudhens very close. A flock of mudhens make the best decoys you can possibly have, and you never want to scare the mudhens away from your blind, for they will draw ducks when nothing else will. The ducks may reason that the mudhens wouldn't be there if there was danger, but there may be a further reason besides that. A duck has the utmost confidence in a mudhen's judgment as to a feeding place. Wherever a mudhen is, there you are going to find feed. Moreover, about all the marsh ducks that don't dive well will hang around the mudhens and feed on the roots and stuff they tear up, or else will rob them of their food as they come up from a dive. You will see widgeons and pintails dart right down and light in among the mudhens. Once my son and I put out about 300 ducks from a little willow cover, and a big bunch of mudhens went out with them. We hid away and waited, and though the ducks came back and circled round, they would not light, and we knew it was because the mudhens had not come back in there. Abe has a lot of mudhen decoys, and says he wouldn't part with them. Naturally, the ducks most apt to come in to mudhens are the widgeon, teal, mallard, pintail, bluebills, ringbills and gadwall. When they are hunting for a place, and ready to decoy, about all the slough ducks will decoy to almost any variety of decoy. I think, in a case like that, they often will turn toward almost any sort of a noise to attract their attention. You can "whistle" teal in the dusk of evening, and you will notice ducks draw into that sometimes whose note is not in the least like that. But usually the note must be very exact, and when you see the birds set and draw in toward you all right, you had better stop your calling and let them come, you keeping perfectly still. You can call some birds without any squawk or duck call, but I always use a call, and find the imitation of each bird's note a great help in getting a bag.

It is a good plan in putting out decoys on a feed bed not to shoot at the birds when you drive them out; very often they will be coming back before you get out your flock. This does not always happen just this way, however.

Another thing I have not mentioned, and which perhaps has as much as anything to do with the big bags of a successful duck hunter, and that is, the hunter should always be watching the flight of the birds and making up his mind where they are going to be later on,

or on the following day. If the ducks keep circling round and going down all day in a certain place, it is sure they have fed there, and if you can get in, you will get shooting there the next day. A knowledge of the flight and habits of the ducks is essential. You want to know where the different kinds of feed are on the marsh and the nature of the spots where the birds are apt to be working in different kinds of weather. For instance, if you know the marsh ducks will be driven off the open water by a heavy wind, have your plan made up where to go and look for them if the morning has a heavy wind blowing from such and such a direction. You have got to study and know your ground, and there is everything in that. I knew this Calumet marsh like a book, and I knew where the ducks would be, for such and such a wind and for such a certain kind of weather. It was often amusing to see some of the shooters follow me around. "I would tell them where I got my ducks, and they would sneak out there early the next morning." By the time I got ready to go out, I might conclude to go in the opposite direction, to a spot where I knew the birds were apt to be on that day; so that by the time night came, they would be asking me again where I got all my birds, and would be ready once more to take a territory I was usually quite ready to give to them. I had them follow me all over the lake that way, day after day, but somehow they didn't seem to strike it. The way of it was, I had done some thinking and they hadn't. Some fellows think if they get good shooting at one point they ought to stay there all the week. Now the right way to do is to watch out on the marsh all the time and have your plans laid ahead. You will have to learn each marsh for itself before you can be said to be perfectly fitted to shoot there. Often in exploring around you will drop on to unexpected places where you will get the best sort of shooting.

Much of all this depends on the feed, and some ducks, especially the mallards, have many different sorts of feed. A mallard will do his best to get at acorn or corn feed, but almost anything else will do, according to the country he is in. He will eat these big, bulblike grass roots, or will eat the buds off of certain plants. Thornapples and dried berries of some other sorts he will eat, and also snails, and also the green grass that grows on an overflow in the spring; but he will not eat this much after it has got to the top of the water. In the fall, mallards and pintails are very fond of the smartweed seeds.

The best of mallard shooting may sometimes be had in the timber of the Mississippi River. There will always be ducks there, in a season of high water, if there are ducks anywhere. I have had great shooting near New Boston. If you find an open place in the timber, where they feed, and put your decoys out in the open and go to calling, it sometimes seems as if you couldn't keep the mallards out. In the style of hunting down there, where the ducks can't see the decoys very far, you have to keep up your calling all the time, and it is sometimes funny to sit on a log and listen to the different sorts of calls you can hear, apparently for miles on every side of you. Some of them make very strange sounds, and I imagine some of them don't get very many ducks.

Sometimes on the Illinois River you get timber shooting like that. I know once I found an open hole in the timber near Hennepin Lake, and put out a lot of mallards from it. There was a road cut through the timber, and I put out my decoys right in front of this road. I got into a treetop near by and went to calling. The mallards began to come in right along that road, and they dropped in to the decoys at once, without any warning. I killed 128 mallards in a little while that afternoon.

I noticed one thing in that timber shooting, and that was, it was very hard for me to "cross" two birds, as father always taught us boys to do in our early days on the Calumet. The old gentleman expected about so many ducks for every pound of powder he gave us, and it paid us to double two birds to the shot whenever we could, and we usually could over the decoys. But in the timber the birds would come dropping down, one right over another, and I only could get one at a time. I would shoot one, and then pull the second barrel at about the same place, and nearly always the next old fellow below would jump right up into the second charge of shot.

Another thing about this timber shooting is, nearly all the birds that are not killed in the air kill themselves by the fall through trees. You lose very few wing-tipped birds. On the marsh you will lose, on the average, about one-third of the birds you knock down, but in the timber you get them nearly all—at least in such timber as that where I was shooting. In that one afternoon's shooting I had three mallards pull their heads slick and clean off in the forks of saplings as they fell down.

I do not know that I ever killed more ducks in one day than the 218 teal I have mentioned. I killed 130 ducks on pretty much the same marsh in one day, of which 80 were canvasbacks, and I was back at the bridge by 3 o'clock that day. I suppose I might think of a great many other heavy days of shooting, but I do not know that many would care to hear of that. I know I have killed 5,800 ducks in one season here on Lake Calumet.

Of course in shooting so much one would learn to shoot pretty well, and we boys were early trained to be careful in our shooting. I always shot brass shells, and when I came home at night I nearly always had more ducks than I had empty shells. I have killed 52 ducks in 50 consecutive shots, shooting on a flyway at teal, bluebill and "blackjacks," or ringbills, as they came by in twos and threes, or small bunches.

I have been asked how I hold on a duck flying at about the average distance of a shot, whether on or ahead, and if ahead how much. I have read a great deal in the sporting papers about holding ahead, and have seen it all figured out that you have got to hold 5, 10 or 15 ft. ahead of a fast duck to hit it. Now, I think the man who did that figuring could figure better than he could shoot. I don't know much of the mathematics of it, but I do know that for any ordinary distance I hold right on to my duck. At a very long shot I may hold pretty well up in front of him. But I always follow the bird along with the gun. As you do that you will see the bird double up as soon as you crook your finger, or so soon after it that you can't tell the difference. That is the way all our family shot, and we were all fairly successful. I never saw a good shooter who poked his gun out in the air and blazed away at a spot where he figured the shot and the bird would come together. I think a great many shooters who miss while holding close on do so because they unconsciously flinch or stop just at the instant they pull the trigger, or think they are going to pull it. The act of the

shot should be all on the sweep of the gun as it follows the bird. I don't know why this is, but I know if you shoot my way you can't tell but what you have killed your bird by crooking your finger. I must say that I have at one time tried that holding-ahead business, and as I wasn't killing any ducks I quit it and began to hold close to my bird, and now I get them. On very long shots, as I said, I go a little ahead, but never so much as the "authorities" say is right. I do not shoot a very coarse or slow powder.

In another thing I suppose I am old-fashioned also, and that is in the way I load my shells. It is the fashion now to put very heavy wadding on the powder, and some shooters seem to wish their shells were longer, so they could put in more wads. My regular load for ducks, for a ten-gauge (I shot a Daly, then a Greener, and now one of old uncle Tommy Hasdale's guns) was always 4½drs. of FFG. American Deadshot in a brass shell, with just one pink-edge wad, and that always an Ely pink and not an American wad. On top of this I use just 1oz. of shot, either No. 5s or No. 7s. I never shot No. 6s very much, because there isn't much difference between them and the 5s on the one hand, or the 7s on the other. No. 7 is a very good duck shot, and plenty heavy enough, especially for teal. The larger and wilder ducks need the 5s.

On top of my shot I always used an Ely black-edge wad. I never use a cardboard wad in my shells at all, and I never shoot an American wad at all. They fly to pieces too easy—unless you should take the extra heavy felt wads they are making now. You will notice how much harder and firmer the Ely wads are. You can't blow them to pieces. I used wads two sizes larger than

the shell, and shot brass shells. You hardly see a shell now not loaded with a card wad on the shot, but I never load mine so. I want my shot held tight till they get out of the barrel, and the tighter the better. I never shoot but an ounce of shot at ducks, and if I can't kill a bird without using an ounce and a quarter, I don't want it. I do not claim to know all about shooting, or all about loading, but that was the way I loaded my brass shells in the old duck-shooting days. In the late match at live-pigeons between Chicago and Kansas City, I won the prize offered for the highest individual score, 47 out of 50, but then I shot paper shells, heavier wadding and 1½oz. of shot. If my theory of holding is wrong, I must have been favored very steadily with good luck. I have not been shooting very long at the trap, and I do not claim to be very much of a pigeon shot.

I am sometimes asked how far a shotgun will kill a duck, or how far I usually kill the ducks that I shoot. I hear a great deal about shotguns killing 50, 80 or 100yds. The gentlemen owning these guns are very fortunate. I am free to confess that mine is no such gun. The distances at which game is shot are usually over-estimated. It should be borne in mind that a duck rarely falls straight down, and where he falls may be quite a way from where he is shot. Now, the outer edge of your flock of decoys is only about 30yds. from your blind, and you shoot most of your ducks clear inside of that line. I mostly prefer to shoot at a duck when he is about 25yds. off, and then I mostly get him, and don't just scratch him down; but really, taking duck shooting as it actually runs on the marsh, there are a great many more ducks killed at 25 and 30yds. than are at any greater distance. It is quite a way 30yds. up in the air. There are not

many trees that tall, and when you are getting ducks from over the treetops you usually think you are doing pretty well. I will say that where one duck is killed at 50yds. ten ducks are killed inside of 40yds. The distances are not measured, and so are not always known.

I suppose a great many shooters would think that I always got out early in the morning, if I made any very good bags. To the contrary. I never was a very early riser when hunting, and I do not believe in either before-breakfast or before-daylight shooting. It is that kind of business, shooting all night, and away before daybreak in the morning, that has done much to drive away our water fowl. The birds have got to have some time to feed, and if they are disturbed all the time, morning and evening, they can't feed and they will leave. I never shot late in the evening as a practice, and never very early in the morning, and I think I really got more birds by it, because I did not drive them out of the country. Seven o'clock in the morning was about as early as I got out usually. Some of the clubs here have rules forbidding shooting after sundown. That is all right, too.

I have seen some wonderful shooting in my time, and the like of it we will none of us ever see again. We may console ourselves that the flight has gone further west, and all that, but the fact is, there is not one duck now to where there were one hundred when I was younger and was shooting around these lakes. There will always be some birds on the Mississippi if the water is high, but the duck supply in our old spots in this inland country will remain small or uncertain unless such papers as FOREST AND STREAM can devise some way to increase them. I have killed a good many ducks in my life. I wish I could bring some of them back to life again.

SHOT COUNT AND WEIGHT.

IN a case in the office of FOREST AND STREAM is a series of bottles. They are filled with shot, and it is about them that we propose to have a talk with our readers. Some months ago a series of heavy little boxes were prepared. They were stoutly made to stand hard travel. They were felt-lined to care for the delicate glass vials placed in them. Each box had fifty of these little bottles, arranged in five rows of ten bottles each, and in the end was placed a standard measure of the American Shooting Association marked 1½oz. One row of bottles was marked 10, the next row 9, next 8, next 7 and the last No. 6. These boxes were sent out to every prominent American shot company, and as each company got its box, there went also a note from the office of FOREST AND STREAM asking that the shot company take from a recent dropping of chilled shot a series of charges of the numbers of shot named and that, using the measure sent, one charge of 1½oz. be placed in each bottle. There was no explanation of the why and wherefore of the request, but in each case the boxes came promptly back, shot-laden, and in each case, too, a courteous note offering the shot and expressing a readiness to do anything else to assist the leading sportsman's paper in any measure it might have on foot.

Away to England went a commission for samples of shot from the two most prominent makers of shot in the United Kingdom. The shot came in small bags, "original packages," from the manufacturing companies, and the measuring out of the charges was done in this office. Each charge was accurately weighed on the delicate balances used in our laboratory in all gun test and other trials. Each charge, too, was counted, pellet by pellet, with no small assistance from an infallible but simple

apparatus, specially devised to lighten the task of counting out nearly a thousand charges of shot. This brought out in a strong comparative table the variations of the different makers, but in order to bring the comparison down to a strict mathematical basis, 100 pellets were counted out promiscuously from each lot and a careful weight taken of them. This was repeated three times to gain the advantage of a fair average.

The contributing companies are shown in the first column of the very interesting tabular statement concerning No. 10 shot. In each instance chilled shot was asked for and regular numbers, avoiding those misleading half sizes which have been introduced to meet the demand of trap-shooters. There was no short cut taken by reaching an average on one charge. Each one of the ten charges called for is given in the first part of the table by count of pellets, and in weight by grains, and then the full-face type tells the company's average both in weight and count.

In the case of the Northwestern Shot Co. answer came that the works did not turn out chilled shot, and soft shot was taken in its stead. It has not been placed in conjunction with the other class of shot in making up the averages, nor has the English shot been thrown in with the American product, but placed separate, showing at once the sharp variation which exists on either side the ocean, and also incidentally how English sportsmen get along with a scale of shot sizes which is anything but uniform.

In fixing the order of the companies the one showing the lowest average count has been placed at the head of our own companies. The LeRoy Co. puts but 936 pellets in the measure, while the Chicago Shot Tower Co. gets no less than 1,329 in the same 1½oz. receptacle. In a match then where the size and measure of the shot were

specified, the man using the LeRoy shot of this number would handicap himself nearly 40 per cent. as against an antagonist using the Chicago-made shot so far as the shower of shot pellets was concerned. Yet it will be seen that so far as weight of charge was to be regarded, the lesser number of pellets run heavier. In average weight it will be noticed that the charge runs from 610grs. down to 566, nor does the smaller weight go with a smaller count, but just the reverse. In fact the whole subject is full of seeming contradictions, and did we not know that every figure shown is the result of counting or weighing, we should be inclined to doubt their showing.

On the whole the charges run very even from each company, yet show variation of 33 to 87 pellets between the different ones of the ten charges sent and counted. There is so much in handling the measure, in the way of getting more or less into it, that the close count shows good measuring experts in each case.

The variation between the two English samples is something very great. The Newcastle shot passes that made under the Abbey patent by nearly 32 per cent., while the variation between the lowest English average and the highest American is nearly 100 per cent.

Taking the table in its entirety it is worthy of a good deal of study, and those who follow the use of a shotgun, with close regard for its possibilities as a scientific weapon of precision, will find in the table points which may explain some of the apparent contradictions so often met with shot when taken merely by measure and number without knowing that whether a number means much or little depends on the name of the maker. With the results of the work done by FOREST AND STREAM it is easy to see why it is necessary to make count and take weight of your charges if you care to know just what you are using, and understand your results intelligently.

FLIGHT OF THE RUFFED GROUSE.

Editor Forest and Stream:

Every one conversant with the habits of the ruffed grouse knows that the direction of their flight is almost invariably in a straight line, although they do occasionally take a wide circle to reach a favorite spot, and also a smaller one before they alight on the ground. When they light on a limb, they fly straight for it, and make no noise in striking except they be wounded. On one occasion a grouse flew toward me for 50 yds., and then passed within 10 ft. in an open field. He must surely have seen me from the start, and once a grouse coming from behind passed so close to my head that I felt the windage. I have never seen a grouse directly change his line of flight but once. While out shooting in company with my brother I was walking on a meadow a short distance from a belt of woods, my brother being within the cover, when a grouse started. He flew toward me. As soon as he got clear of the trees and caught sight of me, he stopped his flight and became almost stationary. It was a glorious sight to see him poised in the air nearly over me. Then he started again in a direction at right angles with his former line of flight; but before he could get fully under way the gun was on him, and he fell on the meadow just 30 ft. from me by actual measurement. My brother, coming out, said, "That was the prettiest sight I ever saw." DORR.

A NEW LEFEVER.

SYRACUSE, N. Y.—*Editor Forest and Stream:* We have for a number of months past been earnestly solicited by our patrons to place on the market a hammerless gun of our own manufacture, to be sold at a value less than any of the hammerless guns heretofore manufactured by us. So great has been the demand for our higher grades of guns that we have been unable to entertain the suggestion. It is being constantly urged upon us that there are a large number of sportsmen who are admirers of the Lefever gun and are anxious to become purchasers, but for various reasons are not prepared to order our higher grades of guns. Again, the owners of some of our higher grade guns write us that they have use for such a gun in addition to their present supply of guns. We have concluded, finally, to listen to these requests, and to this end have increased the capacity of our factory, for the production of this medium-priced hammerless gun, in addition to our higher grades. We are now prepared to receive orders for this gun. It is a well finished arm in all its appointments, having good Damascus barrels, English walnut stock, full pistol grip, simply engraved with no attempt at outward ornamentation, has our re-modeled action and all our late improvements. This special gun will be known as our "G" grade, and will be sold through dealers only. We avail ourselves of this opportunity of advising our patrons of our decision to manufacture this special gun and to suggest to such of them as contemplate the purchase of this gun, to confer with their gun dealer regarding it.

LEFEVER ARMS CO.

"BRIDAL TOUR OF THE KENNEDYS."—St. Louis, Mo.—*Editor Forest and Stream:* I have just finished reading that excellent story, the "Bridal Tour of the Kennedys," and have enjoyed every word of it. I know that hundreds of tired and worn office-tied sportsmen have read with delight the story that carries them back to the days when they tramped after deer and followed the stream. I have seen my room mate, an enthusiastic duck hunter, after a hard day's work, tired and worn out, pick up the *FOREST AND STREAM* and in a minute hear him yell, "Now, just hear that. 'Got up at 4 A. M., and after eating a hearty breakfast step out in the cold, clear air, loaded down with gun, shells and paddles, and as we walk down to where the boats are tied, can hear the *wee-wee* of duck wings overhead.' Ah! now I feel better," he would say; and as soon as the story was finished, instead of going to bed, as he had intended to do, he would start out in the evening air for a walk. The writers of little sketches that carry a man's mind back to pleasant days and off the cares of the world for a time, are the ones who do humanity a kindness.—AN OLD READER.

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

NEW ENGLAND WATERS.

BOSTON, Mass., June 10.—The early exodus of the fishermen is about over for this spring, though a few more parties are to take up line and rod before the dreaded black flies and mosquitoes hold full sway at the fishing resorts of the North Woods of Maine. J. A. French, landlord at the Upper Dam Camps, Richardson Lake, was in Boston yesterday in search of a good cook. He said that the fishing is good at the dam by spells, but the weather has again been cold and unfavorable. A party of fifteen from Waterbury, Conn., he expects this week. At his house there have been quartered some days of late thirty to forty guests, and mostly trout fishermen. The returning parties are not all satisfied this year, though the majority are pleased. Harry Gardner, of Smith, Hogg & Gardner, did not have any success at all. The weather was very cold and wet when he reached the lakes, and he scarcely went fishing at all before he caught a bad cold, followed by rheumatism, which sent him on the road homeward the second day. His party remained a few days longer, but without much success. Poor Mr. Lane, of Paris, Me., was another unfortunate. He has visited Richardson Lake for several seasons, but this time may be his last. He was fishing in the rapids of Mill Brook, at the head of the lake above named, when his foot slipped from the log he was standing on, and the fall broke his leg badly. There was no surgeon to reduce the fracture nearer than Andover, seventeen miles down the lake, and then twelve miles by buckboard. Mr. Betton's steamer fortunately happened to be in that vicinity for wood, and the poor man was conveyed to the South Arm, where, after considerable delay, a team was secured for Andover. When the injured man reached Andover the limb was so badly swollen that the physician there

did not attempt to reduce the fracture, and the man was transported twenty miles to the railroad, and finally by train to his home. Report says that the fracture cannot be reduced for several days, or till the swelling subsides. Such are the misfortunes of an unlucky fall in the woods so far from civilization.

But not all of the fishing trips this season have been fraught with disaster. On the contrary, there has been a good deal of rare sport and much enjoyment. The fishing for some of the parties at Moosehead has been very good. Such was the case with the Harry Moore party. They came home last week a set of happy fellows. The fishing was excellent. The party of seven took fully 250 lbs. of trout and some of very good size for that lake. The party was finally composed of H. B. Moore, S. G. Moore, Dr. J. C. French and J. C. Faulkner, of this city; G. C. Moore, of North Chelmsford; G. R. Moore, of Westport, and B. T. Stephenson of Waltham.

S. G. Moore is Harry's father, and is over 70 years of age. Though a fisherman sometimes on the same waters many years ago, he had not wet a line there for many seasons, and it was a treat to note his enjoyment. He was a boy again. But he had about the only mishap of the party. He was fishing with Tim—one of the most careful guides of the Moosehead region. The old gentleman had caught seven trout, when feeling tired of sitting on the thwart of the boat, he rose up erect, and stretching himself, remarked: "Well, Tim, it does seem good to get up once in a while after sitting so long." No sooner were the words uttered than the boat gave a little lurch, when the old gentleman, trying to regain his balance, lost his footing completely. Over went the boat and both were left clinging to her keel. Fortunately other boats were close at hand, with the little steamer not far away. They were picked up, and not much injured by their bath in the almost ice-cold water. The old gentleman was the first to be drawn on board of a dryer craft, followed by Tim, a good deal discomfited. But the old gentleman was the first to break the silence with the remark: "By gracious, Tim! our seven trout are gone! Where is my briarwood pipe? That's sunk too!" The hale old gentleman didn't seem to mind the ducking in the least, though the water was ice-cold. The little steamer was soon alongside and Mr. Moore, senior, was consigned to a warm place beside the boiler, and immediately carried to the hotel. It need only be remarked that he was out next morning fishing, not a particle the worse for his cold dip in the Moosehead waters.

Stopping at the same hotel with the Harry Moore party was the Rev. Julian K. Smyth, of the Swedenborgian Church of Boston Highlands. He is Harry Moore's pastor, and a jovial kind of a minister he is, and he and Harry are the best of friends. Harry gave him fair warning early in the trip, that although a fair sort of a fellow he might be in Boston, yet it would not do for the minister to believe all that he might say while on this fishing trip. Right here it might be well to remark that Harry is the man who brought those moose and deer stories out of the Maine woods that appeared in the *FOREST AND STREAM* some months since. Well, the reverend gentleman soon took a trout weighing 4 lbs., and was high line for some days. But this was not to be endured by Harry. He waited patiently for a bigger trout to come to his hook, but without success. At last he caught on that would not go above 4 lbs. naturally, but the fisherman had three great spikes in his pocket ready for just this occasion. He quietly drove them down the throat of the trout one after the other. At the hotel at night he suggested to the minister that he had caught a trout which, though not quite as long as the high-liner of the reverend gentleman, yet he thought might weigh quite as much. He requested the clergyman to weigh the fish. He complied, with the remark that "It is a pretty solid fellow, and I am afraid that you have beaten me." The fish turned the scales handsomely at 5 lbs., half a pound heavier than the minister's trout. He yielded gracefully and congratulated Harry on his success. But the joke did not end here. On the last day in camp Harry approached the kind-hearted reverend with a great show of seriousness and an air of secrecy, though he previously looked out that the other fellows were within hearing. "There is something on my mind which worries me," he remarked, "and I feel as though I should like to tell you about it." The pastor encouraged him to proceed. "Well," said Harry, "I knew that that confounded trout of mine had a terribly voracious appetite, but you would hardly have thought that the guide would have swallowed these three spikes that he found in the fish when he dressed him this morning." At this he produced the three great nails that had made his trout weigh so heavily. It is needless to add that Mr. Smyth enjoyed the joke as well as the rest of the party.

Mr. Bayard Thayer, the owner of Birch Lodge, Richardson Lake, has taken his 8 lb. trout this spring, his first season on the lakes. He has been back to Boston once since the spring opened, but is again in camp with a party of friends. Mr. Warren Rawson, of Arlington, Mass., is back from Camp Bemis, where he goes every season, and is happy in having landed a 3½ lb. trout. Mrs. C. A. Stearns, the guest of Mrs. W. K. Moody at Camp Stewart, landed a 4 lb. trout the second day of June. Mrs. Moody landed one of about the same weight on the same day.

Fish Commissioner Henry O. Stanley is just completing the distribution of the landlocked salmon fry that he, with his colleague E. M. Stillwell, have taken at the Eden Falls hatching works. They have taken some 500,000 which are returned to the Sebago waters, and some 800,000 that are taken to other waters in the State. Mr. Stanley says that the landlocked salmon fishing has been good at the Sebago this spring, for rather moderate sized fish, but very large ones have been scarce. He is gratified, however, at the fact that a great many small fish shy of 1 and 2 lbs., are being taken, indicating that the recent work of restocking these waters is bearing fruit.

There comes still another report of the foolish destruction of small trout taken from the streams in the neighborhood of Bartlett, New Hampshire. The last record, bragged of by a Boston sportsman, was 250 trout, and all of them brought home in a 6 lb. basket. He thought that his success had been wonderful. SPECIAL.

SARANAC LAKE, N. Y., June 12.—Many are enjoying the trout fishing in the famous Upper Saranac Lake, among whom Mr. J. H. Lockwood, of New York, guest of E. R. McCoy, Rustic Lodge, caught a lake trout weighing 21½ lbs.

ANGLING NOTES.

THERE are still a few trout left up in Duchess county, N. Y., it seems. The streams are small there and over-fished, but once in a while a fortunate angler strikes a big one and is made happy. Mr. Wm. F. Sage, a well-known angler of Fishkill-on-the-Hudson, was fishing recently on one of the little brooks a few miles back in the country, when he was agreeably startled by the swirl of a big fish, followed by an exciting ten-minute fight. The rod and tackle were very light, and the fly, a coachman, was dressed on a small hook, so that Mr. Sage dared not treat him roughly, for this was the fish he had dreamed of and hoped for for years. After following him 100 yds. or more through rapids and pools, he landed a very handsome well-fed trout—16½ in. long and weighing just 2 lbs.—a monster for such a brook. The fish was exhibited next day at the village drug store, where he attracted considerable attention. It is surprising how many of these old overfished brooks contain trout and how hard it is to exterminate them. If restocked and given half a chance they soon recover and afford fair fishing. For instance, we heard of several very fair baskets of trout having been killed on Decoration Day, in small bubble streams within a few miles of New York city, streams that were supposed to contain only a few shiners or an occasional brook pike. It is impossible to destroy the fishing by fair means. If it were not for the night lines, spears and nets there would be no trouble about the supply. Even the upper waters of the Bronx have furnished quite a number of trout this spring, much to the surprise of every one.

Complaints are made by the visitors to many of our black bass waters that these fish are decreasing in number and size. To remedy this, it is proposed that the season be made to open July 1 instead of June 1 or rather May 30. Of course that change would put an end to fly-fishing, the prettiest and most sportsmanlike way of killing bass. Instead of altering the law, which, if done, would only leave the waters open to poachers, while conscientious anglers staid at home, we would suggest that the law against fish racks and set lines be more strictly enforced. As soon as the shades of night descend on the majority of lakes and ponds the poachers put out their long set lines and slip their fish racks in the sluiceway, "just to catch a few catfish, you," and the result is that the bass get caught—and generally they are the biggest ones. Anglers dislike to complain of these men, because in many cases they are the ones they depend on for boats and accommodations.

Last week witnessed the departure of a goodly number of salmon anglers for different Canadian rivers. Reports from the Restigouche are very flattering. An unusual number of fish were seen spawning last season, particularly just above the head of tide water. Those who are at the upper pools have had no fishing yet, but the salmon are expected daily, as they have appeared in large numbers in the lower pools, where some ninety odd have already been killed. As soon as the water runs down a little the fishing will be at its best. Messrs. Sage, Lawrence, Florence, Dunning, DeForest, Wilson, Ballou, Dr. Baxter and many others are on hand. Dr. Baxter, we believe, leads the score so far with a 37½ lb. salmon.

There are a few salmon still being taken at Bangor, but the river is so crowded with boats and fishermen that it spoils all the pleasure of angling.

There are so many different rod grips and handles advertised nowadays that it is hard for the angler to decide. One who has tried it vouches for the following: Fit a thick piece of chamois skin over your butt or hand piece; it can be sewed on quite smooth and neat, and it makes the pleasantest grip in the world. It can easily be replaced when soiled or worn and never blisters the hand.

Advices from Alexandria Bay just received (June 14) report that bass are taking the fly very well.

TROUT AND MINK.—Dr. Levering and Charlie, with Wm. Kurran and Will Hedden, of Jersey City, returned recently from a short trip to Canadensis and the trout streams thereabout. They report besides a fair share of trout that the brush was fairly alive with woodcock and grouse. Woodcock were continually rising from almost under their feet, while the drum of the grouse was constant. One episode of the trip is worth mentioning. Upon approaching the bridge across Broadhead Creek but a short distance from Crane's, a mink with two young were observed coming out of the water, where they had undoubtedly done their share in thinning out *fontinalis*. Hedden, who is a capital shot with a revolver, whipped out the instrument, and though across the creek and some 25 or 30 yds. away, fortunately planted a ball through the mink's head. The young remained by their dead mother and were easily captured and are now being domesticated in a wired box. When a small trout was thrown to them it was devoured with voracity, and they are continually crying for more. Those of the gentle art who know what destruction a single mink will make in a trout stream in one day and night will breathe their thanks aloud to Mr. Hedden for his fortunate riddance of this three of a kind. Mr. H. will have the body carefully mounted. What he will do with the others should they live we are not informed, but we trust that they will not be allowed to escape.—JACOBSTAFF.

WITH FLY-ROD AND CAMERA.

IN size, interest of text, wealth of illustration, and beauty of production, the most notable work on salmon fishing issued. See advertisement elsewhere.

CHICAGO AND THE WEST.

CHICAGO, June 9.—A short time ago some comment was made upon the taking of a mascollange in the Grand Calumet River, over which some surprise was expressed. This fact is now eclipsed by the taking of a genuine mascollange of 22½ lbs. weight in Lake Mukwanago, in lower Wisconsin, by a Mr. Blackburn and a friend who is an Adams Express Co. agent. Lake Mukwanago is about sixty-five miles north of Chicago. No one seems to remember of any mascollange ever having been seen there before, but Mr. J. M. Clark, who gave the facts in this case, saw the fish, and assures me it was a genuine mascollange.

Mr. Clark has lately been having a good deal of fun with his old friend the black bass. On Decoration Day and the day following he and Mr. Morell caught 65 bass, running from 2½ lbs. to 5½ lbs. This is the finest basket that has yet come down from Loon Lake. Most of the fish were taken in the upper lake. At one time Mr. Clark caught nine bass along the shore of the lower lake, where he was wading and casting among the rushes, the nine weighing 35½ lbs., which is a large run. All these bass are of the large-mouth variety.

Mr. Chas. L. Ryder, General Agent of the Milwaukee, Lake Shore & Western Railway, got back Monday evening from a hasty run up over the road to Gogebic, and displayed a dozen or two of good bass. These bass were all small-mouthed, and were a peculiar looking fish, being very dark-colored, indeed nearly black, on back, belly and sides, with no green shades about them.

Mr. John Soderberg, treasurer of Blomgren Bros. & Co., of this city, left last Saturday for a stay of a week or so at the pretty little sheet of water known as Silver Lake, which is his favorite summer haunt. This is one of the many desirable waters of the Fox Lakes system, and is only about sixty miles north on the Wisconsin Central. Silver Lake has a game warden, a Mr. Schinnig, who also keeps the summer resort hotel there. He is not on record as having warded anything, but he has a lot of boards.

Mr. A. Hirth, the suave gentleman who runs the fishing tackle end of A. G. Spalding & Bros.' house, in this city, has been fishing with two friends at Lake Maria, near Antioch. He reports having taken 38 black bass and 5 pickerel on one day, but he very probably means that it took 38 of them to catch a black bass in 5 days. He is unable to give the names of the gentlemen who were with him, or to produce documentary evidence of a reliable character, and moreover, his nose is not legitimately sunburned.

It may be seen that the backward season has at length begun and that the bass are biting. There has also been some trout fishing, though not much. It is very likely that more fish will be taken this week than in all the season up to this date.

A party of railroad men lately got back from a day's fishing on the White River, and they had 51 trout that weighed 53½ lbs. I could not learn names or the number of rods.

A letter just down from Wausaukee, Wis., on the Milwaukee & Northern, states that constant rains have kept the river full and that the prospect at date is poor.

Dr. Buechner and party are back from their trip to the Gaylord Club, and report a good catch of small trout in the Pike. An unusually large number of big trout have been taken on bait in the deep waters of the lake this spring, as well as many bass.

Young Armour, of this city, got a 3½ lbs. trout and a lot of small ones on one of the trout streams not far from Lake Gogebic last week. A number of gentlemen from the South and East are now in at Eagle Waters, Vieux Desert and Gogebic. The mascollange are reported to be beginning to bite this week, for the first time this season.

I have just got back from a very pleasant visit to the St. Clair Flats, above Detroit, where I went in company with Mr. John Parker and Mr. Frank Wherry, both game wardens, who were on a hunt for certain violators of the fish laws in the neighborhood of the flats. I shall have to make full notice of this interesting trip later on, but I cannot refrain from saying here that the reports of violations of the law are only too well founded. At the time I left, June 1, the bass were just beginning to run on the spawning beds back of the club houses, over toward the old North Channel, and here, right at the time they should have been protected, the native fishermen, mostly Frenchmen, were spearing them, and over the Baltimore Bay they were netting and seining them. At the Peninsula Club I saw three great small-mouthed black bass brought in by one boat, each cut and gashed by the spear. It looked pretty tough. At the Star Island House, among a lot of speared pickerel a French boy brought in I saw another fine bass with the unmistakable marks of the spear. It is legal to spear pickerel, but none of those natives hesitate to spear a bass or get him any other way he can. The Indians also spear bass day and night. I saw two spearing lights out over toward the North Channel the last night I was on the Flats, and three over on the Canadian side. Do you suppose these spears are choice in what they spear? And do you suppose that we blundered across all the bass that were speared on the flats that day? The answer lies in the growing complaint that the bass fishing on the St. Clair Flats, once thought to be exhaustless, is now nothing like what it was, and is growing yearly poorer. The old story will be repeated here, and once more it will be proved that, no matter how large the water, and no matter how abundantly it is stocked, the persistent efforts of fishers for the market will drain and depopulate it.

Now about the remedy. Observe how infinitely puerile is the law. I don't know how it is that so little business sense is observed in making game laws. They certainly do seem to be so framed as to make the discovery and punishment of a violation as difficult a matter as possible. For instance, the Michigan law is one embracing the county warden system. Each warden has his own county and cannot go beyond it. For all the vast watery and marshy region, including the Detroit River, Lake St. Clair and the St. Clair River, indefinite and difficult of determination as the county lines must under such circumstances be, the county warden system alone obtains, further complicated by certain special clauses which permit certain sorts of netting of certain sorts of fish within certain artificial lines, drawn from the mouth of Milk River to Providence alone knows where. Over these lines the foreign warden may not step. It would have been the easiest thing for the people to detect a crime of the sort in hand, but no, it must be a warden and a warden

of that county who must detect it. And this he must do chiefly for love, for there is no money in it. To be plain, here were John Parker and Frank Wherry and myself, not one of whom was by profession fond of seining spawning bass speared, and not one of whom but had the plain facts before him of such outrage. What could we do? Nothing at all. The boys had with them a commission from the State warden for the appointment of a warden in that county, *vice* Mr. Chris. Smith resigned. Chris. Smith, spite of all reports to the contrary, was probably a fair warden, but he could not afford to work for nothing. For the pay of the proposed new warden all the boys could offer was the more or less indefinite promise of a very few club members, who had said they would help raise a salary for a local warden. From what I learned before I came away it seemed likely that the boys would secure a new candidate for game warden honors; and after that the old, old story will be in order.

Now, with the very two men I was with, and the very craft that we had along, the whole region I have mentioned could be patrolled and kept clean of illegal nets and spears, at a less total expense than a decent county warden system would entail. I would agree, if so provided, within one month to sweep every illegal net out of those waters and to catch a dozen illegal spears every week. A boat whose crew was made up of wardens not known to all the local fishermen, and whose movements up and down the lakes could not be known beforehand and figured on, could stop all that foolishness in just about one season. John Parker and Frank Wherry could save the State of Michigan a good many thousands of dollars, and could insure the clubs and hotels of a continued foreign angling patronage, if the fish law department of the glorious State of Michigan had a reasoning and business head to it. But under the present system all these men could do, all that any one could do, was to sit and look on at the baskets of speared bass, and to hear the stories of lessening sport and lessening fish supply. The law wants no results. It does not contemplate actual accomplishments. It kind of, sort of, in a half way fashion, hopes that somebody will warden something, somehow, some day, if he will be so good. I don't think it is mere narrow criticism which rails at such a law and the others of which it is a type. Scripture, common life, common sense, bear in on us every day the truth of the thought, "By their fruits ye shall know them." Yet we ask no fruits of the game laws, and we bear with their vacuities with a patience child-like if not childish. Let us have this straight. We have the same law out in Illinois. The people may not see or complain about a theft of the property of the people. No, but the people may appoint an agent, who, for the fun of the thing, will see all such thefts and punish them. I think a blind, deaf and dumb idiot, with one foot in the grave, could make a better law than that, with both eyes shut and one hand tied behind his back.

Milwaukee, Wis., June 10.—Mr. C. D. Gammon and several friends of his left last Thursday for a mascollange trip on Lake Vieux Desert, where they had such great sport last year. They were so good as to delay their start a few days, in order that I might accompany them upon my return from Detroit, and I have now wiggled out of all sorts of moral responsibilities and have gotten this far north to meet them, where I am unavoidably held over a day. As their party breaks camp next Thursday, it looks as though my privileges would be brief, but I hope to catch them for a day at least before they start home.

E. HUGH.

HE SAVED THE FLY.—Frederickton, N. B.—A number of years since Captain —, of the Royal Artillery, was salmon fishing on the southwest Miramichi, above Boiestown. In an unlucky and unguarded moment he was rather hastily and heedlessly swinging around his salmon rod preparatory to casting, his large hook caught in the thin part of an ear of T. P., who was one of the Captain's men, who, as ardent and a better fisherman than his master, was intently watching the motions of a large salmon, which the Captain was endeavoring to secure. Seizing the line with both hands, so as to save his ear, as far as possible, T. P. slowly walked up to his master, to be relieved from the hook. "Break it off, Captain. Break it off!" said one of the party. "No, no," replied the Captain, "I am going to do no such thing. Would you have me destroy my best fly?" And so quietly taking a sharp pen-knife out of his pocket and sitting the lobe of his servant's ear, he thus safely redeemed the favorite fly uninjured. The story was related to me by the sufferer, who bore on his body confirmatory evidence of the truth of his statement.—EDWARD JACK.

MINNOWS IN CORKED JUGS.—Garrettsville, Ohio, June 12.—At intervals during the past two years the feasibility of transporting minnows in hermetically sealed jars, etc., has been discussed in your valuable journal. I recently met in Cleveland that expert fly-caster and enthusiastic angler J. T. Hasbrouck. Upon one occasion he ran across a veritable old Izaak Walton fishing for bass, and observed that he carried his minnows in a bottle securely corked. In conversation upon the subject he was assured that they might be easily transported for long distances if put in a two or three-gallon jug filled two-thirds full of water and tightly corked or sealed. A short time since, upon my recommendation, the plan was tried by a member of our Angling Association, and the minnows, when turned into bait pails at the end of a seventeen-mile drive, were found to be in splendid condition, only one of the entire lot having turned up. As it is of great importance to many of the vast army of anglers throughout the land, I hasten to give the result of the practical experiment.—E. S. WHITAKER.

BLACK BASS IN SCHUYLKILL RIVER.—Black bass have recently been taken freely in the Schuylkill at Phoenixville, Pa., with a royal-coachman fly. In this river the bass are not yet through spawning; a female was seen in the act of depositing her eggs in the shallows, June 9.

LARGE CARP.—In Rancocas Creek, near Hainesport, Pa., some large carp have been recently taken. As the spawning season is not yet ended we presume that the fish were pronounced flabby and insipid, as all fish are when out of condition.

TO SALMON ANGLERS.—T. J. Conroy, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—Ad.

TROUTING ON THE SIOUX.

[Concluded from Page 391.]

WE all met at the breakfast table, and after the story of the midnight hunt had been told in various forms until it was threadbare, we gave our prospective trout some attention. I arranged to take Mike with me and go to the upper ripples on the stream, which could be reached by a short detour through the woods of about a mile and a half and then have three miles of angling. Albert was to take Tom and fish the lower part of the river, starting from the house, provided he and Tom did not get too much enthused about the deer and start for the wild woods. The repast finished Mike and I at once got ready and were off for the ripples. We were soon in the dense wilderness, going over the hills with a radiant sky overhead and a bright sun shedding its golden gleams o'er the plants, the bushes, the hedges and the trees, as if nature was rejoicing in her best holiday garb. The woodland songsters were out in full force and plumage bright. The soft note of a nuthatch would break the stillness, then the scream of a family of jays rings out, and a little troop of gold-crests raise their tiny voices, or the missel thrush send forth its note of alarm, while the red squirrel raced o'er the branches or sat on a dead bough with his brush curled over his back. It was a pure delight thus roaming through the forest amid the silent shadows, the hum of insect life, the warbling birds and the lovely hues of the flowers that peeped out over the grasses and nodded to the gentle breeze.

Time was lost sight of in this delicious walk, and it appears that Mike had also lost himself, for he made that surprising announcement after we had gone about the distance that should have brought us to the ripples. He placed his ear to the ground to ascertain if he could catch the sound of the purling stream, but it came not. He said he could strike the river at any time, but it was the ripples he wanted to reach. We concluded to bear to the right for a while and see what would develop. After going about a quarter of a mile in this course we again halted and tried once more to catch the coveted sound of the murmuring waters. It was a flat failure, and so we tramped on a little further and then made another stop and listened. This time it was a success, and all was happy and serene. A few minutes' walk and we are at the stream and ripples, which were lovely in gleam of gold and grace of shadow. Beneath the outstretching foliage, where the alders and the sumac wave, and the violet and primrose in beauty flush, the brook as it gently meanders sweetly sings:

"With many a curve my banks I fret
By many a field and fallow,
And many a fairy foreland set
With willow, weed and mallow.

"I chatter, chatter, as I flow,
To join the brimming river,
For men may come and men may go,
But I go on forever."

But a moment or two suffices to prepare for the angle, and as I was ready to cast the daisied fields of poetry are for the nonce banished. Yonder where the current is tossing around a boulder is an inviting place, and to it the line is gently tossed and the bait immediately gobbled, and then a trout of near half a pound is racing around much to his dismay, and is soon safely consigned to the creel as first blood. I obtain one of his fins, and with this for the attraction I send it into the same place, and after I have made it quiver a few times, it is greedily seized, and another of about the same size secured. I try once more, but the dappled beauties seem scarce; and then a little further down the ripples I am in luck again, and two more of about eight inches are captured. Again I change my base, and this time a nurseling, who knew nothing of man's subtle strategy, was badly fooled, but he was returned to the stream to tell his scarlet-robed brothers, with wondering eyes and aching jaws, of his visit to another world. The ripples were soon covered, and when we left them there was a total of ten in the creel. We were now in quieter waters, and have come within casting distance of the exposed roots of a hemlock which soon bids fair to span the brook from the effects of the undermining current. It is an inviting locality, and I am confident of coaxing a beauty or two from it. Away sails the decoying fin, and when it struck the water and quivered by the roots it was suddenly snatched by a greedy trout, who never released his hold till assailed by the crafty assassin at the shore end of the rod. He was a full half-pounder and as pretty as a pink in his scarlet jacket. Again the fin is sent on its destructive mission, and one more foolish trout reaches terra firma and the basket. The third cast secures still another, and that is the last the rootlets here yield.

Mike now suggests a walk to a favorite pool just a rod or two below, and so we hasten along, and in a few minutes are there and ready for the feast. It is a charming-looking place where tulip trees and spotted buttonwood are luxuriating amid the low thickets and hazel bushes, from which came the clear whistle of the brown partridge and the mellow bell of the wood thrush.

"Plenty there," says Mike.

"Yes, and soon there will be plenty here," I responded as I struck the creel with my open hand.

Our reward at this ideal pool was generous, for we secured eight of the enameled beauties, among which were one full-pounder and two half-pounders, before we resumed our march down the flowing brook, which was now singing:

"I wind about, and in and out,
With here a blossom sailing,
And here and there a lusty trout,
And here and there a grayling."

The flowing stream seemed to be fairly alive with trout that morning. From under shelving rocks, around boulders, among graveled roots, by moss-grown logs, in sunshine and in shade, in gentle ripples and in quiet waters the golden fins were liberally taken. The creel was growing heavy, and as we were growing weary and hungry we sought a lovely resting place on the bank under shade of bright maples and towering elms. Here we satisfied the inner man with the lunch the kind-hearted old lady had so generously provided for us. After that we lolled in idleness, watching the great velvet butterflies flutter in the bright sunshine, revelled in the beauty of the lovely landscape and listened to the over-

flowing jubilee from the warblers of bush and brake. These sweet singers of nature are ever a delight, and it seems to me as if there must be a soul in every song of the birds, just as there is gladness in the merry notes of the cricket and the happy hum of bees. As I thought of all the happy years this merry brook had run through deep forests and the bright meadows, I saw a little bird in rainbow wings and breast of gold fly to the water's edge, and with his bill sportively toy with the crystal drops, and then fly to the top of a sedate alder and trill a song to the vernal airs that was "the hidden soul of harmony" itself. The aria ended, it rose on wings and darted through the bending bushes to dispense its sweet-throated roundelay in some sylvan grove near by.

Mike, who was sitting on a log a few feet distant, was not at all enthused with the attractive surroundings, but was just then deeply intent on watching some interesting event that was going on in the insect world. He called me to his side and pointed out what so absorbed him. I noticed on approaching that it was a lot of black ants, that were attacking a large grasshopper and were making sad havoc with him. They were bent upon the dismemberment of their prisoner; at each leg a little workwoman, in a black bodice, pulled and worked with all her might; the rest held the body in place. I never saw efforts more fearful, and at times it looked as if the struggling victim would escape, but they were tigerish and held on with a death grip. It seemed, however, that he must soon succumb to the swarms of infuriated warriors.

With such savage murderers, forever prowling among the shadows, with the nets of the spider spread on every hand, and hungry toads and snakes with their prying eyes seeking out every nook and cranny, it would seem that life among our singing meadows were anything but a round of pleasure. "While 'for our gayer hours nature has a voice of gladness and a smile,' here we look upon her joyless face—an expression grim and mysterious as the silent Sphinx. But to the devout listener at those lips there have been revealed occasional whispers, and to him who reads the book of nature as he runs it verily would seem as though the mark of Cain appeared in every page. Science tells us, and observation lends its verity, that this wholesale slaughter, not only among the insect tribes, but throughout all animated nature, is but the wise ultimatum destined for the preservation of him who bears 'the image of his Maker,' that these professional murderers are but nature's potent allies in her great vital scheme of universal equilibrium—harmony born of discord."

"In the brake how fierce

The war of weak and strong! i' th' air what plots."

"Not even the fluttering butterfly is safe, but is pounced upon in mid air by the great sand-hornet, its wings torn off in mockery, and, thus shorn of its glory, is lugged off to some dark hole in the ground, and the bee returning to its hive, is waylaid on the wing, its body torn open by this armed mignon, whose progeny would seem to have held in perpetuity the death warrant from Queen Titania."

"The honey bags steal from the humble bees,
And for night tapers crop their waxen thighs."

Mike, having a merciful soul, picked up a twig and drove the attacking ants away, and then taking the wounded grasshopper in hand, threw it in air, that it might sail away from its numerous enemies; but it was too badly wounded, and instead of going into the bushes in our rear, it wheeled around and fell in the brook, where with sputtering wings it went along with the current. Soon there was a vigorous splash, and the grasshopper had made a banquet for some lusty trout of the vermilion dye.

"Great Scott! did you hear that?" says Mike.

"Yes, and saw it, too."

Directing Mike to get me a grasshopper, I joined the savage wanderers of field and forest, eager to stain my hands with the crimson gore of that hungry trout that had dined on the helpless grasshopper. Mike soon secured one, and then impaling it on my hook I gently sought the bank, and measuring the distance with my eye, where the poor insect was grabbed, I sent the fluttering bait with a light throw to the very spot. A silvery gleam, followed by a sudden splash was the result, and then the bend of rod and music of whirling reel commenced. I was at once made aware that it was no baby trout, and so I was alert for the victory. He tried every trick he knew to escape. In his efforts he made for some gnarled roots on the opposite bank, but I held him too taut for the trick, and then he broke for some tangled brush that intruded in the stream, but in this he also failed, and had to fight the battle in a fair field. He made a gallant struggle, but it was of no avail, and soon the dandy of the "crimson stars and golden gleam" was imprinting his symmetrical form against the meshes of the net. He registered in the scales 1½ lbs. Mike said it was one of the largest ever caught so far from the mouth of the brook. I felt assured it would be the prize trout of the outing, though my friend had choice waters in which he was pursuing his pleasures, which harbored speckled beauties of a larger size.

The grasshopper proving such a delicious tid-bit for the dappered quarry I tried another, but only captured a half-pounder, and then we wandered along the crystal stream, which taking up its melody, sang—

"And here and there a foamy flake
Upon me as I travel,
With many a silver waterbreak
Above the golden gavel,

"And draw them all along and flow
To join the brimming river,
For men may come and men may go,
But I go on forever."

The noonday sun is now beating down and sending her golden shafts upon the rippling brook, its banks of verdure, its aerial flowers, and its mosses which seem as if awakening under the first caress of the glowing orb. Rosy hues of inexpressible softness steal through the forests, and when the open fields are reached it is as if the air is filled with life and joy. The angler's reverie must not allow the quarry to lie in fancied security, and therefore we thread our way along this translucent stream and decoy trout after trout, "that strain at a gnat and then swallow a lady bug." We had just turned a graceful bend in the river when Mike threw up his hands in holy horror and cried out: "There's a young half-breed catching trout." And on looking, I noticed on the

bank ahead of us, perfectly immovable and with stolid feature, a young half-breed of about 12 years, so intently fishing that he did not observe our *entrée* on the scene. Mike strode hastily forward, and on reaching him inquired, "What are you doing here?"

"Fishing."

"Got any?"

"No."

"You lie, you little savage."

And then Mike commenced looking along the shore to see if the boy had any concealed. Finally he heard a splash by some brush, and on going there found and pulled out a string of about twenty that had been hidden in the drift. About two-thirds of these were under the legal limit by an inch or two, and these Mike released, and handing the boy the remainder told him to "git." The boy did "git," knowing full well that he had violated the law and was amenable to punishment, provided it was meted out to boys. Mike said they seldom came here, as it was too far from town; but sometimes they made a raid on the stream, and then everything that is caught, no matter how small, goes into the pot.

It is the hour now when the trout bite the least, and we, therefore, very leisurely proceed, occasionally picking up one, and then gathering the ripened fruit from the raspberry bushes, which are here in great abundance. I now suggest to Mike that it would be a good plan to clean what trout we have and place them amid cooling grasses in the creel. Proceeding with the work, it was completed in a short time. A count showed that we had forty-five, among which was the prize trout, two of one pound each, four half-pounders, and the remainder running from six inches up to those of the last figure.

We were now about a mile from the house, and this distance we fished carefully, resulting in a catch of twenty-five more, which completely filled the basket, and which we cleaned as soon as we had ceased from the sport. We now started for the lodge, arriving there about 8 o'clock, where we found Albert and Tom, who had returned about the noon hour. Albert said he had had enough of the stream, for he had fallen into it early in the morning, and in consequence was rendered quite uncomfortable the greater part of the day. He had caught about thirty-five, among which were several of good size, and one in particular that was but a fraction in weight below my largest.

The good mother had the meal ready in a short time and then we took our places at the table. Henrietta, the torment of the household, was on hand with her leafy branches ready to make war upon that single fly that loved the "shiny place," and which glistened so like a billiard ball under an electric light. I cautioned her as I sat down to let that particular fly rove to his heart's content on the bald area.

"I done go fa him if he get dar."

"Then I done go for you."

Notwithstanding the warning, she did go for that "shiny place" out of pure unadulterated devilment, and in defiance also of Mike's threat, to feed her to the trout in the big pool. She was a decided character, patterned after the famed Topsy, and required about as much missionary training to bring her to a standard of ordinary Christian civilization.

We prepared for our departure, in order to be on time to meet, at the mouth of the river, the sailboat in which we were to make our return to Bayfield. In a few minutes everything was ready for the tramp, and on bidding good-bye to the family we set our back to the Angler's Lake, and the brook, as if in farewell, sang out:

"I steal by lawns and grassy plots,
I slide by hazel covers;
I move the sweet forget-me-nots
That grow for happy lovers.

I slip, I slide, I gloom, I glance
Among my skimming swallows;
I make the netted sunbeam dance
Against my sandy shallows."

We were soon by the fields and the clearing, and into the deep forest. Here we had not proceeded far before I heard an earnest voice cry out, "Hello!" Looking to ascertain from whom it came, I espied the black face with rolling eyes of the little barbarian of the lodge, mischievously peeping from some raspberry bushes.

"What are you after, you little imp of darkness?" I cried, after I had recovered from my surprise.

"Done want see if I can keep the flies off'n your shiny place."

With this amusing response she rapidly retreated, sending forth a hearty laugh as she ran, that aroused in affright the woodland warblers from their leafy haunts. We again renew our acquaintance in this wildwood with "the children of the air." The bluebird and the robin, the jay and the thrush, the oriole and the bobolink, the

"Linnet and meadow lark, and all the throng
That dwell in nests and have the gift of song,"

were spreading their painted wings or chanting a hymn of praise to attest their joy. We were soon through this grove, and then a clearing came in view, and that we soon passed as also another small wood, and then a brief walk and we were at the mouth of the Sioux, and no sailboat near the shore or in view. It was 4 o'clock, and that was the appointed hour for the boat. We concluded to wait awhile, for it was ten miles to town, the road of sand, and we did not relish the idea of returning to the Lodge, or of an attempt looking to so much pedestrianism. We agreed, however, to make the long walk if the boat did not come, rather than see the lovely and toothsome trout decay. The immortal poet says: "How poor are those who have not patience," and so we thought, and therefore possessed our souls with a good stock of it, and endeavored to solace ourselves under a tall elm, that shadowed us with its palatial arms, in looking at the white-winged gulls as they wheeled in the upper atmosphere, in watching the far-away steamers and vessels, and in the cadence of the rippling waves as they gently beat against the rocky shore.

It was a long wait, and when 6 o'clock came we shouldered our baskets, and with rod in hand, started off with earnest hearts and nodding plumes on the long ten-mile tramp. We would walk for a mile or so or until we struck some little rill that was making music in the bushes as it ran, and there rest and take a cooling drink, and then up and onward again. The sun was now declining fast and the hills and valleys were bathed in gold and purple, while the blue arch above had decked itself

with rosy spots, flights of little wandering clouds like unknown birds. Sometimes they were islands of fire—volcanoes—their sides running down with lava, fantastic kinds of vegetation—lofty palms—"enormous crocodiles crawling on a sand of rubies, or barks with crimson sails, which passed like luminous shadows in the remoteness of a dream." Then the brilliant fairy scene died away, the sky and the clouds paled and took on subdued pearly tints, the twilight was dying.

"How beautiful is night!

A dewy freshness fills the silent air;

No mist obscures, nor cloud, nor speck, nor stain,
Breaks the serene of Heaven."

From the east the broad and golden moon, "smelling like an orange flower bud," arises,

"And far around the forest and the stream,
Bathed in the beauty of her emerald beam,"

Twinkling stars in golden feet and lambent beauty are dotting the dome of blue, while the fleecy clouds now seem to float upon an amber sea. The highway is painted in weird and fantastic shadows, the foliaged sentinels wrapped in solemn glow, and only the tramp, tramp, tramp of the delayed anglers, with the occasional croak of the frog, the bay of some restless dog, or the hoot of the soft-feathered owl alone broke the deep tranquillity. The dove is cradled in the silent cypress, the glow worm illumines the darkened wood, the rampant fox on rapine bent sneaks along with noiseless footfall, while the whippoorwill and bat, the nocturnal ramblers of the air, are scouring the sandy road snapping up the buzzing insects.

Amid these eloquent fields of nature we at last felt the toil, and footsore and weary we arrived at the little village in its golden glow of moonlight, with the love of "the contemplative man's recreation" as deep within as ever, and with the memory of the beautiful brook that is still singing:

"I murmur under moon and stars
In brambly wildernesses;
I linger by my shingly bars,
I loiter round my cresses;

"And out again I curve and flow,
To join the brimming river,
For men may come and men may go,
But I go on forever."

CINCINNATI.

ALEX. STARBUCK.

LAKE CHAMPLAIN.—Plattsburgh, N. Y., June 13.—Sitting here and watching the whitecaps roll up reminds me of the trip in an Adirondack boat taken by your Philadelphia correspondent. As I read his story it seemed as if I were with him, especially as he spoke of the sandbar at Port Kent, where Mr. Seymour and friends of Burlington, Vt., have such famous times with the geese and black ducks, and then on down to the Four Brother Islands, where one can get some great strings of wall-eyed pike and bass; then down by Thompson's Point and Long Point, the home of Albany's Rushmore Club, who would have entertained him in great style had they been in camp when he was there. This is where Little Otter and Lewis Creek run into the lake, making a vast marsh, which is quite a breeding place for black and woodcock. The lake is very high, and pike fishing has been poor. I was down to the mouth of Winooksee River two days ago, but no fish, where they usually get them by the dozens. Some claim that the natives are seining nights, and the scarcity of fish would seem to justify that supposition.—DEXTER.

CAPELIN KILLED BY COLD.—In the Report of the Newfoundland Fisheries Commission for 1889, Mr. Nielsen, Superintendent of Fisheries, mentions the destruction of capelin by cold. He finds that this excellent bait of the cod and salmon is easily overcome by sudden changes of temperature at sea. If cold springs, when the upper strata and the surface water are cooled down to 32°, great numbers of capelin die as soon as they enter the cold area, while the large body of the fish, at a depth of three or four fathoms below the surface, will continue lively and in good condition. Great quantities of capelin are sometimes found floating about dead from this cause. As soon as they enter the area of water at 32° they become feeble, "struggle a little, turn over on their sides and float up to the surface, stomach up and stone dead."

EAST HADDAM, Conn.—One of the best fishing grounds in the vicinity for small fish, perch, roach, eels and bullheads, is what is known as Pickerel Lake, and immense numbers of these fish, including also fine pickerel, are taken from these waters nearly every day. Bashau Lake, the reservoir for the fifteen cotton mills located in the town, is also fertile with pickerel, black bass and pan fish of every kind. Pickerel Lake is an auxiliary to Bashau, and the two offer to our home fishermen rare sport both in summer and winter.—KATO.

ST. ALBANS BAY, VERMONT.—The season for bass fishing at Samson's Lakefield House, on St. Albans Bay, opened well June 2, and excellent sport was afforded. The average for each boat on the first day was nineteen bass, weighing from 1½ to 3½ lbs. each, and also eight wall-eyed pike. On the third day there was a strong wind and some sixty good-sized pike were the result.—R.

BROOK TROUT IN PENNSYLVANIA.—At Allentown, Pa., the Little Lehigh and Cedar Creek are attracting favorable attention for fly-fishing, being almost entirely free from bushes and well supplied with fine fish. The proximity of the famous hatchery of the Pennsylvania Fish Commission will explain the abundance of trout.

THE Duluth Herald offers a split-bamboo "pole," reel and trout line to the citizen of the zenith city of the unsalted seas who captures with rod and line the largest brook trout this season, the weight to be sworn to.

A LARGE EEL.—An eel 3 ft. long and 9 in. in circumference was taken in a trap in Manchester-by-the-sea recently.

SANDY HOOK reports are that kingfishing is excellent.

FISHING TO SUSTAIN LIFE.

THE Hartford, Conn., Times of June 11 reports this interesting case: "Last Sunday a young man somewhat widely known in the North Elmfield section for his eccentricities, dug a box of bait and went fishing in the Farmington River. Two men who were strolling up the stream had to him a suspicious appearance, and fearing arrest for fishing on Sunday, and also for fishing for black bass, which was unlawful up to June 10, the young man fled for his life. He sought a hiding place in a barn. The owner drove into the barnyard, and when questioned saw a chance for a joke, and gravely advised the young man that the two men were Fielding's detectives, sent out by Game Warden Collins especially to catch him. This was enough. He got out through the back of the barn and fled to the woods. Nothing further was heard from him until to-day, when Game Warden Collins received a letter showing that the young man had continued his flight to Westfield, Mass. Safe across the State line he penned this remarkable letter, which we print verbatim:

"WESTFIELD, Mass., June 9.—Hon. Mr. A. C. Collins: Dear Sir—Last Sunday I was in East Granby but at present I am here I went down last Sunday to the river, I didn't take any fish pole with me but I cut one and thought it no harm in catching a few river roach to eat for my own supper as I hadn't nothing to eat only a few crackers and a piece of salt pork. I caught 2 little bass & I let them go as I didn't want them. Two fishermen came up the river & I soon learned that they were spotters and that at sundown they were going to arrest me for fishing. And I thought it pretty hard to go to jail for catching 8 little roach to eat. That Sunday was the first Sunday this year that I put a hook into any waters and I shouldn't even only I was in was a stamp I would like to hear from you & what you have to say about it. N. B.—Mr. Collins What I have written to you concerning my last Sunday's fishing is the truth & nothing but the truth so help me God & I would take my oath on the bible or if I was to be hung up by the neck this very minute. From IRVIN W. TALBOT Address Westfield Mass."

It appears that as these two men were not detectives Talbot was unduly alarmed, owing no doubt to his having been once already convicted by Warden Collins for unlawful trout fishing in February.

Fishculture.

NEWFOUNDLAND SALMON RIVERS.

ADOLPH NIELSEN'S report to the Fish Commission on the condition of the salmon rivers contains a useful and timely lesson. Salmon are found to be diminishing in numbers so rapidly that their extermination is a question of only a very little time, unless something is speedily done to protect and multiply them. The catch on Gander River not many years ago was from 500 to 1,000 tierces annually. Now it is under 20 tierces. In Exploit's River the yield has dropped from over 500 tierces to 50 or 60. Large breeding fish are seldom seen in the rivers; only grilse of 4 or 5 lbs. and sea trout are taken. The causes of this rapid decline are known. Eggs naturally deposited are destroyed in vast quantities by fish and birds. Stake-nets prevent the salmon from ascending the streams to their spawning grounds. Cod traps around the headlands bounding the estuaries catch most of the adult fish before they fairly leave the sea. Dog Bay River is barred across its mouth by three brothers. The Exploits has suffered chiefly from the operations of the cod traps. Generally speaking, the barring of rivers has almost annihilated the salmon. Naturally enough the superintendent recommends the prohibition of every fishing appliance except rod and line within 1½ miles from the estuary of any river for the period of five years. He urges, also, the necessity of artificial propagation to restore the depleted waters, and calls attention to the fact that, in Norway, an apparatus capable of holding and developing 300,000 salmon ova can be constructed at a cost of from \$50 to \$100. There is a good deal of doubt as to the spawning season of the salmon in Newfoundland, but in Exploits River it is supposed to occur in the latter part of July and the month of August.

THE UTILITY OF TROUT CULTURE.

DENVER, Col., June 12.—Editor Forest and Stream: In your issue of May 29 I observe that Mr. Peirce reiterates his belief that trout culture is a failure. He also manifests a little disappointment because his former article did not provoke or attract more attention. He does remember that the paper replied briefly to his article, and that some one, he "thinks in one of the Territories," answered his communication, but he evidently attaches very little importance to that answer. I suppose that I am the person referred to, as I have seen no other contributed reference to Mr. Peirce's article than mine, but I do not hail from a Territory. Assuming that I am the chap that Mr. Peirce is after, I now wish to give a little attention to his later communication.

He says he believes that I "did not claim that any great quantity had been taken, but that they had been seen darting about the stream." I said nothing whatever about their being seen darting about, nor did I limit my statement to one certain stream as Mr. Peirce assumes I did. I did cite Bear Creek and a day's fishing as an example, in which the fisherman took some sixty-four fish, and of which, except four or five were "planted" fish. This was simply given as an illustration of what is done in many streams. The improvement in the South Platte River and many of its mountain tributaries is more marked even than it is in Bear Creek. Mr. Peirce can be supplied with a list of fifty or a hundred streams if he wants it.

Mr. Peirce appears to look at the question from a purely mercenary point of view, with returns to be realized directly from the fish. I respectfully submit that when a State becomes sufficiently interested in the fish question as to provide for their propagation and preservation, it relegates (or tries to) the fish hog to the rear, and Mr. Peirce's argument no longer applies. The State puts a stop to market-fishing—at least for trout. The stocking of streams with trout, as Mr. P. says, "in the interest of sport, pure and simple." This is about the only point that he correctly makes. But the State reaps its profit in another way, and I doubt if this State makes any other investment that pays so largely or so well as does its little annual appropriation for hatching and distributing trout to the public streams.

As I said in a former letter, the South Platte, with its several hundred miles of fishing waters, had been almost depleted of native trout when planting by the State was begun. Now, and for two or three years past, the fishing in that stream and its branches has been so greatly improved that a railway along its banks runs a special daily "fishing train" during the entire fishing season. Moreover, the sport is good, and certainly many more than half the fish caught are the planted Eastern brook trout. Now, Mr. Peirce will ask, "How do you know?" We know just as readily as he can distinguish a negro from a white man. Our native trout are black-spotted, spring spawners. The planted ones have crimson and yellow spots and are autumn spawners. There can be no mistake. The State, or the people, reap profit upon the outlay by the influx of visitors, sportsmen, tourists; by full hotels, increased trade, more railway trains, crowded stages, ready market for farm and garden products, work for laborers, etc., etc. Cannot Mr. P. see it in this light? It does pay a profit.

Now a few words about the cost and return of raising trout for market—necessarily in private waters. Mr. Peirce says there has never been a pound of trout raised in America

that did not cost a dollar and that was worth more than twenty-five cents when raised. I don't know just the expense of raising trout, but I do know that quite a number of people hereabouts are engaged in the business, and they stick to it. In fact there is a demand for land and water suitable for the purpose by more people who want to engage in the business. I had an application for such a lease within the past week. In our spring water the Eastern trout, with fair care, grows to two pounds weight in two years. I have seen them pull down two and a quarter pounds at twenty months after hatching. In some of the little land-locked mountain lakes they grow even faster, and there without artificial feed. The common price for such fish in our market is seventy-five cents per pound.

Mr. Peirce mourns a life wasted trying to raise dollar trout to sell at twenty-five cents. He ought to have confined his ambition to the nurture of "mud cats," or found a better market. If he will come out here we will show him how to raise trout, as well as how to catch, cook and eat both wild and tame ones. He won't even have to risk his life in a Territory.

WM. M. BYERS.

THE LOBSTER IN NEWFOUNDLAND.

ACCORDING to the last report of the Fisheries Commission, 5,000,000 lobsters, worth \$180,000, have been caught in a year in Placentia Bay. Forty canneries valued at about \$100,000 are engaged in utilizing this catch. Some of the bays uniformly furnish larger lobsters than others, and a variation is observed in the length of the spawning season. Owing to the want of a close season, and the multiplication of canneries, the lobster is diminishing rapidly in size and abundance. Mr. Nielsen, therefore, recommends a close season, and would fix the time in Fortune and Placentia Bays, from July 15 to Sep. 20, and in Trinity and Conception Bays, from July 15 to Sep. 15. The hatching establishment on Dildo Island has been used for the artificial culture of lobsters. Mr. Nielsen discovered that the lobster has two spawning seasons, the larger ones maturing their eggs from July 15 to Aug. 15, and the smaller and medium sized ones during the latter part of October and in November. The eggs were obtained from the factories, and were thus saved from destruction, and developed in great numbers. In addition to the apparatus copied from that used by the U. S. Fish Commission, the Superintendent has constructed floating hatching boxes, for use at the canneries. As a result of the first season's work, 4,039,600 embryo lobsters were liberated at various localities around the head of Trinity Bay. It is not a fact that this is the greatest number hatched in a single season, by any country. We have already recorded in FOREST AND STREAM a larger output by the U. S. Government from the Wood's Holl station. The first eggs for the Dildo hatchery were obtained in Green's Harbor, Trinity Bay, July 19 and hatched July 24. Others were brought from Long Harbor, Placentia Bay. During August lobsters became scarce, and after the beginning of September none but green eggs were found. To hatch these, it would have required a couple of months. No method of rearing young lobsters in confinement has yet been discovered. They will not eat small crustaceans, except of their own species. To such an extent does cannibalism prevail among them, that their liberation soon after hatching is necessary to their continued existence. By way of experiment, 200,000 lobsters just free from the eggs, were placed in an aquarium at Wood's Holl, and food of various kinds was offered them. They preferred, however, to devour one another, and at the end of two weeks only four lobsters remained alive.

ROCK BASS AND CATFISH IN GERMANY.—Max von dem Borne, of Berneuchen, has issued a neat little pamphlet, which bears on its cover and title page a figure of our well-known rock bass (*Ambloplites rupestris*), and contains a brief account of the successful introduction, in 1887, of this favorite game fish into Germany. In February, 1887, twenty rock bass, measuring from 1 in. to 1 1/2 in. in length, were sent from Wytheville, Va., to von dem Borne. In 1889 twelve remained alive and bred freely, so that the wider distribution of the species in German waters is practically assured. The pamphlet gives a brief sketch of the nomenclature, habits, food, edible qualities, spawning season, spawning habits, and principal baits used in the capture of the fish. A similar pamphlet deals with the Schynl-kill cat or horned pout forwarded to Germany by Prof. Baird in the summer of 1885, and now regarded as acclimatized in its waters. The species is the common *Ambloplites nebulosus* of the books. Germany can boast of the biggest catfish of the world, so that the American stranger will be overshadowed in size, but it will make up the difference in numbers and longevity, and doubtless will continue to be in Germany, as in America, "bei Damen und Kindern als Sportfisch beliebt."

TRANSFER OF RED-THROAT TROUT.—The first introduction of black-spotted trout from Colorado into Eastern waters was effected by the U. S. Fish Commission June 14, when seventy-six individuals averaging about 10 in. in length were safely landed at Wytheville, Va. This is one of the varieties of the red-throat which is characteristic of the Rocky Mountain and Cascade regions and extends into Alaska. It promises to become a favorite game fish, and we trust it will speedily become acclimatized in the East. In weight this variety often reaches 8 or 10 lbs., and it furnishes wholesome food and rare sport. The East has no native species of black spotted trout.

"SUMMER TOURS, 1890,"

Is the title of the new illustrated summer tourist book of the Michigan Central, "The Niagara Falls Route." It is a practical guide and profusely illustrated. Sent to any address on receipt of 6 cents postage by O. W. RUGGLES, G. P. & T. Agt., Chicago, Ill.

MILK FEVER IN COWS.—There's always a want for a medicine of proved reliability, we thought, observing the great demand among our farmers for Humphreys' Specific A. A. for milk fever in cows, and being ourselves all having a cow of our own, we sent a representative of the press to interview Mr. White, a gentleman well known for integrity and worth, and residing in Dover Plains, N. Y., feeling sure that he would act upon the principle, if you know a good thing tell it, and let your friends have the benefit. "Yes," said Mr. White cheerfully, "I have been using Humphreys' Specific A. A. for milk fever in cows, and with splendid results, and my belief is that if the directions in Humphreys' Veterinary Book are strictly carried out every case of milk fever could be promptly cured. I am now using the A. A. as a preventive, and do not expect to have another case in a herd of 130 cows."—Delaware Dairyman.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Famous Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Advs.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanticoke," "Glean," "Dick Scriver," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

The Kennel.

FIXTURES.
DOG SHOWS.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. R. W. Meek, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

FIELD TRIALS.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 10.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

A. K. C. MANAGEMENT.

Editor Forest and Stream:

The clique which is now controlling the American Kennel Club is endeavoring, and has been for the last year, to impress upon the dog men and breeders of this country that I am fighting the American Kennel Club, and that I am opposed to the said club. Such is not the case. I am now, and always have been, a firm believer in the American Kennel Club. Such a club in this country (if we expect to improve and encourage the breeding and preservation of the pedigrees of thoroughbred dogs, and the successful holding not only of bench shows, but field trials) is an absolute necessity. That is, we should have an American Kennel Club existing, and recognized throughout the country as a governing body—a governing club that not only local clubs, but every breeder and exhibitor should encourage, respect and obey—a club founded by and with the consent of all the local clubs—a club founded upon the theory of right, and whose laws and rules should in all cases be executed with practical and impartial justice.

When Mr. Elliott Smith of New York, was elected president of the American Kennel Club, he entered upon the discharge of his duties as such president, and brought to that chair with himself dignity and grace, which were ever evinced by his impartial discharge of the duties of that office. No delegate could ever determine from the actions or manner of Mr. Smith what his individual feelings were upon any motion or resolution pending before that club.

Mr. Smith never had the impudence to vacate that chair and advocate the adoption or rejection of any resolution or motion pending before that body, and never while he was president (except in one instance) did he ever address the delegates who under the constitution have the management of the club, and that was when he was called upon by reason of a tie vote to cast the deciding vote, when he arose from his chair and standing by it gave his reasons for his vote.

Mr. Smith's impartiality has ever been remembered, not only by his friends, or the delegates who voted for him, but also by those delegates who voted against him for that position.

After Mr. Smith's resignation, Mr. Child, of the Philadelphia Kennel Club, was elected president of the American Kennel Club. The dignity and grace, as well as the impartiality possessed by Mr. Smith, were again brought to the chair during the administration of Mr. Child, and when he resigned from the position to which he had been elected, no delegate could say that during the time he occupied the chair that he ever in any way influenced the action of any delegate upon any motion or resolution pending before that body.

Upon the resignation of Mr. Child, the writer of this article nominated the present president, Mr. August Belmont, Jr., for the position, which had been so ably filled and impartially administered by Mr. Smith and Mr. Child. Mr. Belmont was elected, and since that time, the writer is sorry to say that the position of president has become a total stranger to dignity, grace and impartiality. The present president has from that time considered that it is his duty to not only preside and to decide such questions as may come before him, and then to vacate his chair, call some trusty member to fill the position, while he makes a stump speech either for or against almost every resolution or motion that may, can, or does come before the board.

The president of the American Kennel Club is not a delegate, and should not be a delegate, and it never was intended by the framers of the constitution that he should have any of the powers possessed by a delegate, except in case of a tie vote. His duties are defined by the constitution, and the moment he leaves the chair that moment his duties within the board cease. He is not elected the president of this club, or that club, of this delegate, or that delegate; and he should not in any way by word, action or deed, use the influence of his office to influence the action of any delegate upon any motion or resolution pending before that board.

He is young, and with time may improve, and as I consider him in every way worthy of my personal feelings, as I do every animal, be it man, insect or reptile, even the insect with a sting in his tail or the reptile with poison in his mouth, or even the reptile who in a coil of himself makes his own lair and gulps up and emits a slime, which is readily devoured by those of his clan with not only seeming satisfaction, but joy. Even unto this one my personal feelings extend for his future and continued enjoyment of "health, wealth and wisdom."

That I now am, and have been for some time, opposed to the management of the American Kennel Club, every breeder in the country is well aware.

About \$12,000 annually are now gathered in from the dog men and breeders of this country, and expended at No. 44 Broadway, New York, by the secretary, the assistant secretary, the type-writer, the boy in waiting, and the firm of printers employed by the clique to do the work. That the dog men and breeders get absolutely nothing for this money, we all must admit. The stud book, which should come out quarterly, took about fifteen months in getting to us.

A stud book is a necessity, and we should have it every quarter.

The Kennel Gazette, which makes its appearance monthly, is not only of no value to the breeder, but in itself is one of his greatest enemies.

Any mongrel dog without pedigree or tail, whose date of birth is as uncertain as Noah's, and whose breeder may have been the Egyptian nurse who wiped the tears away from a Sphinx or the fellow who ties the shoes of King Calico, can be entered and registered among the bluest dogs bred by Norrish, of England, and Hopf, of New Jersey.

A registration should mean something, and it should mean that no dog can, shall or will be registered in the American Kennel Club unless the papa and mamma is known even unto the fourth generation.

No encouragement should ever be given to these mongrel dogs. The mongrel dog, like the comet, will come, and the Kennel Club should never recognize them in any shape, manner, form or place.

I have also opposed the financial management of this club, and for fear that I may have been misunderstood, permit me to now say that the financial management, as evinced by the reports made, are not only false and fraudulent, false because they are not true, and fraudulent because they have been made with the intention to deceive.

The major portion of the item of \$1,228.28, which appears in the report made to the American Kennel Club at the annual meeting in February, 1889, was never earned by the club, it was juggled and book-kept in there, and I will now give the history of the finances of 1888, as it may prove of interest to your readers.

During the year 1888 I had the honor to be chairman of the stud book committee, Mr. Schellhass and Mr. Terry being the other two members. In March, 1888, Mr. Vredenburg stated to me that he intended to resign as editor of the stud book, and during that month did so. When he resigned, the arrangement was made whereby the stud book committee appointed Mr. A. D. Lewis as editor of the stud book, and made this contract with him.

Mr. Lewis was to assume the duties of editor, was to compile the pedigrees and do all the work as editor of the stud book. He was to publish the stud book quarterly, was to pay all the bills and expenses thereof, as well as one-half the office rent, and for his services he was to receive the entire receipts coming into the office, as well as the proceeds of the sale of the stud book. If after paying all of these bills there was nothing left, Mr. Lewis agreed he would make no claim upon the American Kennel Club. This was substantially our contract, and it was faithfully, honestly and efficiently carried out.

At the meeting of the American Kennel Club, which was held May 8, 1888, the stud book committee reported this change to the club, and at the same meeting Mr. Vredenburg made his report as treasurer, showing the balance on hand in the American Kennel Club to be the sum of \$128.01. After this Mr. Vredenburg went to Europe, and he returned on Monday, Dec. 3.

On the 6th of December, after pulling himself and the assets of the American Kennel Club together, he reported at the meeting of the American Kennel Club held that day, that he had on hand (and as will appear by the treasurer's report, dated Dec. 5) \$5.39.

At that same meeting, and on that same day, and fresh with the recollection of the aforesaid \$5.39 in his mind, as well as in the treasury, he offered a resolution to increase the registration fee (which was at that time 50 cents) to \$1, and then and there gave his reason for imposing this increase of 100 per cent. upon the dog breeders, which was substantially this, that the cost of publishing the stud book was so expensive that it could not be done at the price then charged for registration. That resolution, upon the motion of Mr. Hitchcock, was referred to the stud book committee. A few days after this meeting, while the writer of this was in the American Kennel Club office, Mr. Vredenburg stated to me out of his own mouth, substantially that I had made no mistake in nominating Mr. Belmont, as he had come into the office mourning over the smallness of the bank account, and replenished it with a large sum of money.

At the annual meeting of the American Kennel Club, which was held Feb. 21, 1889, Mr. Vredenburg as treasurer made two reports, commencing from Dec. 5, 1888, and showing the balance as reported at the previous meeting, \$5.39, and on Jan. 11, \$1,228.28. If any book-keeper will now take these two amounts and examine them, there is only one conclusion that he can come to, and that is this, that they are false.

The item of \$1,228.28 was not earned by the club, there was no possible resource from which the club could earn this item, and the club did not earn it, it was either borrowed, book-kept or juggled into the accounts.

I have asked for these items which go to make up this sum, delegates of the club have asked for them, and the request has been refused; and I now state that the treasurer will never, over his own signature, give to any man, woman or child in this country the items going to make up this amount.

On July 10, 1889, the stud book committee, which then consisted of Mr. Terry, Mr. Schellhass and Mr. Lewis, held a meeting and fanned into life the resolution that was offered by Mr. Vredenburg, and increased the registration fee from 50 cents to \$1, the same to go into effect Jan. 1, 1890.

Several protests appearing in the sporting papers against this unjust and unreasonable increase made by the stud book committee, the stud book committee, in answer to these charges, published a card over their own signatures as an explanation of their action, and in said card they stated:

"The two years' experience of both the secretary and editor shows to them conclusively that the cost of publishing each entry was greater than the amount charged for it, and that this induced the secretary to bring the matter before the American Kennel Club at this meeting, Dec. 6, 1889.

"The reasons for the increase are the following: The cost of composition, printing, electrotyping and binding of each volume is about 38 cents for each entry. To this must be added the salary of the compiler of the book, and a proportional amount for office rent, postage and stationery, and these combined swell the total cost for each entry to a fraction of over 81 cents."

Since Jan. 1, 1889, the stud book has paid its editor a stated salary on the last day of each and every month, together with its share of its other residuum expenses, and when the present volume is published and paid for, the result will be that it has been published at a loss of over 31 cents on each and every entry that the book contains.

At the alleged meeting of the American Kennel Club, which was held without a quorum being present, on February last, and from the proceedings as appear in the February number of the *Gazette*, and from the report made of said so-called meeting by Mr. Vredenburg, I extract the following:

"Mr. Watson—What was the balance that was named that was presented last year?"

"Mr. Vredenburg—\$1,624.09. That was the balance on Feb. 20."

"Mr. Watson—You published a statement at one time, somewhere, that you had a balance on hand of \$1,228.28. Can you tell me where that was?"

"Mr. Vredenburg—That was in the February *Gazette*, of moneys received by the American Kennel Club from all sources, and of expenses of every description to Feb. 16. Receipts to Jan. 11, 1889, as by balance carried over per new book, \$1,228.28, and then the different sources from which we received money from Jan. 11 to Feb. 16, made \$2,375."

"Mr. Watson—I want to know how you bring it up to that point."

"Mr. Vredenburg—Because we had no meeting from Dec. 6, and in the meantime, when I closed my books for

1888, and carried over my balance for Jan. 11, the balance happened to be \$1,228.28."

Mr. Watson utterly failed in his attempt to extract from the treasurer, the items going to make up this amount, and the so-called chairman of the so-called committee, afterward coming to the treasurer's rescue, Mr. Watson for the time being abandoned the search for the lost items going to make up this sum.

Upon his subsequent return to New York he went to the office and again asked Mr. Vredenburg for these items.

Mr. Vredenburg evidently imposed upon him by taking advantage of some deficiency in his intellectual organization, or exhibited to him what must have been the private account which had been kept by Mr. Lewis under his contract with the stud book committee in the year 1888.

But there was one thing which Mr. Watson did get from the treasurer, which all of us had been unable to extract, and which the treasurer put down on an envelope in his own hand writing, to wit, the income of the club from Jan. 1 to Jan. 11, 1889, and which amounted to \$122.50.

He also stated to Mr. Watson that this \$1,228.28, or the major portion thereof, came from the stud book.

Now, breeders and dog men throughout this country, let us sum this up and see what we find.

April 1, 1888, Mr. Lewis takes charge of the stud book under contract with the stud book committee; what he receives is his.

May 8, 1888, the American Kennel Club treasurer's report shows \$128.01 on hand; secretary goes to Europe, returns Dec. 3, 1888.

Dec. 6, 1888, makes a report dated Dec. 5, balance on hand \$5.39.

At same meeting asked to have registration fee increased 100 per cent., because stud book was always published at a loss.

In same month states to the writer received a large amount of money from the president.

Feb. 21, 1889, makes two reports on one day, which show upon their face fully as much jugglery as could have been gotten into one report in two days.

In August, 1889, stud book committee, over their own signature, claim that the stud book had been published at a loss, and that this was their reason for increasing the tax upon the dog men throughout the country 100 per cent.

January, 1890, secretary and treasurer published an annual statement showing that from and during the year 1889, he had received from the dog men and breeders of this country \$8,312.26, and that he and a few others had expended \$7,027.66, and yet he fails to show in any of his reports where the dog men and breeders have received any benefit from the expenditures of this money, for no stud book was published during the year, and for some two months thereafter.

At the so-called meeting of Feb. 13, 1890, Mr. Vredenburg tells Mr. Watson that the balance happened to be \$1,228.28.

A short time thereafter tells Mr. Watson that this money came from the stud book.

Often through the year, in some of the meetings of the club, and in the sporting papers, in reports of officers, and in statements made by them, have claimed that the club actually earned the moneys credited to the club.

Now what I want to know is this:

First—Did the president put any money into the club?

Second—Did he tell the truth when he said he did not put any in?

Third—Did Mr. Vredenburg tell the truth when he reported only \$5.39 on hand Dec. 5, and did he tell the truth when he offered the resolution to increase the registration?

Fourth—Did he tell the truth when he told me that the president did put the money into the club?

Fifth—What are the items going to make up the sum of \$1,228.28?

Sixth—Did the stud book committee tell the truth when they published their card and gave their reasons for increasing the registration?

Seventh—How could any revenue be derived from the stud book when Mr. Lewis published it under an exhaustive contract?

Eighth—Did Mr. Vredenburg tell Mr. Watson the truth when he claimed to get the major portion of the item of \$1,228.28 from the stud book?

Ninth—If he told Mr. Watson the truth, and it is the truth, then is it not a fact that Mr. Vredenburg made a misstatement when he gave his reason for offering the resolution of Dec. 6, and that he also misstated when he told me that Mr. Belmont put the money in, and that the stud book committee misstated when they published their card?

Now, so far as the auditing committee that was appointed is concerned, permit me to now state to the dog men and breeders of this country, that the accounts of the American Kennel Club have not been audited by the said committee, that is, they simply signed the statements made out by the secretary and treasurer. Two of the committee have so said to several parties, and one member of the committee I believe has written a letter to that effect.

I don't want to break up the American Kennel Club, but I do want to break up and release it from the clique that is now managing it not in the interest of the dog men or the breeder, not in the interest of the bench shows throughout the country, but wholly in the interest of a clique that can be gathered into No. 44 Broadway, New York, at the sound of a whistle.

I want to see a club presided over with the impartiality of a Mr. Smith or a Mr. Child. I want to see delegates who belong to the clubs that they represent.

I want to see delegates who can come to a meeting and thoroughly discuss before a presiding officer every resolution and motion offered, and then act upon the same as their best judgments will dictate.

I want to see the registration fee reduced to 50 cents.

I want a stud book to come out every three months.

I want to see no dog registered with the American Kennel Club that has not got a pedigree.

I don't want to see a dog registered whose sire and dam and date of breeding is unknown.

I want to get all the thoroughbred dogs in the country registered.

I want to keep all of the mongrels out of the register.

I want to see a secretary who will be a secretary of the entire club, and not a willing tool for a clique who may be in control.

I don't want any employé of a club to act as a delegate.

I want to see "health, wealth and wisdom" enjoyed by all the dog men and breeders, and local clubs throughout the country, and then we will find that enough of these will get into the American Kennel Club to arrange its affairs.

I want to see the American Kennel Club at No. 44 Broadway controlled by the local clubs and breeders throughout the country, and I don't want to see the local clubs and breeders throughout the country controlled by the officers at No. 44 Broadway.

I want to see officers of the American Kennel Club who will give information to members of local clubs, in regard to affairs connected with the club, when requested.

I want the opportunity to write the obituary of the present American Kennel *Gazette*, as I consider it in every way worthy of my personal feelings.

PESHALL.

NATIONAL BEAGLE CLUB.—Boston, Mass., June 16.—*Editor Forest and Stream*: The quarterly meeting of the National Beagle Club will be held at the Quincy House, Parlor G, Boston, Mass., Friday, July 11, at 6:30 P. M. All members are earnestly requested to attend.—F. W. CHAPMAN, Secretary.

THE NATIONAL BEAGLE CLUB.

Editor Forest and Stream:

I would inform those intending to join the National Beagle Club that their application for membership should be received on or before July 10, 1890, in order to be acted upon at the quarterly meeting, which will be held at the Quincy House, Parlor G, Boston, Mass., on July 11, at 6:30 P. M. It should be remembered that this is the last opportunity beagle men will have of joining this organization until October, and as the entries for our first field trials will probably be closed before the October meeting, they will secure an opportunity of competing for the specials by joining on or before July meeting. Almost every member of the club has promised to send from one to five dogs to our trials, and as we shall have the best judges experience can suggest and money can hire, there should be no reasonable doubt in the minds of those intending to enter dogs that the trials will be a success and an advantage to the beagle, those entering him and the club.

There has been a want felt for a number of years for something of this kind, and now that a club has been organized that will keep awake and push the beagle to the front and keep him there, it should be the duty of every beagle man in America to give this club his support by joining or by sending his dogs to our trials or both, and so far quite a number have done so, but there are those who say "Oh, yes! go ahead, and when you make a success of it we will come in; we have been there once, and don't mean to get nipped again if we know it." To those we would say one swallow does not make a summer, and one failure don't mean everything will be a failure, just try us, and if we don't make a success it will be your fault as much as ours, as our quarterly meetings are intended to correct any mismanagement, and also are a source of great instruction and entertainment, especially so to the amateur, and even the veteran will learn something occasionally, provided he does not "know it all." Our admittance fee is only \$2, and the yearly dues are also \$2, payable semi-annually in advance. Application blanks may be had by applying to the secretary, F. W. CHAPMAN.

MELROSE, Mass., or 364 WASHINGTON STREET, Boston.

THE ENGLISH SETTER CLUB.

MELROSE, Mass., June 12.—*Editor Forest and Stream*:

The annual meeting of the English Setter Club of America will be held at Boston on Tuesday, July 1, at the Quincy House, in Parlor G, at 7 P. M. All are cordially invited to be present.—H. H. BROWN, Sec.

WATERBURY, Conn., June 14.—*Editor Forest and Stream*: It is with much regret that I see in the sporting papers notices to the effect that there will soon be issued a call for the formation of another English setter club. On May 24 of this year, at a meeting held in Boston, there was formed a club called the English Setter Club of America. While not meaning to arrogate to themselves all the interest of the country in the English setter, or all the knowledge upon that important subject, its originators felt the need of a specialty club for that valuable breed of dogs. In forming this club and adopting their constitution and by-laws, they thought their platform, as therein formulated, was broad enough for men from the North, South, East and West to stand upon side by side. Their sole object in forming such a club is the advancement of this breed of dogs, or rather its maintenance in its present position at the head of the list of sporting dogs. I trust that the call mentioned in the notices referred to above will not be issued, but that instead those interested in it will decide to join the club already formed. I can assure them a cordial welcome, and that they will be met half way by the gentlemen composing the club. There will be a meeting of the English Setter Club of America on Tuesday, July 1, at the Quincy House, Boston, Mass., at 7 P. M., which I hereby invite all who are interested in the English setter to attend. In the above I feel that I express the views not only of myself but of all the members of the English Setter Club of America.—F. W. WHITLOCK, President English Setter Club of America.

PRINCE CHARLIE IN THE NOVICE CLASS.

Editor Forest and Stream:

As Mr. Watson has referred to an opinion expressed by me as to the eligibility of his collie Prince Charlie for the novice class at the N. E. bench show of 1890, in which I believe he was the winner, I desire to give my reasons for the opinion I formed.

The rule as laid down by the A. K. C. reads as follows: "The novice class shall be understood to be for a recognized breed, for which a regular class has been provided, and for competition in which a dog shall not have won a prize at any American Kennel Club show, or which has not won a prize in a recognized show held in England or Canada."

Prince Charlie competed in the Futurity and collie sweepstakes at the W. K. C. bench show of 1889. These stakes are not special prizes, but regular open classes competed for every year and open to all collies born in the United States or Canada. These stakes or classes were competed for at the W. K. C. bench show of 1889, they appeared in their regular order in the premium list and were a portion of the regular collie classes and have been for several years, to be competed for at said show.

Prince Charlie was awarded a cash prize in these classes, and hence was barred from any subsequent competition as a novice. His competing at New York this year was an oversight on my part. If Mr. Watson was able to bulldoze Mr. Fletcher and the bench show committee at Boston and gobble up the boodle I think he had better refund.

J. D. SHOTWELL.

No. 115 HIGHLAND AVENUE, Orange, N. J.

SALE OF THE MEMPHIS & AVENT KENNEL.

Memphis, Tenn., June 14.—*Editor Forest and Stream*: We have sold our entire interest in the Memphis & Avent Kennel to our former partner, Mr. J. M. Avent, of Hickory Valley, Tenn., and the dogs of the kennel have been removed from this city to Mr. Avent's home as above. All communications must be addressed to him in the future. The dissolution of the kennel is the result of our determination to retire forever from any connection whatever, nearly or remotely, in a kennel interest, public or private. The purposes for which the Memphis & Avent Kennel was formed have been, we think—and pardonably so we trust—more than fully realized. Its ambition was to breed a line of field dogs the equal, if not the superior, of any ever bred in England or America. Whether this ambition, somewhat vaulting in its conception, has been realized or not, we now leave it to the kennel's record and to the public to judge. To Mr. J. M. Avent is due, more than to any other member of the kennel, the success it has attained. True that through us the kennel came in possession of its winning blood lines (Juno A. excepted), but Mr. Avent, skillful in handling, more skillful in the exercise of a keen innate perception, trained and handled them to a point almost invincible. It is not to be wondered that dogs thus bred and handled should achieve such phenomenal and unparalleled success. Now that we do not own, and will never again own, any interest whatever, remotely or otherwise, in a kennel, and will never again own any interest in a dog except for private shooting strictly, we trust that no one will accuse us of indelicacy in thus expressing ourselves. We most earnestly commend Mr. Avent to our friends everywhere as a gentleman entirely worthy of their confidence in every respect.—W. B. GATES, ARTHUR MERRIMAN.

CINCINNATI DOG SHOW.

[Special Report.]

CINCINNATI, June 9.—*Editor Forest and Stream:* The fourth show of the Cincinnati Sportsmen's Club, held here last week, was a capital show of dogs, notwithstanding the very hot weather. I am informed that the association will hold a show each year in future, and select an earlier date. The management was under the care of Mr. G. H. Hill, of Madeira, who performed his duties in a satisfactory manner. The judges were Messrs. J. M. Taylor and James Mortimer. The former judged the pointers, setters, foxhounds and beagles, and Mr. Mortimer the other classes. The judging was finished the first day and I heard but little grumbling at the awards.

There were nearly 300 dogs entered, many of them being well known prize winners. The quality in some of the classes was very good indeed, the mastiffs, greyhounds, setters and fox-terriers taking the lead. The show of spaniels and collies was very small, as was also the case in some of the terrier classes. The attendance was not what it should have been, although I presume that the club has come out all right, as there was a fair crowd present during a portion of the time.

MASTIFFS.

The mastiffs were not large classes, but the quality was better than I expected to see. Moses was the only one in the challenge class. He is a big one and was well shown. With better head properties he would be a hard one to beat. The bitch class had no entry. Ormande, the winning dog, is well put together and has a good head except that he is weak in muzzle. He is under size and small in bone. Pluto, winner of second, is a bigger dog and has better bone. He has a yellow eye and moves awkwardly. Victor and Duke, both commended, are a long way behind the others. Mengladen, the winning bitch, is well known. Duchess of York, second, has the best head of the lot, and when matured she will make it interesting for some of the good ones. Ilford Czarina, vhc., is a big bitch, but too houny in head and weak in muzzle to win in a good class. Only one puppy was shown, a poor specimen.

ST. BERNARDS.

There were no entries in the challenge classes. Peter, the winning dog, is quite a nice one, but is too houny in head. Goldust, winner of second, has a good head, but is too small, and is lacking in markings. Vulcan, vhc., was the best in the class, and I should have placed him first, notwithstanding his lack of condition. He is of good size, has a good head, is of nice color and is properly marked. The bitches I did not fancy, and do not think that they will ever get in the challenge class. The two dog puppies are promising. First was withheld in smooth-coated dogs, and second might as well have been, as the winner is not a good one. Nora, in the bitch class, is well known.

NEWFOUNDLANDS.

Bruno, the winner, is a dog of more than average merit. Flora, winner of second, is of good size, but lacks character.

GREAT DANES.

The well known Brock was the only entry in the challenge class. He was looking well for his years. Melac, the winner in the dog class, won in the puppy class at Chicago last spring. He bids fair to make a very good one. Aside from these two there was nothing up to show form.

DEERHOUNDS.

Only two deerhounds were shown. Both have been often described.

GREYHOUNDS.

Dr. Van Hummel made nearly a clean sweep in the greyhound classes, winning every prize except second in the open dog class. His dogs were shown in excellent condition.

FOXHOUNDS.

The foxhounds were a good-looking lot, but why a class was made for so-called shaggy foxhounds I am at a loss to determine, as none of the variety were shown, the class containing only the kind commonly known as the American hound, and no good ones of those.

POINTERS.

The entries in the challenge class were absent. Chief, the winning dog in the 55lbs. and over class, is just about an average specimen, with a head that is much too short and thick. He has a capital set of legs and feet. All the others in this class are well known. Tempest, unnoticed, I thought just about good enough in this company for a vhc. card. Phantom, the winning bitch, I do not like, she is bad in head and chest, and is too light in limbs to stand hard work. Both Nell and Lady Jane are better bitches. In the under 55lbs. class, Trinket's Coin won in the dog class. He is coarse in head and lacking in character. Tribulation, the winner of second, is well known. He is a better dog than Coin. Molton Baron, vhc., was the best in the class, except in condition. He shows more true pointer character than all the others in the class combined. Trinket, winner in the bitch class, also shows character and is quite a nice animal, although she is a bit weedy. There was nothing else in the class that will ever do any winning in decent company.

ENGLISH SETTERS.

There was only one entry in the challenge class, Dad Wilson. He has filled out since I saw him last, and is a much better specimen than I imagined he would ever be. Ben Hur of Riverside, won in the open dog class. He is a bit lathy and light, but shows lots of character, and is a very taking-looking animal with a capital set of legs and feet. Dad Wilson's Boy, placed second, is fully up to the winner except in quality. There was nothing else in the class that came near the winner. Bohemian Girl had an easy win in the class for bitches. She was in good form. Letty, placed second, is a very pretty bitch, but a bit weedy. Florence, vhc. and reserve, shows considerable character, but is lacking in substance and was not in good condition. Dixie, vhc., is a better bitch than Florence, as she has plenty of substance and has no serious faults except that she is getting along in years. None of the puppies give promise of future greatness.

IRISH SETTERS.

The challenge class brought out three good ones in Mack N., the winner, Dick Swiveller and Blarney. Dick had the call in my estimation until I compared the two, when the better headquarters of Mack showed him to be the better dog. Aside from the three mentioned and Winnie II., the winning bitch, there was nothing else in the classes that was up to show form.

GORDON SETTERS.

Little Boy won in the challenge class very easily from Leo and Dixon, and Rose was the only entry in the bitch class. Rob Roy, the winner in the open dog class, is a nicely made dog with a fairly good head and a capital set of legs and feet. His coat is bad and he is off in color. Reginald, placed second, is not a show dog, being coarse and lacking in character. Meadowthorpe Blossom, winner in the bitch class, is well known, as is Lady Pilot, placed second.

COLLIES.

I do not profess to be up in collies, but I know enough of the breed to know that they were the worst lot that I ever saw at a dog show.

IRISH WATER SPANIELS.

The well-known Patsy O'Connor had the challenge class to himself. King Slash's Boy, first in the open dog class, is a fine upstanding dog, a bit off in skull and lacking in coat. The bitches have often been described.

FIELD SPANIELS.

Black Diamond, the winning dog, is much too heavy in head and short in neck to beat Samson, placed second. The latter has much the best of it in head and neck, and is equally good at other points except in coat.

COCKER SPANIELS.

Brantford Red Jacket was placed over Black Duke in the dog class, a decision that I cannot indorse. Both are well known and have often been described. Sensation was lucky to catch Marguerite out of show form.

POODLES.

Hans, the winning poodle, is quite a good specimen of the corded variety. Prince is also of the same strain, and but little inferior to the winner.

BULLDOGS.

Rabagas was absent, and Joker, the only one shown, was given first, which he could not win in decent company.

BULL-TERRIERS.

Sir Jack, the only entry, is rather a nice dog, a bit slack behind the shoulders and weak in jaw.

BASSET HOUNDS.

Babette, the only one shown, is well known.

DACHSHUNDS.

The winners, Skelett and Schenke, were the only ones that were worthy of notice. Both are fairly good specimens. The latter is a bit snipy and too tight in skin.

BEAGLES.

With the exception of Little Duke in the challenge and Ross W. in the open class, there was nothing worth notice. Ross is rather too large and coarse for good company.

TERRIERS.

As I am not up in terriers I shall not attempt a criticism; were I to attempt it, I might put my foot in it. The fox-terriers were not numerous, but looked a very good collection. None of the other terriers were well represented, at least in numbers.

PUGS.

The pugs were one of the features of the show; at least this appeared to be the sentiment of the pug fancy, but as I know less of them than I do of terriers I will pass them without comment. The classes were well filled, and the little beggars were the center of attraction, and so far as I was able to see they were properly placed.

KING CHARLES SPANIELS.

Rena, the winner, is much above the average in head properties, and with better eyes and tan would be a very hard one to beat. Jerry, placed second, is better in color but is behind in head.

ITALIAN GREYHOUNDS.

The winning dog and bitch are very good specimens. The latter is about good enough for any company. Behind these there was nothing worthy notice.

MISCELLANEOUS.

The winner in the over 25lbs. class is a nondescript, and under the rules cannot win a prize. The winner in the class for small dogs is quite a good Japanese spaniel, a little off in coat and eyes. Following is a list of the

AWARDS.

MASTIFFS—CHALLENGE—1st, C. C. Cook's Moses.—**OPEN**—Dogs: 1st, C. E. Bunn's Ormande; 2d, Dr. H. J. Groesbeck's Pluto. Com., G. H. Burrows's St. Lawrence Duke and R. C. Houston's Victor. Bitches: 1st and 2d, C. C. Cook's Mengladen and Duchess of York. Very high com., Dr. H. J. Groesbeck's Ilford Czarina. Puppies: Withheld.

ST. BERNARDS—**ROUGH-COATED**—**OPEN**—Dogs: 1st, F. W. and J. Gerstle's Peter; 2d, G. H. Konig's Fred Goldust. Very high com., V. A. Burford's Jum K. Com., D. Wolf's Photo. Bitches: 1st, A. C. Strobel's Norwood Best; 2d, E. B. and O. W. Pfau's Narka. Very high com., C. Goethelm's Olio.—**PUPPIES**—Dogs: 1st, H. G. Garret's St. Junot Gilmar. Bitches: 1st, G. H. Konig's Queen of Lamont. **SMOOTH-COATED**—**OPEN**—Dogs: 1st, withheld; 2d, J. T. Carew's Jumbo. Bitches: 1st, Meadowthorpe Kennels' Meadowthorpe Nora.—**PUPPIES**—Dogs: 1st, G. Wessling, Jr.'s Dixie. Bitches: 1st, Alta Kennels' Marie Louise.

NEWFOUNDLANDS—1st, Mrs. R. J. Johnson's Bruno; 2d, J. Kaestel's Flora.

GREAT DANES—**CHALLENGE**—1st, A. Trinkler's Brock.—**OPEN**—Dogs: 1st, H. Nichols's Melac; 2d, J. W. Heintz's Prince Leo. High com., J. W. Seibers's Kaiser. Bitches: 1st, withheld; 2d, Dr. M. Herzog's Juno.—**PUPPIES**—1st, Dr. M. Herzog's Belle Feava.

DEERHOUNDS—Dogs: 1st, Col. W. B. Smith's Torrum. Bitches: 1st, Quaker City Kennels' Tira III.

GREYHOUNDS—**CHALLENGE**—Dogs: 1st, Rookwood Landseer Kennels' Master Rich. Bitches: 1st, Rookwood Landseer Kennels' Miss Rare.—**OPEN**—Dogs: 1st, Rookwood Landseer Kennels' Babazon; 2d, Devon Kennels' Conspirator. Bitches: 1st and 2d, Rookwood Landseer Kennels' Carmine and Melodrama.

FOXHOUNDS—Dogs: 1st and 2d, very high com. (2), high com. (3) and com., Cook Kennels' Brave, Roderick, Dan, Watch, Drum, Streik, Rover and Luck. Bitches: 1st, 2d, very high com. (2), high com. (3) and com., Cook Kennels' Bernhardt, Spotty, Flying Kate, May Queen, Fanny, Jet and Princess.—**SHAGGY**—Dogs: 1st, second and reserve, A. B. Whitlock's Pierce, Bard and Claude. Bitches: 1st, 2d, and very high com. (3), A. B. Whitlock's Clara II., Patti, Modesty, Fay and Wavy.

POINTERS—**LARGE**—Dogs: 1st, Major J. B. Downing's Chief; 2d, E. F. Carpenter's Bang Beaufort. Very high com., Iststone Kennels' Luck of Iststone and Dayton Kennel Club's Trinket's Count. High com., J. Stimmel's Don and H. L. Kyler's Leon. Bitches: 1st and 2d, Iststone Kennels' Phantom and Nell of Iststone. Very high com. and com., Dayton Kennel Club's Lady Juno and Van Bang.—**SMALL**—Dogs: 1st, Dayton Kennel Club's Trinket's Coin; 2d, B. M. Stephenson's Tribulation. Very high com., Bulled & Miner's Molton Baron. High com., H. L. Kyler's Otto Meteor. Bitches: 1st, Dayton Kennel Club's Robert's Trinket; 2d, J. Lewis's Siberian Girl. Very high com., H. L. Kyler's Patti Donald. High com., Iststone Kennels' Prince. Com., J. E. Gill's Galena. Puppies: 1st, T. H. Caruthers's Bobby Burns.

ENGLISH SETTERS—**CHALLENGE**—Dogs: 1st, J. Shelly Hudson's Dad Wilson.—**OPEN**—Dogs: 1st, Waggoner & Williams's Ben Hur of Riverside; 2d and very high com., J. Shelly Hudson's Dad Wilson's Boy and Chickasaw II. Reserve, B. M. Stephenson's The Corsair. High com., J. T. Williams's Sportsman's Roy. Com., W. H. Wallingford's Kentucky Dash. Bitches: 1st and very high com., J. Shelly Hudson's Bohemian Girl and Dixie; 2d, J. T. Williams's Lady Hill. Very high com., Dr. L. A. Querner's Nell R. High com., W. A. Neddermeyer's Pearl Bondu and Mrs. J. W. Uter's Lady U.—**PUPPIES**—1st, P. H. Bryson's Noble Gladstone; 2d, T. J. Widrig's Winnie W. High com., J. Stimmel's Solito Girl. Com., J. R. Anderson's Duke and W. S. Eaton's Craig Darragh.

IRISH SETTERS—**CHALLENGE**—Dogs: 1st, W. N. Kuhn's Mack N. Bitches: 1st, Kildare Kennels' Laura B.—**OPEN**—Dogs: 1st, T. S. Fish's Frank; 2d, Seminole Kennels' Scotland Chief. Very high com., H. T. Chambers's Roy and Nordick. High com., Kildare Kennels' Sarahfield. Bitches: 1st, Kildare Kennels' Winnie II.; 2d and com., G. H. Covert's Little Nell and Kate IX. Very high com., H. T. Herndon's Fly. High com., F. V. Andrew's Kitty O'Brien and W. H. Child's Betsey Leigh.

GORDON SETTERS—**CHALLENGE**—Dogs: 1st, S. G. Dixon's Little Boy. Bitches: 1st, W. S. Hammitt's Rose.—**OPEN**—Dogs: 1st, S. G. Dixon's Rob Roy; 2d, C. O. Hendee's Reginald H. Bitches: 1st, Chestnut Hill Kennels' Meadowthorpe Blossom; 2d, S. G. Dixon's Lady Pilot.

COLLIES—Dogs: 1st, Chestnut Hill Kennels' Roslyn Dandy; 2d, J. Heekin's Heekin's Bruce. Bitches: 1st, C. A. Christman's Lady Bruce; 2d, H. C. Cumming's Lucy D.

IRISH WATER SPANIELS—**CHALLENGE**—1st, J. Lewis's Patsy O'Connor.—**OPEN**—Dogs: 1st, Mrs. George H. Hill's King Slash's Boy. Bitches: 1st, J. Lewis's Countess Bendigo; 2d, Mrs. George H. Hill's Nora O'Donoghue.

FIELD SPANIELS—1st, B. F. Lewis's Black Diamond; 2d, A. Laidlaw's Samson. Very high com., Neddermeyer & Sander's Lady Babcock.

COCKER SPANIELS—Dogs: 1st, C. M. Nelles's Brantford Red Jacket; 2d, Woodlawn Kennels' Black Luke. Bitches: 1st, J. W. Bunting's Sensation; 2d, Woodlawn Kennels' Marguerite. Very high com., Mrs. F. Smith's Lady Obo and G. Ball's Perhaps. Puppies: 1st, J. W. Bunting's Minstrel.

POODLES—1st, P. Schwan's Hans; 2d and com., W. Rising's Prince and Cleveland. Very high com., T. A. Snider's Carlo. High com., S. G. Dixon's Paris.

BULLDOGS—1st, Mohawk Kennels' Joker.

BULL-TERRIERS—1st, E. H. Kessler's Sir Jack.

BASSET HOUNDS—1st, M. W. Taylor's Babette.

DACHSHUNDS—1st and 2d, N. H. Davis's Sollett and Schenke. Very high com., B. F. Lewis's Gill. Com., A. Mills's Kelpio II.

BEAGLES—**CHALLENGE**—1st, Quaker City Kennels' Little Duke.—**OPEN**—Dogs: 1st, J. Lewis's Ross W.; 2d, A. V. Brodrick's Brod's Sport. Bitches: 1st, A. V. Brodrick's Fern B.

FOX-TERRIERS—Dogs: 1st and very high com., F. Hoey's Veronese and Le Logos; 2d, L. & W. Rutherford's Warren Laird. Reserve, M. W. Taylor's General Grant. High com., A. E. Pitts's Ruby Signal. Bitches: 1st, E. C. Redinger's Blomton Lulu; 2d, L. & W. Rutherford's Warren Dainty. Reserve, H. J. Linzer's Nancy Mixture. Very high com., J. Lewis's Rush. Com., H. F. Lackman's Spot and L. Griffith's Bell. Puppies: 1st, L. & W. Rutherford's Warren Laird; 2d, F. Hoey's Le Logos.

IRISH TERRIERS—**CHALLENGE**—1st, Lewis & Jarrett's Burnside.—**OPEN**—1st, withheld; 2d, P. O. Maderia's Branigan.

BEDLINGTON TERRIERS—1st, N. Koley's Hornet; 2d, International Kennels' Blue Gown.

SCOTCH TERRIERS—1st, Meadowthorpe Kennels' Meadowthorpe Donald.

DANDIE DINMONT TERRIERS—1st, Meadowthorpe Kennels' Meadowthorpe Reiver.

SKYE TERRIERS—1st, C. A. Shinn's Sir Stafford.

YORKSHIRE TERRIERS—1st, J. Farley's Tip; 2d, E. A. Hart's Fritz H.

TOY TERRIERS—1st, G. Meerlein, Jr.'s Bonnie; 2d, Miss Cora B. Davis's Mack.

PUGS—**CHALLENGE**—1st, A. E. Pitts's Kash; reserve, Dr. M. H. Cryer's Bob Ivy. Bitches: 1st, Mohawk Kennels' Bo Peep II.; reserve, Dr. M. H. Cryer's Vesta.—**OPEN**—Dogs: 1st, Dr. M. H. Cryer's Nap; 2d, Hudson and Gillman's Lord Clover; reserve, A. L. Wilson's Little Jewel. Very high com., J. Englehart's Mark and Eberhart Pug Kennels' Eberhart's Cashier. High com., H. Englehart's Sport. Com., J. Eberhart, Jr.'s Beauty. Bitches: 1st, H. L. Goodman's Rustic Queen; 2d, Seminole Kennel's Daisy. Reserve, Dr. M. H. Cryer's Cassina. Very high com., Howard Kennels' Sateen. High com., Eberhart Pug Kennels' Lady Thora and G. H. Hardy's Hazel Kirke.—**PUPPIES**—Dogs: 1st, A. E. Pitts's Mons Dot. Reserve, W. Fisher's Gag. Bitches: 1st, Mrs. A. G. Eberhart's Queen Loris.

KING CHARLES SPANIELS—1st and very high com., C. W. Sander's Rena and Tags; 2d, J. S. Roebuck's Jerry.

ITALIAN GREYHOUNDS—Dogs: 1st, J. Englehart's Prince; 2d, C. L. Bird's Roger. Very high com., Dr. A. J. Miles's Romeo. Bitches: 1st, J. Englehart's Victoria; 2d, Mrs. J. P. Heister's Patti. Very high com., H. Eichler's Flossy. High com., J. A. Armleder's Daisy.

MISCELLANEOUS—**LARGE**—1st, B. H. Kughn's Sport.—**SMALL**—1st, A. Meininger's Japanese spaniel Ko Ko.

SPECIAL PRIZES.

Greyhounds—Kennel, Rookwood Landseer Kennels. Foxhounds—Yard, Cook Kennels; shaggy, A. B. Whitlock. Pointers—Kennel, Iststone Kennels. English setters—J. Shelly Hudson. Irish setters—Kildare Kennels. Gordon setters—S. G. Dixon. Rough-coated St. Bernards—Best puppy, Count Gilmar. Great Danes—Melac. Greyhounds—Babazon. Shaggy foxhound—Pierce. Pointers—Puppy, Bobby Burns. Setter bitch, Bohemian Girl. Pointer or setter stud dog (2), Little Boy. Irish setters—Best dog (2), Mack N.; bitch, Laura B.; brace, Laura B. and Winnie II.; Gordon setters—Little Boy. Irish water spaniel—Best dog in open class, King Slash's Boy. Cocker spaniels—Brantford Red Jacket. Fox-terriers—Best in open class, Veronese. Pugs—Best (2), Kash; owned by a lady, Queen Loris; dog puppy, Mons Dot; bitch, Queen Loris. Italian greyhounds—Best dog, Prince; owned by a lady, Patti.

BUCKEYE.

TO FORM AN ENGLISH SETTER CLUB.

THERE will be a meeting of those whose names are associated in the call below at the rooms of the American Kennel Club, No. 44 Broadway, New York city, Tuesday, June 24, at 1 P. M., to form an English setter club, for the election of officers and transaction of such business as may come up at the meeting.

NEW YORK, Jan. 23.—We, the undersigned, desire to invoke concerted action by persons interested in the English setter, for the organization of an English setter club. Such a club is urgently needed in the common interest to undertake the regulation and better management of those matters affecting this particular breed of dogs, which require the authoritative direction of a central body. Among the principal objects to be observed is a revision of the standard of bench show form to conform to the improved English setter of to-day, as demonstrated by the results of our numerous field trials; to select and suggest the names of men competent to judge the breed at bench shows, to offer prizes at such shows as shall recognize the standard of the club, and the judges selected by it, and to extend its influence to the promotion and improvement of field trials, and to the selection of judges at such trials in such manner as the club may deem most efficient and desirable. It might also be expedient to secure necessary legislation for the better protection of the right of property in dogs, and for kindred purposes which only concerted action can adequately influence. To this end duplicate lists for signatures will be mailed to several sections of our country, where a strong following is assured. When the lists are all returned, a call in the proper papers, with the signatures obtained, will be made for a meeting for the organization and transaction of such business as may come before it. To this we, the undersigned, agree:

SIGNATURES.

Pierre Lorillard, Jr., Jas. L. Breese, Thos. H. Terry, Percy Ohl, John S. Wise, Wm. Tallman, Wilson Fiske, John E. Long, New York; W. A. Coster, Saratoga Springs, N. Y.; J. Treadwell Richards, Elizabeth, N. J.; J. M. Taylor, A. P. Vredenburgh, Bergen Point, N. J.; J. E. Guinotte, W. G. Peters, F. R. Rice, W. T. Irwin, Kansas City, Mo.; P. H. Bryson, W. B. Gates, Arthur Merriman, Memphis, Tenn.; J. M. Avert, Hickory Valley, Tenn.; J. Shelly Hudson, Geo. Wells, Covington, Ky.; Taylor Williams, Newport, Ky.; Gen. W. B. Shattuck, Cincinnati, O.; Geo. H. Hill, Madeira, O.; J. E. Dager, Toledo, O.; Richard Morgan, Akron, O.; Will A. Neddermeyer, Columbus, O.; H. Hulman, Jr., Terre Haute, Ind.; Geo. W. Ewing, Fort Wayne, Ind.; Chas. L. Holmes, Waterbury, Conn.; Edgar Huidekoper, Meadville, Pa.

NEW YORK, June 16.—*Editor Forest and Stream:* In February and March last the signatures of these owners and breeders of English setters were obtained, and they should have been sent in long since; but a rush of business in preparation for and giving a series of tournaments taking my entire time, prevented my attention to the matter. I am alone responsible for the delay. J. M. TAYLOR.

CENTRAL FIELD TRIAL CLUB DERBY—New York, June 12.—*Editor Forest and Stream:* In checking over the entries to our second annual Derby, we find that the subjoined entry was omitted from the list sent you last week: F. Richards, agent, setter Rudge Gladstone (Paul Gladstone—Bohemian Girl). This makes total number of entries 116.—C. H. ODELL, Sec'y Central Field Trial Club.

CHAMPION FLORA II.—This well known St. Bernard bitch strayed or was stolen last week from her kennel at Montclair, N. J. Information regarding her will be thankfully received by Mr. L. Daniels, 301 Produce Exchange Building, New York.

FUN AT DOG SHOWS.

[Continued.]

OLLA PODRIDA.

WHILE this is the "cussing" side, there is also a funny side to every scene. At one of the shows Miss Van Buren exhibited her Italian greyhound Cupid, quite a good one. Somehow he wet his mat and a bit of the mat dye came off; so when he appeared in the ring the knowing judge ordered him out in quick order, because "the dog is alive with mange." The poor creature had to go, and our judge no doubt rose fully ten points, in his own estimation. One of the best specimens of the breed ever shown in America had to be content with a second prize, as the officiating person said he was "too small." As the limit is "not over" but "under eight pounds," what in the name of common sense was wanted? The judge didn't know, so the little fellow had to bear the ignominy of being "too small." Not unlike this was the experience of an exhibitor at New York, in the miscellaneous class, a class composed of dogs of accepted breeds but not eligible elsewhere, the exhibits being too few to warrant a class by themselves. First prize went to a dog, and as the owner was leaving the ring with the blue ribbon he asked the judge what breed of dog his was, as he himself didn't know nor had he ever seen a man who did know. The "judge" colored, turned away, not vouchsafing an answer. Now, this is what we have been through and are still sweetly meandering through. Heaven help us!

I never hear the name of Garry Owen but I have to smile audibly. No dog's nose ever caused half the trouble in this world that Garry's has. Poor Garry's was black by nature, but nature took a freak, changed it for a while to white; and while it was in that state one of our canine mentors claimed that the owner had faked it in order to make it the proper color. The result was that there was a grand rush for white nose Irish terriers, and the lucky owners were happy in their possession, for they said, "The great judge and critic says the noses should be white." Shortly afterward the white nose became black; and Dr. Niven, I'm sure, never after saw Garry Owen without having a good hearty laugh.

BEAGLES.

These little beggars have given lots of amusement to the knowing ones. At one of our shows the judge had to resort to the "point system." Several onlookers watched the score as it was made out, and the winner was landed the happy possessor of 102 points out of a possible 100! Good figuring this, and a mighty smart dog, too! But all in all the dog was worth a dozen such as Storm, who for some reason, never understood, has been placed over, not only good ones but real clinkers. May be immense size and general coarseness win when quality and perfect outline are unseen. In Philadelphia once, in a good class of

DACHSHUND.

Gretchen and Flint, the very worst specimens in the show, were given the blue and red ribbons. No one kicked, for with the exception of Mr. Mason, nobody seemed competent to show up the farce. It was too funny, so he smiled and then—"smiled" again. That beautiful

BULL-TERRIER.

Starlight, by one of our "judges" was pronounced to be anything but a bull-terrier. It might be any other sort of a terrier, but bull-terrier it never was nor would be. Yet, somehow, the blue ribbons keep being tacked on to her collar by a competent judge, and it bothers the incompetent judge and critic to find a better one.

BULLDOGS.

Britomartis has never recovered from the terrible grumbling in a Western paper, where it was stated that "her lower jaw is not level." Had the critic's head been as near level as her jaw was right, he would have said she had one of the grandest heads ever seen on a bulldog. Another one of our "judges" and critics finds fault with a certain bulldog because he does not stand like a terrier in front, and has so publicly stated it in his report. I fear the next thing we will have will be a new standard where legs shall be straight as ramrods and jaws as level as a pointer's. I've often wished to hear Billy Graham's laugh, but never more so than when once at Philadelphia, where the

PRINCE CHARLES SPANIEL.

Napoleon III. was awarded most reluctantly a second prize. The judge refused to give him first prize because "Poor little Nap's nose and the cruel mallet had been made more closely acquainted than the rules of Mr. Bergh's Society would permit." He thought a toy spaniel should have a long face. Those little lively chaps, the

BLACK AND TAN TERRIERS.

have given us lots of fun too. The Meersbrook Maiden business is still fresh in our minds, but what a row that little lady did make for a while! all over the country she went, a long list of first and special prizes won under the best judges in England tacked on to her name, quite covering up her lovely white blaze. Our Scotch friend got the babies woefully mixed up on his trip out, still no one discovered it, no one knew the difference, all kept on handing her out the blue ribbons. The FOREST AND STREAM banged away at the judges for giving first and special prizes to a dog with a disqualifying mark on her as plain as the sun at noonday, but it did no good. There was one judge, and only one, who was equal to the occasion, just as in the case of the fox-terrier Rubicon, the robber dog that took from Mr. Thayer and other owners hundreds of dollars. *Turf, Field and Farm*, with its juvenile reporter, informed their readers that they had had the great pleasure of giving the peerless Meersbrook Maiden a very careful examination and found her a wonder. The Chicago paper, represented by our Babylonian friend and judge, wrote of her as a world-beater, and told Dr. Foote that he recognized her at a glance as the beautiful bitch he saw in London when over there. Compare the blundering work of these novices with Mr. Mason's report the first time Mr. Mortimer gave the supposed Maiden first prize and you have conclusive evidence for the one hundredth time that it is all moonshine to suppose a man can judge dogs properly unless he is a born judge and has had the practice necessary to mature the innate knowledge. He can't do it. Look how the judges get tripped up the very first time a man brings before them a rank duffer with a long list of winnings behind! They look wise, ape the actions and movements of competent men and then—collapse. Here, my boy, is Mason's report, written many weeks before it was discovered Meersbrook Maiden was not Meersbrook Maiden at all, but Meersbrook Girl, a "skate" sent over to keep the Maiden warm on her passage out.

[FOREST AND STREAM, March 21, 1889.]

Only one bitch, Meersbrook Maiden, was shown. She was given first and special for the breed, a decision which will never be indorsed by those who have any knowledge of the breed. Her great English record won her the prize. She has twenty firsts and seconds in England to her credit, and as no English judge would ever award prizes to a black and tan and white, black and tan terrier, it is positively certain that the bitch was faked when she was shown in England. She has a long white spot on her breast, and, as every one who understands the breed is aware, this is a disqualifying mark. For the benefit of the judge and others who are not posted on the breed, we quote the following from "The Book of the Dog": "The smallest spot of white is an absolute disqualification, so particular notice must be taken to see that no dishonest staining has taken place. The chest is by far the most likely place for it to appear." "Stonechange" says: "The color and markings (value 25) are in this breed—which is now essentially a fancy dog—important. No other color than black and tan or red is permissible; the least speck of white is fatal to winning chances, and it is in richness, contrast and correct distribution of these that excellence consists." The owner of Buffalo General, that was first in the dog class, should have put in a protest and claimed the special prize.

Would-be judges follow the records. Real judges know a good dog when they see one, regardless of newspaper reports and the record. Herein lies the difference. On many occasions we must show our dogs under incompetent judges or keep them at home, but this racket won't hold out much longer, notwithstanding the would-be controllers of dog shows insist that incompetency is the parent of popularity. I know one unfortunate exhibitor who contended with the judge that his dog was better than the Maiden, on account of having no white at all, and was laughingly dismissed with "Why, the Maiden could beat your dog if she was all white!" What a jolly laugh our British cousins must have had when they read the learned article after article devoted to this controversy. If those boys on the other side don't put up a host of "jobs" on us in the near future it won't be from any conviction that we are "up" in all breeds. Dan O'Shea was guilty of about as good a joke as ever was perpetrated on any judge. It was at Cincinnati, and here he showed a

SPANIEL.

Scarce had he entered the ring ere the poor dog was ordered out in quick metre. Dan went, too, and deftly with a pair of scissors he trimmed the feather all off and boldly entered the ring again with her in another class, and came out a winner. 'Twas too good to be kept under a bushel, so one after another of the conspirators gave it all away, and at last the full force of it was given to the public. I fear the judge never quite forgave Dan, and Dan is surely too smart to ever give him the chance to again "judge" his dogs. By the way, the Spaniel Club, with the exception of the St. Bernard Club, is about the only one that is entitled to be called a specialty club, for it has spaniel men to judge spaniels. Fewer mistakes have occurred in this breed than in any other, due solely to each man guarding his own and uprisings against the idea that "anybody can judge spaniels." I never see a

MASTIFF.

without laughing inwardly at the scene enacted at Pittsburgh, where a judge gave an h.c. card to that lovely Lady Clare. That was quite on a par with Mr. Dana's decision at New York, where he said that Salisbury (winner of some 75 first and special prizes in England) was too large for a mastiff and gave him third prize to a 875 dog's second. Considering that Salisbury after a season's winning was bought for £200 by Mr. Mason and was never afterward beaten in England, it looks very much as if some of our judges know as little of dogs as they do of cats. Take for instance that grand specimen, Ilford Cromwell. Several times he was shown, yet beaten at every point, sometimes not even getting a mention, and sometimes staggering under the load of a mighty "c." card. Now he is a "champion of record" according to the A.K.C. standard, and has won the title after many a hard fought battle. Then look at Ilford Caution. Some of our judges who had never seen a short-faced mastiff thought he was a mongrel, and had it not been for Mr. Mason's articles and criticisms in FOREST AND STREAM, he would have been buried alive. The novices all at sea on this year's reports of the world-renowned new-comer Beaufort, and if he wanted to buy a mastiff what would he do and where would he go when the critics of two papers act also in the capacity of judges at most of our shows? One critic, after calling him "one of England's giants," says he is nearly a cripple (though not yet six years old), has a good head, yet plain face, and is inferior to Ilford, Chancellor and Melrose Prince. Another critic says he is a mastiff of the first water, while a third says he has a wonderful skull but almost too square a muzzle and completely smothered his competitors. Such reports from men who enter the judges' rings teach the learner absolutely nothing, and instead of being the educators are in fact the confounders. The stately

ST. BERNARDS.

have come in for a goodly share of setbacks, and it is not many years since I witnessed judging that raised all the ire in my nature. Dan Foster had a creature, whose dam had probably been scared by a St. Bernard, which he called Barry. He showed this same Barry at the New York show of 1887, and there the judge had the hardihood to give him third prize over a dozen better specimens, when at the very greatest stretch of leniency he did not deserve even a c. card. Merchant Prince bowled out that peerless Leila, and old Apollo did the same thing, when in very truth neither dog could beat one side of her. These decisions aroused the Yankees "Dutch," and soon the cry was "Miss Whitney to the rescue," and gallantly has she responded, thus saving the noble breed from its slaughterers.

To me it seems some exhibitors don't care how they get their prizes or under what conditions so long as they get them. They would rather win a first and special prize for "best in the show" with a dog they know full well is a perfect scrub, and while having better ones at home, than take second prize to a rare good one, being "beaten by a neck." This was forcibly illustrated at a recent meeting of a large kennel club not a thousand miles from New York. It was proposed by one of the members that a certain judge should be asked to officiate at their coming show. Another member sprang to his feet and strenuously opposed it, saying, "Gentlemen, I want to win once in awhile, but under Mr. — I get left, as the best dogs win under him, while with other judges I stand as much chance of winning as any one else." "Is needless to say Mr. — was not invited."

This is about the sort of men who run our dog shows, and the only wonder is that, handicapped as our dogs are, the really good ones ever get to the front. Until the shows are held in all honesty and sincerity of purpose for the improvement of dogs, until specialty clubs sink friendship and sinister motives forever out of sight and select only men they know to be both competent and honest, we shall go on stumbling along like blind men, full of theory but empty of results, hoisting up mongrels and bowling down good ones. Let the specialty clubs stand on their own bottoms, be independent, govern themselves, brook no interference from outside parties, approve only as judges the very best men regardless of personal feelings, refuse to support with their entries dog shows where incompetent judges officiate, and I'll venture in three years from date of such action the dogs will be improved a hundredfold and foreign nations be buying our beauties instead of our people sending thousands of miles to find what is wanted. Take the Mastiff Club, or Clique Club as it is called. There is not a judge of mastiffs on the list. Look at the Pointer Club; every judge of pointers barred. Then there is the Fox-Terrier Club, with just one judge of terriers (Mr. German Hopkins). And we are told that the first object of the clubs is the improvement of the dog. Bosh! The shrewd commercial man secures the very best talent obtainable and mounts the ladder of wealth through that means. The lunkhead takes what comes along and in a year or two we hear of a "failure." What is true in commercial life is true in the dog fancy, in the poultry fancy; in fact, in all walks of life. Why men who have thousands of dollars invested in dogs act as they do passes all comprehension. The same tactics carried into their business life and they would "bust" in six months.

The three factors that enter largely into the judging in this country are incompetency, favoritism and hatred. Perhaps there is no hobby where jealousy and hatred can be so clearly seen and revenge so gloriously wreaked as in dogs. If a judge don't like a man he too frequently judges the owner and not the dog itself. He strikes the owner his cruel blows through his dog. At every show you will hear men openly declare that they would get knocked out with however good a dog they might bring into the ring, and if any old score is to be settled it is done right here to the evident delight of the judge. One incompetent judge's opinion is prejudiced by another's, and so it goes the rounds

like a rotten apple in a barrel of sound ones. Favoritism too, goes a great way. They too often judge who has hold of the chain and not what is at the other end of it.

Not long since I attended a show where an exhibitor was asked by a mutual friend what he had entered. He gave the dog's name, which the questioner had never heard before, yet when told who the judge was and without having first seen the dog, offered to bet a box of cigars that he could win first prize with it. He said: "Why I can win with anything under —." And so he did. The bet was paid, and on the train home we managed to smoke the entire box of cigars, leaving him nothing but the special prize this same dog had won, and which the owner positively refused to take home, vowing he'd be ashamed to tell his brother dog owners with what dog and how he had won it.

One is constantly hearing this "Why I can win with anything under —." What does all this mean, and why do not exhibitors stop a moment and think what is the cause. They are constantly approached at our shows by friends who say, "Let me take that dog in and I'll land you a winner;" and though the speaker may not be a fancier of that breed, may not even know a world-beater from a flat catcher, yet he too often reckons, knowing his host, and hands you the blue ribbon. At New York, not many years since, I made a large entry. A friend (the secretary of one of our clubs) offered to take one for me into the ring, betting dinners he'd win with whichever I gave him. I handed him over the poorer (the other being a rare good one) and sure enough I took second and he was convulsed with laughter as he waved the blue ribbon under my nose. My dog had won a lot of prizes, his never had nor has since that day. I paid the bet and to this day the laugh is still on me.

I recently read in one of our papers that the falling off of shows and the number of entries was due to the fact that the New York show was held in February, was the first one of the year, and exhibitors winning there were satisfied to rest on their laurels. This deduction was all wrong. Last year we had thirteen spring shows, this year we have only six, and for next year I predict a still less number if the clubs persist in appointing incompetent judges, whose decisions cause exhibitors to become disgusted, kick like mules, and finally keep their dogs at home, advising their friends to do likewise, and never as much as visit the show when it is in their own city, except it be to see the fun, witness the "judging," and have a hearty laugh while saying "What fools these mortals be."

MEPHISTO.

KENNEL NOTES.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Rowdy II., Mingo, Belle and Miss Veen. By J. P. Prentiss, Wilmington, Del., for beules, one black, white and tan and one white and dun dog and two black, white and tan bitches, whelped Feb. 16, 1890, by Rowdy (champion Rattler III.—champion Myrtle) out of Fly (Bobby—Lady).

Fantasma. By Theo. J. Hook, Rome, N. Y., for red cocker spaniel bitch, whelped Feb. 14, 1890, by champion Red Rover (champion Obo II.—Woodstock Dinah) out of Woodstock Floss (Robin—Woodstock Nellie).

BRED.

Prepared Blanks sent free on application.

Rose Graphic—Ben Adham. Chas. D. Roberts's (Dexter, Me.) pointer bitch Rose Graphic (champion Graphic—White Rose) to Dr. H. K. Fletcher's Ben Adham (champion Graphic—Rush—Eria), May 19.

Lass of Graphic—Count Fauster. E. C. Rochester's (Logan, O.) pointer bitch Lass of Graphic (champion Graphic—White Rose) to Dr. Holston's Count Fauster (Mainspring—Dolly Fauster), May 26.

Eudora—Monk of Furness. The Elms Kennels' (Forest Lake, Minn.) English setter bitch Eudora to their Monk of Furness, June 8.

Granger Belle—Monk of Furness. F. F. Congdon's (Beaver Dam, Wis.) English setter bitch Badger Belle to The Elms Kennels' Monk of Furness, May 19.

Daisy—Titus. O. B. Gilman's (Boston, Mass.) cocker spaniel bitch Daisy (Jet—Beauty) to his Titus (Prince G.—Lora), June 5.

Black Nan—Sancho. C. Kammerer's (South Boston, Mass.) cocker spaniel bitch Black Nan (champion Black Pete—Altha) to O. B. Gilman's Sancho (champion Obo II.—Dido W.), June 7.

Ruff—Sancho. Miss Morrison's (Boston, Mass.) cocker spaniel bitch Ruff (Burgler —) to O. B. Gilman's Sancho (champion Obo II.—Dido W.), June 14.

Frantic—Obo II. O. B. Gilman's (Boston, Mass.) cocker spaniel bitch Frantic (champion Black Pete—Fannie Obo) to J. P. Willey's champion Obo II. (Obo—Chloe II.), June 11.

Phonny—Black Pete. O. B. Gilman's (Boston, Mass.) cocker spaniel bitch Phonny W. (champion Obo II.—Dido W.), June 16.

Spunkie—Red Rover. Theo. J. Hook's (Rome, N. Y.) cocker spaniel bitch Spunkie (Wilkes Obo—Black Flash) to his champion Red Rover (champion Obo II.—Woodstock Dinah), April 2.

Mollie—Red Rover. Theo. J. Hook's (Rome, N. Y.) cocker spaniel bitch Mollie (Carlo—Beauty) to his champion Red Rover (champion Obo II.—Woodstock Dinah), April 7.

Bud—Fishpool Gem. G. A. Muenchinger's (Newport, R. I.) Yorkshire terrier bitch Bud (Snyder—Mollie) to North Fields Yorkshire Kennels' Fishpool Gem (Harrison's Ben—Bent Rose), April 20.

WHELPS.

Prepared Blanks sent free on application.

Dido B. Tell Kennels' (Worcester, Mass.) pointer bitch Dido B. (Amroy's imported Bob—Daphne K., June 12, six (four dogs), by their Dargio (Mikado—Gypsy K.).

Countess Amelia. The Elms Kennels' (Forest Lake, Minn.) English setter bitch Countess Amelia, June 6, seven (four dogs), by their Monk of Furness.

Jess. The Elms Kennels' (Forest Lake, Minn.) Irish water spaniel Jess, June 2, nine (four dogs), by their The Kerry Gov.

Moll S. The Elms Kennels' (Forest Lake, Minn.) Irish water spaniel bitch Moll S., May 29, twelve (six dogs), by their Daniel O'Rourke.

Dot. C. Kammerer's (South Boston, Mass.) cocker spaniel bitch Dot, June 12, eight (six dogs), by O. B. Gilman's Sancho (champion Obo II.—Dido W.).

Spunkie. Theo. J. Hook's (Rome, N. Y.) cocker spaniel bitch Spunkie (Wilkes Obo—Black Flash), June 6, eight (five dogs), by champion Red Rover (champion Obo II.—Woodstock Dinah).

Mollie. Theo. J. Hook's (Rome, N. Y.) cocker spaniel bitch Mollie (Carlo—Beauty), June 9, nine (six dogs), by his champion Red Rover (champion Obo II.—Woodstock Dinah).

Jenny. North Fields Yorkshire Kennels' (Salem, Mass.) Yorkshire terrier bitch Jenny (Deardon's Tell—Phillip's Violet), May 19, three (one dog), by their Toons Royal (champion Dreadnaught—Tricksy).

SALES.

Prepared Blanks sent free on application.

Currier's Prince—Maygo whelp. Liver and white pointer dog, whelped March 25, 1890, by C. A. Parker, Worcester, Mass., to E. Rogers, Norwich, Conn.

Rose Graphic. Liver and white pointer bitch, whelped May 15, 1889, by Graphic out of White Rose, by D. H. Moore, Athens, O., to Chas. D. Roberts, Dexter, Me.

Lady Agnes. Orange and white St. Bernard bitch, age and pedigree not given, by The Elms Kennels, Forest Lake, Minn., to D. Bergman, St. Paul, Minn.

Monk of Furness—Lady Fayette whelps. Black, white and tan English setter dogs, age not given, by the Elms Kennels, Forest Lake, Minn., one to A. M. Drake, St. Paul, Minn., and one to M. Poehler, Henderson, N. C.

Spokan. Black, white and tan English setter dog, age not given, by Monk of Furness out of Lady Fayette, by the Elms Kennels, Forest Lake, Minn., to G. Bernals, New Orleans, La.

Corinna. Red Irish setter bitch, whelped April 10, 1890, by Blaze out of Gladys B., by R. H. Burr, Middletown, Conn., to G. T. Lord, Turnerville, Conn.

Fun W. Black cocker spaniel bitch, whelped May 4, 1889, by Little Lad out of Miss Ginger, by J. P. Willey, Salmon Falls, N. H., to Mount Waite Kennels, South Framingham, Mass.

Pansy W. Black, white chest, cocker spaniel bitch, whelped Sept. 12, 1888, by champion Obo II. out of Lady of Learning, by J. P. Willey, Salmon Falls, N. H., to Mount Waite Kennels, South Framingham, Mass.

Learned Truett. White, black and tan fox-terrier dog, whelped March 18, 1890, by Hillside Tarquin out of Rose S., by Learned Kennels, Hudson, N. Y., to H. H. B. Angell, New York.

Rifle and Trap Shooting.

RANGE AND GALLERY.

CREEDMOOR.

THE Board of Directors of the National Rifle Association on June 10, unanimously elected Capt. John S. Shepherd executive officer of the annual fall prize meeting, which is to begin at Creedmoor on Tuesday, Sept. 9, and cover five days. It was voted to admit the Martini-Henry to competitions restricted to military rifles. The Tiffany continuous match was made an all-comers' any-rifle competition, distance 200yds., number of shots 5, on the American standard target. The emoluments in this contest are uncommonly valuable, the principal being the Tiffany silver vase and \$50 in cash, followed by 32 cash prizes, namely, \$50, \$30, \$25, \$20, \$15, 5 of \$10, 7 of \$7, and 15 of \$5 each. In addition to the foregoing the German Schutzen are to be favored with a special competition known as the Barney Walther team match, distance 200yds., standard target, 5 shots; teams of 5 men; entrance fee, \$10; re-entries, \$5; 75 per cent. of the entrance money can be divided into prizes of 30, 25, and 20 per cent., the winning team to be declared champion short-range shots, and to be presented individually with medals.

It was decided to allow any position in the Steward Continuous Match, and the Governor's Match was reduced from a 10 shot to a 7 shot competition at 500yds.

The Directors, Judd, Wimbledon Cup, President's Long-range Military, All-comers', Hilton Trophy, Inter-State Military, Interstate Long Range, New York State National Guard, and First and Second Long Range matches, on the right of the range, and the association should furnish competitors with weapons without charge and with special ammunition at cost.

ALBANY, June 13.—The Legislature of last year passed a law providing that whenever the National Rifle Association should convey to the State its grounds at Creedmoor, L. I., constituting the rifle range, the State should acquire the same, and the association should accept and manage the same as a State rifle range for the use of the National Guard. The Attorney-General has approved such a deed of Creedmoor, which was made some time ago, and the Attorney-General has accepted the property. This conveyance, however, is not to be made until the association has agreed to a term of ten years from the date of the passage of the act, upon paying the expenses of markers and any and all necessary expenses to hold its annual competition in rifle shooting at Creedmoor for a period not exceeding ten days in each year, and such other rifle matches and practice as may be approved and authorized by the Attorney-General. The law also constitutes the Attorney-General, or his Chief of Ordnance and General Inspector of Rifle Practice a board to acquire additional land in the rear of Creedmoor in order that rifle practice can be properly carried on upon the range, and \$25,000 was appropriated for the purchase of additional land. The board has held one meeting, but decided not to purchase any land until the public road which lies in the rear of the range has been declared closed.

The Attorney-General has issued an order to the General Inspector of Rifle Practice that no liquor shall be sold on the ground.

ST. LOUIS, Mo., June 7.—A. McBean made the top score at the last shoot of the St. Louis Pistol Club. E. Mohrstadt won second. All shooting is at 125yds., standard American target. The scores:

A. McBean	8	9	7	10	10	10	10	93
E. Mohrstadt	10	8	10	9	10	9	8	92
G. Alexander	8	9	8	8	10	10	7	80
S. D. Rmin	8	10	8	10	8	9	8	88
M. Summerfield	9	10	9	8	9	8	9	86
W. Bauer	9	6	7	10	9	7	9	85
W. Mackwitz	9	10	12	10	12	12	11	84
H. Russell	7	10	7	10	5	10	9	80
M. O. Billmeyer	10	6	9	8	8	10	8	80
S. J. Schaefer	7	5	10	7	8	7	8	78
A. E. Bengel	5	7	9	6	8	10	8	69
John Dineen	5	8	5	9	6	7	4	66

Following are the scores of the Laclede Rifle Club, 70ft. range, 10 shots, possible in 10 shots 125:

S. Gassard	12	12	12	12	12	12	12	119
Billy Clark	12	12	12	12	12	12	12	118
W. W. Wolf	12	11	12	12	12	12	12	118
J. W. Ries	12	12	12	12	12	12	12	118
Capt. Cork	12	11	12	12	12	12	12	117
W. R. Cottrell	11	12	12	12	12	12	12	117
E. Mussman	11	12	12	12	12	12	12	116
J. W. Phillips	11	12	12	12	12	12	12	115
A. N. Truesdale	11	12	12	12	11	12	12	114
G. C. Irwin	12	11	11	12	12	12	11	112

Below are the scores of the N. O. Nelson Rifle Club, made last Thursday, at 500yds., distance 40, possible in 7 shots 84:

A. Fredrick	12	12	12	12	12	11	83
P. Fredrick	9	6	12	10	12	12	81
G. W. Felton	9	6	11	11	12	12	80
C. N. Fredrick	12	12	11	11	11	12	80
H. Blaisdell	10	12	12	10	11	12	78
B. F. Smith	10	11	12	10	12	12	78

THEY HUSTLED THE POTATO PATCH.—Ephrata, Pa.—At a recent match of the North End Rifle Club, 200yds., off-hand, the following scores were made:

West	10	9	7	5	7	0	7	5	8	71
Winters	5	10	8	5	8	7	4	0	6	63
Wenger	4	9	6	8	9	4	4	0	6	58
Carpenter	4	9	6	7	9	6	3	4	5	58
Stober	4	10	3	10	6	6	0	3	4	49
Lefevre	10	0	4	3	6	4	3	3	4	37
Konigsmacher	6	5	8	4	0	3	0	0	6	37
Dorrich	6	10	7	8	3	3	0	3	33	
Miller	3	6	0	0	0	0	0	0	28	
Bickley	0	0	0	0	0	0	0	0	7	

The most amusing feature of the day was to see Messrs. J. A. Stober, late candidate for Senator, L. M. Wiest, merchant of Schoenock, W. P. Winters, proprietor of the Ephrata House, and J. R. Shirk, of Ephrata, in the field of Jacob Kissler, where the great is placed, leading to plant potatoes, before the match could take place. Mr. Kissler was at planting potatoes in the rear of the target and the place where the boys stood to shoot, and in order to get him out of harm's way the boys jumped over the fence, grasped several baskets and coal buckets, and in an hour or so had planted quite a number of rows, each probably nearly 100yds. long. The boys enjoyed it, and Mr. Kissler was not in the least sorry for the trouble he had.

The Schoenock Short Range Rifle Club met at their range, at Schoenock, on last Saturday afternoon, for practice at 25yds., off-hand shooting, with .22cal. rifles:

W. E. Crouse	6	6	8	9	10	8	9	9	10	84
P. H. Treisch	9	9	7	6	6	8	6	6	70	
E. S. Hagy	8	4	10	4	5	8	10	5	67	
H. P. Pannabecker	9	7	10	7	8	4	8	4	65	
J. R. Shirk	9	6	6	9	9	8	7	6	63	
A. S. Burkholder	0	6	10	0	8	10	4	6	59	
D. M. Appel	0	8	4	5	5	9	7	4	65	

This was the close of their ten scores, under which they are classified in four classes.

BOSTON, June 14.—The Massachusetts Rifle Association began its spring meeting to-day, at their range, with a good attendance of riflemen. Some fine scores were made. The weather conditions were of the best. The meeting will continue all day Monday and Tuesday. There are four matches, each containing many valuable prizes. Following are the full scores made to-day, distance 200yds., standard American target: Match No. 1, off-hand match, 40 prizes. Seven shots, five scores to count:

H. E. Tuck	303	A. A. Philbrick	288	S. T. George	269
O. M. Jewell	301	F. T. West	287	M. Beal	257
W. Charles	300	N. O. Good	278	S. E. Howard	244
J. A. Fry	299	S. O. Sydney	272	M. T. Day	186
W. G. Hussey	236				

Match No. 2, rest match, 12 prizes, 7 shots, five scores to count:

F. Daniels	386	S. Wilder	379	V. P. Thomas	376
------------	-----	-----------	-----	--------------	-----

Match No. 3, military match, 10 prizes, 5 shots, five scores to count:

J. H. Keough	197	W. G. Hussey	196	F. J. Lounsbury	168
--------------	-----	--------------	-----	-----------------	-----

Match No. 4, 5yds. pistol match, 5 prizes, 7 shots, 5 scores to count:

H. Severance	319	W. Charles	317
--------------	-----	------------	-----

ROBERT MILEY.—The sudden death of rifleman Robert Miley comes as a sharp and disagreeable surprise to his many friends in Brooklyn. For several years he was a firm friend of Gen. Dakin, and had a great admiration for the bluff hero of Dollymount.

NEW ORLEANS, June 8.—The fourth day of the rifle contest at the range of the Metropolitan Club took place to-day in the presence of a fair number of spectators. The shoot was an interesting one. The score to date stands:

Arnauts	17,457	Endeavors	16,216	Olympics	17,413
Expectations	16,984	Clairbornes	14,547	Southerns	16,769

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

June 17-20.—Tournament Rocky Mountain Sportsmen's Association, at Cheyenne, Wyo. W. E. Ostrander, Sec'y, Denver, Colo.
June 24-27.—Tournament at Dayton, Ohio, under management of Rollo O. Helkes and W. Scott McDonald, \$1,000 guaranteed.
June 24-26.—Annual Tournament, Hill City Gun Club, Vicksburg, Miss.

June 24.—Third Tournament, Standard Gun Club, Baltimore, Md. T. J. Clements, Capt.

June 25.—Seventh Annual Tournament, Johnstown (N. Y.) Gun Club. F. W. Partiss, Sec'y.

June 27-28.—Claremont Shooting Association, first day live birds, second day targets, commencing at 10 o'clock. C. M. Hathaway, Pres.

July 1.—Tolley's Tournament, Catskill, N. Y. Guaranteed purses. Geo. J. Tolley, Sec'y.

July 4.—Silver Gun Club's Second Annual Tournament, Slater, Mo. E. W. Vaughan, Pres.

July 4.—Towanda, Pa., Second Annual Tournament, Guaranteed cash and merchandise prizes. W. F. Dittich, Sec'y.

July 4.—The Red Hook Gun Club's Tournament, at Red Hook, N. Y. R. J. Carroll, Sec'y.

July 9-10.—Springfield, Mass., Shooting Club Tournament, with guaranteed purses. J. A. Peters, or Corry, Pa., Manager.

July 15-17.—Saratoga Gun Club Tournament, at Saratoga Springs, N. Y. \$1,500 guaranteed. All money prizes, no merchandise. W. A. Coster, Sec'y.

Aug. 13-23.—Third Annual Keystone Tournament, at Corry, Pa. Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Ball Game Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purses. Wm. E. Limberg, Sec'y.

NEW YORK STATE ASSOCIATION.

ON Monday evening, June 10, the delegates to the thirty-second convention assembled in the handsome quarters of the Lyons Club, President W. S. Gavitt in the chair. The meeting was called to order at 8 o'clock. The president opened the proceedings by giving a short address regarding the affairs of the association. Among other things he suggested that the words New York be dropped from the name, and it be hereafter simply called State Sportsmen's Association, and also that the money so collected to be used in the purchase of trophies for the regular State events. He was glad to see so large an attendance, which argued well for the prosperity of the club. Mr. Gavitt spoke well and clearly, and was several times in the course of his speech greeted with applause. In conclusion he tendered the delegates the most hearty welcome from the managing club, the Spencer, and from the Lyons Club, whose rooms were tenanted in so kindly a manner for the use of the convention. The following clubs were active members of the association:

Waterville G. C., Waterville—C. M. Felton, H. N. Candee.
Oneida County Sportsmen's Association, Utica—J. M. Markham, I. F. Tuttle, R. J. Peck, T. A. Daniels, G. Markham.
Peoria G. C., Peoria—Thomas Driver.
Canastota G. C., Canastota—E. B. Roberts, Wallace Suit, E. J. Money, B. H. Clenne, J. P. Lynch.
Chemung Sportsmen's Association, Elmira—J. Nester, P. F. Foley, D. E. Curtin, C. H. Kniffen, Charles Gerler.
Hillside G. C., Watertown—H. H. Taggart, O. M. Paddock, A. Ellingham.

Waterville G. C., Buffalo—J. H. Ball, H. C. Nedge, M. D. Ward.
Trojan G. C., Troy—S. Goggin, A. Paul.
Clyde G. C., Clyde—J. T. Howard, W. N. Gareud, H. H. Constan, H. C. Watson.

Lyons Game and Fish Protective Association—B. Hammond, R. N. Arkey, J. W. Durwell, M. O. Felter, Geo. Keni.
Rome G. C., Rome—A. H. Golly, L. E. Belton, M. R. Bingham, M. R. Kellek, G. Honck, Jr.

Lakeside G. C., Geneva—H. J. Ramsey, I. C. Beebe, H. H. Becker, J. S. Barnes, I. G. Stacy.

Oneida County Sportsmen's Association, Utica—H. C. Gates, C. O. Worden, L. E. Keyes, T. Dexter, W. O. Roberts.

Auburn G. C., Auburn—G. C. Luther, N. W. White, C. E. Egbert, H. C. Kipp, I. Henry Kerr.

Wayne G. C., Williamston—W. C. Hadley, C. Tassel, B. Catchpole.

North Side G. C., Woodside, L. I.—L. Lyon.
Steuben Sportsmen's Association, Pulteney—A. Raker, H. B. Nichols, I. W. Hyatt, C. Wagner, O. O. Conklin.

Audubon Club, Buffalo—J. B. Sage, M. Downs, A. J. Minton, N. E. Story.

Onondaga G. C., Saratoga Springs—W. H. Backus, W. A. Coster, H. M. Livingston, W. L. Fike, J. W. Ramsdell.

Spencer Sportsmen's Association, Lyons—H. B. Whitney, H. R. Killick, I. W. Purnan, N. H. Sheridan, M. F. Forsyth.

Union G. C., Western New York—J. T. Kelsey, N. Moore, E. Andrews, M. Ferris, J. M. Foote.

Homer and Cortland and G. P. A. Cortland—A. H. Schermerhorn, B. E. Miller, J. B. Whitney, W. Newcomb, E. L. Ridge.

Queen City G. C., Buffalo—Phil Behling, Jacob Koch, Otto Beas, B. Tolmsa, I. Busch.

Club—M. N. Richmond, D. H. Andrews, E. Hicks, A. Rickman, A. Baker.

Onondaga Sportsmen's Association, Syracuse—E. Hudson, Sr., I. Hookway.

Peacock Grove G. C., Westfield—T. Peacock.

Other gun clubs, members of the association in good standing: Johnstown, Genesee of Ironduquoit, Elm Grove of Albany, Rochester, Bradley of Walden, Union of Brunswick, Valley Falls, Greenbush, Independent of Hoosic Falls, Catskill, South Side of Watertown, Little Falls, New Berlin, Olean, Gloversville, Chatham, Clarksville, Lake Ontario of Ironduquoit, Fountain of Brookline, Batavia.

The following applied for membership: Clyde, Broadalbin, Buffalo, New Baker of Batavia, Hillside of Watertown, Chemung Sportsmen's Association of Elmira, Oneida County Sportsmen's Association of Elmira, Canastota, Peoria of Buffalo. The secretary, John B. Sage, was ordered to cast the ballot, and upon doing so he declared all those proposed duly elected.

Report of Committee.—The one by Messrs. Hadley, Gavitt and Whitney regarding the programme of the present meeting. Hadley, as chairman, handed the secretary the printed pamphlet, saying that was the report of the committee, and that he felt warranted in saying that the result of the labor of the committee was the best and most varied list of prizes ever offered for competition by the State Sportsmen's Association. (Mr. Hadley evidently forgot the meeting at Coney Island.)

It appeared that there was a hot contention among the clubs as to where the next convention should be held. Buffalo, Syracuse and Rome wished it. Syracuse and Buffalo wished an adjournment in order that more delegates in their favor should be present. Rome and their friends insisted upon immediate action.

At last year's convention the choice of places lay between Lyons and Rome. The contest was close. At a late hour, by a tacit agreement with the delegates, Rome agreed to make way for Lyons, if she could be made the choice for 1891. While it was not in writing this agreement was understood by every man present and should have been binding. The action of this night, looking to a repudiation of that implied pledge, was entirely wrong. Upon motion to adjourn being defeated a scene of uproar followed, which defies description. Motions, counter-motions, amendments came from the mouth of every one, a dozen often at once. The chair was not recognized, and the presiding officer for a time was unable to quell the disturbance. After two hours waste of time it was moved and carried that the regular order of business be proceeded with. Mr. Hadley moved that Rome be the place where the convention of 1891 should meet. Richmond, Koch, Hookway, Cowns and others opposed, asking that Buffalo be the choice. Barnum and Windom asked that Syracuse's claims be heard. Barnum stated that Rome was a new member, of but a few years standing, while Syracuse was one of twenty years; that Syracuse had taken it when any other club declined it, taken it when a money loss was sure to follow, rather than see no convention held the year referred to.

Hadley in answer asked whether it was a question of money-making or not. The argument became forced and heated. Gates, addressing the chair, said that he regretted the scenes of disorder and violent personalities; that the members were supposed to be gentlemen as well as sportsmen, and asked them to act as such.

The confusion at this point reminded one strongly of a heated political convention. At 11:30 P. M. a motion was made to vote upon the choice of the club, the affair was thoroughly enjoyed, and the hour was late when the party separated.

The hours before the assembling of the convention found many of the men on hand. As the time was likely to prove dull unless something was done to prevent it, a series of sweepstakes were inaugurated, commencing at an early afternoon and continued without intermission until the sun went down. The weather was all that could be asked for, clear but not too hot.

The grounds were nicely situated about a half mile from the train and were large, as good as could be desired for the purpose. At the right field a clump of trees interferred somewhat with the light. In center field a large, heavily foliaged oak also was in the way. Outside of that nothing better could have been asked for.

Here follow the scores of

Monday, June 9.

Preliminary contest No. 1, 10 singles, \$1 entry:

Hadley	10	York	9	Catchpole	8
Beechey	10	Wendell	9	Kipp	8
Stewart	9	M. A. Keller	8	Walson	7
Luther	9	Whyte	8	Lyon	7

First and third div.; second div. by Stewart and Luther on shoot off.

Preliminary contest No. 2, 10 singles, \$1 entry:

Hadley	10	Watson	9	Wendell	8
Forsythe	10	Lyon	9	Kipp	7
Whitney	10	Stewart	9	Catchpole	7
M. A. Keller	10	Luther	8	Tee Kay	7
York	9	Tossie	8		

First and third div.; second shot off and div. by Keller, York and Watson.

Preliminary contest No. 3, 10 singles, \$1 entry:

Lyon	10	Catchpole	9	York	8
Sheridan	10	Luther	9	Wendell	8
Watson	10	M. A. Keller	9	Tassel	7
Whitney	10	Forsythe	9	Knittle	7
Tee Kay	10	Hadley	9	Stewart	7

Ties div.

Preliminary contest No. 4, 15 singles, \$1.50 entry:

Hadley	15	Forsythe	14	Payne	12
Luther	15	Kellek	14	Coryell	12
Stacy	15	Sheridan	14	York	11
M. A. Keller	14	Purcell	13	Hyatt	10
Whitney	14	Knittle	13	Lyons	10
Catchpole	14

First divided, other ties shot off; second divided by Peacock, Hadley, Wagner, Norton, Levengston and Watson; third by Goggin, Luther, Crosby and M. A. Keller; fourth by McCormick and Montgomery.

The adjourned meeting was called to order at 9 o'clock, President J. N. Giddin in the chair. The meeting was almost an informal one, nothing being done of any importance save a complimentary notice of the late Mr. Yerrington, of Norwich, Conn. Adjournment followed, to Thursday evening, the hour 8:30 P. M. This and Monday night must have startled the citizens of quiet Little Lyons. On Monday evening a Mr. Tobias was found visiting the town. He fell in with the boys, and being possessed of a magnificent voice, a gleeful club was soon formed, which attracted much attention. At a late hour this gleeful club, attended by a large number of musical enthusiasts, serenaded the town. Did it in handsome fashion, too. I doubt if ever Lyons heard better time in singing than that gleeful club furnished them. The rendering of "My Country 'tis of Thee" was well worth the listening to. Despite all the fun, all the rattling, not a sportsman of all those present, I deem myself for forgetting himself as a man. Indeed all the ill feeling was left behind in the meeting room of the convention.

Wednesday, June 11.

Wednesday opened hot and stifling. The air was saturated with moisture. Breathing was difficult in the heated air. At the early hours a dense fog hid everything. As the sun rose this was dissipated so far as seeing it was concerned, the humidity remained for all that. During the morning and early afternoon the sun fairly blazed upon the contending men. Olive skins took on a darker hue. The fair-bellied fellows bore the brunt of it, their cuticles became first red, then redder, and then the skin

peeled up in little curls. "Broad brims" became the fashion, but the town ran short in supply. On the grounds it was a bake oven in which the shooters represented the loaves.

Contest No. 3, \$80 in merchandise prizes in addition to entries, entrance \$40, class shooting, 12 single kingbirds, ties shot off at 6 single birds:

The club has lately enrolled a number of new members and a largely increased attendance is expected throughout the remainder of the season. Shooting days are the first and third Thursday of each month.—Wm. JENNINGS, Sec.

ST. LOUIS, Mo., June 7.—Last Thursday, J. L. Winston defeated John W. Gates, in a match at 50 live birds, for \$50 a side. An excellent lot of birds were trapped for the affair and both gentlemen made ten stops with their second barrels. The conditions were 50 birds each, A. S. A. rules. Winston 43, Gates 38. A return match at 250 birds, for \$250 a side, is being talked of to take place in the near future.

At Avenue Park, last Friday morning, John W. Gates and James E. Hagerty shot a live bird match, for \$50 a side. The birds used for the shoot were an extra selected lot and the candidates for trap-shooting honors did well to stop as many as they did. Conditions of the match were, 50 live pigeons, A. S. A. rules, for \$50 a side. Hagerty used a 10-gauge gun and Gates a 12-gauge. The score:

John W. Gates.....111111111122121010101111111212201011212-45

EUREKA GUN CLUB.—The June shoot of the Eureka Gun Club took place at Marion, N. J., June 10, under the most favorable circumstances of weather and attendance. Regular monthly bluebird contest, 5 traps, 15 targets, unknown angles, club handicap, Class A.—Chase gold medal, Schortemeier silver medal, Class B.—J. H. Ficken gold medal, Strobe silver medal. Live bird medal contest, 7 birds per man, 50yds. boundary, club handicap.—Schortemeier and Schortemeier tied on straight scores, the former winning by having used the second barrel a less number of times than his competitor. Third event, 10 Cincinnati clays, from 5 Keystones traps, unknown angles.—Difley and Schortemeier div. first, Swindell and H. Butcher second, Kelly and Schults third, fourth event, 4 live birds, 5 traps.—Schortemeier and Schults first, Swindell and Kelly second, J. H. Ficken and Difley third. Fifth event, same as previous.—Schortemeier first, Schults, Swindell and Kelly second, J. H. Ficken third. Sixth event, at 4 birds.—Schortemeier and Schults first, Swindell and Kelly second, Ficken third. Seventh event.—Schortemeier and Schults first, Ficken and Kelly second, Swindell third. The number of birds killed by members follow: J. H. Ficken 10, Kelly 11, Swindell 17, Schults 13, Schortemeier 22, Crossman 4, Strobe 6, Elenard 17, Difley 4, D. Butcher 4, Conway 2, H. Butcher 4, Sutton 5.—L. H. S.

LITTLE ROCK, Ark., June 13.—The Little Rock Gun Club held their weekly shoot at the grounds yesterday afternoon. It proved very interesting and exciting, some excellent scores being made. Mr. Bernays, the jeweller, contributed a handsome gold medal, the winner the shoot to have the privilege of wearing it. It was the next shoot, when he must defend the trophy. The scores ran: Foster.....0111011111111111-16 Jungkind.....010010010010000001-17

FORT HAMILTON, L. I., June 14.—New Utrecht Rod and Gun Club. Club match at 10 live pigeons, 30yds. rise, 50yds. boundary, American Association rules:

R E Street.....8	A Hegernan.....8	G A Cropsey.....6
G R Street.....9	J Koster.....8	G F A Bondies.....5
G E Nostrand.....9	M Van Brunt.....7	J Lott.....5
J W McKay.....9	R J Van Brunt.....7	A Squires.....3
D Deacon.....8		

Several sweeps at clay birds were shot afterward. Next regular shoot Saturday, June 21, and every Saturday thereafter, weather permitting.

WHITNEY-PEACOCK.—A match has been made between Henry B. Whitney, of Phelps, N. Y., and Capt. Tom. Peacock, of Westfield, N. Y., at 100 live birds each, for \$200 a side. A forfeit of \$50 has been posted, and the match is to be shot at Saratoga Springs, N. Y., on July 18, the day after ending of the Saratoga Gun Club tournament.

SLATER, Mo., June 10.—Slater Gun Club, gold and silver medals, 3 traps. Shoot No. 1, 9 single Peoria blackbirds:
Vaughan.....11010111-7 Baker.....01010101-5
"Puck".....11011111-8 Perkins.....01010000-3
Three pair Peoria blackbirds:
Perkins.....10 10 10-3
Baker.....10 10 10-2
Vaughan.....11 10 10-4
"Puck" got gold medal and Vaughan silver.—W. R. K.

BALTIMORE.—The third tournament of the Standard Gun Club will be held at Tolchester, Tuesday, June 24, commencing at 10:30 A. M. Steamer Louise leaves pier 16 Light street wharf, 8:30 A. M. and 2:30 P. M. This will be one of the leading shooting events for the present season in this country, and many times larger than anything of the kind held before in Maryland. The weather will not prevent this shoot. It goes! Standard targets and traps will be used in all events. All shooting will be under American Shooting Association rules. Excursion tickets (Baltimore to Tolchester and return) can be had of gun club secretaries, members of Standard Gun Club and gun stores. This will surpass anything we have ever attempted before. We are sure of having twenty teams in the first event. In fact, I think 200 shooters in one race will surpass a good many parts of the country.—W. S. CLEMENTS, Capt. S. G. C.

Dachling.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1883, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FIXTURES.

21. Hamilton, 25ft.	28. Cor. Navy, Spring Regatta, New Rochelle.

BUFFALO Y. C. PENNANT RACE, JUNE 7.

THE first pennant race of the Buffalo Y. C. was sailed on the afternoon of June 7. The original course was to be five miles to windward and return, but as the first leg would be down wind, and the yachts would outrun the launch in the heavy sea, it was decided to make the course from the club house to the Government breakwall, going twice around the breakwall and back, making about a six-mile race. The wind was blowing fresh from the northwest, with a heavy sea.

The Buffalo Y. C. classifies the yachts by their sailing length, and the sailing length of a yacht is the square root of the sail area alone. The sail area is measured according to the rule adopted by the Lake Y. R. A. Time allowance is computed on the sailing length according to Herreshoff's table of allowances. This rule is found to work admirably in the feet, comprising as it does so many different types of boats, canoes, yachts, sharpies, cutters and skimming dishes, which no system of waterline measurement can harmonize.

The starters were Alcione, Charles Forbush; Louise, F. W. Caulkins; Fanny, F. James Thompson. The start was made at 3:30 P. M. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Alcione.....	3:31 00	5:10 15	1:39 15	1:24 48
Louise.....	3:31 30	5:14 10	1:42 40	1:25 57
Fanny F.....	3:30 30	5:14 45	1:44 15	1:27 39

Louise showed very marked improvement in her sailing over last year. Considerable change was made in her during the winter; her ballast was lowered 8 in. on the keel and chain, and her aft. The center of effort of her rig was also carried aft, and her sail plan cut down.

BAD CONSTRUCTION.

A VERY striking example of how not to build yachts has lately come under our notice, the case being aggravated by the fact that the yacht in question is a modern craft; in fact, only launched in 1888. The yacht is a cruiser of moderate size, and has considerable displacement and a very heavy lead keel. Owing to some local usage she was lately docked, when it was found that the lead keel had been placed some distance from the wood. To remedy this a number of dovetail plates of iron were let into the wood keel and garboards on the one hand and the lead keel on the other, each pair of plates being through-bolted with iron. When the yacht was set afloat the result was to pull the garboards and sides of main keel down, making her worse than before. She was again hauled up and thoroughly examined, when it was discovered that in the first place her keel was added on to the other, and the second, that with very small heads of 1/4 in. copper, were few in number and with very small heads, in addition to which the whole keel construction was weak and insufficient. The main keel is very wide, but of little depth, beside which it is built up of three pieces, a centerpiece and two sides. The frames have but little hold on the keel, while the iron floors are entirely too light, there being only a little tie the heavy lead keel to the hull proper. The fore check, at the fore end of the lead, was built up of small pieces of all sorts, shims, wedges and winchards being used to make up the required shape. It was found necessary to cut in 6 in. hack-mate knees, two on each frame, with a heavy oak keel, through which the new keel bolts will run. The new knees are fastened with screw bolts to the futtocks and are well bolted to the main keel, thus stiffening the latter and at the same time making it a single tie to the frames; while the keelson distributes the weight of the keel and even the fore and aft checks will be replaced with solid timber, and such additional work will be necessary before the yacht is fit for use. In order to bore the bolts it has been necessary to remove the mast and to take out floors, cut out water tanks and tear the whole interior of the yacht to pieces.

There may be some excuse for light construction in the case of racing yachts, but one not intended for cruising, but there can be no justification for such flimsy work as this, and especially in a cruiser. The yacht is as large as many that are built for sea and the West Indies, and is of a type that should be suitable for just such work; but it would be embarrassing to say the least, to have the keel drop out when off Hatteras. With the weights of lead now carried, the nature of the floor construction and the size and quantity of the keel and even the fore and aft checks will be replaced with solid timber, and such additional work will be necessary before the yacht is fit for use. In order to bore the bolts it has been necessary to remove the mast and to take out floors, cut out water tanks and tear the whole interior of the yacht to pieces.

YAMA.

THE new cutter Yama, building for Mr. Allan Ames, of Oswego, N. Y., was launched on June 18 at Winttingham's yard, Bay Ridge, and will leave this week on her long voyage by the Hudson River and the Erie and Oswego canals for Lake Ontario. Yama was designed by Mr. Will Fife, Jr., and is one of the first boats built by the classification by corrected length now used by the Lake Yacht Racing Association. This classification is really no new thing on the lake, having been in use since 1884, but it is only since the active discussion of the measurement question within the past year that yachtsmen have awakened to the fact that length might be taken at the expense of sail, and also that this could be done with good results. There has been but little building on Lake Ontario, the addition to the fleet being mainly imported yachts from the Atlantic coast, and in the case of Merle in 1887, the designer followed the conventional model of a cutter fostered by a length classification, not considering it worth while to avail himself of the privilege of taking more length at the expense of sail. The new yacht is built to the full limit of the class in which Merle will race, 40 ft. corrected length; the factors which make up this figure being 36 ft. l.w.l. and 4 ft. for the square root of the sail area, the latter being the familiar 1.5 seawanhaka rule with a little difference in the detail of measuring.

Yama is to all intents and purposes a reduced Minerva, differing from the latter only in being a trifle narrower, in showing somewhat less bilge and in a little less forefoot, at least these are the points of difference which strike the observer who sees them practically side by side, as when they were hauled out lately at Winttingham's. The sheer, the freeboard and the peculiar contour of the keel are the same as Minerva, and when about the only difference in the appearance of the two will be in color. Minerva being black and Yama white. The rake of the sternpost is the same, about 40°, the lead running aft to the heel of post. The shape of the lead keel is such as to get every pound as low as the contour of the hull permits, wasting nothing in a thin fin. The lead is fastened to the hull by a series of hollow metal bolts, spaced 18 in., and also by diagonal bolts of smaller size at intervals of 1 ft.

The stem, keel and sternpost are of oak, the frames are double-sawn, spaced 3 ft. apart, with two steamed oak frames between. On each side of the stem is a strong angle iron knee, with a strap knee on each bent frame, and bilge clamps are yellow pine, the deck beams of oak and backing of the planking of oak on the bottom and yellow pine on the topsides, with mahogany plank sheer and bulwarks. The deck fittings are all of mahogany, the rail of oak. The transom is very neatly worked out of solid mahogany up to the rail. The decks are of white pine, 3 in. wide amidships and tapering at the ends, the seams being paid with marine glue, and there is a very neat steel windlass and bits in one, a light affair of steel, bolted to the deck, with a geared head for chain, operated by a crank. The yacht of course steers with a tiller, there being a cockpit 5 ft. long by 2 ft. 6 in. wide for the helmsman. The fore part of this cockpit forms the hatch to the sail locker.

Below the yacht is very roomy and convenient; the main cabin is amidships, a room 6 ft. long with 6 ft. headroom under the long skylight. At the forward end of the sofa are the usual sideboards with lockers above, while at the after end are long wardrobes for clothing. The floor space between lockers is 3 ft., the lockers each make a berth by night, and above them the sides are finished with light paneling. The joiner work is of American red cedar, which is further set off by cushions and sofas of rich dark green plush. The companion gives access to the cabin direct, and on the port side of the ladder is the entrance to a very good "ladies' cabin, 6 ft. 3 in. long and with full headroom under the skylight. This room is finished in white pine, painted white, there being the conventional arrangement of a bed on each side, with locker in convenient access to the cabin in racing.

At the forward end of the main cabin a door to starboard opens into quite a roomy toilet room, with w.c. and wash basin, occupying half of the yacht, the port side being taken up by a passage to forecabin and by the pantry and icebox. The forecabin itself extends from the mast forward, and will have hammock bunks for three men. The sails were made by Laphorne & Ramsey, and include a full racing outfit. The rigging and blocks were also sent out from the other side. The scuttling of the yacht is quite light, but only the best materials have been used, and with

a good distribution of parts and plenty of fastenings there is no question of her strength. The fastenings are of copper and yellow metal throughout, iron being used only in the fastenings of the steel floors to the keel and frames. The deck fittings and details are very convenient and complete. Mr. Winttingham has taken special pains with all parts of the work, and the result is one of the best constructed yachts that has yet been set afloat about New York or Boston. The metal work of the deck and spars, which is all of steel, is particularly good.

As the yacht in racing trim will draw over 2 ft. more than the depth of the canals, and it is impossible to lighten her owing to the great weight on her keel, a pair of pontoons, calculated to displace about eight tons, have been built on each side of her, being connected by heavy beams beneath the keel. Each pontoon is provided with a separate rudder, in addition to the yacht's. She was launched with these pontoons in place, and when completed her spars will be lashed on deck and she will be placed in one of the large tows for Albany. She will be fitted out as rapidly as possible on her arrival at Oswego, in order to be in trim by the time of the Lake round in August.

ATLANTIC Y. C. ANNUAL, JUNE 17.

THE annual regatta of the Atlantic Y. C. was sailed on Tuesday at a moderate southeast wind, making a beat out to the lightship and a run in. The fall times were as follows:

	Start.	Finish.	Elapsed.	Corrected.
Katrina.....	10 39 23	3 57 31	5 18 08	Not m.
Shamrock.....	10 39 43	3 57 24	5 17 41	Not m.
Anaconda.....	10 42 33	3 40 32	4 57 59	4 57 59
Clara.....	10 42 02	3 42 00	4 59 58	4 54 35
Nepenthe.....	10 41 05	4 18 00	5 36 55	5 34 55
Stella.....	10 45 00	Did not finish.

Pelican.....	10 45 00	Did not finish.		

	Start.	Finish.	Elapsed.	Corrected.
Frolic.....	10 45 00	2 50 50	4 05 50	4 05 50
Monette.....	10 45 00	3 10 50	4 25 50	4 18 07

	Start.	Finish.	Elapsed.	Corrected.
Bijou.....	10 41 53	2 35 05	3 53 12	Not meas.
Silene.....	10 43 00	2 44 10	4 01 10	Not meas.

The winners were Shamrock, Clara, Nepenthe, Chipsa, Shona, Kathleen, Frolic and Bijou. Minerva finished well ahead of her class, beating Chipsa by nearly 7 minutes, but passed on the wrong side of a channel buoy, and was consequently disqualified. A full report of this race, together with several others, is postponed until next week. The regatta of the Corinthian Y. C. of New York was sailed on Wednesday.

SOUTHERN Y. C. ANNUAL, June 3.—The annual regatta of the Southern Y. C. of New Orleans was sailed on June 3 in a strong S.E. breeze, three rounds of the regular 5 mile triangle. The entries were:

	Sailing Length.	Sailing Master.
Minnie.....	27.00	Louis Martin.
Zoe.....	31.00	W. A. Gordon.

	Working Schooners.	Catboats.
Elmer.....	35.00	J. Christian.
Gracie Cerino.....	40.00	Jos. Cerino.
Gerdes Bros.....	51.00	Frank Maloche.
Dr. Franklin.....	56.00	Martin Green.
		Jos. Laporte.

	Catboats.	Open Boats—Working Rigs.
Minnie S.....	19.08	
C. E. Sarrazin.....	20.00	
St. John.....	26.00	
Juanita.....	27.00	

The club prizes were a handsome trophy for the open boats, \$50 in cash for the working schooners, and \$15 for the catboats, in addition to which Mr. Lawrence Wirt presented a handsome silver pitcher as a prize for the cruising sloops. The start was timed.

The winners are: Class B Growler, Class C Thorn, Class D Henry Gray, and Class E Eddie. The judges were Comm. A. E. Prime, of the Yonkers Y. C., and Theophilus Butts and Geo. S. Garland, of the New Jersey Y. C. The regatta committee included Vice-Com. John Orlieb, Richard C. Greten and Gilbert S. Brown.

MONATQUOT Y. C., JUNE 10.—The first regatta of the season, on Wednesday of last week, was but a drift, there being no wind all the afternoon. The starters were: Moondyne, cat, 2 ft. 10 in.; A. J. Shaw; White Fawn, sloop, 2 ft. 11 in.; J. P. Holbrook; Montezuma, sloop, 2 ft. 4 in.; A. P. Worthen; Posy, sloop, 2 ft. 3 in.; E. S. Hunt & Son; Erin sloop, 2 ft. 11 in.; John Cavanagh; Diadem, jib and mainsail, 1 ft. 2 in.; L. A. Hayward; Breeze, cat, 1 ft. 6 in.; White Marsh. The course was down the river, round Quincey brush buoy and return, 4 1/2 miles, to be covered within 3 hours.

The only boats that finished were White Fawn, 1h. 30s.; Posy, 1h. 3m. 30s.; Diadem, 1h. 20m. 20s. The judges were E. T. Jordan, N. F. Hunt, H. Gardner and D. Smith. A chowder was served after the race, the rest of the evening being spent at the club house.

BROOKLYN Y. C. ANNUAL REGATTA, JUNE 14.—The annual regatta of the Brooklyn Y. C., on Saturday, was partly spoiled by rain and fog, but with the aid of a southeast breeze a very good race was finally sailed, the times being:

J. S. Frith, tuckup.....	15.00	1 00 00	Withdraw.	
Pennsylvania, hiker.....	16.00	1 46 20	Withdraw.	

It was a beat dead to windward two and one half miles in short tacks, and a home run. The wind was very heavy at times, making lively work for the tuckup crews. The sharpie, with comparatively flat bottom and almost square bilge, stood up like a house, and as the water was not very rough, she walked right away from her class.—E. A. LEOPOLD, Sec'y.

MINERVA AND GOSSOON.—The Boston Herald compares the two yachts as follows: "The details of the design of the hulls of the 40-footers Minerva and Gossoon have been published in the Herald, and a comparison of the sail and spar plans will be found interesting. The Gossoon will be equipped with Scotch wire rigging imported expressly for her, her rigging is based on the same firm which furnished the rigging for the Minerva on the Atlantic and Helen. The running wire rigging is 3/4 in., while the standing rigging is 1/2 in., being an 1/2 in. all over less than the Minerva, and consequently weighs less. Like Minerva, the Gossoon will have wire halliards. The Gossoon, from deck to hounds, is nearly 5 ft. longer than the Minerva. As to the topmasts of each boat measuring the same, 30 ft. from heel to shoulder. The foremast of the Minerva's topmast is over a foot longer than the Gossoon's. The diameter of the Minerva's topmast is less than the Gossoon's, but the latter's being hollow is much lighter—a great advantage. To offset this, the jackyard and topmast poles of the Minerva are shorter and weigh less. The height of the perpendicular for racing length is close on 4 ft. more on the Gossoon. By the above it will be seen that the latter has a great advantage in having a comparatively short topmast and long mainmast, the length of the Minerva's mainmast being more equal. The most noticeable thing about both boats is the stepping of their masts. The distance of Minerva's mast from the forefoot of the stem to the forefoot of the mast at the load line, is just 13 ft., and the Gossoon's is precisely the same. On deck, from the forefoot of the mast to the gammon iron, the masts are in the same position on both boats, so that, practically, the forefoots are quite the same. From the gammon iron to the foot of the bowsprit of the Gossoon measures 2 ft. more, which means more head sail. The boom of the Gossoon is hollow, 48 ft. long, 8 in. in the slings, and is over 4 ft. longer than the Minerva's. This would give the Gossoon nearly 6 ft. more on the base line, and a larger area of sail. As to the gaff, the Gossoon's is over 2 ft. longer than the Minerva's. By the above it will be seen that but little advantage can be gained in the stepping of the masts. The Gossoon has a larger sail plan and also a larger spinnaker; the excess of the latter over the Minerva's she does not pay for, as the rule only taxes on each boat the excess of the spinnaker boom over the length from the forefoot of the mast to the point of connection of the jibstay on the bowsprit. In down the wind work the Gossoon has a great advantage in having a bigger spinnaker. Regarding the diameter of the mast, the Gossoon's measures 3 1/2 in. more at partners than the Minerva's. With the advantage of having a larger sail spread, the Gossoon will have more power than any of the other Burgess forties. She has nearly 18 short tons of lead on her keel now, and, judged by the way she floats, it will take at least three short tons more to settle her down to her designed

STATEN ISLAND ATHLETIC CLUB, YACHTING DEPARTMENT.—The annual regatta of the yachting department of the Staten Island Athletic Club will be sailed on June 28 over courses on New York Bay, the start being off Robbins Reef buoy. The regatta will be open to yachts owned by members of regularly organized yacht clubs in the vicinity of New York, but as it will be sailed under the rules of the New York Y. R. A., which tax the extreme overhang on each end, the modern boats are not likely to enter in any great numbers. However well this measurement may answer for open boats, it is prohibitive in all the modern cabin yachts, and will act to keep them out of the races. All yachts entering must be sailed by owners or members of the club, the cabin yachts being allowed one man for every 5 ft. of sailing length, and the open boats one man for every 3 ft. Shifting ballast is allowed only in open boats. The time limit is seven hours. The regatta committee includes Messrs. E. M. Post, R. K. McMurray, R. L. Lippitt, Philip C. Sus and Edgar Hicks. Entries close on June 25.

OLIVETTE AND ANNIE.—The match on May 31 at Fall River between the cats Olivette and Annie was started in a light S. W. wind, which shifted to west, blowing quite hard before the finish. Annie led by 31s. at the line, but though Olivette was delayed by grounding her board on a piling, she passed Annie in all the four miles, when the shift of wind placed the latter a short distance under Olivette's lee bow. The rest of the eight miles to Coal Mine Buoy was a long and short leg. Olivette leading by 15m. at the turn. On the run home Annie's extra length told, and she finished 15s. ahead of Olivette. The lengths by the old Atlantic Y. C. rule are, Annie 241.4m., Olivette 211.1m., the latter thus winning by 4m. 17s. corrected time. The stakes were \$125. Olivette will have some of her inside iron replaced by lead run into the after deadwood.

CORINTHIAN NAVY.—A meeting of the New York Bay Squadron of the Navy was held at the Hotel Marlborough, on June 12, when it was decided to hold the squadron's regatta, off Clifton, Staten Island, on July 5, start at 2:30 P. M. Entries may be made with C. F. Hicks, 451 Broome street. The New Rochelle Y. C. has placed the freedom of their house and course at the Navy's disposal for the annual regatta, on June 28. Many entries have been received and the affair promises to be a success. The fleet book is now out, members may obtain the same by application to the purser. The following gentlemen are proposed for membership: Albert Houseman, Mr. Huntington, Theo. W. Davis, E. H. Jewett, Robert P. G. Bucklin, L. A. Camacho, Frank R. Livingston, Joseph Gill, J. E. Whittlesey, Emmet Fay.

DARE.—This old sloop has been put through some radical alterations at Pollon's yard, under the superintendence of Mr. Driscoll. Her keel has been removed and a new one substituted, the bottom at the same time being dropped considerably lower, making a hollow at the garboards instead of the old straight dead rise. The old stern has been sawn off and a new and modern counter of very fair proportions added, so that the yacht would no longer be recognized.

SHINNECOCK BAY Y. C.—This club has filed its certificate of incorporation in the county clerk's office. The trustees are James C. Carter, Francis Baker, B. H. Howell, Peter Gilsey, Wendell Baker, H. B. Howell, Lewis Edwards, George C. Stone, George M. Eddy, William M. Lawrence and L. Dinwiddie Smith.

SEAWREN Y. C.—At the annual meeting of the Seawren Y. C. held on May 24, the following officers were elected for the ensuing year: Flag Officer, Wm. Ratcliffe, Jr.; Sec'y-Treas., Henry Hartshorn; Mens. F. C. Riley. The first regatta of the club will be sailed on July 4, the time of starting to be fixed later on.

GOSSOON. the new Adams 40, made her trial trip on June 11, having Mr. Burgess and Mr. Quinn on board. She is reported as floating well above her lines and being very stiff. She will not be at New York for any of the June or July races.

WHITE CAP. yawl, David Hall Rice, has been sold to Dr. J. T. Rothrock, of Westchester, Pa., the author of that pleasant book, "Vacation Cruisings."

SHREWSBURY RIVER.—On June 13 a race was sailed for the challenge pennant, Gem winning, with Twilight second and Tam O'Shanter third.

TIGRESS. the Ellsworth 35-footer, was launched at Lawley's on June 12, and will sail in the Boston city regatta of July 4.

Small Yachts. By C. P. Kunhardt. Price \$7. **Steam Yachts and Launches.** By C. P. Kunhardt. Price \$3. **Yachts, Boats and Canoes.** By C. Stansfeld-Hicks. Price \$3.50. **Steam Machinery.** By Donaldson. Price \$1.00.

Price \$1. **Canoe Handling.** By C. B. Vaux. Price \$1. **Canoe and Camera.** By T. S. Steele. Price 40 cents. **Four Months in a Sneakboat.** By N. E. Bishop. Price \$1.50. **Canoe and Camp Cookery.** By "Seneca." Price \$1.

Canoing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

1. Ianthé, Annual.	20. New Jersey Athletic, Bergen Point, Fall.

ROCHESTER C. C. ANNUAL REGATTA, JUNE 12.

The regatta committee prepared the following programme of races for the annual spring regatta of the club and designated Thursday last as the date. The announcement was made that the first race would be called at 12:15 P. M. sharp, and an interval of 15 minutes would be allowed between each race:

1. Sailing, Wilson cup, 3 miles, no limit to rig or ballast.
2. Tandem paddling, 1/2 mile, single or double blade.
3. Sailing, upset and maneuvering, no special appliances allowed, canoe to carry two sails, no limit to ballast, 1/2 mile and return, at signal throw over paddle and recover, at second signal canoe to be tipped over until top of foremast touches the water, canoe to be righted and cross finishing line under sail.
4. Tandem hand paddling, 200yds. to leeward.
5. Paddling upset, no special appliances allowed, at signal every canoe to be turned completely over, righted, and with crew inside paddled across finishing line, 200yds.

All sailing races to be started to windward and finish at regular home buoy, irrespective of distance. All races to be governed by A. C. A. rules.

The first race was called in a hard rain storm, with but little wind. Big sails were the order of the day, and the largest sails won. Surprise secured the best start, but was becalmed under the shore, and so lost her advantage. Marie was delayed 3 min. by the parting of her mizen halliards. On the second round Surprise fouled Polly Wiggle, and after breaking her steering gear was obliged to withdraw.

Massachusetts, Martin..... 1 03 00
Marie, Stewart..... 1 04 00
Midget, H. S. Moody..... 1 05 00
Polly Wiggle, F. L. Smith..... 1 10 00
Surprise, McVean..... Withdrew

Second event, tandem paddling, 1/2 mile:
My Partner, H. S. Moody and C. B. Walters..... 4 00
Dalinda, W. S. Smith and Stewart..... 4 02
Seward, F. L. Smith and McVean..... 4 06

Third event, sailing, upset and maneuvering, 1 mile:
Midget, H. S. Moody..... 1 15 00
Marie, Stewart..... 1 18 00
Polly Wiggle, F. L. Smith..... 1 16 50
Prudence, Wilson..... Did not upset.
Surprise, McVean..... Did not upset.

Fourth event, tandem hand paddling:
Malinda, W. S. Smith and Stewart..... 1
Louise, Martin and H. S. Moody..... 2
Seward, F. L. Smith and McVean..... 3

Fifth event, upset paddling:
Midget, H. S. Moody..... 1
Marie, Stewart..... 2
Polly Wiggle, F. L. Smith..... 3
After the races the big canoe Hui was launched and the club and their guests to the number of fifty were transferred to the Newport House, where all partook of one of Sour's famous "fish and chicken" suppers. After supper the presentation of prizes occurred, and then all aboard for home.

A. C. A. MEMBERSHIP.—Eastern Division: W. C. Maynard, Northampton, Mass.

CENTRAL DIVISION MEET.

Editor Forest and Stream:
Canoeists intending to attend the Central Division Meet at Lake Chautauqua are requested to inform the purser, J. K. Bakewell, Pittsburg, Pa., or the rear-com., E. L. French, 224 Jersey street, Buffalo, N. Y., of the fact, so that camp sites and accommodations for clubs and individual canoeists may be reserved, arrangements for transportation and reduced rates from Pittsburg, Buffalo, and Rochester to the camp have been made. Trains on the Lake Chautauqua R. R. from Jamestown and Mayville, will stop for canoeists directly at the camp. Information as to transportation etc., from other points will be promptly furnished upon application, made to the purser. Canoeists coming from Dayton or Cincinnati or Dayton, Ohio, may apply directly to Thomas P. Gaddis of Dayton, Ohio, or James O. Shiras of Cincinnati, Ohio, members of the committee on transportation.

Contributions of flags for prizes are solicited, flags should be sent to C. F. Holdship, chairman of the regatta committee, Pittsburg, Pa., prior to June 28.

The officers and members of the Central Division of the A.C.A., extend a cordial invitation, to all canoeists to join with them in their camp and meet. GEO. A. WARDER, Vice-Com. C. D., A.C.A. J. K. BAKEWELL, Purser.

To the Members of the Central Division:

We desire to announce that arrangements have been made with Mr. Horace Fox, Manager of the Grand Hotel at Point Chautauqua, to furnish meals to members of the A.C.A., and guests of the camp, at the rate of one dollar per day. For canoeists who may desire to do their own cooking, provisions will be delivered in camp by the steward. Lumber for docks will be furnished upon application to the quartermaster. Few docks will be required however, as the beach is shelving and is composed of sand, free from mud and stones.

Camp will open July 1, and close on July 15. The first week will be devoted to cruising and camping, the races being fixed for the second week.

All races are open to any amateur canoeist, excepting that for the Jabberwock cup, which can only be contested for by members of the Central Division. E. L. FRENCH, Rear-Com.

J. K. BAKEWELL, Purser.

CANOE CANNON.—One of the neatest pieces of "canoe jewelry" that we have ever seen has lately been placed on sale by the Winchester Repeating Arms Co., a small swivel gun for canoes, canoe yaws and such musquito craft. It is of the popular Lavigne pattern, very neatly mounted on a gun metal carriage which turns on a mahogany base, the whole being secured to the deck by one screw bolt. It takes a .58 brass shell, can be quickly loaded and fired, and makes all the noise that even a canoeist could ask for.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

J. D. B. Roselle, N. J.—1. When is the law off on gray squirrels in Union Co., N. J.? 2. When is the law off on woodcock in Union Co., N. J. Ans.—1. Nov. 1. 2. Open season is months of July and October, November and first fifteen days of December.

SUBSCRIBER.—Kindly inform me through your valuable paper what kind and caliber rifle you would advise me to get to shoot elk, deer or bear with. Ans. Select one of the heavier arms, not less than .45, and burning not less than 70gr. powder.

D. W. J. West Milton, O.—1. Do you consider repeating rifles as good for target as single-shots? 2. Is the rifling of a breech-loader liable to become worn with ordinary use, rendering the gun useless? 1. Single-loaders have the preference where fine target work is desired. 2. No.

R. G., London, Ont.—On May 28 I secured a couple of turnstones (*Arenaria interpres*) on the shore of Lake Erie, near Port Stanley, Elgin county, Ont. There were two flocks, one containing about a dozen birds, and the other (from which I secured the specimen) about four; are they common visitors to the Great Lakes? Ans. The bird is rated as cosmopolitan in the books, but it is chiefly confined to salt water shores.

B. J. F., Lockport, N. Y.—Will you kindly mention the weights of some of the largest black bass that have come under your observation. Ans. There is in the office of FOREST AND STREAM a head of a Florida black bass that weighed 23½ lbs. This is the large-mouthed species and the biggest specimen of which we have any knowledge. A fish weighing 19½ lbs. was reported from the lake at Gainesville, Fla. in March, 1875 (Goode's American Fishes). The average size in the North is about 6 lbs. and in the South somewhat greater. The small-mouthed species seldom exceeds 8 lbs. and the average is 4 or 5 lbs.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "help."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

YACHTING ON THE GREAT LAKES.
THE growth of yachting in America has naturally been strongest on a part of the Atlantic coast, and about two or three of the larger seaports, the fleet along the thousand miles of coast between Maine and Virginia outnumbering in size and far surpassing in quality the rest of the pleasure fleet of the entire country. For various reasons the growth of yachting along the Atlantic coast south of Chesapeake Bay is likely to be slow, the shoal bays, the stretches of exposed coast line and the few harbors being serious obstacles. Though progress be barred in this direction, it is free enough in another quarter, and in a very few years the Great Lakes are likely to be the scene of a growth and development of yachting no less remarkable than that of the last ten years on the coast.
A single glance at a map of the United States is sufficient to show how insignificant are the present yachting centers of the country, Long Island Sound and Chesapeake Bay, compared with the expanse of even the smallest of the Lakes; while the coast line of the Lakes is nearly three times the length of that portion of the Atlantic coast from Eastport, Me., to Norfolk, Va., which forms the established cruising ground of the Atlantic fleet. In the Western Number of the FOREST AND STREAM Mr. E. J. C. Cleaver discussed very fully the drawbacks and disadvantages which hinder yachting on Lake Michigan; obstacles which, though serious, may be overcome in time as the work of building artificial harbors advances, but more particularly as the love of sailing increases and yachtsmen learn better the style of craft that is necessary for their work.
One cause perhaps of the present condition of yachting about Chicago and Lake Michigan may be found in the fact that none of the yachts on the lake have been specially designed to meet the peculiar conditions which our correspondent so clearly states. The fleet has been gathered from all quarters, from New York and Long Island Sound, from the other lakes, and even from the distant Clyde; and it is by no means surprising that the

boats have not proved the best possible for such peculiar waters. The revival of yachting on Lake Michigan will probably come at the hands of some of the younger sailormen who are now racing and cruising in such small craft as can be conveniently used on its boisterous waters, and the craft that they will man will be different from all of the old fleet; staunch and sturdy keel craft of moderate draft and sail area, ranging from 40 to 60ft. in length, boats that will give room and comfort and yet will ride in safety the heavy storms of the Upper Lakes.
The problem of turning out such a craft, suited exactly to existing conditions, without regard to those of distant waters, must be solved by the yachtsmen of Lake Michigan, and by no others. Already there are competent designers and builders on its shores who have done much for the sailormen in sizes below 30ft., and who will prove competent to meet the demand for larger craft when the call for them comes. From the nearer lakes, from Erie and Ontario in particular, we hear nothing but promises of more and better yachting, of improvements in all directions, and it is probable that a dozen years more will see a distinct and firmly established system of yachting, with models and rules specially adapted to it that shall extend from the head of Lake Superior to the mouth of the St. Lawrence.

THE PRESERVE SYSTEM.
THE system of buying and leasing territory for shooting and fishing purposes is progressing with great strides. The latest and most extensive transaction is the taking up of a hundred thousand acre tract in the North Woods by the Adirondack League Club, articles of incorporation of which have just been filed. The land acquired is a portion of the Blake estate, lying in Hamilton and Herkimer counties. It comprises a number of trout waters, among them Moose, Panther, Deer, Jones, Otter and Jock's lakes, and West Canada Creek. The purchase price is given at \$500,000, which is to be raised by the sale of 500 membership shares at \$1,000 a share. The shares, which are also certificates of membership, will give individual title to five acres of land as a building site, rights of camping, fishing and hunting throughout the club's territory, and a share in the profits of a lumbering business, which it is said will yield an annual income of \$30,000. The trustees named in the articles of incorporation are Warner Miller, M. W. Barse, O. L. Snyder, Robert C. Alexander, Mark M. Pomeroy, Warren Higby, A. G. Mills, Henry E. Howland, Henry C. Squires, De Witt C. LeFevre, Henry Patton and Alexander R. Harper.
This withdrawal of the Jock's Lake country from the public means a serious diminution of available hunting and fishing grounds in the Adirondacks. It is in line with the coming of a new order, under which the angler or hunter who does not belong to a club will eventually be shut out. These changed conditions are coming with a rapidity little dreamed of a few short years ago.
Everywhere the tendency is toward great fish and game clubs, purchase and control of lands and lakes and streams. Report says that Mr. Austin Corbin of New York has lately consummated the purchase of 4500 acres of land near Sullivan Harbor, Me. This purchase has been made in connection with Mr. Clyde D. V. Hunt, and for the Moose-a-beck Game Club. The property was formerly known as Great Wass Island. It has twelve miles of shore front, and also a long stretch of forest. As soon as the officers of the club are chosen and the preliminaries agreed upon, it is proposed to invest some \$50,000 in game and fish for stocking the preserve. Such a movement is looked upon with open-eyed wonder by local sportsmen, who have hunted over these lands for years unmolested. There are growlings of discontent, the result of which only time can tell. All is not serene in the Parmacheene Lake region, if the voice of guides and hunters is to be trusted. It is true that the party of sportsmen has bought out John Danforth and taken his leases off his hands, and obtained promises of further leases, but the thing is to control the waters of Parmacheene. It has been repeatedly decided by Maine courts that lakes and ponds above a small number of acres in extent—we think it is ten—are open waters, waters open to the public. It is true that the lessees of the land can prevent sportsmen from landing to the extent of the amount of trespass, but the Maine courts have put themselves on record as often in the past awarding 1-cent damages in such cases.

The feeling is very strong among sportsmen who have formerly visited Parmacheene against the attempt to close this region to the public. It is now proposed, we learn, not to attempt to close the preserve to the public this year, but after this year the public will be excluded from the John Danforth camps at least. There is a good deal of under growling expressed among guides and others who have formerly hunted and trapped in winter in the Parmacheene region. They say that if the lessees of the Danforth camps attempt to make a game or fish preserve of the region, they will not be responsible for the consequences.

No reasonable man, however, who thinks that he has an opportunity to secure for himself a desirable game and fish preserve, is apt to be deterred from such an enterprise by the mutterings and vague threats of individuals who have formerly had the free range of the woods in question. The average sportsman differs in no respect from the average man who is not a sportsman, when it comes to a matter of personal advantage as against public benefit. Options on the control of deer forests and trout waters will not be refused for any promptings of philanthropy. Individuals and clubs will go on securing their territory, without regard to the deprivations imposed on the public. As we said last week, it is only human nature to have regard for one's personal interests in such affairs; and the average sportsman and angler has just as much human nature in his make up as his fellow men.

SNAP SHOTS.
CAPT. CHAS. A. BENDIRE has progressed so far in the preparation of his "Oology of North American Birds" that he hopes to put the material of the first volume into the hands of the printer by the close of the year. The initial volume will comprise the Game Birds and the Raptors. This undertaking, in which Capt. Bendire has been engaged for several years, and the completion of which will consume five or six years more, is with him altogether a labor of love; and he is putting into it all the care and thoroughness and devotion characterizing a work of that nature. The patient investigation and untiring industry with which he is gathering and winnowing his material are such as to insure for his completed volumes a first place among works on American ornithology. The text will treat not only of the nest and eggs, but of the range, haunts and habits of each bird. As the Oology will be a Government publication, it is to be hoped that the work may be given a form commensurate with its high character.

Mr. A. C. Collins, of Hartford, Conn., is deserving of great credit for the energy and shrewdness with which he is following up the violations of game and fish laws. His latest exploit was the detection of shad pounds unlawfully set on Sunday, the offenders being staid and prominent citizens of Saybrook, some of them worth very respectable fortunes. Mr. Collins has succeeded in getting convictions in the lower courts, and there is little doubt that he will carry the cases successfully through the higher courts, to which the convicted netters have appealed. Not the least public service accomplished in cases like these is the showing up of the prominent citizens aforesaid as tricksters and dishonest sharpers, who for their own selfish gain have been cheating the community.

The Webster, Mass., *Times* records the death, at the age of eighty-eight, of Miss Mary Jaha, the last member of the once great tribe of Nipmunks. The Nipmunks were the Indians celebrated by "Nessmuk," and among whom he first imbibed that taste for a woods life which became his life-long passion. It is a curious and striking commentary upon the possible far-reaching influence of even the humblest individual, that thousands of readers of a journal of to-day should have owed the pleasure found in the writings of one of its contributors to the chance impress upon his character of an illiterate woods-haunting Indian in the forests of Massachusetts more than half a century ago.

An illustration of the decadence of rifle shooting is afforded by the action of the New York Rifle Club, which on last Tuesday was, on petition of its trustees, dissolved by the Supreme Court. The petition was based on the decline of interest in the sport.

The Sportsman Tourist.

TWO AFTER TROUT.

FIFTY years ago troutling in the streams of New England was— But, bless us! Fifty years did I say? That's a long way back. Did I mean to be understood as saying that my memory runs back into the dimness so far as that? Nay, verily, I hardly believe I did, for not so many winters have sifted their snows over my crown, though here and there it has begun to respond to the bleaching process in an unmistakable way. I am very sensitive in regard to my age, so I won't say just how long it has been since first I wet my feet and line in the lovely trout brooks of Vermont; but I will begin at the beginning again, and say, just as though I knew all about it, fifty years ago troutling in the streams of New England was a perpetual delight and a joy forever as long as it lasted. There were trout in those days, and streams, and plenty of them, even though they were not generally as large as the Nepigon or Rangeley monsters, and one did not have to go into the next State or Canada to get a thoroughly enjoyable day with the dashing little fighters. Ah! those were the days of unalloyed bliss and stone bruises, heart-thrilling anticipations and yearned-for Saturday afternoons. Talk of the bliss of "love's young dream!" Don't mention it. It isn't a circumstance. A rosy flush, mingled with the odors of Araby and old worm boxes, still hangs over those happy days that linger in the westerling sun—

"Dear to my heart are the scenes of my childhood."

When I was permitted to "go a fishin'" all alone, and came home with a string of trout dried stiff, and dangling from a willow twig, the Prince who slew the Ogre and recaptured his best girl was not more proud and happy than I when I had thus justified the confidence reposed in me, even though I had lost that whopper in the hole where the fence crossed the brook. What mattered it though my line was but 3ft. long, sinkered with lead twisted out of the lining of a tea chest, and tied to a pole out by the brookside. What though I knew nothing of playing a fish, but jerked him incontinentally as far into the empyrean as my budding muscles could send him. I had all the condensed happiness my cuticle could contain, and that is all anybody can hold, though they do fish with a bamabaralancewood rod and silk line and five-dollar reel and sneek bend and snell and leader and flask. What fishing memories are so sweet as those of brook trout fishing? Go to, ye mud cat, sucker *et al* fishermen. Where ignorance is bliss you are welcome to it. You haven't got within cannon shot of the suburbs of the trout fishermen's heaven, and are filling up with an exceedingly poor substitute for nectar and ambrosia.

I think of these things and many others related, every spring previous to April 1, when the hens begin to shell out their fruit, carpets are taken up, the south wind blows warm, the grass shows brighter green and the bluebird and robin skirmishes pipe the advance of the legions that soon shall occupy the land. They will no doubt have many a chill and get their toes nipped as a result of their eagerness, as many of the trouters do who invariably go forth on April 1, whatever the weather. As for me, rather than stand in a snowdrift and whip frozen streams in order to tempt the fish to bump their heads, I prefer to wait a few days until I can enjoy without stint a perfect day along the rippling water. I would rather far utilize the chilly days when the wind blows raw and the trout are half benumbed, overhauling my tackle, making a list of things to order which I don't need at all, and building the loveliest air castles that ever were. We have all done it, you know, times almost without number, and never learn better. It is a provident streak in us that inures to the benefit of the dealer in tackle. Some may get what comfort we can out of that when the season is done and we have a box of tackle to carry over.

I had just such a streak last spring again, though I had no definite idea that I should be able to go anywhere. I wanted to badly enough, for years had elapsed since I had had a good outing for trout, and I knew I was pining away from lack of it. As the warm spring weather came on, it really did begin to look as though my wishes were to be realized, and I actually went so far as to make arrangements to go down into Pennsylvania for a week; but when things had got pretty nearly to a focus, circumstances over which I had no control stepped in unceremoniously and deprived me of my friend's company and my dreams vanished in the never to be. I did not like to give it up so, though 'twere "so near and yet so far," for I had all my tackle corralled, had dug a lot of "wums" (mum's the word now) and made arrangements to be gone a week at least.

I hunted up another of my acquaintances who liked to wet a line in a trout stream, and after some argument prevailed on him to go with me. Smith was not what you would term a finished artist with the rod any more than I; true, he did like to swarm off by himself and enjoy lonesomeness, and I knew he wouldn't bother me to death. Of course if I could have made him to order, I think I would have had some kinks different, but he agreed with me on most points, and I knew that he would always be on hand when wanted. He would use worms when flies wouldn't do, but I have done the same thing, and I could not do much criticising. So we fixed it up that we'd go up into Canada somewhere for a week or so if we could ascertain which was just the very best place, and in order to ascertain we looked up maps and wrote ticket agents and referred to old FOREST AND STREAMS and other papers until we were tired. Then we cast off the home lines and squared away for Buffalo, where we laid in some more hooks which we never used, and a few flies which we never needed, and a patent jointed, folding, collapsing circumdicular fore and aft landing-net, and a creel that was too small, and divers and sundry other articles deemed indispensable. All this in smiling May, about the middle.

Then we interviewed the Grand Trunk ticket agent, who cheerfully agreed to let us ride to North Bay, Ont., and back again for \$14.75, but would deduct \$3.74 if we would wait until June 1, when he would inaugurate the annual excursion business. His bid not being high enough we closed with him on his first offer, and in an hour were trundling along toward Suspension Bridge, whither the Queen had sent a special agent to see if our valises were equipped with the regulation underclothing for the trip, the weather being much cooler up toward Hudson's

Bay. This thoughtfulness aroused our deepest gratitude, and S. said that from this time forward memories of the Stamp Act would be a shade less bitter. The said agent aforesaid said that it would have been more in accordance with instructions governing such proceedings if the underwear had been colored red and properly stamped, but as this was clearly an unintentional oversight he would pass us. He toyed with our rods a moment, asked how old they were, and whether they had been used, said something about values, looked us over, hefted us financially, concluded it was a hopeless case and left us. He was a good-natured chap, and I hope to meet him on the other shore again.

Now we were off and away again, kicking up a dust and putting the miles behind us until 5 o'clock P. M., when Toronto sent her suburbs out to meet us and conduct us to her busy center. We lost no time in hunting up the Assistant Commissioner of Crown Lands that we might procure a permit to fish for trout in the Nipissing district, there being no restriction in the Dominion except on trout fishing. This being very pleasantly arranged I bethought me after supper that I might need a rubber coat, likewise some pocket scales to weigh the monsters we should catch, also some flies, the like of which we had not, so we set out on the search, only to find to our disgust that places of business except cigar stores were almost invariably closed at 6 o'clock smack. Did you ever hear of the like! But after brisk trotting up and down King and Queen, and Princess, and Duke, and other streets we did manage to find one solitary gents' furnishing store open, or partly open, that the authorities had overlooked in some unaccountable manner when they locked up the rest of the city, and here, though I thought it rather queer, I found a rubber coat. The proprietor said he was out of flies and scales and other hardware, but he had noticed a light just now in a hardware store down the street, which was perhaps yet open. You see it was such an unusual thing, he had noticed it. We tacked at once, carrying all sail, and luckily found a man in, just about to pull out, who didn't know what I meant by pocket scales. I explained, when he said he had some spring scales but he couldn't sell them. I looked at S., he looked at me, and we both looked at the man. "For why?" said I. "Do we look too scaly, or aren't you permitted to sell after dark?" He hesitated a minute, and then said he'd show us what he had, but was not allowed to sell them to be used, or something to that effect, I didn't just comprehend what S. said to me that if they were what we wanted we'd be responsible for the using. However, they were too large, and being in a hurry we didn't stop to get the true inwardness of his meaning, to have the scales removed from our mutual vision, as it were. But what the man meant has always to this day puzzled me. Maybe he suspected us of a design to purchase the only pair he had and set up an opposition shop, or may be he had a corner on scales and was bound to enjoy it. Perhaps he spotted us for Yanks and remembered Bunker Hill, or perhaps the scales weren't just on the square. They were spring scales and this was in May, so that was all straight. Can any one enlighten me? It causes me considerable anxiety and bad dreams, and I wake up in a peck of trouble a way, way off in the wilderness catching huge trout without any scales.

We found tobacco stores open in plenty though, and having laid in a stock of solace we betook us to an office where we secured lower berths in the sleeper to North Bay, and in due course of time we left the city and rambled northward into the darkness. The next morning when I raised the curtain and looked out it was raining gently and we were passing through a rough country, wooded with spruce, pine and birch, where granite boulders had been sprinkled around quite frequently. Occasionally we crossed a trout looking little stream, or kept alongside for quite a space, and here and there were holes where I just knew I could "pull 'em out." At Sundridge, Stony Lake stretches away into quite a body of water. Boats were out with rods outlined against the water, and I was told that trout of from 1 to 3lbs. in weight were caught. Oh! ecstasy. Wasn't that enough to set the electric afflatus scampering all over a person? With much difficulty I allowed myself to be carried aboard the train, my arms outstretched in passionate appeal toward that blessed hiding place of my adorable beauties, and we slid into the north again. At 8:30 we slowed up at North Bay, and there off to the left was Nipissing, the beautiful, stretching away until sky and water met in undefinable union. Gripsack in hand and rods on the trail we sought the Pacific Hotel, where we got something to fill up with, which they called breakfast. In the office were some superb moose, elk, deer and caribou antlers.

Then we began our quest of a conveyance to take us to Trout Lake, four miles further into the wilderness; where the pioneer, Dick Jessup, would set us afloat upon the headwaters of the Ottawa and show us where the maskinonge, the pike, the bass, the salmon trout, the pickerel and the speckled trout were waiting our pleasure. We found a horse and wagon and an old man to drive, and were soon en route to our Mecca. The driver had never been out to the lake, but said he could find the way, and as it was but a short drive, we thought so, too. Where the road wasn't sandy it was mucky, and where not mucky it was stony. After the first mile or so it was in the woods, and then it was corduroy and rocks and roots and spring holes and mud; bang! whang! kerchuck! slide off the seat, catch a fresh hold and try it again. The old man was quite chipper; and when we came to a fork in the road said he didn't know which to take, but we'd all guess and see which came nearest. Good fortune favored us, and we struck it right the first time, soon coming to a little clearing at the head of the lake where was a lone settler, who said we were on the right road and that Dick's was a mile ahead. That put heart into us and energy into the old man's whip; so that ere long we pulled up at the bars in the fence inclosing Dick's clearing, paid our driver, turned him loose and climbed the hill to the cabin that overlooked the fair Trout Lake. Mrs. Jessup was at home, likewise a boy who worked for Dick; Jack McKenzie, the guide, had gone to North Bay, and we had met him on the road unwittingly. Dick was out on the lake with two gentlemen, one from North Bay and the other from Toronto.

The cabin was small and quarters for us looked dubious, but Mrs. J. said two visitors were going to town as soon as they got in. So we were in luck and were soon made at home. Of course the first questions were about trout

fishing, and we were a little disappointed to find that there were no speckled trout in the lake, but were glad to know that there were two small brooks emptying in, one and three miles below. We did not wish to lose any time so a lunch was put up, tackle prepared, and with the boy for guide and oarsman, we took one of the several fine boats and were soon pulling down the lake, pumping information out of the boy concerning everything that related to fishing, hereabout, until we had him dry, and he stopped to get a drink.

"S," said I, as I looked upon the lovely sheet of water dotted with islands, and thought of the sport there was in store for us: "Will you excuse me if I explode a little, I can't hold in a minute longer." "Here's at you," said he, "with all my heart and lungs."

And then we ripped the welkin until the sun shone through, the wooded shores threw back the clatter and the boy at the oars began to wish that he was anywhere else than in a boat with two lunatics.

Skirting the shore we rowed along past a little clearing on the hillside where (so it seemed to me) some misguided man had built a cabin and was trying to find soil enough between the white boulders to stick in some seed. After a time we came to the mouth of the first stream, hidden by thickets, on low ground. We landed and, by a short cut and trail, struck the brook some way from the mouth and made ready to try for trout. I had a Henshall lance-wood bass rod, which, by the way, makes a very good trout rod, albeit a trifle short, and ere long lifted out, for the first time in many years, a speckled trout. Reader, have you ever been there? Shake! I dropped my rod, took the six-inch squirm in my hand, and looked, and gazed, and gazed, and looked at his beautiful colors and proportions until he had filled me full, while hosts of happy memories of other troutling trips trooped to the front for recognition. But I hadn't time for recollection while other fish were awaiting my overtures, so at it I went, moving through the underbrush, which was too utterly thick for utterance.

After exhausting my patience and creeling a dozen or so pretty fish, I called to S. that we had better try the other stream, to which he was unanimously agreed, having scratched his hands and face poking through brush and briar until he was disgusted. We returned to the boat and rested and cooled off, while the boy pulled away for the next place and we ate a lunch, enjoying as we rode lovely views of the beautiful lake, which stretches away ten miles to the east, with numerous bays and islands. Before long we ran ashore again in a little bay, walked across a peninsula to another bay, and then inland until we struck the stream we were in search of. This was larger than the first, down which, in the spring, loggers drove their winter harvest. The last drive of the season was just over, and the "holes" had been pretty well gouged and torn out by the logs, and many fish probably had been driven down into the lake or slack water near by, but in an hour's fishing we managed to get enough to make, with what we already had, fifty-one trout, running from 6 to 6in. With these we went to the boat and rowed homeward, having spent a very enjoyable afternoon.

Some time after we reached the cabin, and as sunset drew on, a noise out on the lake, as from some one trying to sing, attracted our attention, and on looking out we saw a boat some distance from the shore motionless, in which two of the occupants, who hardly knew whether they were afloat or ashore, were endeavoring to make "Auld Lang Syne" intelligible. It was for the most part a lamentable and ridiculous failure. They speedily gave it up, and we went to the landing to see what luck they had had. They tossed out one "longe" of 25lbs., one of probably fifteen, two salmon trout of 8 or 10lbs., each, handed out a basket full of empty bottles, which accounted for the irregularity of "Auld Lang Syne," after which the sweet singers tumbled ashore with considerable uncertainty, and after their team was hitched up bundled themselves into the wagon and vanished into the woods, North Bayward. We made the acquaintance of Dick, had a trout supper, chatted and smoked, and turned in to dream of mountain streams and jumping trout.

O. O. S.

[TO BE CONCLUDED NEXT WEEK.]

Natural History.

MISS COOPER'S "RURAL HOURS."

READING Miss Cooper's "Rural Hours," too little read and appreciated now, one is forcibly reminded that to her were transmitted in a large degree her father's love and close observation of nature and the gift of graceful and vivid description of its various moods. This delightful outdoor book was almost the first of its kind in our literature, as simple, unaffected and as truthful to the phases of our rural life as was the work of White of Selborne to that of England.

It is a faithful record of observations made during her rambles around her home at "Otsego Hall" in the years 1848 and 1849. Pleasantly written, her notes show not only a keen interest and love for all wild country things, but an acute observation of much that an ordinary rampler would pass by unseen.

The lake, hills, meadows and forests contribute to her pleasure and our edification, while so much of interest is recorded of birds and flowers, one is fain to believe Otsego Lake a greatly favored locality, when, more likely than not, nature has impartially scattered as numerous objects of beauty and interest around our own homes if we only had eyes to see them.

How many of her countrywomen would join her in a "walk of several miles" over the frozen lake where "it is particularly pleasant to wander at will over so broad a field, confined to no track," accompanied by her dogs who do not like "the constant succession of dull rumbling and groaning sounds" beneath their feet. The "beautifully clear" waters of this lake, reflecting village, wooded hill and floating cloud, often appear in her landscapes. Its shallower reaches, filled with a great variety of aquatic plants, afford delightful study for many an hour. Here is an attractive picture, "Standing on the hillside within the woods, we looked down beneath an archway of green branches and between noble living columns of pine and hemlock upon the blue waters below." "Several boats were moving about and there was a sparkling ripple in the sunshine."

In rambling over a hillside pasture, how many would know or notice that it had never been plowed or that it "looked very differently from other fallows"? "Here you observe a little hillock rounding over a decayed stump, there a pretty hollow where some large tree has been uprooted by the storm; fern and brake are also seen in patches instead of the thistle and mullein. Such open hillsides bear a kind of heaving, billowy character, which in certain lights becomes very distinct; these ridges are formed by the roots of old trees, and remain long after the wood has entirely decayed."

In a smooth, well-cultivated meadow she reads the same history. All around are foreign grasses and foreign weeds, while in a little hollow, where once was a spring, are still growing as they have grown for years the native plants—moose flower and cohoshes—and on a river bank squirrel cups and gay-wings tell her every spring the soil there is still unturmed by the plow.

Every child who likes to creep along the meadow knolls in search of flowers or strawberries in these summers, when the click of mowing machines is heard in the smallest of hayfields, can attest that this description of a meadow, written forty years ago, is just as truthful now. "A meadow is a delicate embroidery in colors, which you must examine closely to understand all its merits; the nearer you are the better. One must bend over the grass to find the blue violet in May, the red strawberry in June; one should be close at hand to mark the first appearance of the simple field-blossoms, clover red and white, buttercup and daisy, with the later lily, and primrose, and meadow tuft. One should be nigh to breathe the sweet and fresh perfume, which increases daily until the mowers come with their scythes."

Thoughtful fancies flock around as she comes upon a spring in the forest lying in a "little rocky basin lined with last year's leaves," such a spring as a hunter and his dog are glad to come upon in a thirsty September day. "We feel assured that by every fountain among these hills the Indian brave, on the hunt or the warpath, must have knelt ten thousand times to slake his thirst, and the wild creatures, alike his foes and his companions, the tawny panther, the clumsy bear, the timid deer and the barking wolf, have all lapped these limpid waters during the changing seasons of past ages."

Walking early in the spring, "glad to tread the brown earth again," she meets with a disappointment that many of us have also felt. "Several noble pines, old friends and favorites, had been felled during the winter; unsightly stumps and piles of chips were all that remained where those pine trees had so long waved their evergreen arms," and the character of acres around was entirely changed, much to her sorrow. "The rudest boor passing along the highway" can easily, in a few short minutes, bring one of the towering trees to the ground; but generations of men must pass away before a like majestic growth can again arise. She seems to have an especial fondness for the old pines, of which there are many in her haunts. "Their gaunt, upright forms standing about the hilltops, now tossing their arms in the stormy winds, now drawn in still and dark relief against the glowing evening sky," "silent spectators of wonderful changes," they are all loved and cherished. "Sixty years since," she writes, "those trees belonged to a wilderness; the bear, the wolf and the panther brushed their trunks; the ungainly moose and the agile deer browsed at their feet; the savage hunter crept stealthily about their roots, and painted braves passed noiselessly on the warpath beneath their shade. How many successive generations of the red man have trod the soil they overshadowed and then sat down in their narrow graves!" An ordinary writer would not have used this last verb, but Miss Cooper had studied Indian customs too carefully to forget their manner of burial. It would be a blessing to our country if every owner of trees would read, and reading would heed, her protest against the thoughtless slaughter not only of the forests, but of small clumps of trees and of solitary ones.

Wherever her rambles take her she notices the birds, the friendly robin, the mewing catbird, "stealing upon us unawares," the humming bird that "brings a message from Cupid" when it flies into a room, the "cheerful, happy-tempered" barn swallow, and the swift-winged chimney swallow. How many of us knew that before chimneys were built this bird made its nest in hollow trees, and that its nest still made of twigs shows it was once a forest bird? It has "little to do with the earth and the plants and the trees, never alighting except within a chimney."

But more than all else, Miss Cooper's "Rural Hours" is pervaded, as it were, by the fragrance of wild flowers, and all who love the savor of old-fashioned names are indebted to her for the preservation of the common names of many of our flowers, sweeter by far with their familiar titles than with the scientific nomenclature.

How suggestive of the woods, of its own gray-furred leaves and stems, is "squirrel cup" (*Hepatica triloba*), a far prettier name than liverwort for the "tiny lilac cups," hanging from their downy stalks, singly here and there, later on they have "gained courage, standing in little groups." The "white coolwort" (*Tiarella cordifolia*), with "light and airy tufts," is so called because the broad leaves used to be laid on burns and scalds. "Fringe cup" (*Mitella diphylla*) at once recalls to mind that five-rayed snowflake "hanging its tiny cups at intervals on a tall, slender two-leaved stalk. As for "gay wrings" (*Polygala paucifolia*), the name is very appropriate. Clustered together as is the habit of this bright spring favorite, they look like "so many rose colored butterflies resting on the mosses," and "bead ruby" (*Convallaria bifolia*), suggests its slowly ripened shining ruby berry. "May star" (*Trientalis americana*), is a fit name for this dainty, star-like blossom. *Trillium grandifolium* and the other native Trilliums are all "moose flowers."

She mourns that our native flowers were not named before the science of botany was known, so that they might be universally called by some simple, appropriate name easily to be spoken and remembered by little children and unlettered country folk.

"Pretty natural names," she says, "were given 'flowers' in olden times, as though they had been called over by some rural party—cherry-cheeked maidens and merry-hearted lads—gone a-Maying of a pleasant spring morning," like ox eye, daisy—day's eye—crows foot, buttercup, heart's ease, loose strife, thrift, wake robin, marigold, and many another. "After such names as these, ought we not to be ashamed of Batschia, Buchnera, Schizanthus" and the like?

With such few hints and glimpses of "Rural Hours," the book is heartily commended to the attention of all who desire to know what was written of our outdoor life forty years ago, and as well, to all lovers of nature.

ROWLAND E. ROBINSON.

SALLY.

WITHOUT doubt the most popular individual in the London Zoological Gardens is Miss Sally, the bald chimpanzee, known to science as *Anthropopithecus calvus*. So distinguished a personage has she become that I think many of our American friends will be pleased to study her portrait, and an excellent one it is. The expression of face is perfect and her habitual one, though her intelligence is so remarkable that during her performances one expects every moment to see a smile or a frown, or the raising of eyebrows, some visible response in the way of pleasure or anger; but no, the face wears always this same imperturbable look, as if, however, Sally were considering in her own mind her present life and her future prospects. More especially when spoken to she appears to be mentally deciding whether she will be obliging or the contrary. To her credit be it said that she usually complies, but with the same unchanging expression of physiognomy.

The question has been frequently discussed, "Can animals count?" Sir John Lubbock among others has given much attention to some apparent examples in the case of insects, bees and others, which in feeding their young invariably bring the same number of victims, more to a female than to a male grub. But in passing it may be suggested that a knowledge of quantity rather than number is the guiding-instinct, the female grub being larger and requiring more food.

Now there are two animals at present in our Zoological Gardens who are unfailingly correct regarding numbers; and in both cases the comprehension of actual language directs them. First, as being by far the more accom-

SALLY.

plished scholar, comes Sally. It is no regular routine that she goes through, nor one voice only that she obeys. Not only has she two keepers, both being in turn her tutors, but if a casual visitor asks for a straw, six straws, ten straws, or to shake hands with her, as may be, and Sally is in an amiable mood, she complies as if her keeper had spoken the words. For a time, and after much patient teaching, three seemed to be the limit of her calculations. Then she advanced to four and then to five, and here she stopped for a year or two, her keepers almost relinquishing hope of any further advance. But suddenly her intellect seemed to gain strength and now she can count ten correctly. By "counting" we, of course, mean that she comprehends clearly how many straws to pick up if told to give ten to her keeper, or to any one else who requests that number; her compliance toward a stranger being, however, less certain, as Sally resents unwarrantable liberties. Her steady and methodical way of going through "her lessons" is an example to any pupil. Deliberately she selects a straw and holds it in her mouth while she picks up another, passing that to her mouth, and so on, until the required number is collected; she then takes them from her lips, folds the bundle in a compact form and delivers it to her keeper.

But her comprehension of language does not end here. "Give me a straw through the bars," and she does so. "Put one through the key hole," "now in my pocket," and so on. Not taxing her patience too long, the keeper approvingly says: "Good girl, now you may have this piece of apple," laying several slices on the wood work between the wires. "This piece is for you to smell," "this bit you may look at, but not touch until I tell you;" Sally giving her undivided attention, not attempting to eat any more until the keeper says: "Now you may have this piece or that." To "shake hands" with the right or the left one, to put up her right or left foot as bidden, to collect straws for a "button-hole" and place it there, to take milk from a cup with a spoon "like a lady," and many other small performances are promptly, though deliberately, executed as the words are spoken. I have watched her often but have never seen her make a mistake in her comprehension of the request.

Sally is supposed to be about nine years old at the present time. She has been an inmate of the gardens for seven years, and was apparently two years old on her arrival. She grew rather quickly at first, and now must have attained nearly full growth, any further change being very slow.

Intelligent as this lady chimpanzee undoubtedly is, it must be admitted that her temper, to speak in the mildest terms, is extremely capricious. Affectionate, and fond of one of her keepers to an extent that she is credited with shedding tears if he too abruptly ceases his attentions and departs (it is but polite to attribute the "tears" to fondness and not to anger). She has sometimes gripped his hand and inflicted a sudden bite that has, sad to tell, proved a very vicious nature. Those who venture on any caress must be vigilantly on their guard, for there is

no knowing Sally's freaks of temper; and occasionally, when her attention and her memory have been over-taxed by the exactions of a continuous stream of visitors, she will suddenly dash away to the back or to the top of her cage and offer unmistakable proof that she is but an untutored savage after all.

One other accomplishment of Sally's must not be omitted, and that is her "singing." Here the monkey quality of imitation is apparent and nothing more. When her keeper says, "Now, Sally, give us a song," and leads off with a strain, "Tra-la-la" or otherwise, the creature lifts up her voice and gives utterance to a succession of discordant screeches, which can be compared neither to the braying of an ass, nor the quacking of an angry goose, nor the language of feline serenaders, but a compound of all, ending in a prolonged cadenza yell and an air of self-satisfaction that is laughable. Sally has done her best, but she cannot be included in the category of the animals with a discrimination of sound, which Mr. R. E. Stearns has lately been enumerating.

As may be supposed Sally has proved an interesting object to scientific men, many of whom have been to witness her capabilities. Had they time to watch her and attempt to instruct her with the patience and perseverance of her keepers (to do the latter justice), or to go through the same routine with some other members of the monkey tribe, they might enable us to ascertain the true workings of Sally's brain and whether it is memory, a comprehension of sound or of words in the human voice, a clear perception of quantity in gathering just so many straws, no more, no fewer, than the required number, induce this obedience or compliance on her part. Memory undoubtedly is an agent, and to this may be added a power of concentrating attention; the anticipated reward is also an incentive, as it is with higher beings in the scale of creation. If we could only add to these endowments the faculty of speech (but it must be in the English language) we might yet better understand the workings of Sally's brain.

The other inhabitant of the Gardens who can count is the Patagonian sea lion (*Otaria jubata*), which was brought from the Falkland Islands in 1879. She also does a number of amusing things in obedience to verbal instructions, such as catching fish in her mouth when thrown from a distance, sitting upon a chair or going up a plank to do so, and "kissing" her keeper. But the most interesting feat is when she is told not to catch the second, the sixth or other fish thrown to her. The keeper says to the spectators that he holds six or five fish, and that the seal will catch in her mouth all that are thrown to her, except the one that any visitor present will mention. Some one replies she is to miss the fourth or the third, as he chooses to decide, when the keeper repeats the number, saying to the seal, "You may catch all but the—" whichever number has been decided upon—and the animal never makes a mistake. After all are caught she is told that she may come down from her elevation (the chair on a platform in the middle of her pond) and go after the one she missed, which she does in an accurate plunge, proving that she had observed carefully where it was thrown. Six fish being as many as the keeper can conveniently hold at one time, the seal has not been practiced beyond that number; but in her case, as in Sally's, there is a true comprehension of sequence and of language.

CATHERINE C. HOPLY.

LONDON, England.

THE WORCESTER, MASS., NATURAL HISTORY SOCIETY will open its summer camps at Lake Quinsigamond, July 22 to Sept. 1. Those camps are for boys, girls and families. The president of the society is Mr. Edward H. Forbush.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

CLABROUGH 12, May 1, '90.	PARKER 10, hammer, June 6, '89.
COLT 12, July 25, '89.	PARKER 12, hammerless, June 6, '89.
COLT 10 and 12, Oct. 24, '89.	REMINGTON 10, May 30, '89.
FOLSOM 10 and 12, Sept. 26, '89.	REMINGTON 12, Dec 5, '89, Feb 6, '90.
FRANCOTTE 12, Dec. 12, '89.	REMINGTON 10, Dec. 26, '89.
GREENER 12, Aug. 1, '89.	SCOTT 10, Sept. 5, '89.
GREENER 10, Sept. 12-19, '89.	L. C. SMITH 12, Oct. 10, '89.
HOLLIS 10, Nov. 7, '89.	WHITNEY SAFETY 12, M'ch 6, '90.
LEFEVER 12, March 13, '90.	WINCHESTER 10 & 12, Oct. 3, '89.

SHOT COUNT AND WEIGHT.

THE examination of No. 9 shot shows the same variations in matters of weight and count as was shown last week in our table of the No. 10 shot. The same companies' output are still under consideration, and the samples as before were gathered direct from the companies themselves in the FOREST AND STREAM sample bottles, except in the case of the English concerns, whence small bags of shot were sent direct to the office. The charges of 1½oz., Am. Shooting Ass. measure, in each instance were counted and weighed, and the figures of each individual charge are given in the body of the table, and then in the heavier full-face figures the average count for each company is given. To obviate any irregularity which might come with various manners of loading and to bring all into a uniform line of comparison, 100 pellets were taken from each lot of shot and their weights taken, in three different samples and the average in the last column struck. As before, the shot from all sources is the regular size and not any of the half sizes made up in many factories on the trap-shooter's demand.

A glance at the table shows the variation between the top and bottom of the list to be over 30 per cent. The Leroy Co., of New York, are still at one end of the list as making the largest shot, but the Collier Co. have gained the other extreme with an average of 951 pellets against the lowest average of 721. In the number of shot the Cincinnati Co. just strike the average, so far as count is concerned, and yet a glance at the weight average shows that they have but 552 grains weight in the charge, while the average reaches over 584. In the 100 pellet division the jump is from 63½ grains weight to 82 grains, or a charge of about 30 per cent, following very closely the general average. The Northwestern Co. still figure all alone as soft shot makers, not having as yet any chilled shot output. The two English companies get very close together, very close indeed, as compared with the gap

which existed with the No. 10 shot. The Newcastle shot, however, dropped from 964 pellets in No. 10 shot to 783 in No. 9, while the Abbey patent shot runs only from 732 to 700.

The various droppings run very even, and each company does not materially vary from its average in the 10 charges sent. The lowest count was in the Leroy lot, with 713 pellets, while the highest, 960, was in the Collier exhibit. The shot, as a rule, was very well made, with rarely a pear-shaped or dumb-bell shot; while the color in every instance was bright and attractive. We will not now repeat our query as to where and how an effort should be made to secure uniformity as to size and hence count of pellets. A maximum variation of 10 per cent. would be ample for even the most careless workman to get within the pale, but when it passes 30 per cent., the using of the same number to designate the shot becomes little more than a farce. Take for instance No. 10 from the Leroy factory, with an average of 936 pellets to the 1½oz. measure, while from the Collier tower we can get pellets of No. 9 which run 951 pellets to the same measure. In other words, a contestant using No. 9 shot of the one make has an advantage in the greater number of pellets over a fellow marksman using No. 10 shot from another factory; and in the weight of metal thrown the advantage is very naturally with the larger number of shot.

PARROT POT-PIE.

Editor Forest and Stream:

In your issue of May 29 "J. V. B." tells us about "stewed parrot." Any one would infer from his report that he did not hanker after that kind of game any more. And that "reminds me."

In the winter of '74 and '75 I cruised in the Bay of Honduras, the most of the time being spent among the Bay Islands. On Christmas morning I found myself at Bonacca, an island whose inhabitants (some fifteen or sixteen families) all lived on small outlying keys, their plantations of bananas being on the main island. I was quite at home, having been there several times that winter.

While taking our morning coffee at Capt. Kirkcannell's (the patriarch of the island) the question was brought up: "What shall we do to-day?" It was answered by George: "Let's go after parrots." The point was carried by acclamation, and after our coffee we stowed ourselves in one of the crankiest of crank dugouts and started for the island. And by the way, did any of your readers ever have the pleasure of riding in a Caribbeean? If not they have missed something. Narrow, cranky and wet, these craft are still the very perfection of speed and seaworthiness, and some of them show the finest and most perfect lines I have ever seen.

As I said, we got away directly after coffee, and with a fine breeze soon reached the island. We made a landing in a little cove where a small stream came rattling and tearing down the hillside, to lose itself in the salt waters at the foot. Now the fun began, for be it known, the land in Bonacca is all set edgewise, and covered with an almost impenetrable growth of vines and bushes. Trees there are in plenty, but so completely covered with all kinds of creeping and climbing vines, orchids and parasites of every description, as to seem of secondary importance. Through this foliage we forced our way, now climbing up a large boulder, only to slide down the other side, then making a flying leap on to a fallen log, just to have our feet slip on the damp mould and find ourselves sprawling in the wet leaves on the other side.

So we climbed, waded through sloughs, got scratched with briars, wound up in hedge spider webs, bitten by mosquitoes and stung by gnats. When about noon we had reached the top of the island, there came the most merciless driving, pelting rain storm that it has ever been my lot to face. And I didn't face that, but took refuge under a leaning tree, where with the water running down my back, and the mosquitoes putting in their best licks, I tried to fill and light my pipe. But all things have an end, the rain slackened to a drizzle, then a few scattering drops, and, presto! the sun pops out from the thick clouds, the birds spring into life, and the forest is glittering with jewels. To complete our happiness, my companion found some dry matches in an inside pocket, and our cup was full. After our smoke, we decided to keep on across the island to "old man Grant's," where George said we would be sure to get some birds. I was ready for anything, for the old muzzleloading musket that I carried already weighed a ton; and I was eager for anything that promised to take my mind away from my load, and the uncomfortable feeling of my wet clothing.

On the way to Grant's, George told me of a tragedy which had occurred there several years before. Old man Grant was the only settler on the island proper, and had by pluck and hard work made himself a home. He had one son grown up. The father and son raised vegetables, caught fish and turtles, and managed to secure a good living. On one of their trips to a neighboring island the son met and fell in love with a young English girl; and after a short courtship married and brought his wife home. They lived happily for a while, until one day, when the old man was away fishing and the son at work in the field, there came a boat from the mainland, with four desperadoes, who had heard or surmised that the Grants had money. They first went to the field, where they shot young Grant; then to the house, where they told Mrs. Grant she must show them where the money was. She denied having any money. Taking her by the arm, they led her to the dead body of her husband, telling her if she still refused to show where the money was they would serve her the same. She still denied having any money. They then took her to the house, where, enraged at her continued refusal, they tied her hand and foot and set the house on fire. About that time they were frightened by an approaching boat, and taking their own craft pulled away as fast as they could. The boat which frightened them proved to be the old man Grant's. As he reached the landing, he saw smoke coming from his house. Rushing up, he was in time to save his daughter, but the house had to go. The men were captured soon after and sentenced to hard labor with ball and chain. Afterward, in Truxillo, I saw two of the rascals at work on the road.

While George was telling the story we floundered along down the mountain, and as he finished we came in sight of Grant's house. Between us and the house, as we emerged from the wood, was a large cleared field, and in the field were some coons, the most familiar thing I had seen since leaving New England. But coons were not what we came for; we came for parrots; and here it was well along toward sunset, and not a bird. As we neared the house we saw old man Grant approaching to meet us. He proved to be a hard, wiry old fellow, but his "Good evening, gentlemen; a merry Christmas," sounded hospitable, to say the least.

"Have you seen any parrots?" asked George.

"No, not since morning. But, gentlemen, I have been wishing all day for some one to help me spend Christmas, and I believe the old woman has just got dinner ready."

He did not have to urge us much, as by this time we

were ravenously hungry. After a dip in the brook and brushing the cobwebs out of our eyes, we were ready. As we seated ourselves at the well filled table our host observed, "I think you gentlemen said you were after parrots. Well, here they are," and he pushed toward us an immense tin filled with pot-pie. "I made a lucky shot this morning, got fourteen at one shot, and they are in that pie." We sampled that pie, in fact we sampled it so persistently that there was little but the pan left. Did we like it? Well, we did. And after our dessert of pineapples and bananas, as we were lounging under the veranda with our home-made cigars, we said, "Chicken pie made out of parrot is good enough for us."

Perhaps I have come a long way round to tell a short story, but one thing leads to another, and if I was not afraid of being too tedious, I might tell you how, after staying all night with old man Grant, we accepted his invitation to go around in his boat, caught the turtle, were capsized, etc.; but I think I have said enough for this time. Parrot pie is good and Honduras is a capital cruising ground.

TARPON.

FLORIDA.

BRITISH COLUMBIA GAME.

VANCOUVER, B. C., June 11.—*Editor Forest and Stream:* The season here in British Columbia has been very wet and backward, in fact the old-timers do not remember such a cold wet season. The snow is still deep back in the mountains. The game prospects, however, are good. In the vicinity of Victoria the crow of cock pheasants is heard in all directions, and numerous broods of their young are daily seen almost within the city limits. Quail and blue grouse are also abundant there. Friend Maynard and the writer made several attempts to photograph a blue grouse sitting on her nest, and failed each time, not but that we could approach the grouse, for she would allow us to set the camera within a couple of yards of her. The reason of our failure will be truthfully told in a future letter. There is material enough regarding the matter for several columns, and then the tale would be but half told.

Deer and panther are also numerous within a few miles of Victoria, and the trout fishing is excellent in the streams on the island. The provincial Legislature has amended the game laws in several important particulars. The \$50 license is a great mistake and will meet with much opposition throughout the Province, but more of this later.

STANSTEAD.

FIFTY YEARS IN THE GUN TRADE.—On June 13 Mr. John P. Lovell, of the Boston John P. Lovell Arms Co., celebrated the fiftieth anniversary of his business career. Beginning in 1840, Mr. Lovell has been connected continuously with the gun trade, his business growing from year to year and from decade to decade, until it has attained its present very large proportions.

AN OCTOBER REPORT WILL BE IN ORDER.—Camden, N. J., June 5.—If the Jersey law makers don't interfere this year, I know where a seven-snagger has been running through the woods of Atlantic county the last three years. I count the days on my fingers for the last of October.—W. C.

CUTLER AND CROSS ISLAND.—An effort is being made to induce the wildfowl to remain over by planting the shallow lakes of Cutler and Cross Island, Maine, with wild rice and other aquatic cereals and roots.

GAME IN THE NATIONAL PARK.—Yellowstone National Park, June.—A tourist who made an early trip with a saddle horse and guide, saw over two hundred elk in the Alum Creek Country and Hayden Valley, and one buffalo bull within two and a half miles from the Upper Geyser Basin. The government scout, Mr. Ed. Willson, while on a trip down Nez Perce Creek, saw a band of buffalo with 50 cows and 15 young calves in sight. He says the calves were so young he could have caught any of them. After watching them for some time he went around, so as not to disturb them. It was no novel sight to him to see a band of 50 to 100 elk, but the buffalo are not so plenty, and they gladden an old-timer's eyes. I saw on a trip to Soda Butte several bands of elk. None of the bulls had horns much over twelve inches long; this slow growth is caused by the late season I think. One, two and three years ago I saw several bulls with horns much longer and at an earlier date. The cow elk are having their calves. If the rate of increase goes on as it has the past five years the Park will soon be overrun with game. Several bear have been seen this spring. One old silver-tip strode pat on two of the Transportation Co.'s herders on Mt. Evans recently. They were well mounted and wanted to see it run so that they might give it a charge, but they soon changed their mind when the chase proved likely to be the other way. Antelope and blacktail deer are quite numerous in the open country between Mammoth Hot Springs and Soda Butte. From all indications the Park will see more visitors this season than ever before.—H.

LAWRENCEBURG, Ky., June 6.—Anderson county is one of the largest producers of "Bourbon" whisky in Kentucky, and it seems that the whisky interest has almost absorbed all other interests, fishing and hunting included. There is not a shooting club in the county, though the wealth would warrant such recreations. But if a denizen of the hot and dusty city desires a pleasant place to hunt or fish, this town offers many inducements. The county town lies about midway between Salt and Kentucky rivers, each about four miles distant, and each abounding in fine black bass, cat, calico perch and other kinds. There is still a large proportion of forest lands which abound in small game. I am told the season promises well for quail and gray squirrels. There is a number of smaller streams, but in almost every case the waters are ruined and the fish destroyed by the offal from distilleries being emptied therein. Such things are indictable as nuisances, but it would almost paralyze a Grand Juror to mention such a thing, as being a blow at the material prosperity of the county. Such is the power of money and of money making. A distiller can even make whisky, drive his cattle or haul corn or do any work on Sunday, as being a business of necessity.—J. S. M.

ESSEX COUNTY GAME.—Lynn, Mass., June 24.—Judging from the reports of our local sportsmen the number of game birds in this locality far exceeds anything which has been reported in years past. This encouraging state of affairs is principally due to the mild winter weather we have enjoyed of late years. A prominent member of the Mass. Kennel Club, Lynn, Mass., knows about where every bird is located, and to use his familiar phrase that "I no and I know where to find the birds, at the right time," but I venture to predict disappointment for him and his faithful companion, as no doubt the butcher's work will commence long before the law-abiding member of the club will venture into the bush, or even before he thinks of getting his trusty breechloader in condition for the fall sport. The birds in this section of the country are wholly unprotected, so far as the watchful eye of a game warden is concerned. To be sure there is a fish and game warden, but methinks he knows not what a game law is, or if he does, he is entirely ignorant as to the protection they require at his hand and which he is supposed to give them, "short lobsters" being his hobby.—R. L.

OF OUR WESTERN NUMBER, June 12, a Massachusetts reader writes: "This is surely a red-line, blue-ribbon, white-star (or what you will) number."

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

RANDOM CASTS.

THE oil can that will not leak under some even ordinary condition is yet to be made. A small bottle of very thick glass, say about a quarter of an inch thick, made with a metal screw cap and washer, still remains the only safe thing to carry oil in the pocket or valise. Have a piece of metal of the thickness of a knitting needle soldered to the inside of the cap, and using enough to reach to the bottom of the bottle, and in long enough oil will adhere to lubricate your reel.

Don't pass unkind remarks about the manner in which the novice handles his rod, but remember that you probably cut just as poor a figure in your first attempt at casting either the fly or from the reel.

In salt-water fishing, for sport choose the striped bass; for eating, the kingfish; for excitement, the bluefish; for disappointment choose the skate. And, as they are frequently found on the same grounds, "you buys your bait and you takes your choice."

For the preservation in good shape of the long tips of surf rods, procure a piece of wood of about 1ft. in length by 2in. in breadth and 1/4 in. in thickness. Cut openings through it, across the grain, 1in. long and from 1/2 to 1/4 in. wide according to the size of the tips at the top. Make these openings 1 1/2 inches apart. Now fasten the wood by screws to the wall, about 6in. below the ceiling moulding, or in a high closet, and hang your rods in the openings, instead of standing them in a corner at an angle of 45 deg., as is so often done. It will assist in straightening those tips that have received a set and keep all in good condi-

tion and away from accidents. But don't hang them up with the reel on or they will be injured by the side strain caused by the weight of the reel. Better still, take off the independent butt with reel attached, and lay it on a shelf.

Use oil-tanned raw hide for the apron to your reel, instead of the usual hard and rough leather. It preserves instead of injuring the line. **BIG REEL.**

THE NESSMUKS.

WORCESTER, Mass.—For a number of years the need of a sportsman's club, which would be more in sympathy with the interests of active field sports, has been strongly felt here, and during the fall shooting of the past season a few congenial spirits who had passed many a pleasant day together in the brush and on the trout streams, decided to organize a club, founded on their ideas of what a sportsman's club should be.

Not until the past winter did the scheme take any definite shape, but before the trout season opened, things were well under way, and by the time the weather was warm enough to make an outing agreeable a club of six was formed and an entire camp kit, including tent, dishes, a refrigerator (about 18x14x20), cooking utensils, and a folding canvas boat, was purchased.

The thought that an account of one of our outings might interest some of **FOREST AND STREAM's** readers, has prompted me to write this article. First our name. It was decided, after much deliberation, that none more appropriate than the *nom de plume* of that very fountain head of all that is best in field sports could be chosen. The man who stands preëminently at the head of American woodsmen, and one whose writings will ever hold him in kind remembrance. With what a shock of pain we read of his death so lately. Yet we never saw him or even knew that he was born within a few miles of Worcester. But we knew him well through his contributions to this paper.

And so we are called "The Nessmuks." Of officers we have but one, the "official hustler," self appointed and with authority to get up a fishing trip for any day on which he can be away. We never lack for a "hustler," as some one has a scheme under way about all the while. Our official machinery therefore runs remarkably smoothly.

One Friday one of our members pined for trout. The telephone was brought into play and a gathering was arranged for 7 P. M. Every one was on time. "Well, what's up now?" "Up? Well, it's about time something happened, isn't it?" "Sure!"

"All right; you take a can of cream in the refrigerator and I'll look out for coffee and salt pork. What time will we meet you for breakfast?"

"Oh, say 9 o'clock."

"Nine it is. Good night," and the meeting was adjourned.

It was arranged that we were to go in two directions; two in one team with the boat and camp truck and three in another with tent and refrigerator.

You are not to meet the club members in their offices, so by what names they are known on the street would not interest you. As they appear for breakfast they are known to the camp as "Hy Hicks," "Little Hicks," "Charley Ross," "The Half-breed," and one who has not earned sufficient distinction as a fisherman to entitle him to more of a handle than "Blondie."

Little Hicks and Blondie had the boat and were started about 1:30 A. M., just the time Hy and Charley reach the Bay State lunch cart to learn that the hungry Half-breed "had been there" and cleaned the cart out, forcing them to the "open all night" star. The three finally got together, loaded in their effects and got off a few minutes past two. Cold! I did not experience such a ride last winter, and was obliged to wrap myself in the lap robe to keep from freezing, while Charley drew on his extra pair of heavy woolen socks over his gloves to drive in. Just before daylight we turned down an old wood road and hitched up.

Doing a war dance to start circulation we got into our togs, thrust hands into pockets, and with rods under arms started for the stream. It was almost light enough to see one's line when we started in, and it was not a minute later when Hy laid the first trout out on the bank without any preliminary landing net business.

This opened the ball; and it was not closed till the end of the stream was reached about 7 A. M. The trout were all in the running water, and were biting like tigers.

The Half-breed struck a big one, and hung back trying to coax him to rise again till Charley and Hy were out of sight down stream. They were "in it," surely.

Coming to a deep pool, Hy took to the bank for a few rods; and as he stepped in again, Charley hooked one within two feet of where he stood; and soon he was netted and they proceeded down stream side by side, wading the stream, and nearly every likely looking place yielding one. "Careful how you approach the big pool, Hy; we'll get a nice one there," said Charley, as he sneaked along under cover of the bank and cast out over the head of the pool, being rewarded a moment later by a good one, which made the light rod nearly kiss the water as the fish felt the hook and turned down stream. This stream is a favorite of ours, and the fishing being mostly open, we fish it right. That is, with light fly-rods, netting each other's fish.

The flat water below proved unfruitful; but coming to where an old log lay across the brook, Charley remarked, "Now, a good fisherman would take one there," which he immediately proceeded to do; and striking in a rod or so below Hy, said, "That's a pretty likely looking stretch just opposite me," but failed to fish it, while Hy followed down and took three beauties out of it, and whipping the opposite side where Charley had just waded down and hooked a half-pounder.

In attempting to walk carefully over the shelving rocks Charley partially lost his balance and sat down just far enough so that the water flowing over the terrace behind him washed the skirts of his coat, but did not quite touch his trousers where they were nearest the water. Teetering there for about half a minute before he could regain an upright position, he presented a picture which was worth the trip to see.

Something ludicrous occurred at every turn, and such a trip comes to a man but seldom. At one time both rods were floating down stream, while two excited fishermen were trying to basket a 12in. trout. Coming to a par-

ticularly slippery place one was sure to hook a trout just as he began to slip, and do a song and dance over the stones for a rod or so before he could bring up and land his fish.

About 7 o'clock Charlie and Hy turned back to hunt up the Half-breed whom they found squatted down behind a bush intent on fishing a deep pool where an old tree grew on the opposite bank. "Hush! I just lost an old lacer in here. He bent my rod double." "Want me to take him out for you?" says Hy. "Yes; he's right under those old roots." Hy strung on one of his "irresistibles" and hooked him the first cast. "Great Scott! he's got him, and he'll weigh two pounds—head him over here away from the roots. Take him up into the swift water and drown him."

"What, a sucker?" "No, a dace." "Oh, dear! Ain't that terrible." This ended it, and the baskets were emptied on the grass and 31 beauties from 8 to 12in. long were counted with the remarkably even respective catches of 10, 10, 11. Upon reaching the team, the horse, which was hitched to a sapling, made a sudden plunge forward followed up with another till she lost her foothold, when her head was down completely out of sight, beneath her body, and blood was seen oozing out through the blanket, which completely enveloped her. It did not take long to whip out a knife, cut the halter, unhitch tugs and holdbacks and throw off the blanket so we could see what shape she was in, and pulling out her head she regained her feet. Not one in the party but supposed her neck was broken. The only damage to the harness was about the bridle, and was repaired with a piece of twine. A small cut was found in her side where a stub had broken the skin. This was washed out, and the delay was not more than twenty minutes; but three men had learned thoroughly a good lesson. Never approach a horse from the rear.

At the appointed times all met at the rendezvous, and the coffeepot was soon out. Hungry! Ye shades of Tanner, blush for them. Breakfast over and dishes washed, the Half-breed and Blondie started out to fish a brook at the head of the pond, while Charlie and Little Hicks took the boat out for a troll, leaving Hy to keep camp and fish for perch from the shore.

Just a word about our boat. It is such a gem I cannot forbear mentioning it. It is the "Acme," advertised in this paper, and seems as near perfection as a folding boat can be. When folded it goes right under the seat of a Concord wagon or stands up between two in a carriage. Set up, it carries three nicely and for model no folding boat I ever saw approaches it.

During the day Charlie and Hy were drifting along the shore with a light wind, when suddenly, and with a roar that was simply blood curdling, a water spout, or whirlwind, struck the pond just at the shore, about 200yds. away, and moved out about three rods, when it as suddenly died out. It was unlike any water spout either ever saw before, inasmuch as it was of the same size from top to bottom, appearing about 10ft. across and 5ft. high. The noise it made was spiteful beyond description, and the water flew from it in all directions. After it subsided the men looked at each other for a minute before either spoke. Charlie's eyes hung right out on his cheeks, while he avers that Hy did not regain his customary color for half an hour. It certainly was a most wonderful and fearful thing.

At 4 P. M. we had dinner. Charlie is the cook, and when he has the coffee pot boiling away and our spider (one we had made to order, 14in. across the bottom) filled with trout frying in salt pork and Indian meal, he is in his element. And such coffee and fried trout as he can produce would gladden the heart of any epicurean camper. The day was beautiful, and we did not use our tent, preferring the shade of the trees, in which to enjoy our after dinner pipe. And we did enjoy it, too, every minute of it.

If I had time and you had patience I might describe the lovely pond on which we make our camp, the pretty grass-covered point, which juts out into it just enough to insure a good breeze at all times and immunity from flies. The pit where sand has been taken from the bank years ago is now grown up to grass, level as a floor and surrounded by a wall about 5ft. high. Here we leave our teams. In the numerous streams near by trout are to be had. There is pickerel and perch fishing, and all of it within an easy drive of the city. We think we have hit on about the right idea of fishing for the pleasure there is in it.

We always have a good time. Every one is a "thoroughbred" and "kicks" at nothing. If the day proves pleasant our pleasure is assured. Does it rain, it's better fishing, and we can cook and eat our dinner under cover.

Of course we seldom bring in many trout, but if we can secure enough to feed five or six hungry men we are satisfied. So far we have got big returns on our investment, and some day we shall take out our wives and babies and endeavor to substantiate our claim that there is no better way to spend a holiday than with The Nessmuks. **HAL.**

WITH FLY-ROD AND CAMERA.

IN size, interest of text, wealth of illustration, and beauty of production, the most notable work on salmon fishing issued. See advertisement elsewhere.

TO SALMON ANGLERS.—T. J. CONROY, 65 Fulton street, N. Y., has a lot of fine salmon rods, assorted kinds, which he will sell at a sacrifice until stock is reduced. Don't miss the opportunity.—**Ad.**

FOREST AND STREAM, Box 2,332, N. Y. city, has descriptive illustrated circulars of W. B. Lefingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swivel," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

CHICAGO AND THE WEST.

CHICAGO, Ill., June 20.—Everybody is now out fishing, or has just got back, or is just about to start out. And everybody is catching fish too. This seems to be a great season out this way.

The Fred Taylor and Frank Arrowsmith party got back last week from their annual trip to the headwaters of the Little Oconto, forty miles west of Ellis Junction on the Milwaukee & Northern, and they had 1,800 brook trout with them. I am not saying a single word.

Billy Payson is also just back from a trip up the Milwaukee & Northern. He caught an average of about sixty trout a day, and had 300 in all. I hear he was also on the Little Oconto.

Mr. Fred C. Donald, general passenger agent of the Chicago & Atlantic, Mr. Levings, an engineer on the same road, and Mr. C. S. Burton, of the Kankakee Line, were last week up at Ellis Junction after trout. They did not go very far from town, and seem to have tried fishing in the horribly bushy and much fished little creek right near town. They caught a few trout, but were fairly driven out of the woods by the mosquitoes, which are worse this year than for a long time, owing to the prevalence of high water all the spring. The agent at Wausaukee still writes down reports of high water. He says he can't bet on the trout yet, but he can on the mosquitoes.

It was Mr. Levings who told Messrs. Donald and Burton of the fine bass fishing in the Tippecanoe River, in Indiana, and this week the three gentlemen above named are going to take the official car, Fredonia, of the C. & A., and go down there and have about the most fun ever was. Scott, the colored boy who belongs to the car, is going along to cook, and there will be great days on the car. The Fredonia will probably lie off at Ora Station. Below there the Tippecanoe runs close to the railway. It is a broad, rocky stream, full of riffles, and can be waded nearly all the way. This luxurious party will have a handcar go along on the track opposite to them, and will thus have transportation for their ice, fish and eatables. The Tippecanoe is here a good stream for fly-fishing, and the bass are the small-mouthed, but this party will use some minnows, against which Charlie Burton puts his glass minnow trap on the handcar. The bass will have to come down when a whole corporation goes out after them this way. I came very near going on this trip myself. I told Charlie Burton I was going fishing with a party on the Fox River next Saturday, and then he invited me to go down on the Tippecanoe with them, on Saturday, all of which nearly turned my hair gray. It is matter of grief that one cannot fish all the streams at once, for life is so short.

It seems that Mr. Loeb, of A. G. Spalding & Bros., was out with a picnic party below Aurora, on the Fox River in this State, a week or so ago, and came back with long accounts of the bass they caught on the fly in that stream. His story so fired Mr. August Hirth, who presides over the fishing tackle department of the same house, that he also must go fishing. Mr. Hirth is a celebrated fly-fisherman, his art being fairly equal to charming the birds from the trees. Mr. John Soderberg, Mr. A. H. Harryman and myself will go along to watch him fish. All joking aside, however, the bass have been taking the fly in fine shape on the riffles of the Fox, near Oswego, Aurora and Yorkville. The C. B. & Q. is the line to these points.

It is probable that our party will not catch many fish on Saturday, for to-night there have been disastrous storms all through this section. Cyclones have wrought destruction through northern Illinois. Torrents of rain are falling to-night. Dispatches to the press from Boscobel, Wis., report heavy floods there and say the trout streams are ruined, the trout being swept out into the meadows and left to perish. The streams of this region will doubtless be too high for good fishing for a few days now.

Day before yesterday I met Mr. W. L. Shepard, Secretary of the State Sportsmen's Association, just as he was outfitting for a trip to Crosby's place, on big Twin Lakes, Wis. As I had just gotten in from that same country, I implored Mr. Shepard to procure a head net and a bucket of mosquito "dope" before he went into the woods. He grew pale, and hurriedly purchased those commodities for himself and two friends. A man can have a lot of fun with the mosquitoes up in Wisconsin this season.

Messrs. H. & W. H. Manegold, Julius Roehr, Robert Kretchmar, Jr., and Henry Roethlisberger, all of Milwaukee, returned last week from a mascollonge trip through the lower Eagle Waters chain of lakes. They had a box full of fish; but their largest mascollonge weighed only 16 lbs. Their names probably stuck out over the boat and scared the fish. Mr. Robt. Seidl, of the same city, came down on the same train from Twin Lakes, with some "lunge and a half" of perch.

Billy Mussey and a friend or two are fishing in the lakes near Madison, Wis., a very beautiful locality. Billy some time ago provided himself with a fine new rod, which some enterprising rod speculator sold to him for \$2.50. It was one of the "combination" sort, the kind you can make into a cane, a sketching stool and a clothes-horse all at once, and which can be operated by a child. Billy ought to feel all right about that rod, for he got a good deal of wood for the money.

Mr. Lew Pitcher, of the Board of Trade, with Messrs. J. B. Goodman, Jas. Whitney and J. E. Jenkins, recently returned from a week's fishing on Lake Winnebago, out of Neenah. They had remarkably good luck, the catch of small-mouth black bass, aside from all silver bass, pike, etc., running 56, 40, 28, 35 and 82 per day. These bass were taken on the trolling fly, over the reefs. Mr. Pitcher explains that he uses a gang of flies on a long leader, sometimes attaching a minnow or so also on the leader. The minnow, he thought, attracted the bass, but they usually took the fly, and often he had three bass on at once. I should think one fly would be more fun. Neenah is a good place to go. If I were asked to advise a party where to go and be most certain to get some fish, I believe I should recommend Neenah. The fishing there is varied. The Milwaukee & Northern, or the C. & N.W. is the road to take. Mr. Orr, of the Board of Trade, and his friend, Mr. Bartlett, took 350 lbs. of bass on Winnebago in three days this spring. That ought to be pretty near enough. Mr. Pitcher mentions having heard of four shad taken on Winnebago this year. These fish weighed about 34 lbs. and are supposed to be part of a plant put in six years ago. I have heard nothing of the "moon-eye" fishing in the Neenah River this spring, but that must be

just about due now. The "fly" was on the Wisconsin lakes in abundance last week.

Mr. C. W. Lee and a friend have had some fun fishing for the big lake perch some distance out in the lake. They caught some weighing a pound and a half, he thought. The secretary of the Grand Calumet Heights Club, Mr. Marshall, says the perch fishing off their beach is now good. The annual meeting of this club, for election of officers, etc., occurs next Wednesday night at the Grand Pacific Hotel, of this city.

The last I heard of myself I was up in Wisconsin, or, rather, in Michigan, and had just finished breakfast at Watersmeet. At this point Mr. Vliet, the general passenger agent of the Milwaukee, Lake Shore & Western Railway, together with his friends, Mr. Kennedy and Mr. Bonnell, bade me good-bye as their train rolled north for Gogebic. I was to go south to State Line and thence seek out Charlie Gammon and his associate pilgrims, who were supposed to be in camp somewhere over on Vieux Desert. Watersmeet is right on the divide, and I was told that I could get some trout fishing there, barring the high water. To the north, bass; to the south, mascollonge, dead oodles of them, according to all accounts.

By and by a freight train came along, and in course of time we got to State Line, and there I shouldered my pack and inquired of the station agent whether he could direct me to a wild-looking man with a side-bar moustache. "Oh! you mean Mr. Gammon, do you? Well, he and all his party have pulled out from Vieux Desert and gone down to Three Lakes, about twenty-eight miles below here."

"Did they have any fish?"

"A few. They had one good 'lunge. Some other parties sent down a good lot from Vieux Desert last week. They bit better last week than this. Mr. Gammon left here two days ago."

Nothing was left but to climb on the freight train again, which was done, after the conductor had obligingly waited till the agent had learned by wire that the Gammon party was still in camp out at Three Lakes.

It was our fortune to have a sick locomotive on that particular freight train, the way she gasped, groaned was painful in the last degree. The sylinder was worn so that the packing would not stay. At Eagle River we took the engine to pieces and scraped it, but it didn't seem to go any better, and we were devoutly thankful when at about 1 o'clock, P. M., we pulled into Three Lakes. Here I got lunch and learned that the party I sought were in camp on Lone Stone Lake, about 9 miles east. To this spot I got some of the usual complicated directions of the North Woods, I was to go so many miles to such and such a place I had never heard of, and then follow the trail till it turned to the right, and then take an old trail that led off somewhere else, and by and by I would get there. My informant begged me with tears in his eyes to let him take me over with a team, price \$5, but I reasoned that I could make just about \$5 in two hours and so set out on foot, supplied with a lunch or two, some matches and a general idea of which way the stream ran. At first I went along about like Al. Bandle's railroad train, which ran eleventy-seven miles in 'leventy-seven minutes and a half, but after the first five miles of mud and mosquitoes I slowed down a little. My pack, which weighed about 40 lbs. in all, appeared to weigh more than a four-year-old buck. And there were 400,000,000 mosquitoes that bit me every half mile, in spite of head-net and pennyroyal "dope." By rare good fortune, however, I kept on the right trail, and dreading extremely a night in the woods under such conditions, I struck so good a gait that after a time I knew I must have passed over not only 9, but 11 miles or more of ground. As a rest in carrying my pack, I tried "toting" it with the strap passed across the forehead, Indian fashion, and, on the whole, found I could travel faster in that way, a sort of jog trot being then possible.

The long and crooked lane through the deep pine woods and swamps finally ran up on a high ridge. Through the forest I could see a streak of lighter sky, and knew that I was near the lake. At length it broke full into view, and racing down the slope I saw the white tents shining through the green trees upon the shore. Here in a few moments I cast off my pack and took a long breath. A boat was passing inshore between camp and the opposite line of green woods, and I hailed it.

"Hello, who are you?" came the answer.

"Mighty hungry," I replied, and some one laughed and the boat turned and shot in toward camp. E. HUGH.

MAINE FISHING.

THE sportsmen have generally returned from their spring fishing trips, and reports are fairly satisfactory. At Moosehead the fishing has been excellent, with the trout rather larger than usual. Fly-fishing there has begun to some extent, though the weather has been cold and the season has been backward. The Kineo Club, of Boston, started on its annual trip to Moosehead last week. The number of sportsmen who have made up the party in former seasons was somewhat reduced, and new men were invited. J. B. Thomas, Jr., the commander of the club, was prevented by press of business from going. He is one of the partners in the Standard Sugar Refinery, organized and owned by his father for many years, and with the Sugar Trust business has been rushing. Mr. Walter Sanborn was also prevented from going with the club by pressure of business. Mr. Lauriat, of Estes & Lauriat, is soon to sail for Germany, and consequently he gave up his trip with the Kineo Club this year. Among those who have gone are Mr. Frank Wise, of Fisher & Wise; Mr. Hunnewell, of Doe & Hunnewell, and Mr. Albert Nickerson. Mr. W. S. Hills followed the party after they had been gone several days. Mr. Hills is one of the most genial of sportsmen, and he has the sympathy of all of the clan in his affliction—one of the hardest for the sportsman to bear—that of partial blindness. But his courage is sufficient to cure even cataracts of the eyes. He is determined that he will recover his eyesight, and thoroughly believes that the way to do it is to visit the old haunts and try to see the old sights again.

Some of the brook fishermen report remarkably good catches since the weather became warmer. Mr. Foster, of Foster & Weeks, this city, has just returned from his native town—Bethel, Me.—where he has visited the old brooks again, with a wonderful string of trout as the result. He reports the brook fishing in the neighborhood of Newry and Bear River very good.

Reports say that the landlocked salmon fisherman are

still catching some fish of fair size in the Sebago waters, though large fish have been scarce this year. The catch of landlocked salmon in the Rangeley waters has not been remarkable, or even very satisfactory, this year thus far. Mr. C. D. McDuffee, of Manchester, N. H., is reported as taking a salmon from Kenebago Lake the other day weighing 6½ lbs. Several smaller fish have been taken from Rangeley Lake, but very few from the lakes below.

J. H. French, well known to sportsmen as a hotel keeper at Andover, Me., has sold his hotel at that place, or at least the bargain is made, to the Thomas Brothers, Albert and Frank, proprietors of the other hotel at the same place. Mr. French is to give up the hotel, and also the transportation business over the buckboard road in to the lake. He is at present lessee of the Union Water-power's hotel camps at the Upper Dam, and he proposes to remain there and build a couple of cottages on the lands of the company, one for the better accommodation of ladies visiting this fishing resort and the other for his own home. I understand, from good authority, that he has the permission of the company to build these cottages. He looks upon the undertaking as a safe one, since it is probable that the railroad from Phillips to Rangeley, now building, will be running by another season, whereby it is expected that travel will be doubled to those lakes.

June 24.—One of the members of the Kineo Club has beaten the record in the way of lake trout (*namaycush*) this season. Mr. J. F. Nickerson, in the wholesale grocery trade of Boston, brings back from Moosehead a lake trout weighing 19½ lbs. This is no fish story, for Mr. Nickerson produces affidavits of the exact weight. This is the biggest trout yet, though not a pure *Salmo fontinalis*, and Mr. Nickerson is justly very proud of it.

Another big catch this season was that of Master Willie Clough, of Lynn, Mass., a lad only twelve years of age. In company with his father he made a trip to Moosehucmaguntic and Cupsuptic in May. At noon one day they went up to one of the Cupsuptic camps to dinner. The boy at play in one of the boats at the wharf threw over a hook with a dead minnow on it. Soon he felt a fish, and saw at once that it was a big one. He played it, and finally landed without assistance an 8 lbs. trout.

It seems that Mr. Fox, of New York, who took a 7½-pound trout from the Narrows, Richardson Lake, at the time that Mr. Guild, of Boston, took his 10½-pounder, of which the FOREST AND STREAM has already published an account, had rather bad luck. The lake was very rough that day; indeed, so rough that soon after the big trout were taken they were obliged to quit fishing. The waves were so high that they decided to stop at Camp Veve Vale till the little steamer came down on its afternoon trip, and get aboard for the Middle Dam, instead of attempting to have the guides row them down. They reached the wharf at that camp all right, though a little wet by the high seas and considerably benumbed with the cold. But the big trout were in the boats all right up to this point. The guides—I will not give their names, for they are not in the habit of making blunders—took Mr. Guild's trout out all right; but, alas, for the 7½-pounder of Mr. Fox. The guide took him up and attempted to step on to the wharf. The fish was slippery, as only a cold trout knows how to be slippery. The guide's hands were numb with the cold. The trout went down between the wharf and the boat, and is there to this day for all that has ever been seen of him. The fish was supposed to be "stone dead," but it did not rise, though they waited and watched till evening. Poor Mr. Fox was really to be pitied. He has been fishing many trips, but never succeeded in taking a big trout before. Moral: Always handle trout, and make guides handle them, by locking the thumb and forward finger into and through the gills from below. It is absolutely impossible to lose a fish if it is taken hold of in this way, whether it be alive or dead.

Mr. Samuels, President of the Massachusetts Fish and Game Protective Association, and author of that charming new book, "With Fly-Rod and Camera," has just returned from a trouting trip to Nova Scotia waters. He reports the fly-fishing excellent with fair-sized fish. He is much pleased with the extent of lake and river that is easily accessible there. He visited the old haunts of the lamented Prouty. His hands are brown enough to last him through another siege of literary work, but there is an absence of the usual black-fly bites. Mr. Samuels thinks that he was too late for these torments of the angler; they come very early in this section.

But the fishing resorts are about to be given up for the season by the regular anglers, and the excursionists are to take their places. Excursions are planned to the Dead River region and to the Seven Ponds, to the Rangeley and to Moosehead; Tuft's Pond in Kingfield, lately dignified with the name of Tuft's Lake, is also to become an excursion resort, that is if excursion parties can be advertised into going there. The advertisements propose the best of fishing for gamy trout. Well, the excursionist will not hurt the fishing much. That is one consolation to the anglers who have been in the habit of visiting these waters. The gamy trout will probably keep out of the way of the bait that is offered by the ordinary excursionist, and one good dose of live mosquitoes will wind up the fishing. SPECIAL.

PENNSYLVANIA ANGLING.

Editor Forest and Stream:

In "Angling Notes" in your paper much information is given in short form. All anglers should help to enlarge this column. About Aug. 1, 1889, the Pennsylvania Fish Commission, through Mr. W. L. Powell, sent 4,000 California or rainbow trout from the Allentown hatchery to me at Harrisburg, which I placed in the Big Spring, a Newville. On the opening day, April 15, my son took one on a fly which measured 6 in. Two weeks ago caught one 7½ in. long. Yesterday I took two 7½ in. and one 5 in. long. When they were placed there last August there were none over 1½ in. in length, so they have grown at least 6 in. in ten months. The four I caught were at taken where the water was 30 in. deep and runnings swift. I caught fifty-nine trout yesterday, but no rainbows, and the quiet, still, running parts of the stream. I also took few brook trout in the same stretch of water that the rainbows frequented; they gave considerable sport, jumping out of the water three or four times, and then sulking a little before landing. I took a brook trout yesterday about 9 in. long that had a scar across the back of its neck and about ½ in. of its gill cover gone, exposing the gills. It was evidently struck by some sharp instrument.

FLORIDA FLY-FISHING.

ELIZABETH, N. J., June 18.—*Editor Forest and Stream:* As a fisherman has a reputation for accuracy to maintain (or establish), will you permit me to correct a recent item in the *FOREST AND STREAM* relating to myself? The paragraph gave me too much credit, and at the expense of my companions. There was but one tarpon killed with the fly-rod during the trip, and this was accomplished by J. Herbert Johnson, of New York. Tarpon rose freely to the fly, but owing to the hardness of their mouths a strike was rarely successful; and with a light fly-rod it was frequently impossible to keep the tarpon away from the roots of the mangroves, entanglement in which of course was immediately destructive to the leader.

The "25lb. channel bass" was doubtless an allusion to one of 24lbs. 5oz., killed previously on a fly-rod by one of my companions, Dr. George Trowbridge. On the trip referred to, although innumerable large bass were caught, there were none of weight approximating this. The "nine varieties of game fish killed on one occasion" were the joint result of the labors of Messrs. Johnson, Trowbridge and the writer. The fish were so large and gamy that a man of ordinary strength could scarcely have endured the physical strain incident to killing the number involved in the performance alluded to.

It seems impossible to exaggerate the fishing possibilities of the west coast of Florida. With a fly-rod the number of fish which may be caught is purely a question of physical endurance. The frequent uncertainty for ten minutes after striking, as to what manner of fish is attached to the line, is pleasantly exciting. Indeed, one frequently starts in with one fish and lands another, the fish originally struck having been swallowed by a larger one.

When one tires of the rod there remain the better weapon and the manlier sport of the harpoon and harpooning. This sport involves more exercise, demands more skill, is more truly sportsmanlike, and is vastly more exciting than the capture of any manner of fish with any form of hook or rod which the wit of man has yet devised. But I must not make you the victim of my hobby. Would you like the cold statistics of the victims of rifle, harpoon, net and rods in our recent trip? Devil fish, 2; deer, 4; turtle, 5; alligators, 3; sawfish, 6; whip rays, 14; jewfish, 7; sharks, 23; tarpon, 21; kingfish, black grouper, cavalli, ravaile, bluefish, Spanish mackerel, channel bass, sea trout, skipjack, bonita and nineteen other varieties in great numbers. A. W. DIMOCK.

ANGLING NOTES.

A FINE pair of salmon were seen last week disporting themselves in a pool below the falls near the mouth of Rondout Creek, which flows into the Hudson River. They remained there two days, chasing one another around the pool and even to the very edge of the bank. They were undoubtedly male and female and in search of a spawning bed.

The Hon. Geo. A. Brandreth reports that the bluefish are quite plenty at the inlet at Rockaway Beach. A number have been caught from 8 to 12lbs. in weight, and one was taken that turned the scales at 16lbs. Sea bass are also reported as being very plenty, but weakfish are scarce.

At Manasquan Inlet, on the New Jersey coast near Point Pleasant, large numbers of bluefish have made their appearance and the anglers there are having great sport. A large shad was picked up on the beach, having been chased ashore by the bluefish. Quite a number of striped bass are also being caught by casting from the shore. The most attractive bait seems to be the white sandworm.

As soon as the weather becomes hot the surfaces of the majority of our lakes get too warm to suit the trout and they retire to the deep cool pools and spring holes. When this occurs it is very difficult to find good fly-fishing. This generally is the trouble in going too late to the Adirondacks or Maine. If the weather happens to keep cool good fly-fishing may be had up to the middle of July, but after that time and until the cool nights of September reduce the temperature of the surface of the lakes, it is almost impossible to coax up decent-sized fish to the fly. There is one notable exception to this rule, and that is in the region of the famous Seven Ponds in Maine. These lakes are so cold that one can enjoy good fly-fishing all through the summer. Prof. Mayer of Stevens Institute spent a couple of months there, and indorses this statement. The fish are not very large, but of good fair size, and afford excellent sport. There is a good camp on Beaver Pond belonging to Ewd. Grant. He will furnish those who wish to visit this region with the necessary information; his post office address is Rangeley, Maine; or Mr. Wakeman Holberton of 18 Vesey street will gladly give further particulars.

Reports from the Restigouche place the number of salmon killed per day at about 200, an average of about two to each rod, as it is estimated that there are not less than 100 anglers on the river at present.

There are many stories told that prove that the killing of fingerlings is yet far too common. Sometimes it is the countryman with a big tin full of little fellows, resembling soft soap, snaked out of the side streams and sold at the hotels and boarding houses; and sometimes it is the city angler who imagines he is doing a big thing to fetch in a basket of trout that would run 32 to the pound. What a pity it is that people will be so short-sighted. Just to think what fun each of those little fingerlings would furnish if allowed to grow up and become a 10 or 12in trout! We shall have to adopt the foreign style and have a man go out with every fisherman who will carry a rule and measure each fish before it is put in the creel.

And now it is becoming the fashion to troll for speckled trout with the deadly phantom minnow or cruel gang bristling with treble hooks. We ought to copy the laws of Maine and forbid the use of more than one hook. And even better yet would it be to do away with all bait-fishing and stick to the artificial fly, so that the trout would grow up and increase, and there would be plenty for all.

BLUEFISH.—A few bluefish have been taken in the Great South Bay, Long Island.

MICHIGAN TROUT STREAMS.—Our esteemed correspondent, Mr. Alex. Starbuck, is now on the north shore of Lake Superior among the huge brook trout of that icy basin unless the allurements of Deer Creek have held him a willing captive for a longer time than he intended when writing us from Grand Rapids, June 17. We quote from his letter for the information and pleasure of anglers who are hoping to enjoy an outing in the State now famous for trout of several kinds, and particularly the *fontinalis*: "Trout are reported here and elsewhere as being quite numerous and taking both the fly and bait with avidity. A friend writes me from Boque Falls that two anglers caught in Deer Creek in one day 225 trout running from 6 to 10in. Another one drops me a line that he took out of two holes in a creek within eight miles of Petoskey 75 lovely trout from 6in. up. A merchant of Grand Rapids informed me last evening that in the early part of May he took 55 fair-sized trout out of Pine River, in the northern part of the State, in six hours' fishing, and that when the stream was high and roily. Two of the attachees of Spalding & Co. of this city, caught in one day in May in Bear Creek and the Hersey 82 and 85 respectively, among which were some running over 2lbs. In fact, from all inquiries I learn that trout are more numerous this year in Michigan than ever before, and that big catches are the rule."

STOCKING MAINE WATERS.—David Kneeland and John Meade recently made a trip to the Edes Falls hatching house and got some 25,000 landlocked salmon fry, which they turned into tributaries of Anonymous Pond, Harrison and Long Lake, at North Bridgton. Messrs. Frank Bennett and J. F. Libby also procured several thousand fry for Lakin Brook, in Sebago. We learn that there were hatched at Edes Falls this season about 600,000 landlocked, 250,000 sea salmon and about 7,000 brook trout. All excepting the sea salmon eggs were taken from fish caught in the Crooked River weir, and nearly all will be turned into local waters. The increased number of small landlocked salmon taken in Sebago Lake this spring demonstrates that artificial propagation is the right method. Five years ago it was rare to see a smaller fish than 3lbs. taken there. The Sebago Lake fishing has compared well this season with former years, notwithstanding high water and bad weather. The mouth of Stickey River, near the lake station (Sebago Lake) has come into some prominence as a fishing ground, and we predict that there are others to be discovered yet.

PROTECTING CONNECTICUT TROUT.—In the latter part of May president A. C. Collins, of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, learned that three parties had netted West Brook (a famous trout brook) in Windsor. Mr. Collins and Detective W. C. Fielding put their heads together and took up the trail. As a result of their work Lewis Hoskins and Charles McKinney, of Tariffville, were brought before Justice Sidney E. Clarke, of this city, at Windsor to-day. Hoskins and McKinney both entered a plea of guilty on one count, and were fined \$5 and costs, the latter amounting to \$14.69. A Hartford man who was mixed up in the affair with Hoskins and McKinney will be arrested. Law-loving fishermen are invited to assist the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, by their financial aid, as this association receives no support whatever from the State. Fifty arrests and forty-eight convictions is the record of the association since September, 1888.

SOME SEA FISHING.—On the south side of Martha's Vineyard enormous schools of very large mackerel have made their appearance. Among them are seen individuals measuring 18in. in length. A boat captured 600 in a short time. There is a great deal of sport in hooking mackerel when they rise freely to the bait. Their movements are swift, their form symmetrical and their colors showy. The angler can see hundreds of them darting all around his boat and may become too much excited to bait his hook, as we have learned by experience in the days when mackerel swarmed around our shores. On the shore fishing grounds off Cape Ann an 8lbs. salmon was recently taken on a trawl. There is a very gratifying increase in the number of Atlantic salmon, judging from the reports of the present season.

IRONTON, O.—Our correspondent, J. D., who spent his three-days' vacation at Bennet's Mill, in the early part of May, reports 4 black bass and a white perch as a reward of a Monday's fishing. He adds: "I read with much sorrow your account of the death of 'Nessmuk,' he is a man I should liked so much to have known personally. If there were thousands more like him how much better the world would be and how much less sorrow. A love of the woods and of woods life makes a man better for every occupation."

A PAIR OF TROUT.—Rangeley, Me., June 16.—Messrs. H. C. Kennedy, of New York, and E. W. Blodgett, S. M. Blodgett and W. B. Tanner, of Pawtucket, R. I., while fishing on the Bemis Bar this afternoon, took one trout weighing 7lbs. and one weighing 5. While the 7-pound trout was being landed another large one followed it to the surface several times. Soon afterward the 5-pounder was taken near the same place. The trout proved to be male and female.—F. C. BARKER.

A PITY HE DID NOT HOOK THEM.—Traverse City, Mich., June 19.—Bert Winnie, a sixteen-year-old boy, was spearing from one of the docks in Grand Traverse Bay at this place, when he captured and landed two muscalonge, one 4ft. 9in. long, weight 57lbs.; the smaller one weighing 24lbs. This was a big haul for a boy.—W. M. C.

NORTHWOOD, N. Y., June 20.—The streams are too high to fish much. Will Lovel caught the largest mess (7lbs. before dressing). Arthur Miller caught the largest trout; it weighed 2½lbs. Partridge are plenty.—WOOD-CHUCK.

NEW YORK CITY BASS.—Mr. Franklin caught 7 striped bass, on the first of the flood, at the foot of 126th street, on Monday last. One weighed 8½lbs. The bait was white worms.

in an attempt to jig it at night. Big Spring is frequented at night by plenty of poachers or pot-fishermen; they use all kinds of tactics to take the trout, and it is a wonder that there are any trout left in the stream. Kingfishers, suckers, eels, ducks, geese, muskrats and farmers' boys prey on the spawn and trout, until a person would think that there would be none left; but last evening they were rising by hundreds all along the stream. I took eight after dark with a white-miller, all 10 and 12in. long, catching the last one at 8:20, and then the flies and mosquitoes were so bad that I had to quit. Last Friday morning between 6 and 7 o'clock I took fourteen bass with a fly on the Susquehanna River, fishing from the shore on the Cumberland county side, with a red and yellow fly. A. J. F.

HARRISBURG, Pa., June 10.

Fishing is poor in the Susquehanna River at this locality on account of the high and muddy water. At York Haven, Pa., a party of lawyers and leading business men of York have established a fishing club house. A number of black bass and wall-eyed pike have been caught at the falls, but fishing is bad for the reason stated. Prospects are good when favorable weather and water exist. A wall-eyed pike weighing 7lbs. was caught at Collins's, Pa., last week. A fish of this kind was recently taken at Washington Borough, Pa., under very peculiar circumstances. A boy set an outline in the Susquehanna probably to catch eels and catfish, and in going over it he found this large fish tugging to get away. The pike was not fast to the hook, but the hook and line had passed through its gill out at the gill opening, and on the hook was a good-sized eel. It is reasonable to suppose that the eel took the hook first, and later the pike tried to accommodate both, but the eel probably had too much foresight in its tail to venture into his pike's abdominal region, and preferred to wriggle through the forest of gill-rakers and thus regain his native element. The pike made the absurdly common mistake of opening his mouth too wide and once too often. STEHMAN.

BAINBRIDGE, Pa., June 16.

In our issue of May 22 we published Mr. Moore's note on the capture of croppies at Havre de Grace, and on June 5 we mentioned the spawning of the calico bass in the Susquehanna and Tide Water Canal. The two names refer to the same fish and are identical also with the grass bass of the Pennsylvania Fish Commission reports. Two very fine specimens of this handsome game fish were forwarded to the U. S. Commissioner of Fisheries, June 17, by Mr. R. E. McClenahan, from the Susquehanna River, at Port Deposit, Md. One of them is 10in. and the other 12in. long, and both are in fine condition. The fishermen supposed the fish to be a cross between the black bass and the white perch. The grass bass, we believe, was introduced into the Susquehanna from Lake Erie, for it is mentioned in the fish laws as the Lake Erie or grass bass. We repeat the fact previously stated that this species is one of the finest pond fishes in our waters. With its white perch, striped bass, wall-eyed pike and rock bass, reinforced by the black bass and the grass bass, the Susquehanna commends itself to the angler as a highly profitable field for his recreation. The praiseworthy efforts of the Pennsylvania Fish Commissioners, to increase the supply of wall-eyed pike and other valuable game fishes, are bringing the river into well-merited prominence, in spite of the strange whim of calling them Susquehanna salmon.

ADIRONDACK WATERS.

NEW YORK, June 23.—I left here on the 13th, and after a ride of eleven hours reached North Creek, where I found one of the new six horse stages in waiting. After a ride of 18 miles I met my guide, Harvey Bonney, who from his experience of over thirty years in the Chain Lake region, was, of course, a safe, and I can add with pleasure, a cheerful and amusing guide. Bonney and his log house are known and pleasantly remembered by probably more persons than any of the "old guides" in the Adirondacks. After a tramp of 9 miles, over a rather rough trail, we reached his cabin, which is on Chain Lakes. It is dry, cheerfully furnished and very comfortable, with a bed of balsam boughs that would put to shame the odors of new-mown hay. After a supper of good mountain fare and a good night's rest, we stepped into our boat and were on the lake to try our luck for the speckled trout, which find their home in the cold waters of Chain Lakes. Our first day's catch numbered 25 and weighed 16lbs. The following two days it rained, and the two remaining days I succeeded in getting respectively 18 trout that weighed 8lbs. and 13 that weighed 9lbs.

Deer seemed to be very plentiful. On Saturday we saw one come out of the woods and bathe himself in the cool waters of Deer Pond, and on Monday we came across two in the afternoon feeding on the suckling grass of Grassy Pond. The open winter and the grass being a month earlier than usual has helped to preserve the deer, and they were all in their red coat, which indicates their being in a good healthy condition and unusually fat for this season of the year. If the present game laws are continued in force for a few years there is no doubt that deer and trout in the Adirondack region will be very plentiful.

A great deal of credit is due to the Adirondack Railroad Co. and their associates, the National Express Co., for refusing to carry deer or trout to market, which is a great source of protection to the game of the North Woods. I have traveled the Adirondack region pretty generally and have not seen any point of the woods that looks so well as Chain Lakes. There is no sign of fires here, which is getting to be unusual in this region, now that so much lumbering is done; and nothing destroys the appearances of these woods so much as a lumbering camp and the fires which they are the origin of.

W. S.

GREAT CATCH OF STRIPED BASS.—Where are the striped bass? Early in June a great body of them were in Pamlico Sound, N. C., and 10,000 of them were taken by the fishermen in a single day. Of course the men had more of these fine fish than they could handle, and the probability is that many of them were wasted. The time is not far distant when injurious methods of fishing will be prohibited if the extermination of the fishes is considered worth striving against.

Fishculture.

POND CULTURE.

SILVER PERCH AND ROCK BASS.

I SEND you a few lines giving my experience in "perch" culture, with the hope that it may induce others to engage in the rearing of that beautiful, valuable and desirable family of fish, I mean valuable for small ponds and family use, their growth is too slow and weight too light to make them valuable for market. Five years ago, as an experiment, I placed in a pond, of about two acres in area, several hundred "silver perch" (*Pomoxys annularis*); they were then a few inches wide and nearly as thin as silver dollars. In order to supply them with an abundance of food, I constructed a smaller pond, just above that in which the perch were placed, and stocked it well with "mill pond roaches;" through the bottom of the dam of the rock pond I put a trunk made of plank 8 in. wide, in order to entirely empty it at pleasure into the perch pond. I open this trunk every spring and through it the increase of twelve months passes, amounting to many thousands of minnows, from $\frac{1}{2}$ to $\frac{1}{3}$ in. in length; these are all devoured by the next spring, adding much to the growth of the perch.

I am surprised that more attention is not paid to the culture of this truly excellent fish. As a pan fish it is vastly superior to any other in this part of Virginia, being inferior in edible qualities only to the mountain trout. Its growth is not so rapid as could be desired, but it increases in numbers astonishingly and is admirably adapted to small ponds. As a biter it is capricious, sometimes taking the hook about as fast as it can be baited, and at other times refusing any bait that may be offered it. The best bait is a "borer," to be found under the bark on dead pine trees, though a small minnow from one to two inches in length will answer. The largest of my "silver perch" now weighs $1\frac{1}{2}$ lbs. and measures 15 $\frac{1}{2}$ in. by 7 in. I have also experimented with the "red eye" (*Ambloplites rupestris*) and do not like it so well in some respects. Its growth is very slow, but it is a better fighter, and is much more gamy than the silver perch. The largest of my red eyes, now six years old, are not as wide as a man's hand, though they have been kept in a pond to themselves with a plentiful supply of food. When I got them through the U. S. Fish Commission they were not larger than pumpkin seeds. Fishculture in this region has many drawbacks and annoyances, the principal of which are the depredations of idle thieving negroes, with which this part of the State is cursed; nothing short of a sentinel always on guard can keep them off; and then we have many minks, otters, snapping turtles, green and blue herons, etc. I shot one of the latter a few days ago, and on cutting it open found in it a carp over 8 in. long.

LOUISA COUNTY, Va., June 15.

[The red eye perch of Virginia is the well known rock bass of Pennsylvania. In the Stony Creek region of southeastern Virginia, and particularly on the estate of Dr. Overton, we are informed that the red eye often exceeds 3 lbs. in weight. Here the black bass and other fishes of its family also thrive and multiply wonderfully.]

MAINE PLANTINGS.

BANGOR, Me., June 23.—The Maine Commissioners of Game and Fisheries have just closed the disposal of their young sea and landlocked salmon fry, into the different rivers and lakes of the State. The distribution has embraced the whole State, from Aroostook to Lincoln county and Rangeley. They have turned into our rivers and lakes the product of something over 1,200,000 ova. Of our sea salmon, 200,000 were sent to the hatchery at Grand Lake Stream, to be turned into St. Croix waters, under the superintendence of that true brother of the angle, Mr. Frank Todd, of St. Stephen. The remainder were turned in at head waters of Kennebec and Presumpscot rivers. The United States Commissioners deemed it not advisable to turn in any more fish into the Penobscot above the poisonous pulp mills, as there is no law in our State prohibiting factories from emptying all their chemical refuse and other waste matter into our rivers and streams. Some hundreds of yearling salmon were contributed by the U. S. Commission to tributary streams of the Penobscot, below the tidal dam at the water works, at Bangor, and more are promised us in the near future. The landlocked salmon fry have been divided by us between some thirty odd lakes all over the State. Four lakes have been stocked in Mr. Deser's, through the kind assistance of Messrs. Kimbal, of the Kimbal House, and Messrs. Rodick, of the Rodick House. Presque Isle has formed a famous club and received a generous supply. Oxford county visited the hatchery at Sebago and carried off a supply for their different favorite resorts. Rangeley had a hatchery at Rangeley Village, whence in the future both a large supply of her famous trout as well as landlocked salmon will be produced for her famous lakes. A small supply of a few thousand salmon were hatched and turned in from there this year.

BANGOR.

NEWFOUNDLAND FISHCULTURE.

THE policy of the Fisheries Commission recently established in Newfoundland is to build at once hatcheries for cod, salmon and lobsters, and to carry on at the same time the study and investigation of the fish and fisheries, and adopt the necessary measures for the regulation and protection of the latter. A cod hatchery with a capacity of 200,000 eggs was completed July 15, 1889. The apparatus includes 48 Chester boxes and 4 of the McDonald tidal boxes. The chief difficulty so far experienced has been the securing of ripe eggs. The hatchery was finished after the close of the spawning season. In Trinity and Placentia bays cod are said to spawn in May and June. Occasionally an odd male or female in the gravid condition is seen later in Placentia Bay, but the two sexes are never found at the same time. The successful work accomplished by the United States and Norway has stimulated the Newfoundland Commission to earnest effort, and the rapid decline of the fishery has added a more powerful incentive to prompt action. The seines destroy millions of young cod every year, and the present scarcity of marketable fish is attributed principally to this destructive method of fishing.

STURGEON CULTURE.—The U. S. Fish Commission is experimenting in the artificial propagation of the lake sturgeon. The work is under the charge of Mr. Frank N. Clark and was begun at Fox Island on the Detroit river. Owing to the limited number of ripe males and females obtained at Fox Island, the operations were transferred to Algonac on the St. Clair river, where the spawning season usually begins about June 20, and the fish are caught on hooks, sometimes as many as 40 being taken in a day. The eggs of the sturgeon are free and easily handled in the jars adopted by the Commission. The period of incubation has been more than ten days, and the young are said to resemble tadpoles more than anything else.

ARTIFICIAL HATCHING OF LAMPREYS.—Mr. Alexander Jones, a member of the U. S. Fish Commission, has succeeded in artificially hatching 25,000 eggs of the sea lamprey (*Petromyzon marinus*) on ear No. 3, at Windsor Locks, Conn. The eggs are free and were hatched in McDonald jars

after an incubation period of ten days. We believe this is the first successful attempt to hatch the eggs of this species artificially. Under natural conditions, the eggs of the lamprey are deposited under heaps of stones, which the eels pile together for the protection of the ova and the young fry. The development of the lamprey, for the study of which an opportunity will doubtless soon be offered, must prove an interesting subject for the embryologist. The sea lamprey is known to deposit its eggs in the fresh waters, and the habit of protecting them by means of piles of rock is well known. The young pass a considerable portion of their early life in the soft mud and are usually toothless, and have rudimentary eyes. To the river fishermen they are familiar as one of the most attractive baits for out-line fishing. Little is known about the length of time occupied in the development of this toothless and blind animal into the formidable parasite of the shad and other anadromous fish. Mr. Wm. Bahme of Pennsylvania, has kept one of the species which live permanently in fresh water, and says that they do not become fully developed until the fourth year of their existence. Lampreys are used more extensively for food than one would at first suppose. There is a steady call for them and the supply is seldom equal to the demand.

DISTRIBUTION OF BLACK BASS.—The Pennsylvania Fish Commission recently sent Superintendent William Buller, of the Western Hatchery at Corry, to Sandusky, Ohio, to collect black bass for distribution in suitable waters of the State. Mr. Buller obtained at North Bass Island a good supply of bass averaging about $\frac{1}{2}$ lb. each in weight. He was greatly assisted by Mr. George E. Littleton, of Sandusky, who takes great interest in collecting small bass for introduction into other waters.

WALL-EYED PIKE AT ERIE, PA.—The hatching of wall-eyed pike at the Erie station of the Pennsylvania Fish Commission during the past season was very successful. Owing to the limited supply of tank room everything in the shape of a receptacle was swarming with the fry and thousands of the young fish had to be deposited in Lake Erie for want of room in the station.

"SUMMER TOURS, 1890,"

Is the title of the new illustrated summer tourist book of the Michigan Central, "The Niagara Falls Route." It is a practical guide and profusely illustrated. Sent to any address on receipt of 6 cents postage by O. W. RUGGLES, G. P. & T. Agt., Chicago, Ill.

FIXTURES.

DOG SHOWS.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. R. W. Meek, Secretary.
Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.
Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.
Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geldes, Chairman Committee.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.
Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.
November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.
Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.
Nov. 10.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.
Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratogo Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eight Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brumby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougner, Secretary.

FUN AT DOG SHOWS.

[Concluded.]

COLLIES.

THE awards that have been made in these classes would cause a Shirley or a Thompson to go off in a fit of laughter and die from the effects. Collies, like other breeds, have had their Rubicons, Meersbrook Maidens and Robin Adairs, and quite a number of collie judges have added to their stock of popularity and become famous through the usual channel—incompetence. I think it is almost generally conceded that the most incompetent persons become the most "popular" judges in America. The more outrageously unjust and stupid the awards, and the more liable is the person who made them to be written up as the "ever popular Mr. Greenhorn." I say in America, because such a thing cannot be in England. There a majority of the exhibitors are competent judges, men who know whether a decision is right or wrong. This insures the days of unreliable judges being short. They make two or three bad blunders and the fancy discards them in quick time. Here, the exhibitors, with the exception, perhaps, of a handful, know little, if any, more than the judges; and as a large majority of exhibitors exhibit worthless specimens and do not know they are worthless, it follows that the judge who succeeds in making the most stupendous blunders becomes the most popular. He pleases the largest number—the grand army of incompetents. If there is one good dog in the class the judge is far less likely to gain popularity by giving that dog the prize than by selecting a rank duffer. The good dog bears no resemblance to the bad ones, and the exhibitors argue that if the good dog is right all their dogs must be wrong.

The contemplation of such a state of affairs is anything but honey to these men, and they are only too glad to agree that the good dog is of wrong type. Let the judge spot a real bad one for the prize and then tell the disappointed exhibitors that their exhibits pressed the winner close, being of a similar type, and you will have peace in that show. Why, I have known the exhibitors to take such an award as a compliment. "He's a great deal like my dog is that first prize winner, same type. Didn't take the judge long to see they are two of a kind. Good judge, I guess, but I like my dog for first. I'll show him again." He does show again, and the good dog that was unnoticed by the incompetent judge on this occasion turns up in the same class. The judge understands his business. He gives first to the dog that was unnoticed, and withholds all other prizes and cards for want of merit. Then there is music in the air.

The man who understood his business and did his duty is denounced, the incompetent judge becomes "popular," especially if the owners of the defeated mongrels are prominent members of a specialty club. These men join hands and bring influence to bear on the unsuspecting managers of bench shows. The result is this: The judges' ring becomes open to anything and everything that is ignorant on one question—the correct type of a dog.

The memorable popularity enjoyed by incompetent judges will continue until the exhibitors and reporters become initiated. To make exhibitors, who have been born minus a natural gift of detecting true form, learn anything about dogs is a most difficult task. They lack what Mr. Wade terms a "dog eye," and it is almost impossible to make them see straight. These men are responsible for what are known as "popular judges." Look down the list. Mr. Shotwell, who has committed some of the most glaring errors of judgment ever heard of, is "popular." Mr. Harry Goodman is reported to have given a prize to a setter when shown in the collie class, and we all know about him giving the queen of mastiff bitches, Lady Clare, highly commended in a very weak class. For this he is frequently styled the "popular Harry Goodman." Mr. Mortimer could not see Guido, a collie, when Robin Adair was in the class, notwithstanding that Mr. Graham, who was looking over the railings, asked in a loud tone of voice, "What is that man doing?" More recently he gave a prize to a "collie" whose dam was a spitz, and a bad one at that. For these and other decisions of the same color he is pronounced "ever popular," and is invited by the Collie Club to distribute a number of valuable specials.

Mr. Thos. Terry, like Mr. Mortimer, did not know that Robin Adair was not a collie. He bred all his bitches to him, ruined his kennel and advised his friends to do likewise. This conclusive evidence of a thorough lack of knowledge of collies resulted in Mr. Terry being made a judge. He started out by awarding prizes to prick-eared dogs and soft-coated ones of the "type" he had been breeding. It is almost unnecessary for me to say that he is "popular." Mr. Terry has won a larger number of what may be termed lucky prizes than any man in America. Most of these prizes have been given to him by "popular" Mr. Mortimer, but "popular" Mr. Shotwell gave him the biggest plum of all. This was at the last New York show where Mr. Terry walked off with the Collie Club trophy value \$500. If Mr. Terry had been a good judge he would have refused to accept that prize, for rightly it belonged to some one else. Fancy winning \$500 with a puppy that was worth \$85 to \$50. But why is this sort of thing permitted? Didn't I tell you that the explanation is to be found in the fact that the exhibitors do not know whether a decision is correct or incorrect. In this particular case one reporter (FOREST AND STREAM'S) "tumbled to the racket," but as a rule those worthy gentlemen hold on to that chronic silence which has made them famous on more than one continent. If Tom Brown shoots Bill Jones's lurcher for scratching up the geraniums in his garden, you'll find the papers chock full of a lot of rot, yes the editors will devote columns upon columns of editorial space, in addition to a dozen pages in the kennel department, to the question of man's inhumanity to dog and neighbor. They may go further and raise a monument to the dog's memory and the man's brutality. But, when through the incompetence of a judge, an exhibitor is deprived of \$500 which, in the name of justice and fair play, is his, where do you find these reporters—vacation; gunning; shooting—sleep. By silence they prove their utter unfitness to tackle a question of vast concern to the dog-loving community. If a man shoots a dog they know the dog was shot and by human hands. If the dog dies they know he's dead. They can't commit themselves in taking hold of the question and we get the "news." They are not sure that a decision made at a dog show is right or wrong. The judges can't enlighten them, for they don't know. The exhibitors are in the same position. The result of this deplorable condition of affairs is that every breed of dogs is made to suffer, and a lot of incompetent chaps are allowed to go ahead destroying type and undoing what cannot be redeemed in years of careful mating. If the reporters had been equal to the occasion, do you suppose Thunder would have won more than one first prize? Would Rubicon have "won" the prizes he got, but never deserved, if the reporters and exhibitors had known anything about fox-terriers? If the press had been alive would Mr. Fred. Hoey not have learned that in following Mr. Mortimer, in placing Rubicon over Mixer, he would be hanging himself as a judge, bringing himself into ridicule here and losing any respect that might have been given to his opinions abroad?

One wrong decision may lead to a hundred, when one incompetent judge follows after another. Messrs. Belmont, Hoey and Mortimer together cost Mr. Thayer over \$1,000 during the past two years, and Mr. Shotwell cost the Chestnut Hill Kennels \$500 all in about five minutes. How is the trouble to be overcome? Overcome! Why, my boy, it cannot be stopped until exhibitors take the law into their own hands and refuse to exhibit. I am willing to wager that the Collie Club will suggest Mr. Shotwell's name for judge on the first possible occasion, just to show that his New York decisions were "popular." And you will find Messrs. Belmont, Hoey and Mortimer slaughtering the terriers and looking wiser than a Solomon. As for Rubicon, he will probably be placed in the stud to "improve the fox-terriers in this country." And so we go along from bad to worse, trying to learn from novices and forgetting what we know.

MEPHISTO.

THE ENGLISH SETTER CLUB.

IN response to the call for the purpose of forming an English Setter Club, published in FOREST AND STREAM last week, there was a meeting held on Tuesday, at the rooms of the American Kennel Club. Major J. M. Taylor called the meeting to order, and Mr. J. Treadwell Richards was elected chairman and Mr. Percy C. Ohl secretary. The following named gentlemen were present: Messrs. J. T. Richards, T. H. Terry, George Jarvis, W. Tallman, John E. Long, Percy C. Ohl, Wilson Fiske, A. P. Vredenburg, Major J. M. Taylor, Capt. Patrick Henry and Dr. H. C. Glover. Nearly all of the signers of the call who were not present sent proxies.

After the adoption of a constitution the club was organized under the name of The English Setter Club, and the following list of officers was elected: President, Mr. Pierre Lorillard, Jr.; First Vice-President, Mr. J. Treadwell Richards; Second Vice-President, election postponed; Secretary, Mr. Percy C. Ohl; Treasurer, Dr. H. C. Glover; Executive Committee, the above-named officers and Messrs. T. H. Terry, Wilson Fiske, John E. Long, J. M. Taylor, P. H. Bryson, J. Shelly Hudson, J. E. Dager and J. A. Graham. Committee on Standard, Messrs. Lorillard, Bryson, Taylor, Tallman and Fiske. A committee consisting of Messrs. Taylor, Vredenburg and Ohl was appointed to confer with the English Setter Club of America, with a view to the consolidation of the two clubs.

The executive committee was requested to prepare a set of by-laws and to report at the next meeting.

The initiation fee was fixed at \$5 and the same amount for yearly dues. There was considerable friendly discussion of details, and the various measures as finally adopted received unanimous votes.

MR. A. R. CROWELL sailed for England last Saturday. We understand that he will return early in August and bring with him a few dogs, if he can find anything to suit him.

DOGS OF THE DAY.

A MONTH ago a gentleman permanently connected with the A. K. C. suggested that I might be of some assistance in endeavoring to revise the constitution so as to get it ready for a new issue of printed copies, which would have it complete up to date. The constitution of a club is not a thing that can be juggled with. It is not a weathercock which chops and changes with every little flaw of the wind, but something that should be like a lighthouse, substantially built, with its beacon ever flashing a warning against foolhardy or ignorant navigators who rush recklessly onward, and if they cannot afford time to steer around the obstacles, go at them nose on, like Missouri River boats at a sand bar. They trust in the numerical strength of the crew to pole them over, little reckoning the damage done by the course pursued.

Most organizations have constitutions so framed that there is deep water all around and it is fair weather sailing, even in stormy times. Some few are different, and worst of all, that I know, is the A. K. C., which is worse than Hell Gate ever was to steer through on a racing tide. When, added to this, we have a disregard of even the plain directions to the sailing masters of this craft, is it any wonder that it is a continued struggle to keep it watertight and on an even keel? At the last meeting the president in some of his remarks drew attention to an article, one of this series, and stated that he did not think it proper that I should criticize the club and what was being done. My reply was that the A. K. C. had no warmer supporter than myself so long as its rules were abided by, but that under no circumstances would I retreat one step from my right to criticize any action, whether by pen or voice. It is not fair criticism, such as I hold mine to be, that will hurt the A. K. C.—that never hurt any person or any club. Illegal actions, persisted in when their illegality has been plainly demonstrated is what is to be feared, and not fair criticism. But I am steering wide of my destination in regard to the new constitution. As I said, this is not a thing to hurry over, and I have from time to time done a good deal of thinking, the result of the suggestion made to me. The conclusion I have arrived at is this:

We have arrived at a stage at which a very radical change is essential as to the executive committee. As at present constituted it is a misnomer and its manner of construction makes it unwieldy and unrepresentative. When the A. K. C. began with a dozen clubs it was all well enough to have every delegate on the committee, but we have now close upon fifty clubs each, one of which has a right to be represented at executive as well as club meetings. One fault conspicuous in this method is that the men who execute or carry out the rules, being also those who form them, they are responsible to no one but themselves, and are therefore indifferent as to the line of demarcation between the widely distinct duties of legislators and executors. If as executors they go wrong, immediately as legislators they can decide that they did right, and this is just what has been done by the A. K. C. Then, again, while it is permissible in a club to be represented or not as it sees fit at a club meeting, it is essential that committeemen should attend to their duties.

These seem to me to be the obstacles to a continuance of the executive committee as at present provided for, and looking around for something as a substitute therefor I find two similar organizations, each of which has a model of executive work and which might be copied with advantage. These are the National Trotting Association and the National Amateur Rowing Association. The former calls its executive committee the board of review, and it is made up as follows: The country is divided into districts, and all districts have an equal number of representatives in the board. At each board meeting one member from each district is entitled to a seat, and the manner of their selection or appointment is for the president to ask each district member in rotation if he can be present. If the answer is negative, then the next one is asked until an affirmative answer is received. The Rowing Association executive committee consists of nine members, three being elected at each annual meeting to serve for three years. The objection to the Trotting Association system is that with continued cases there is an absence of knowledge of what has been done before except by official statement, which is only good in the absence of personal knowledge and is necessarily inferior thereto. The Rowing Association system, while admirable for that body, has its disadvantages for the A. K. C., and I am inclined to the idea that a combination of the two would work to the greatest advantage. This, then, is my suggestion, which I would like to have criticised:

The executive committee to consist of either twelve or fifteen members, of which of the first committee one-third shall act for three meetings, one-third for two and one-third for one, and every one-third subsequently appointed shall act for three meetings. The method of appointment to be by rotation of clubs in alphabetical order. Should a club decline to be represented, then the offer to be made to the next in order. The associates to always have the right to be represented by one of their delegates, in whichever order they desire. Further, I would suggest the holding of committee meeting more frequently than every three months during the show season; that the present advisory committee be superseded by one consisting of the three senior members of the executive committee; that their duties and powers, as well as those of the executive committee, be purely executive, and as such clearly defined. Further, to insure the attendance of members, I would have a \$10 fine for every absentee. This to be absolute, and be charged to the club the absentee represents and not the individual. Due notice of inability to attend to alone be a waiver of the fine. In conclusion I would say that this is written without any discussion with any one and are purely my personal views.

I think we may all congratulate ourselves on the great improvement for the better in the discussion of kennel subjects. On my part I have avoided personalities, and the same is to be said of Mr. Mayhew and Peregrine, the new man at Boston. There is always room for difference of opinion, and good is bound to result when the tone in which these differences are expressed is unobjectionable. Mr. Mayhew has gone into the Peshall credential case again, but I cannot see but that he has weakened his position. His argument is too brittle to stand any handling, if he will excuse the pun. There is no conflict at all between the appointment of M. Malcolm as delegate for the year and that of Mr. Peshall for the meeting of May 22. The credentials of the latter contained the explanation of Mr. Peshall's appointment for that particular occasion, and limited it thereto. The very verbiage which Mr. Wise held to vitiate Mr. Peshall's credentials was what really gave it effect. Without it the Maryland Kennel Club would have had two delegates, but with the explanation came the fact of Mr. Malcolm retiring from office for that particular occasion. It is not the province of the A. K. C. nor any person to criticize the method of Mr. Peshall's appointment, outside of the Maryland Kennel Club, and that club has by its action shown that it fully upholds the validity of the appointment. The proxy held by Mr. Malcolm, which he presented at the A. K. C. meeting in February, was not, as Mr. Mayhew says, "parallel to the case in question." If he will look at it he will find that it is a proxy, nothing more or less, signed by the delegate; whereas Mr. Peshall's was a certificate of appointment, signed by the club secretary, as required by the A. K. C. constitution. One was entirely wrong, yet it was

accepted as correct by Mr. Vredenburg, and, as I am informed, with full knowledge that it was not good. There is really no necessity to discuss this phase of the case, for Mr. Anthony, as soon as I had replied to Mr. Wise, withdrew his motion. Mr. Anthony is too clear-headed a man not to detect the flaw in the indictment, although I do not doubt that he could have the same vote for his motion had he maintained it as was obtained for his personal motion against Mr. Peshall. While I disagreed with those who voted for the latter, I recognize that it was a call for personal opinions and not subject to criticism, as was the other motion.

In the Collie Club stakes announcement which appeared in FOREST AND STREAM of June 13, there is a slight omission. The date should read, for collies born on or after July 1, 1889. There was also a reference to the probability of the A. K. C. adding \$50 to the sweepstakes. It should have been W. K. C. I think I need only to draw the attention of Mr. Shotwell, the Collie Club secretary, to the fact that the last sweepstakes closed on May 31, and the present might as well be dated back to June 1. Some good dogs might be barred out by omitting the month of June. I do not exactly understand about the Produce and Futurity stakes. Will Mr. Shotwell please give an explanation. What I paid in from June to November, 1889, was refunded.

I understand that that gentleman proposes to again take an active part as an exhibitor. I am advised that he has bought a sister to Purty, in whelp to Christopher, and a youngster by The Squire out of Roslyn Gaylass. Besides these I hear of a Nancy Trefoll—Ethel II. bitch puppy at the Orange Kennels, on which the C. C. secretary builds high hopes.

After the close of the Cincinnati Dog Show, Dr. Cryer called upon me with reference to the award of the pug kennel special, which he had been advised was won by the Eberhart Pug Kennels. He had made out a protest, but on looking at the catalogue and noting the dogs which won in competition for the prize, I said, "There is some mistake. Mr. Mortimer could never have made any such decision. I would telegraph him and get his answer before doing anything more." Acting upon this suggestion, Dr. Cryer received from Mr. Mortimer the following reply: "Dear Sir—I found upon looking over my marked catalogue that the special prize of \$10, offered by the Cincinnati Kennel Club, for the best kennel of pugs, was not awarded. This was due to the fact that this special was not enumerated in the judge's book. The only pug specials that I awarded were specials No. 27, in catalogue, and No. 32. (Both these were for Cincinnati owned dogs.) I have wired Mr. George Hill, the superintendent, drawing his attention to the unfortunate omission, and will write him by this mail. Of course your kennel wins the open special. Your very truly, JAMES MORTIMER." Prominence ought to be given to this, because in a Chicago paper, containing a report of the show, there appeared a labored attempt at justifying the award to the Eberhart Kennels, which that paper announced had been made.

There was a decision made at Cincinnati which is likely to be brought before the A. K. C., and it is this. Mrs. Frank Smyth, of Germantown, sent her cocker spaniel Toady Obo, and when the class was called he was awarded first prize. On the following morning (Wednesday) Brantford Red Jacket and Duke Obo turned up. The class was ordered to be rejudged, with the result that Toady Obo was put back to vhc. The show rules contain the following:

1. No dogs will be received before Monday, June 2, or after 8 A. M. Tuesday, June 3.

X. The judging will commence promptly Tuesday morning, June 3, at 10 o'clock. * * * If any dog is not found in its stall when called for by the judge, the judging will proceed without it. This rule will be rigidly enforced.

The italicised word appears so in the catalogue. As a protest has been made to the A. K. C. I am precluded from doing anything beyond stating the facts as given to me.

In the last issue of FOREST AND STREAM Mr. Shotwell replies as to Prince Charlie and the novice. His reasons for disagreeing with me are doubtless perfectly good—to him, but they are not so to me. One thing he says I do most strenuously object to, and that is his concluding that I bulldozed Mr. Fletcher and the Boston committee. Such a statement is neither correct nor courteous. I was not present when the dogs were judged, and never had one word of conversation regarding the dog being in the novice class with Mr. Fletcher or anybody else. I had one or two long talks with Mr. Fletcher, and he never even broached the subject. I don't think Mr. Shotwell knows Mr. Fletcher, for he is hardly the man to tackle on a brow-beating mission, especially on a first acquaintance as ours was. As to it being an oversight on Mr. Shotwell's part that he judged the dog at New York, permit me to say that I would have followed the same course as I did in the Glenlivet case, and the dog would have been judged just as Glenlivet was.

As for my sticking to the "boodle," as Mr. Shotwell calls the \$3 the dog won, I will make this proposition to Mr. Shotwell. I will agree to waive the seven days protest clause and the \$5 deposit if Mr. Shotwell can get the Boston Club to accept his protest at this late date and refer it to the A. K. C. Or if he prefers it I will agree to Mr. Vredenburg making a protest on behalf of the A. K. C., the question to be decided at the September meeting of the A. K. C.

Mr. Frank Dole has not sailed for England as he purposed, the cause of the postponement being, I regret to say, the serious illness of Mrs. Dole.

Mr. Crowell dropped me a good-bye line before he started last Wednesday across the Atlantic. Mr. Crowell's London address is Williamson's Hotel, Bow Lane, London, E. C. It is not unlikely that he may get as far as Switzerland ere he sets his face homeward.

There is quite a kick among the Pacific Kennel Club members over the admission of the California Kennel Club to membership in the A. K. C. They should not be unreasonable but remember that they are not likely to hold a show this year at least, and exhibitors should not be deprived of the opportunity of getting a show if another club desires to give one. I will guarantee to say that if a club in any Eastern city announced that it would not hold a show in 1891, and another club from the same city appeared for membership, it would be elected by the A. K. C. J. W.

FOX-TERRIER STOLEN.—*Editor Forest and Stream:* On or about June 14 there was stolen from my place at Highland Falls, N. Y., the fox-terrier bitch Blenton Forrest, white, with black tickings on body and tan tickings on ears; three years old. All persons are warned from buying or receiving this dog. A liberal reward will be paid for her recovery.—JOHN A. LOGAN, JR. (Highland Falls, N. Y.).

DOGS.—NALDIRS medicated SOAP for washing dogs, destroys all irritating insects, removes doggy smell and leaves the animal refreshed and happy. This prize medal soap, used by all the leading owners in Europe, is now sold by Park & Tilford, McKesson & Robbins, E. Fougere and all Druggists.—Adv.

A. K. C. MANAGEMENT.

Editor Forest and Stream:

I should like to have had Mr. Peshall's letter come to me in my regular daily occupation at a time when the night editor was shouting "Swamp'd again, boys, cut everything down to the lowest notch." I think I could have put it inside a column and made it better every way. Not but what Mr. Peshall carries his reader along with him, still the features are not striking enough, being lost through the length of the letter. Boiling the letter we find as a residue this statement. Mr. Peshall was chairman of the stud book committee in 1888, and that committee contracted with Mr. Lewis to take all and pay all during the second six months of the year. This he did up to Mr. Vredenburg's return in December. The books then showed a balance of over \$1,000, yet that balance, all but a few dollars, was in Mr. Lewis's pocket.

Holding the position he did, Mr. Peshall ought to know what he is talking about when he makes the foregoing statement.

The cash, however, does not disappear from the books into Mr. Lewis's pocket, but the account is carried on to Jan. 11, 1890, when it is balanced, the balance being \$1,228.28. That I can testify to, for Mr. Vredenburg showed me the book. He did not, however, advise me of any such arrangement as Mr. Peshall testifies to, nor did I hear anything of that until after I had seen the books, wrote what I did in FOREST AND STREAM a week later and some two or three weeks later show Mr. Peshall, in the presence of Mr. Winslow, the memorandum I had in my pocket, which was in Mr. Vredenburg's writing. Then Mr. Peshall told us what he stated in his letter last week. That I did not make it public is for the reason I then gave to Mr. Peshall, when I told him that it was for him to do the disproving of the figures I had obtained and published.

How did the money, if it went into Mr. Lewis's pocket, get back into the A. K. C. treasury? That it must have been replaced is evident by the treasurer's report. Mr. Peshall says Mr. Vredenburg told him that Mr. Belmont had come to the rescue of the club. Of that I know nothing. If the money was so put into the treasury it can be proved without much trouble. There is, however, a rather peculiar thing in connection with this part of the story: When at the annual meeting I asked for information as to the accounts, Mr. Vredenburg replied that he was glad of the opportunity of refuting certain rumors, and he mentioned specifically as one of these rumors that Mr. Belmont had given \$1,000 to the club, and he denied point blank that Mr. Belmont had given one penny to the club. If any one has the opportunity to compare the statement of Mr. Vredenburg as given in the official report of the meeting and the report given by Mr. Peshall's stenographer, he will find that the official report has been materially altered. Then again, at the last meeting Mr. Belmont as definitely stated that he had never given a cent to the club, and then went on to say that if he stated that he had not given a cent to the club he expected to be believed. In the official report the specific statement is eliminated. Of course I am aware that these reports are not verbatim, being condensed by some one, but it is at least unfortunate that both Mr. Vredenburg's and Mr. Belmont's specific statements should have been struck out, while wholly secondary remarks in the same connection were retained. If Mr. Peshall's statements are proved to be correct, then we will have to believe that these omissions were premeditated, but Mr. Peshall's statements are only *ex parte*, and his side may be only good until the other is told. Even if proved untrue, however, it is not the less unfortunate that the statements were cut as they were, for to a certain extent it lends color to the accusations.

Apart from anything that the American Kennel Club may do in the case, it seems to me that it devolves upon Messrs. Terry, Schellhass and Lewis to say something. If they can deny Mr. Peshall's statements as to the disposal of the balance during Mr. Vredenburg's absence it should be done quickly. The present is not a time to stand upon the order of doing, but to do. We know that if the assertion is false they are the ones who can deny it. We believe that if it is false one or the other will say so, and if silence reigns supreme they and the A. K. C. officials cannot blame people from coming to the same conclusion that one of the staunchest of the A. K. C. supporters has when he told me a week or so ago that he more than feared there was a nigger in the fence.

For my part I do not take either side, but await developments. I have endeavored in what I have said to bring out the salient features on the side of the accusation, so as not to let them be clouded over by side issues. And I say these are the things that are to be proved correct or false. Nothing said against Mr. Belmont personally has any place in the issue, nor are Mr. Peshall's peculiarities to be weighed in the balance. The question before the court of canine curiosity is: How did the money that Mr. Peshall says was paid to Mr. Lewis get into the A. K. C. strong box again?

I hope the interest in the case will not prompt the editor of FOREST AND STREAM to adopt the prevailing newspaper craze and offer \$100 for a solution of the question, answers to be written only on coupons printed in the paper. J. W.

Editor Forest and Stream:

In reply to an article of Mr. Peshall's in your issue of to-day, regarding the Auditing Committee appointed to examine the accounts of the Secretary-Treasury of the American Kennel Club, in which he says: "Now as far as the Auditing Committee that was appointed is concerned, permit me to now state to the dog men and breeders of this country, that the accounts of the American Kennel Club have not been audited by the said committee, that is, they simply signed the statements made out by the secretary and treasurer. Two of the committee have so said to several parties, and one member of the committee, I believe, has written a letter to that effect." We desire to say that every statement contained in above quotation is unqualifiedly false, as we did examine the accounts as directed, and that we made out and signed our own statement, Mr. Vredenburg taking no part in the examination except when called upon to give any needed explanation of entries, and that he took no part whatever in having made any such statements as are contained in above article personally or by letter.

A. CLINTON WILMERDING,
J. M. TAYLOR,
GEO. W. LA RUE.

NEW YORK, June 10.

Editor Forest and Stream:

In Mr. Peshall's slanderous letter published in your issue of last week he says fit to accuse me of fraud, dishonesty and trickery in manipulating the funds of the American Kennel Club, and of submitting an untrue statement of the finances of the club for the year 1889. The charges contained in this letter are too ridiculous and absurd to answer. To all who know me personally a denial is unnecessary. To those who know me only as the secretary of the American Kennel Club, I desire to state publicly that it is only a short time ago that Mr. Peshall urged me to accept a position of trust and confidence under a high railroad official (the president of the Lehigh Valley R. R. Co.), to whom he (Peshall) had recommended me as a person not only competent, but one who would be valuable to him. On consultation with Mr. Belmont I decided to remain with the American Kennel Club. At the time of this high recommendation by Mr. Peshall, he knew as much about my method of transacting

the affairs of the club as he does to-day, and this is sufficient proof that he does not really believe his own statements. He has coined absolutely, and without one particle of truth, phrases and statements never used by me, and the very idea of which never crossed my mind. This is done to build an argument known to him to be false, malicious and without a shadow of foundation, but serving at any cost his hatred of the American Kennel Club and its officers. Mr. Peshall vilifies me and the officers of the club I represent. He maligns and insults the auditing committee, knowing full well before his letter was published that at least one member of the committee had protested against that portion of his statement referring to the personal examination and certification of the correctness of my books and accounts. Therefore, in order that this matter may be sifted to the bottom, I have preferred charges against Mr. Peshall and have asked for his permanent disqualification. A. P. VREDENBURGH.

Editor Forest and Stream:

I am sorry to see such a war going on among the A. K. C. members. Why not stop it at once? The ones now fighting are our ablest and best known breeders. Mr. Belmont, Mr. Anthony and Mr. Vredenburg should recognize the fact that this is a public club and that their acts as officers of the club should not be private or so considered. A large majority of the breeders are against them in publishing the *Gazette* and registering their mongrel dogs. In this Mr. Peshall, Mr. Wade and Mr. Malcolm are in the right. While I do not approve all of the articles written by them against the management, yet I am sure most breeders will go a long way with them. Mr. Peshall is a man of great learning and ability, especially so when he confines his article to the animal, but when in a controversy he allows his turbulent pen to fill with sarcasm that cuts to the bone, he should curb himself. Let us have a committee, the books opened and a hearing granted to both sides of the question, differences adjusted, and then peace will reign again.

R. E. STRYKER.

NEW YORK, June 21.

THE INDIANA DERBY.

INDIANAPOLIS, Ind., June 22.—*Editor Forest and Stream:* The Indiana Kennel Club's Derby closed with forty nominations, twenty-seven English setters, two Irish setters and eleven pointers. All were whelped in 1889:

REVELEER—W. B. Hill's (Frankfort, Ind.) black and white English setter dog (Gath's Mark—Esther).
BONNIE BONDHU—W. A. Neddermeyer's (Columbus, O.) black, white and tan English setter bitch (Count Wakefield—Pearl Bondhu).

RANCHO (F. H. Perry's (Des Moines, Ia.) red Irish setter dog (Claremont Patsy—Nino).
BEN C.—Jos. Crugom's (Milwaukee, Wis.) red Irish setter dog (Glencho, Jr.—Nellie C.).

FANCY KING DON—Geo. K. Andrews's (St. Louis, Mo.) liver and white pointer bitch (King Don—Queen Faust).
SPOTTED BOY—Chas. Proctor's (Union City, Ind.) liver and white pointer dog (Trinket's Bang—Nellie Bow).

BLUE DAISY—Geo. E. Gray's (Appleton, Minn.) black, white and tan English setter bitch (Gladiator—Lady F.).
TRAP, JR.—Samuel Grant's (Great Falls, Mont.) lemon and white English setter bitch (Ruby's Druid—Trap).

PICKWICK—Madison & McGuffin's (Indianapolis Ind.) liver and white pointer bitch (Graphic—Marguerite).
JUBILEE—J. M. Freeman's (Bicknell, Ind.) black and white ticked English setter dog (Gath's Mark—Esther).

IVAN—R. B. Morgan's (Akron, O.) black and white English setter dog (Gath's Mark—Esther).
GOV. KLUMP L.—R. B. Morgan's (Akron, O.) black, white and tan English setter dog (Jim Blackburn—Lufra's Ruby).
GAMSTER GLADIATOR—Harry S. New's (Indianapolis, Ind.) black, white and tan English setter dog (Gladiator—Western Queen).

CRICKET—Harry S. New's (Indianapolis, Ind.) orange and white English setter bitch (Rush Gladstone—Quail).
QUAIL II.—Harry S. New's (Indianapolis, Ind.) black, white and tan English setter bitch (Rush Gladstone—Quail).

SPOKANE—John T. Bartlett's (Edwardsport, Ind.) lemon and white English setter dog (Gath's Mark—Esther).

CANADIAN QUEEN—G. G. Pabst's (Milwaukee, Wis.) black, white and tan English setter bitch (Locksley—Leddardsdale).
PRIDE OF ALMA—Hon. J. E. Guinotte's (Kansas City, Mo.) lemon and white English setter bitch (Josephus—Mollie).

AMBER—Hon. J. E. Guinotte's (Kansas City, Mo.) lemon and white English setter bitch (Gath's Mark—Fleety Noble).
JIM—Hon. J. E. Guinotte's (Kansas City, Mo.) lemon and white English setter dog (Josephus—Mollie).

MCGINTY—Hon. J. E. Guinotte's (Kansas City, Mo.) black, white and tan English setter dog (Captain G.—Daisy Deal).

LEBANON BOY—Lebanon Kennels' (Lebanon, Pa.) lemon and white pointer dog (Lebanon—Virginia).

PENELOPE II.—Lebanon Kennels' (Lebanon, Pa.) lemon and white pointer bitch (Lebanon—Penelope).

JOE L.—J. H. Kerr's (Indianapolis, Ind.) black pointer dog (Joe Pape—Nan).

ROSALINE WILKES—Wm. M. Keer's (Indianapolis, Ind.) black and white ticked pointer bitch (Ossian—Fannie K.).
MAY—W. B. Allen's (Indianapolis, Ind.) lemon and white English setter bitch (Rush Gladstone—Quail).

BUSTER—J. I. Case, Jr.'s (Racine, Wis.) black, white and tan English setter dog (King Noble—Crocket).

CORYNE—J. I. Case, Jr.'s (Racine, Wis.) black, white and tan English setter bitch (King Noble—Crocket).

QUEEN VIC.—J. I. Case, Jr.'s (Racine, Wis.) black, white and tan English setter bitch (King Noble—Queen Vashri).

GIPSEY STONE—A. A. Whipple's (Kansas City, Mo.) liver and white pointer bitch (Cornerstone—Dolly II.).

BALLAHOO—Norvin T. Harris's (New Orleans, La.) liver and white English setter bitch (Paul Gladstone—Bohemian Girl).

HOPE'S MARGUERITE—D. E. Rose, agt's (Lawrenceburg, Tenn.) orange and white setter bitch (Gath's Hope—Sue J.).
MCBRAYER—A. J. Gleason's (Alma, Kan.) black, white and tan setter dog (Josephus—Clara Windem).

ROSE OF ALMA—A. J. Gleason's (Alma, Kan.) black and white setter bitch (Markman—Don's Nellie).
HOPE'S LUCILLE—A. J. Gleason's (Alma, Kan.) orange and white setter bitch (Gath's Hope—Lady May).

SUNOL—E. Cadman's (Kansas City, Mo.) liver and white pointer bitch (Corner Stone—Dianorah).

MINNESOTA—Paul H. Gotzian's (St. Paul, Minn.) English setter bitch (Monk of Furness—Lady Fayette).

NASO OF THE ELMS—Paul H. Gotzian's (St. Paul, Minn.) liver and white pointer dog (Naso of Kippen—Lass of Bow).

HALLELUJAH—Paul H. Gotzian's (St. Paul, Minn.) blue belton English setter bitch (Gath's Mark—Esther).

KING—Royal Robinson's (Indianapolis, Ind.) liver and white pointer dog (Graphic III.—Devonshire Gail).

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$3.50. For sale by FOREST AND STREAM.

ENGLISH VS. AMERICAN BEAGLES.

"HIBERNIA." In last week's issue, has got things sadly mixed regarding the present type of beagles in England. The illustration of champion Little Duke is much nearer the type of those that I saw at Olympia, Darlington, Bangor and Brighton last summer, and the illustration of champion Ringwood is much nearer the type that is doing

ROYAL KRUEGER.

the winning here. I am not speaking of the dogs that these illustrations represent, but of the illustrations themselves. The head of Little Duke (in the illustration) has not the first identical point of the American beagle about it. If the reader will take the cut of Ringwood and compare it with that of Royal Krueger, at the head of this article, they will see a very marked resemblance. The beagles that I saw in England last summer were miniature foxhounds, and those who read my report of the English shows in the Boston *Harvard* will remember that I stated so at the time. "Hibernia" calls Ringwood's head "a caricature of a bloodhound." Barring the long ears and slight throatiness I consider it an excellent ideal of the American beagle; the expression is excellent, the eye, muzzle and skull also.

"Hibernia" states that Ringwood would take about c. in this country. Well, perhaps he would judge that way, but I can name at least four judges, that if scoring the cuts as we have them in the FOREST AND STREAM, would give Little Duke just about c. to Ringwood's 1st and special.

I think friend Tallman got the body and limbs of his subject pretty good, but I consider Little Duke's head very much superior to that of the illustration. One thing is certain, either "Hibernia" is entirely wrong, or the one that is entirely wrong is

NAMQUOIT.

Editor Forest and Stream:

In last week's issue you publish the pictures of the English beagle Ringwood and the American Little Duke, with remarks furnished by "Hibernia." I will draw attention to the fact, which I think all will admit, that Little Duke as portrayed is as much like Little Duke in the flesh as I am, and though the picture of Ringwood bears a closer resemblance to him than does Little Duke's, yet it is in no way satisfactory, so that allowance must be made in both cases. So much has been written on the false impressions conveyed by pictures, that with the additional allusion that it is quite unjust to make comparison in this way, I will dismiss them.

"Hibernia," almost at the commencement of his communication, says: "I have not seen any recent importations of beagles." To this I will say, "Hibernia" has only himself to blame, for had he been at the last New York show he would have seen Ringwood's daughter, Blue Belle, who won first there. Further on he says: "Our English cousins are breeding on different lines from the ideal standard we have set up." My only answer to this is the latest importation, Blue Belle II. Lower down I read the statement: "The American-bred beagle is about the nearest approach to a miniature English foxhound that has yet been reached. The English champion Ringwood, judging from the illustration, is simply a caricature of a bloodhound, or a bad representative. * * * But I want to say right here that I do not think the type is correct, and that if champion Ringwood was shown here a c. would be about the highest mention he would get." (Italics mine). With regard to his reference concerning American beagles more resembling miniature foxhounds, this may be so, and herein lies the rift within the lute, for in England the beagle is quite a distinctive type, as is the foxhound and the harrier. Of course in color, carriage, shape and make all three are alike, but in head, character and expression there is a vast difference, nor does this difference originate from modern ideas, but from time immemorial, long before Gen. Rowett existed.

It is unnecessary as well as a troublesome labor to enter into old quotations and ancient history, but I can assure "Hibernia" he is under a false impression when he considers a beagle should be a counterpart of a foxhound in head and expression, and because he and breeders before him in this country have bred to this erroneous idea, such does not warrant his inference that he and the American beagle breeders should dictate to the land of their origin, where it would be possible to produce good ones in at least equal proportion as compared to those here. With regard to "Hibernia's" allusion, "Judging from the illustrations, etc.," I would say to him, "Take the note from out thine eye," for Little Duke looks more like a half-bred setter than anything else. Then, when he says with such emphatic eagerness, "I want to say right here that I don't think the type is correct," and Ringwood would only get c. here," all the critics would be at variance with him, for his daughter Blue Belle is his *fac-simile*, only that Ringwood is 15 in. and Belle under 12, and if anything is needed to satisfy "Hibernia" as to her pretension I would refer him to all the reports in the different papers of the New York show, as well as inform him that only once was she beaten in England, and that on her first appearance, when she was young and shy, also two of her principal wins don't appear in the stud book, viz., first at Barn Elms, 1887, and first and special, Ilford, as she was disqualified through a clerical error.

"Hibernia" continues: "According to one of the best English authorities there are at present but two practical working packs in all England." The following list I think he will admit, is a facer "to one of the best English authorities": Mr. Edward Barclay's, 17 couple; Bronwydd, Sir Martine Lloyd, master, 11 couple; Mr. W. Charley, Jr.'s, 16 couple; Chester, Mr. Chas. W. Smith, master, 16½ couple; Christ Church, Oxford, 13 couple; Mr. Seymour Dubourg's, 12 couple; Mr. T. Johnson's, 10 couple; Mr. Niblett's, 12 couple; the Pen-y-Ghent, Mr. John Foster, master, 12 couple; Royal Rock, Mr. L. R. Stevenson, master, 16 couple; South Camp, Capt. N. A. Bray, master, 12 couple; Stockton, Mr. W. G. Strother, master, 12 couple; Stradishall Place, Mr. Richard J. Deakens, master, 14½ couple; Trinity College, Cambridge, 18 couple; Vale of Llangollen, 13 couple; North Worcestershire, Mr. E. H. Humphreys, master, 12 couple. Nor does this include the many owners who keep smaller packs for their own and friends' pleasure, which would swell the list very considerably.

Further on he advocates exporting some to England, and makes the remarkable assertion: "There is no game in England as suitable for the beagle as our so-called rabbits."

"Hibernia"! oh, "Hibernia"! Whither art thou wandering? You are on a false track. However, to return to beagles, I have had the advantage of seeing the prize winners here and those in England, as well as many of those that are never shown, and I am quite satisfied "four" country can more than hold her own. "Hibernia," like many others, has formed a wrong idea of the number of good ones on the other side from the fact of there being so few shown; but let him try to pit the best three couples here against the best three couples from the packs in England, and methinks he would look very small, and, putting size on one side, I have yet to see the beagle that can lower the colors of Ringwood's imported daughter, Blue Belle II.

R. F. MAYHEW.

DOG TALK.

IN the last week's issue I notice a short note, headed "This Man Appears to Have Friends." I prefer to keep out of all controversy that is not of vital importance to my readers, and have kept my fingers out of this last A. K. C. muddle. I rise to make but one short remark. If Mr. Peshall is not a "genial, liberal-minded, upright gentleman," than I never met one. Whether he is really an enemy of the A. K. C., or only striving to purify its rank and file, remains to be seen.

Personally I do not care a broken straw whether Major Taylor's English Setter Club or the English Setter Club of America eventually leads. I am only striving for the improvement of the breed in general. It looks in very bad form to see Major Taylor trying to start an opposition club when he cannot find a single objection to the one already formed. It savors very strongly of an attempt to break open old sores between the East and West, the very thing the club already organized is trying to avoid. As one of the organizers of the club, I know that those directly interested knew nothing of Major Taylor's plans until his letter was read at the organization meeting after the call had been published and personal invitations had been sent to parties North, South, East and West. Among the applications received and read that night other parties spoke of Major Taylor's plan, and said that they supposed it had been abandoned, as they had not heard anything of it for months. The club is already a strong one, and many of the names on Major Taylor's list are active members of the club already formed. One thing is sure; we will get a club out of the two, and this opposition will but stimulate interested parties into greater activity.

I notice "J. W.'s" note re the question as to what is an American-bred dog. I agree with him that the A. K. C. should govern all such matters, but if they will not attend to these matters in detail I think the St. Bernard Club has a perfect right to make such rules as it chooses to govern its own specials. There is certainly a marked difference between sending a bitch to England to be bred and purchasing a bitch in England and then having her bred before shipment. But these same A. K. C. rules read that the breeder of a dog is the person owning or leasing the bitch at the time of service. And I fail to see the odds whether the bitch be in England or America.

The first quarterly meeting of the National Beagle Club will be held at the Quincy House, Boston, July 11, at 6:30 P. M. Several important amendments to the constitution and by-laws are talked of. The report of the field trials committee will be acted upon. They will doubtless be held the latter part of October or November. The secretary reports new applications for membership coming right along.

There have been 1,024 dogs licensed in Lynn, Mass., this year. No wonder Lynn can support a bench show.

It is a popular delusion that if a person is bitten by a dog and that dog should develop rabies at any future date, the person bitten will have hydrophobia. There is nothing like personal experience to prove that such a delusion is a pure fallacy. Fourteen years ago I was quite severely bitten by a dog that died a few months later of active rabies. Well, I get angry sometimes, but am not "mad" yet. Don't froth at the mouth very often, and never entertained the idea for an instant that I was liable to be smothered between two feather beds. I can readily understand that persons of a very highly excitable temperament can scare themselves into something very similar to hydrophobia without any actual cause. But such absurd notions should have gone into obscurity along with the Salem witches.

The St. Bernard men are asking each other the question: Is the owner of a stud dog liable for damage done to a bitch while temporarily boarding at his kennel? This question applies to all breeds, and in my opinion the owner of the bitch sends her at his own risk. Most owners prefer to be present at the service or send an attendant, and most kennel owners prefer to have the owner of the bitch or his representative present. Not necessarily because of any doubt as to the integrity of the interested parties, but because such an arrangement is more satisfactory in every way. But in case the man ships his bitch any great distance he should inform himself of the social standing of the man he is dealing with, and know that he has a suitable place to keep bitches when in season. If he does not know these facts he runs his own risk. Were the owner of the stud dog liable I can foresee many complicated cases that would inevitably arise. Such as a bitch being injured en route and dying soon after arrival, or like the case in question, the bitch may be stolen through no lack of vigilance on the part of the party keeping her. If a man keeps a boarding kennel and some one poisons the whole lot, is the handler supposed to pay for the lot? Or should the kennel become infested with rabies is that the keeper's fault?

Mr. W. Stewart Diffenderfer, Baltimore, Md., has purchased the Merry Mount Kennels, Woolaston Heights, Mass., the rough-coated St. Bernard bitch Biola. She is a good-boned bitch of considerable quality.

While in Boston the other day I accidentally ran across Mr. Brewer and a very promising 7-months old Irish setter puppy, by Huntington out of Brownie, the dam of Sunset. He will be heard from if he keeps on as he has started.

"Our Special Commissioner," in a Western contemporary, makes the following statement, speaking of England: "Our most popular judges are the gentlemen who have been most successful as breeders, and who therefore must almost of necessity at some time or other have owned some of the dogs shown under them." Here in America the public raise a great hue and cry against a man judging a breed that he has bred all his life. Is a man that never owned anything but greyhounds competent to judge St. Bernards? Is an Irish setter specialist competent to judge the English setter if he never owned one? Are not our judges gentlemen and men of honor? If not, we had better raise a new crop. In England we have Rev. Robert O'Gallagher judging Irish setters, and Messrs. J. F. and Sydney W. Smith judging St. Bernards and giving perfect satisfaction. They are gentlemen, and if they err it is not on the side of the dogs they formerly owned. When we arrive at a similar feeling of trust in our judges our shows will be more of a success and not until then.

The papers this week all contain notes regarding the two

English setter clubs, and one and all advise uniting the two clubs. That is all very well and exactly what must eventually happen, but why isn't it just as easy a way to settle things for all interested parties to join the club already formed. I notice in the list published by Major Taylor for the name of Mr. H. Hulman, Jr., owner of Gath's Mark. Mr. Hulman is a member of the English Setter Club of America.

The Elmwood Kennels' St. Bernard bitch Queen of Scotland whelped nine beautifully marked puppies by Beauchamp last week. We found Mr. Teague rather broken up after losing two nights' sleep, but elated over his good luck, five dogs, all sold.

I was very sorry to hear Mr. A. C. Wilmerding talk of giving up Clumbers. This breed needs the fostering care of just such men as Mr. Wilmerding. He has purchased a very fair black cocker bitch in High Rock Jet, winner of 3d at Boston this spring. I think this is the last but one of Mr. Walton's kennel of cockers. NAMQUOIT.

CLAREMONT PATSY.

DES MOINES, Ia., June 21.—*Editor Forest and Stream:* I would not pay any attention to the communication of R. C. Denning, which appeared in several sporting papers recently were it not that silence might be taken to be an admission of some of his statements. The cut of Patsy was obtained by Mr. E. O. Damon, who says that it is an absolute perfect likeness, and that by looking at it "the fancy sees him just as he is." I have the photograph from which the cut was made, and I say it is as fair and correct a picture as I have seen of any Irish setter; and I can produce affidavits of reliable men, recommended by our best banks, that the cut fairly resembles the dog. I can also produce letters of breeders of Irish setters to the same effect to any one who wants to see them. When Mr. Denning says that the cut looks no more like Patsy than a great Dane you have a fair sample of the reckless exaggeration of his letter.

Again the dog was not cracked up by the "Claremont Kennel." He was advertised by F. H. Perry as any one who could read the ad, could see, and there is no prevarication or false statement in the advertisement, as I verily believe.

That I rechristened Patsy to hide his identity is as false as anything can be, and Mr. Denning, if he had kept posted at all, would have known it. The name was changed and noted in the leading sporting papers, and Patsy was registered in the A. K. C. S. B. This was all I could personally be expected to do, though Mr. Denning thinks I ought to have notified every breeder personally of the fact.

Possibly I don't know anything about Irish setters, but I have seen Elcho and Rose ten times to Mr. Denning's one, and have seen nearly all the leading Irish setters of America to-day.

It was my good fortune to have lived a number of years in Claremont, the home of Dr. Jarvis, and I saw and admired his dogs for many years, and have never ceased to be proud of Dr. Jarvis and his dogs.

Now, if Messrs. Denning or Burr think Patsy is such a duffer, I will give them a chance to come out of their holes, and I hereby challenge them to run one of Mr. Burr's red dogs against a puppy by Claremont Patsy and Ninon (which was whelped July 31, 1889) at the Indiana trials this fall, or any time after that that we can agree upon, for a side stake of \$100 each, to be awarded to the best dog by the judges at the Indiana trials, if the race be run there, or by any judge that may be agreed upon between Mr. Burr and the trainer of my dogs.

I have this day sent \$25 to Mr. P. T. Madison, secretary of the Indiana Kennel Club, for a forfeit. This challenge to be accepted and a deposit of \$25 as a guaranty of good faith to be made by Messrs. Denning and Burr on or before July 15, and the balance to be deposited with Mr. Madison before the entry for the all-age stake closes for the Indiana trials. Messrs. Denning or Burr and myself to name the dog each will run by the 1st of October. F. H. PERRY.

FIELD TRIALS FOR BEAGLES.

Editor Forest and Stream:

I see by the last issue of your paper that the National Beagle Club propose to hold a field trial for beagles during the coming autumn.

An old beagle man, and having some experience with the breed as hunting dogs, I am free to say that I don't see how a beagle field trial can be satisfactorily conducted so as to do justice to the dogs or credit to the judges. I presume the competing dogs will be hunted in couples as in setter and pointer trials. Now, our little hare (the game I suppose they will be tested on) is found chiefly in briery thickets, in which dense cover the dogs will be cast off. They will at once be lost to the sight of the judge. In due time one of them may jump a rabbit, he opens on the hot trail; the other dog may bark to him, but most probably will not, as he is a strange dog. Admit, however, that the competitors pack in and run together, what then? The judge is not familiar with the tongue of either dog. He cannot tell which one is on the line and if a check is made. How is he to know which dog unraveled the tangled mazes of the lost trail and "bit it off" again?

The following synopsis will recall to every beagle man similar experiences, and is about what occurs in nine out of ten hunts. Yourself and friends with your pack are at the cover side, the dogs are thrown in, and with the exception of a momentary glimpse of a busy worker, you are alone on the edge of the thicket. After a time you hear a whimper, and remark, "That is jingle," then a prolonged beagle note, and "There goes Jolly, now look out;" and then a burst of music, alto, tenor and bass, tell you the rabbit is bounced from his squat, and the pack are driving him fast and furious. After a time the cry suddenly stops and you know the rabbit has doubled and the dogs have overrun him. You wait and listen, curious to see which dog will pick it up, secretly hoping it may be one of the young ones. A long wailing note, Trimmer, the old rascal, has, as usual, "worked the double." Now they drive steadily, finally, hard pushed, the rabbit breaks cover, coming out to open ground, the pack crowding hard and running in a compact bunch. This is the first time either dogs or game is sighted, and here the rabbit is shot.

Now, which was the best dog? You know, because you have hunted them day in and day out, season after season. You know each dog's tongue the instant he throws it; but suppose the National Beagle Club's judge had been with you. In answer to your query, which is the best dog? his reply would be: "I couldn't see the dogs any time during the run until they broke cover, when they were running in a solid pack, and—Jack was as good as his master—and when a check was made I could not tell which dog recovered it, as I could not identify them by their voices."

Another point to be considered in the coming trials is the height of the competing dogs. It would be manifestly unfair to run a 12in. dog against one 15in. The smaller dog might be much the truest and best all around, but the taller one from his greater speed would take the lead, overrun, and spoil the little one's chance in toto.

If the Beagle Club really intend to hold a trial it would be well to begin at once to formulate rules for judging, etc., so that contestants may know what is required of them. In view of this, these rough notes are thrown out as a starter. BEGELE.

WEST PHILADELPHIA, Pa., June 20.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Ben Adhem. By H. K. Thatcher, Dexter, Me., for orange and white pointer dog, whelped Jan. 20, 1885, by Rush out of Eria (Coffin's Rak II.—Burr).

Tip, Mamie E., Mabel E. and Zora. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pugs, one dog and three bitches, whelped April 23, 1890, by champion Kash (champion Bradford Ruby—Lady Cloudy) out of Lady Thurman (Silver Shoe—Dixie).

Babe Moore, Kittle Moore and Susie Moore. By Moorefield Kennels, Colmar, Pa., for one lemon and white and two black, white and tan English setter bitches, whelped Feb. 8, 1889, by Dick Roy (San Roy—Cora) out of Caddie M. (Rodriguez—Lady Rake).

Forie Moore. By Moorefield Kennels, Colmar, Pa., for black, white and tan English setter bitch, whelped March 26, 1889, by Dick Roy (San Roy—Cora) out of Mattie (Prince Al—Maiden).

Golden Dust, Golden Fleece and Golden Fairy. By J. B. Martin, San Francisco, Cal., for white, black and tan and white fox-terrier dogs, and white, ticked ear, bitch, whelped April 3, 1890, by Blanton (champion Lucifer—Blanton Vesta) out of Beatrice (champion Bacchanal—Blanton Arrow).

BRED.

Prepared Blanks sent free on application.

Brunette—Leo. Prof. L. P. Bralve's (West Farms, N. Y.) Newfoundland bitch Brunette (Bruno II.—Mirza) to J. Ross's Leo (Lynn—Dick Roy), June 6.

Nellie E.—Ossian. P. T. Madison's (Indianapolis, Ind.) pointer bitch Nellie E. (Meteor, Jr.—Mamie) to his Ossian (Croxteth—Amine), June 6.

Pet—Ossian. Robt. Riley's (Indianapolis, Ind.) pointer bitch Pet (Ben La Nier—Queen) to P. T. Madison's Ossian (Croxteth—Amine), June 15.

Chiquetess Tara—Boycott. Mrs. E. Tyler's (St. Paul, Minn.) pug bitch Chiquetess Tara (champion Duda—Tressa) to Eberhart Pug Kennels' Boycott (Duke—Boumie), June 8.

Viola—Bradford Ruby II. H. Eichler's (Covington, Ky.) pug bitch Viola (champion Treasure—Topsy) to Eberhart Pug Kennels' Bradford Ruby II., June 13.

Lu Lu—Gem. G. J. Orandall's (Pawtuxet, R. I.) English setter bitch Lu Lu (Sam Green—Merry Belle) to T. M. Aldrich's Gem (Cruiser—Burr), June 13.

Cad's Pet—Gath's Mark. Moorefield Kennels' (Colmar, Pa.) English setter bitch Cad's Pet (Moorefield—Caddie) to H. Hulman, Jr.'s Gath's Mark (Gath—Gem), May 23.

Caddie M.—Roger. Moorefield Kennels' (Colmar, Pa.) English setter bitch Caddie M. (Rodriguez—Lady Rake) to L. Gardner's Roger (Count Noble—Moll), May 4.

Lucy—Dick Roy. Moorefield Kennels' (Colmar, Pa.) English setter bitch Lucy (Prince Al—Maiden) to their Dick Roy (San Roy—Cora), May 6.

Jennie—Buck. Prof. L. P. Bralve's (West Farms, N. Y.) Gordon setter bitch Jennie (Dash—Fannie) to his Buck (Teaser—Lou), June 10.

Twinkle—Roscus. Central Kennels' (Jersey City, N. J.) King Charles spaniel bitch Twinkle to W. Phillips's champion Roscus, June 17.

WHELPS.

Prepared Blanks sent free on application.

Uma III. Theo. Honegger's (Plainfield, N. J.) great Dane bitch Uma III. (Cassius—Erika), June 13, eleven (nine dogs), by his Herold (Faust—Gemma).

Molly Stark. S. Van Santvoord's (Troy, N. Y.) mastiff bitch Molly Stark, June 2, six (two dogs), by J. L. Winchell's Boss.

Sal II. T. Donoghue's (La Salle, Ill.) pointer bitch Sal II. (Bob—Sal), May 29, nine (three dogs), by J. H. Winslow's Tempest (Beppo III.—Lass of Bow).

Nadly of Naso. Fleet View & Reading Pointer Kennels' (Lynn and Reading, Mass.) pointer bitch Nadly of Naso (champion Nick of Naso—Temptation), June 6, ten (three dogs), by J. H. Winslow's Tempest (Beppo III.—champion Lass of Bow).

Lady Thurman. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Thurman (Silver Shoe—Dixie), April 23, five (two dogs), by H. E. Pitts's champion Kash (champion Bradford Ruby—Lady Cloudy).

Brunette. Chas. York's (Bancor, Mo.) Yorkshire terrier bitch Brunette (Bob—Judy), June 8, five (four dogs), by P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady).

Bud. G. A. Muenchinger's (Newport, R. I.) Yorkshire terrier bitch Bud (Snyder—Mollie), June 18, five (three dogs), by North Fields Yorkshire Kennels' Fishpool Gem (Harrison's Ben—Bent's Rose).

SALES.

Prepared Blanks sent free on application.

Cinderella. Dark brindle bull bitch, whelped March 3, 1890, by Portswend Tiger out of Grit, by J. H. Matthews, New York, to S. Vainward, New York.

Leslie and Lady Randolph. White and liver pointer dog and white and liver ticked bitch, whelped March 12, 1890, by Spot Dash out of Belle Randolph, by Fleet View & Reading Pointer Kennels, Lynn and Reading, Mass., to G. H. Bargar, Columbus, O.

La Grappe. White and liver ticked pointer dog, whelped Feb. 15, 1890, by Spot Dash out of Beauty, by Fleet View & Reading Pointer Kennels, Lynn and Reading, Mass., to E. W. Foot, Cambridge, Mass.

Spot Dash, Jr. White and liver ticked pointer dog, whelped March 12, 1890, by Spot Dash out of Belle Randolph, by Fleet View & Reading Pointer Kennels, Lynn and Reading, Mass., to E. W. Foot, Cambridge, Mass.

Tip. Fawn pug dog, whelped April 23, 1890, by champion Kash out of Lady Thurman, by Eberhart Pug Kennels, Cincinnati, O., to H. B. Bedford, Parkersburg, W. Va.

Smoke. Apricot fawn pug bitch, whelped Feb. 16, 1888, by Leo II. out of Dimple, by Eberhart Pug Kennels, Cincinnati, O., to A. Gittelson, Augusta, Ga.

Royal Duke. Apricot fawn pug dog, age and pedigree not given, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. H. A. Spaulding, Chicago, Ill.

Young Loris. Fawn pug dog, whelped April 3, 1890, by Sir Loris out of East Lake Virgie, by Eberhart Pug Kennels, Cincinnati, O., to Wm. J. Gerley, New Orleans, La.

Gus Bondhu—Nellie Noble whelp. Black and white ticked English setter bitch, whelped Feb. 2, 1890, by F. H. Clark, Dodgeville, Mass., to Moorefield Kennels, Colmar, Pa.

Blanton Vesta—Beatrice whelps. White, black and tan fox-terrier dogs, whelped April 3, 1890, by J. B. Martin, San Francisco, Cal., a dog and bitch to Capt. A. B. Anderson, San Gabriel, Cal., and a bitch to I. N. Isaac, Tulare, Cal.

Golden Lily. White fox-terrier bitch, whelped July 24, 1889, by Clover Turk out of Beatrice, by J. B. Martin, San Francisco, Cal., to Mr. Louden, same place.

DEATHS.

Young Loris. Pug dog, age not given (Sir Loris—East Lake Virgie), owned by Eberhart Pug Kennels, Cincinnati, O., May 27, from worms.

Monarch's Rip Rap and Flirt. Black and white English setters, dog and bitch, whelped Dec. 12, 1889 (Monarch's Image—Idol), owned by Louis Batjer, Elizabeth, N. J., from distemper.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

K. N. Y.—Will you kindly inform me, in the next issue of your paper, what is the matter with my dog and what to do for her? She will be a year old next month and was in heat, for the first time, this spring. Since then she has been ailing. Her appetite is as good as ever, but her spirits are depressed, her bowels loose, and she very frequently coughs up quantities of white mucus. Ans. Bitch is out of condition. Give a 5 grain quinine pill, concealed in a morsel of meat, each day for ten days. Give 5 drops of Fowler's solution of arsenic in the food once daily for three weeks.

E. S. E., Binghamton, N. Y.—I have a setter puppy, 18 months old, which has distemper. Have been giving her Fowler's solution of arsenic, commencing with 5 drops and increasing one drop a day to 20 drops, and back again, having now got down to 7 drops. She seems better and eats more (feed mostly bread and milk, and scraps, no meat), but she scratches a great deal, the hair coming off in a morsel of meat, and around the root of her tail; the skin is red and seems sore. I have washed her twice with carbolic soap, letting it dry on, and think it helps her somewhat, but does not stop the itching. Ans. Use the arsenic once more in the same manner as before. Get some zinc oxide and diachylon ointment, equal parts of each, and rub some in gently, once daily, over the affected parts. Keep the bowels open with one or two teaspoons of syrup of buckthorn daily. Give a little cooked meat mixed with other food. Exercise regularly.

Rifle and Trap Shooting.

RANGE AND GALLERY.

OUR MARKSMEN IN GERMANY.

BREMEN, June 15.—The Schützengest committee assembled this morning with bands and banners and marched to the Central Hotel, where the American riflemen are staying, and conducted the visitors to the Schützenhof. Enthusiastic crowds lined the route. After a banquet in the rifle hall the contest opened at half-past three P. M. The evening programme included a military concert, popular sports, fireworks, supper and a ball.

Speaking at the banquet in reply to a toast to the American visitors Mr. Schneider said that the toast to the Emperor and the Empire, proposed by Mr. Hauschild, president of the Bremen Schützen Verein, found a joyful echo in the hearts of German Americans. Only since Germany had been united had the Germans in America become prominent and respected. What the Germans liked about America was the general freedom enjoyed by the people. He concluded by offering a toast in honor of President Harrison.

President Hauschild announced that Captains Wehrenberg, Sieberg and Mayer had been elected honorary members of the Bremen Schützen Verein. Capt. Sieberg expressed the thanks of himself and his comrades for the compliment thus paid them.

BERLIN, June 17.—The commission of the federal shooting contest has passed a resolution requesting the municipal authorities of Berlin to open the proceedings by formally welcoming to Germany the riflemen who have come from foreign countries to participate in the contest. It is certainly well taken place in front of the Town Hall. The municipal authorities will also be requested to act as marshals at the banquet to be given to the riflemen. Herr Miguel, as president of the Schuetzenbund, will deliver the address at the banquet.

BREMEN, June 17.—In the international shooting match here, in which the American societies participated, the highest prize was won by August Zimmerman, of the New York Independent Schuetzen Corps. Herr Zimmerman has accordingly been proclaimed Schuetzen King.

BREMEN, June 18.—The American prize winners in the shooting contest are: First bird, Raddoff (gold crowns), Martin Fichen (imperial globe), and Zimmerman, the champion of North America; second bird, Schroder (scepter and tail, two prizes). All of the foregoing are New Yorkers. At the Bremen field target Jordan, of New York, made 215 points; Utschig, of San Francisco, 359, and Jacoby, of San Francisco, 360. At the Wasser field target Zimmerman made 58 rings, Schroder 55, Jacoby 50, and Busse of New York 58. The prizes are biscuit boxes, spoons, vases, etc.

HAMBURG, June 23.—Twenty-five Hamburg riflemen, on the steamer Blankensee, met the American riflemen, on the Wieland, on her arrival from New York to-day. Salutes were fired and a band played "God Save the Queen." The Wieland's saloon passengers were transferred to the Blankensee. Bouquets were presented to the ladies who accompanied the American riflemen, after which Herr Felge, the President of the Hamburg Rifles, delivered an address of welcome to the visitors in the steamer's saloon, expressing pleasure at their visit and the hope that they would be satisfied with the result of the shooting contest.

President Weber and Capt. Diehl replied to these remarks thanking Herr Felge for his hearty welcome. President Weber, in proposing three cheers for the Hamburg Rifle Corps, said he was pleased to announce that the Central Committee of the German rifle meeting had honored the Independents by asking them to head the grand procession in the streets of Berlin July 7. After this he described the voyage on the Wieland, which, he said, had been most enjoyable. He told of a concert which had taken place at the Wieland and of the receipts from the sale of programmes, etc., amounting to 1,185 marks, of which 100 marks were given to the widows and orphans' fund and the balance to the stewards. The visiting riflemen landed at 9 A. M. and were immediately driven to the Hotel de l'Europe. The contest begins at 4 P. M. to-morrow and is to be followed by a dinner and illuminations in the evening.

HAMBURG, June 24.—After inspecting the town the American riflemen at 12 o'clock boarded the steamers for Ulenhorst. On arriving there they marched to the Schützenhof as Baskies. On the point shooting competition two Americans won prizes, but in the competition for the silver cup they were easily beaten by the Hamburgers. This is ascribed to the absence of the best American shots, who are in Hanover.

BOSTON, June 21.—The Massachusetts Rifle Association held its weekly shoot to-day, with a good attendance of riflemen. There was a bad 6 to 10 o'clock wind that bothered them a good deal and spoiled several good scores. Following are the best scores made to-day, 200yds., standard American target:

W Charles88	H L Lee76	F Brownman73
CH Eastman77	S T George74	S B Sydney68
H Severance101	N O Good92	W Peters91
A H Ballard95				

W Charles88	S T George86	O M Howard80
H L Lee85				

W P Thompson109	F W Chester103	A H Stewart92
S Wilder108	M T Day102	S S Wood90
A H Ballard105	N O Good99	J W French87
W Peters105	S D Martin95	S A Hooper85

CH Eastman68	S W Chester67	J B Hobbs66
D Bayley68	S D Martin66	S S Wood65

W Charles91	H L Lee86	M T Day86
S T George89				

* Only one entry allowed each week.
* Only one entry allowed each shoot day.
(R) Re-entries allowed.

VANCOUVER, B. C., June 9.—A large number of the members of the Vancouver Rifle Association turned out on Saturday for the usual practice. The 600yds. target broke down, so that it was impossible to finish the shooting:

Capt Thompson31	31	62	Dr Bell-Irving20	55	54
C E Tisdall32	28	60	J D Stuart29	24	53
U McGirr29	30	59	J Wilson24	23	52
D McKay28	28	56	H Collins27	24	51
D Smith28	27	55	U H Mackie26	21	50
H A Brocklesby29	25	54				

June 14.—The usual Saturday shoot of the Vancouver Rifle Association:

Dr Bell-Irving29	28	59	H Collins27	24	53
D McKay30	30	60	H Smalley24	20	49
U McGirr30	30	60	J Egger22	22	44
Capt Thompson29	29	58	P A Bagger18	25	43
U Mackie26	27	53				

EPHRAATA, Pa., June 17.—The members of the North End Rifle Team met on their range, near Ephrata, Pa., last Friday afternoon, to engage in the third prize match for the season. The weather was very favorable for fine shooting, although rather warm, and the majority of the participants did exceptionally well in scoring. It was about 1 o'clock when the first sighting shot was fired, and the first score of 10 shots for each member, ended a few minutes before 5 o'clock. With sighting shots there were at least 40 shots fired, and the target looked worse than if it had been in an army engagement. Shooting was at 200yds. off-hand:

L M Wiest72	J M Sheaffer60	C M Miller37
C S Wenger70	J A Stober57	A N Deitrich30
W O Winter68	O Konigsmacher41	Col R W Bickley16
Carpenter59	D B Lefever41		

ZETTLER CLUB, June 13.—The Zettler Rifle Club held the first shoot on its summer programme over the 200yds. range at Cypress Hill Park, L. I., this forenoon. Owing to Saturday's heavy rain, only four marksmen were prepared for the shoot. The most points, 1443, were made by B. Zettler on scores of 220, 207, 194, 211, 196, 217, an average of 208.14. Dr. J. A. Boyken made 220, 213, 221, 228, 215, total 1,087; average 219.40. H. Kohlmetz fired only ten shots, and made 180 out of the possible 250; F. Ross 196.

WORCESTER, Mass., June 17.—At a recent meet of a few of the members of the Worcester Light Infantry at the Post Meadow Range, each man that faced the target had a possible 25. The work in detail follows:

Pvt Logan20	20	19	21	80	Sergt Gilman17	17	14	43
Corp Hassom19	20	18	87	Sergt Lincoln12	16	28		
Pvt Fuller17	17	18	82						

TORONTO C. C., JUNE 14.

THE Torontonians opened the season on Saturday with a sealed handicap race over a triangular course, the distance covered in three trips being about 4½ miles. Most of the canoes that entered being cruisers, or the crews being new to the work, the handicap was arranged with due regard to those facts. The race was a splendid one, all the fleet getting away well together. Wilton Morse leading in his new canoe Spendthrift. She is a fast racer, being an improvement on last year's Cannuck, which won the trophy at Slave Island, and was built by the same man that built Spendthrift. Another new canoe this year is A. M. Rice's Dixie, which is not the Dixie of 1889, although bearing the same name. She lost ground considerably, owing to her racing sails not being ready, and being consequently sailed with a smaller outfit. The time taken over the course by each competitor was as follows:

Spendthrift, W. Morse.....	42 00
Bel, J. W. Sparrow.....	47 00
Bervie, A. Shaw.....	49 30
Dixie, A. M. Rice.....	54 00
Stella, R. E. Matheson.....	57 30
Rook, R. Tyson.....	66 00
Fritz, R. Rogers.....	68 00
H. Ford.....	73 00
C. Shaw.....	Retired.

As the race was a sealed handicap, Bervie takes first place on time allowance, Dixie second and Stella third.

The same evening a most exciting race took place between the famous war canoe Unk-to-hee and the gig of the Argonauts R. C. The start took place shortly before 6 o'clock, twelve paddlers being in the Unk and six rowers with a coxswain and three passengers in the gig.

Argonauts—Bow, W. Stewart; 2, A. R. Denison; 3, J. McGee; 4, H. Higginbotham; 5, A. Morphy; stroke, H. Wyatt; coxswain and passengers, E. Vankoughnet, W. Ince, S. Bogart, and Major Sankey.

Unk-to-hee—Stroke, H. R. Tilly; 2, W. B. Wright; 3, E. Hackborn; 4, A. M. Rice; 5, J. Walker; 6, F. Rogers; 7, D. B. Jacques; 8, R. B. Elgie; 9, W. Morse; 10, H. E. Fortier; 11, M. F. Johnson; 12, T. G. Elgie; captain, A. H. Mason.

As might be expected, the Argonauts got the best of the start, and soon had a lead of half a length, but after the Unk got fairly moving they could not gain an inch. The Argonauts bent to their work with a will and strained every nerve to let daylight appear between the gig and the canoe, but all they could do was to hold their lead, which they did until nearing home, when the canoe gradually crept forward; 50 yds. from the winning post the Unk was still a quarter of a length to the bad, but in response to a call from the captain the canoeists dug their blades into the water with a vim, and fairly won the race on the post by 4 ft. The result was hailed with great enthusiasm, and the defeated Argonauts showed what thorough sportsmen they were by paddling alongside and giving three cheers for the Unk and its lusty crew. The canoeists were also loudly cheered on their way home as they passed the T. R. C. and R. C. Y. C. houses. The course was a fair half mile.

GALT C. C. REGATTA, JUNE 13.

THE canoe regatta in connection with the Galt Summer Carnival took place on Friday morning in the presence of 4,000 spectators. The proceedings were enlivened by the delightful music furnished by the Barrie Brass Band. The balcony of the club house and the rising banks of the river afforded a good view of the course.

The first race called was the single blade paddling. After a good race the men finished in the following order: First, H. F. McKendrick; second, R. G. Muntz, Argonauts, Toronto; third, F. Frank, Brantford; fourth, H. Frank, Brantford.

The second race, the tandem, was the hardest fought race of the day. The five crews got away to a good start and for some distance lapped the others. The stroke of the Frank and McKendrick crews drew ahead, and it was a ding-dong race to the finishing line, the Brantford crew finishing by a short half length. First, H. and F. Frank, Brantford; second, J. N. and H. F. McKendrick, Galt; third, F. Lightbourne and R. G. Muntz, fourth, Wehner and Gunther, Hespeler; fifth, Brooks and Beattie, Hespeler. It is but fair to state that the Hespeler crews were handicapped by paddling in much heavier boats than the others. The next race, club fours, brought out representatives from Brantford, Hespeler and Galt. The red and black jerseys of the Brantford, blue and white of the Galt, and white of the Hespeler crews, made a bright picture as they strained every muscle in bending to their work. Neck and neck they came down the course. Several times during the course the Brantfords changed hands like a glove, not a stroke was missed, and the canoe plunges ahead, sending up a shower of spray. The crowd becomes enthusiastic and cheers the contestants. The Galt crew seems to be paddling well within themselves, not having yet changed hands. Every one is looking for a most exciting finish. Suddenly there is a swimming race, the four Galt paddlers have parted company and each man is making for the shore, leaving the Brantford crew to win easily, with the Hespeler crew second. The crews were: First, H. Frank, F. Bloomfield, E. Tomlinson and F. Frank, of Brantford; second, Guenther, Brooks, Beattie and Wehner, of Hespeler; J. N. McKendrick, H. Reinhardt, G. M. Gibbs and H. F. McKendrick, Galt, capsized.

The swimming race was next called, and proved an interesting contest. First, J. Aspinall, Tilsonbury; second, F. Moss, Preston; third, Victor Rossell, Hamilton; fourth, W. D. Dickson, Galt. The hurry-scurry brought out three contestants, who finished in the following order: First, W. G. McKendrick, Ubique C. C., Toronto; second, J. N. McKendrick, Galt; third, H. Reinhardt, Galt.

The last race on the programme was one in which a great deal of interest was centered. The rivalry was keen. The paddlers were well-known experts. Everything promised which resulted in an excellent race from start to finish: First, Miss Alice McKendrick and Harry McKendrick, Galt; second, Miss Frances McKendrick and Fred Bloomfield, Brantford; third, Miss Pauline Johnson and Harry Frank, Brantford; fourth, R. G. Muntz and Mrs. Muntz, Toronto. Had the crew stroked by Miss Johnson not eased up before crossing the line the result would probably have been different. Mrs. Muntz acted as passenger only, but R. G. sent his craft along so fast that he finished well up with the others. MAMAC.

A. C. A. SIGNAL CODE.

To Secretaries of Clubs:

EXPLANATION.—A signal code is being drawn up for use at the A. C. A. meet, by means of which notices of races, meetings, entertainments and the like will be given by signal flags, displayed on a flag staff in a conspicuous place in the camp.

There are several signals which require club flags in addition to the signal flags, for example: "The club whose flag is displayed with this signal invites the members of the A. C. A. to a camp-fire at their club camp at 8 o'clock this evening." "The members of the club whose flag is displayed with this signal will please report at their club headquarters to-day at" (then follows the signal of the hour). "There is unclaimed property, believed to belong to the members of the club whose flag is displayed with this signal, now lying at" (then follows the signal as to place). "The club whose flag is displayed with this signal as issued challenge, the details of which are posted on the notice board," etc., etc.

The secretary of any club who thinks his club may wish to give any of these signals at the meet is requested to furnish to the undersigned his club flag, 3 ft. 6 in. in length.

Very respectfully, EDWARD W. BROWN,
NEW YORK, June 14. Chief Signal Officer.

CRUISING CUPS AND CANOE YAWLS.

At the meeting of the Brooklyn C. C., on June 10, Mr. Chas. P. Weeks was presented to the club a trophy to be raced for during the annual cruise of the club each year, the following rules to govern the races:

1. The rules of the A. C. A. each year to govern the race for that year.
2. The trophy to be known as the "Pagan Cruising Trophy," and shall be the property of the members of the club as long as they participate in the annual cruise. When, however, two successive years elapse without an annual cruise having been taken, the trophy shall revert to the donor.
3. The regatta committee of each year or their representative shall arrange for each race in camp, the course and time limit to be then decided upon.
4. The maximum sail area of any canoe shall not exceed 75 sq. ft.
5. The canoe and owner winning the trophy shall be given possession of the same until the next annual cruise; but should the annual cruise be omitted during any year, the regatta committee shall be the custodian of the trophy for that year.
6. All contestants must sail their own canoes and must be club members.
7. The club will have engraved on the trophy the name of win-

ning canoe, captain and date and location of race, at their own expense.

There being a limited number of boats in the B. C. C. larger than canoes, it has been customary to have a race for this class every year in the annual regatta, and there having been no rules to govern these races, it has been annoying and inconvenient to decide just what might be considered an "unclassified" boat; so the following general rules have been adopted:

First—All races in the club heretofore known as "unclassified," shall in the future be limited to a class to be known as "canoe yawls," which shall consist of boats of the following description, viz.: Sharp at both ends, length not over 18 ft., beam not over 45 in., depth not over 24 in. amidships.

Second—The crew of each canoe yawl shall consist of two men only, unless the programme of the regatta state to the contrary.

Third—The A. C. A. rule in regard to ballast shall apply to this class, except that no ballast shall be shifted.

Fourth—Boats in this class shall be given a time allowance of 2 seconds a foot per mile, to be calculated to the nearest half foot.

AN A. C. A. PADDLING CUP.—Mr. H. C. F. Randolph of New York, A. C. A. No. 906, has offered to present to the A. C. A. for competition at the meet in August next a handsome silver mug, to be known as the "Shinnecock cup." It is to be presented to the winner of a special one mile paddling race for decked canoes, and is to commemorate a difficult paddle experienced by the giver in the neighborhood of Shinnecock a season or two ago. He is a veteran cruiser, has made the circuit of Long Island in a canoe, and recommends as far superior to the other north or Sound side of Long Island to any one contemplating cruising to the next meet. W. H. HAVILAND.

SAD ACCIDENT TO A CANOEIST!—A prominent crack of the New York C. C. was airing his large kites on New York Bay one day last week in rather gusty weather. A sudden puff caused him to slide out to windward, but alas, when the canoe righted and he would fain have slid in, his weather coat tail fouled in the sliding seat, and in less than a moment he was fathoms deep beneath the blue waters of the Bay. To his credit be it said that he held on to the sliding seat up to the canoe and climbed aboard, in spite of a heavy sea, trimming sheets and sailing on after stopping to bail out a little water in the well.

A. C. A. MEMBERSHIP.—Northern Division: H. Chas. Sparks, Ottawa; Frank W. McCallum, Wm. H. Warren, Montreal. Atlantic Division: Edward H. Burtis, W. D. Anderson, Jr., Brooklyn, N. Y. Eastern Division: E. C. Sherwood, Southport, Conn.; A. E. Wiswell, Lynn, Mass.

Yachting.

"West Indian Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FIXTURES.

			25. So. Boston, Moonlight Sail.

REGATTA WEEK, JUNE 16-23.

IT is a very fortunate thing for the advocates of classification by corrected length that no change of the rules was made last fall; as otherwise they would have been saddled with all the blame for the present deplorable condition of yacht racing, for which, it is now evident, they are in no way responsible. Had the change of classification been made last fall, its influence would only have been felt in the new boats built, the time allowance of existing boats being precisely as now; so that for this year, at least, it would have had no perceptible effect on the racing, which would have been neither better nor worse than under existing conditions. As it has happened that there is no racing at all this season save among the forties and thirties, the entire blame would have been laid on the unfortunate classification, which, as is now proved, would have been entirely innocent.

Why there is no racing and what the result of such a state of affairs is likely to be next year and the year after, are very serious questions, and ones that are by no means easily answered. When the starters in the great event of the early season, the annual regatta of the New York Y. C., muster but the beggarly total of ten yachts, none over 74 ft., not a schooner among them, and four of the ten sailing over with no competitors, it becomes a serious question as to the future of yacht racing. The case would be different if there were any serious disturbances in the political or financial world, but the country is at peace and fairly prosperous; so that there is no cause to be found here.

As far as the large schooners are concerned, it is not strange that after the activity that succeeded the building of Sachem and Sea Fox, and the improvement of Grayling, a temporary reaction should set in; but from all appearances the present lack of vitality in the class is likely to last for an indefinite time, perhaps to be but the beginning of such a period as has prevailed in England since Miranda killed the schooner class there. If it were only that the cracks had withdrawn for a year, there would

be less cause for regret, as a good opportunity is thus given to the ex-racers, and plenty of good racing might have followed; but the dry rot evidently pervades the whole fleet, and those that are not laid up are left to swing at their heels or to go out at times to follow the forties down the Bay. There were a dozen big schooners off Bay Ridge any day last week, which, profiting by the absence of Sea Fox and Grayling, might have enjoyed some good racing among themselves, at the same time doing something for the clubs they represent, but not one, save the little Azalea, went so far as to hoist a racing flag. Had half a dozen owners agreed among themselves to enter, with anchors on bows and boats on davits, without stripping ship, there would have been hardly less interest than in the bygone fights of the nineties, as it is an incontestable fact that the interest in a race depends less on the intrinsic speed and excellence of the competitors than on the closeness with which they are matched.

As far as the display goes the whole week must be set down as an utter failure, a fact perhaps of little importance in itself; but then from a purely racing standpoint the result was little better. The schooners were absent, the famous 90 ft. sloop class is still in the dim haze of the future; while the 70 ft. class, though with a fair fleet of boats, provided but little sport. "Titan" was about the course under her small rig; Bedouin is laid up yet, and the New York Y. C. race this year and the year after, so far as ashore, by an unlucky accident. Of the three that entered Shamrock, Katrina and Fanny, only the former sailed the three races. Clara, in the 55 ft. class, sailed in all the four races, in but one having a competitor. Even in the 40 ft. class the entries were poor. Minerva sailed all the races, Maraquita sailed three, Tomahawk had a look in a couple of times, Chocław made three starts, while the rest of the fleet were either hauling out for work that should have been done last winter, thus missing three races and entering the others hurriedly and with little preparation. In the 30 ft. class matters were still worse, as nothing but little Shona came forward to face Kathleen.

Apart from the racers themselves the conditions were much as usual, the New York Y. C., Corinthian and Seawanhaka clubs each sailing its annual regatta, while the latter in addition sailed a special race for forties and thirties. The usual fleet of steamers, steam yachts and sailing craft was in attendance, and the weather was up to the average for regatta week, three days of light sailing breeze, one drifting match ending in a fresh breeze, and one day of rain and a strong S.E. wind, giving plenty of good racing for the few competitors. One feature that is too plain to be passed over is the absence of the centerboard boats; the racing being left largely to the keels. The seventies, of course, are all centerboards, there being no modern keel craft in the class. In the next class the cutter Clara sailed alone save in one race, beating her centerboard competitor in that. In the 40 ft. class there were five keel boats and one centerboard, the latter only winning once, the day when Minerva was disabled. In the 35 ft. class the narrow Scotch cutter Shona, a Watson boat of but 35 ft. 9 in. beam, defeated without allowance the centerboards Eurybia, Volusia, Polly and Hypatia, while in the 30 ft. class the once numerous centerboard fleet has disappeared completely since Kathleen's advent.

PAVONIA Y. C.—JUNE 16.

The annual regatta of the Pavonia Y. C. on Monday proved a great success, there being good entries and a fresh S.E. breeze all day. The course for the cabin boats was from off Ellis Island around the Southwest Spit and return, the open boats sailing around Swinburne Island and Fort Lafayette, 30 and 18 knots respectively. The start was given at 12:05. The fleet had a beat down with an ebb tide, the leaders being timed at Buoy 95:

Mergus.....	2 45 40	Irene.....	3 03 50
Phantom.....	2 48 00	Souter.....	3 04 22
Avalon.....	2 53 05	Forsythe.....	3 03 10
Christine.....	2 59 70	Growler.....	3 11 42

The small craft were timed at Buoy 13:

J. T. Corlett.....	1 37 30	Leader.....	1 49 50
H. H. Holmes.....	1 49 10	Square.....	1 57 45

The full times were:

The winners were: Mergus, Irene, Christine, J. F. Corlett, H. H. Holmes, Bessie R., Sadie May, Souter Johnnie, Minerva, the judges were: Com. A. J. Prime, Youkers C. Y. C.; Frank Oliver, Hudson River Y. C.; and George E. Garland, New Jersey Y. C. The steamer Pomona carried a large party of guests over the course.

ATLANTIC Y. C. ANNUAL, JUNE 17.

The first race of the week was the annual regatta of the Atlantic Y. C. on Tuesday, sailed as usual from a start off the club house to a finish off Buoy 15, below the Narrows, the course for all over 35 ft. being around both lightships, the 53 and 46 ft. classes going out and in by the Swath Channel, the others around South-west Spit. The forties and thirties went down the Swath and around the Scotland, while all others turned a markboat off Buoy 8. The Atlantic Y. C. has lately made an important change in its sailing rules, the first point for a club to consider is the actual Seawanhaka rule of length and sail area. In doing this, however, it has made a change apparently for no other reason than to be at variance with the uniformity that most of the other clubs are working to attain. In the Seawanhaka rule, as now used by the New York, Eastern, Larchmont, Seawanhaka, Quaker City, Corinthian, New York Y. C., and other clubs, the entire sail area is the square root being extracted. In the rule as modified by the Atlantic Y. C. the sail area as measured is reduced by 10 per cent. before the square root is extracted. This move has the disadvantage of confusing the racing men. The measurement of a yacht in all of the clubs mentioned is the same, and easily remembered. The first point for a club to consider is 15.61 ft. By the Atlantic rule, however, she will measure 44.20.

Every race that is sailed goes to prove the necessity of uniform racing rules, as men are obliged to hunt over half a dozen club programmes to make sure just how the rules they may sail under to-day may differ from those they sailed under yesterday and those they will sail under to-morrow. In making a change of rules, therefore, the first point for a club to consider is the actual merit of the change in itself, but the next, and of hardly less importance, is as to how it will agree or conflict with the general usage; and in each of these respects the alteration of the established rule in the present case is for the worse.

The Atlantic Y. C. beside Grayling, to which famous yacht it has always added the first claim, has had a number of small schooners which entered in the annual regatta, but this year not a two-striker was present at the line. The largest racers were consequently the 70 ft. sloops, with Katrina, Shamrock and Fanny entered. The improvements in the former two promised an interesting race, as was the case, Fanny not starting, although sailing about the line when the gun was fired. Anaconda was evidently not going to give up the fight with Clara without trying her best, and Captain Joe Ellsworth was at the wheel for the day, making the best showing for the boat that she has ever had, though Clara finally won the mug. Nepeenthe and Stella made up the 46 ft. class. In the forties the entries were Chispa, Chocław and Minerva, the former steered by Com. Lawton, her owner, and Minerva by Captain Charles Barry. As Chispa, though in all

of Tuesday. In one way or another she ghosts away from the fleet in light weather in a style that makes it evident that luck alone is not responsible for her success. She passed Buoy 10 at 2:09:45, with Tomahawk a good 10 minutes astern and the rest still further in the rear, the times being:

Minerva.....	2 09 45	Florida.....	2 57 50
Tomahawk.....	2 42 00	Marquitta.....	3 03 45
Katrina.....	2 44 42	Clara.....	3 04 00

The first half of the race, from Buoy 15 to the two lightships, was a drift, Katrina and Shamrock sailing apart at times, but finally turning the Sandy Hook Lightship but 18s. apart, the times here being:

Shamrock.....	4 44 00	Whaleaway.....	4 49 28
Katrina.....	4 44 19	Florida.....	4 55 15
Clara.....	4 47 15		

Minerva turned the Scotland at 3:31:55, the others being far astern. The breeze freshened considerably in the afternoon, and the latter half of the race gave some good sailing between Shamrock and Katrina, as for the forties, Minerva was so far ahead that the Burgess boats were able to ignore her entirely, and have a very exciting little sub-race between themselves. Shamrock led all the way home until near the finish, when by a little better handling Katrina headed her, leading over the line by 2 1/2 m., and winning by 1m. 38s. corrected time. Tomahawk was the first of the Burgess forties being off of Minerva. Chocotaw and Marquitta had a very close brush for last place, Chocotaw finally winning it. The full times were:

SECOND CLASS SLOOPS.

The judges were George E. Garland, New Jersey Y. C.; George Parkhill, Columbia Y. C. and Col. B. S. Gibson, Sing Sing Y. C.

SEAWANNAKA CORINTHIAN Y. C. ANNUAL, JUNE 21.

In the matter of starters the Seawanna Y. C. was still worse off than the New York, only seven yachts crossing the line, in spite of as fine a racing day as could be asked for over the New York course, a strong working breeze from S.E. giving a better trial to windward than has been seen yet this year. Katrina was kept out through a death in her owner's family, while Gracie, in spite of some hard work, was still on the ways. On Friday extra launching ways were laid under her, but she did not move, not going off finally until Monday. Clara sailed alone in her class, while the forties were limited to Minerva, Marquitta and Liris, the latter just down from Piegrass's, where some of her lead had been taken off. Kathleen was promised a classmate in Volusia, but the latter did not show up, so the little white cutter sailed over. Minerva was sailed by Mr. A. B. Alley, Marquitta by Mr. Burgess and Liris by Mr. Lovejoy. As Mr. Maxwell had no competitor for Shamrock, Mr. Duncan started the cutter Huron, a cruiser that is some 7 ft. to the class. The usual conditions were in force, no clubboats, Corinthian helmsmen, and only one paid hand on the forties and thirties.

The tide was still flooding at 11 A. M. when the first whistle was blown, the start, the usual time one, being given at 11:10. Shamrock crossed at 11:32:30 and Huron at 11:34:30, both carrying working topsails. The three forties came for the line together, but with Marquitta ahead, she was first to the line, followed by Liris, the latter just down from Piegrass's, where some of her lead had been taken off. Kathleen was promised a classmate in Volusia, but the latter did not show up, so the little white cutter sailed over. Minerva was sailed by Mr. A. B. Alley, Marquitta by Mr. Burgess and Liris by Mr. Lovejoy. As Mr. Maxwell had no competitor for Shamrock, Mr. Duncan started the cutter Huron, a cruiser that is some 7 ft. to the class. The usual conditions were in force, no clubboats, Corinthian helmsmen, and only one paid hand on the forties and thirties.

The tide was still flooding at 11 A. M. when the first whistle was blown, the start, the usual time one, being given at 11:10. Shamrock crossed at 11:32:30 and Huron at 11:34:30, both carrying working topsails. The three forties came for the line together, but with Marquitta ahead, she was first to the line, followed by Liris, the latter just down from Piegrass's, where some of her lead had been taken off. Kathleen was promised a classmate in Volusia, but the latter did not show up, so the little white cutter sailed over. Minerva was sailed by Mr. A. B. Alley, Marquitta by Mr. Burgess and Liris by Mr. Lovejoy. As Mr. Maxwell had no competitor for Shamrock, Mr. Duncan started the cutter Huron, a cruiser that is some 7 ft. to the class. The usual conditions were in force, no clubboats, Corinthian helmsmen, and only one paid hand on the forties and thirties.

Marquitta held her lead, the others working in under the Owl's Head shore to catch the first of the ebb tide. The positions were but little changed when the fleet beat out of the Narrows, Marquitta had a good lead, Minerva came next, then Clara, and Liris last. Just outside Fort Wadsworth, Liris went on port tack, with Minerva after her on weather, when Clara, coming out on starboard tack, put Minerva about, Minerva went on starboard tack, in close company with Clara, and before the larger boat had drawn clear of her she lost ground perceptibly. Marquitta held down along the West Bank, but both Liris and Minerva stood out to the eastward, toward the middle. Here the wind came heavier, heading them at times. Strange to say, Marquitta, carrying working topsail, stood up in a way she has never done before, while Minerva set down her working topsail, and Liris, after heeling heavily in the puff, was compelled to do the same. Before Buoy 10 was reached the wind let up, and both set topsails. Marquitta was very well sailed, and was evidently able to hold the others, while Minerva was dropping Liris. The times at Buoy 10 were:

Shamrock.....	1 00 36	Clara.....	1 19 49
Huron.....	1 05 14	Minerva.....	1 19 13
Marquitta.....	1 18 30	Liris.....	1 21 17

The forties tacked close around the buoy, Clara standing by on the port tack for some distance in order to keep clear, as she had not left them yet. From the start Marquitta had gained 42s. on Minerva and 2m. 33s. on Liris.

On the reach beyond the point of the Hook the positions changed but little, and beyond that there was a little more. Marquitta was kept going and stood the sea better than Minerva, but gained

nothing to speak of on the latter between the Hook and the Scotland. Liris, after starting the race with sheets eased off in the first windward work, was now pinned in until she stood still and jumped about in the sea, losing very badly on this part of the course. Before this Huron had hauled down her number and was following the race as a spectator. Shamrock and Clara were off for the Sandy Hook Lightship, where they were not timed, and Kathleen had turned Buoy 5 and gone home. The forties were timed at the Scotland as follows:

Marquitta.....	1 13 12	Liris.....	2 25 16
Minerva.....	2 17 01		

Once again the fleet sprang to port and ran for Buoy 5. Liris being a slight gainer in this stern chase. Coming in by Buoy 10, with working topsail and small jibtopsail set, Marquitta made a careless jibe, the backstay was not set up quickly, and the topmast went a little distance above the cap. The jibtopsail was taken in and the working topsail left aloft, all that portion below the level of the gaff and still doing its work. In spite of this loss Minerva gained but little, and as she had been behind her allowance of Marquitta all day, the result was not changed by the accident. Marquitta finished at 3:59:42 and Minerva at 4:00:08, thus Marquitta covered the course in 55s. less than Minerva, the latter beating her by 2m. 28s. Mr. Burgess turned an "elaps-d" hand-spring, but Minerva takes the "corrected" prizes, the \$100 cup for the class, the Leland G. Winthrop challenge cup, and Mr. Alley wins the "home" prize offered for the best boat for another sailing over the yacht making the best time over the Scotland Lightship course. The full times were:

SEAWANNAKA SPECIAL SWEEPSTAKES—JUNE 23.

The third Seawanna Corinthian race was a repetition of the first of the series, on June 5, except that it was a sweepstakes, \$25 entrance for the forties, with the Carroll cup, presented last year by Mr. Royal Phelps Carroll and won by his yacht Gorilla, being re-donated to the club. The race was also open to the thirties, \$15 entrance, and special prizes offered by Mr. Whitlock, but Kathleen was the only entry, and she did not care for another sailing over the forties.

The forties entered were Minerva, Chocotaw, Liris, Tomahawk and Marquitta, but the latter pair did not start. Full professional crews were allowed and also clubboats, the boats to be steered by amateurs. Mr. A. Bryan Alley had charge of Minerva, Mr. Lovejoy of Liris and Mr. Edmund Fish of Chocotaw. The day was cloudy and overcast, but with a moderate S.E. wind in the morning, the tide turning ebb about an hour after the start. The much-abused "one-gun" start was tried again, this time with success, as the yachts were all ready. Minerva took a tug at Bay Ridge, Chocotaw sailed down about 10 o'clock and Liris when part way down accepted a line from the judges' boat. All carried small jibtopsails, Minerva and Liris also carrying second clubtopsails, while Chocotaw had a jibheader set. After a little maneuvering for the start, Minerva cut under the stern of the judges' boat, anchored to the eastward of Craven Shoal Buoy, on port tack, just after the gun, with the bowsprit of Liris over her boom end, while Chocotaw was about a length clear of Liris astern. Minerva had the weather berth, Liris being in her wake.

At the start Chocotaw fell off until in a few minutes she was to leeward of the others and close to the West Bank, where Mr. Fish made a tack, going across Liris' stern, and well out into mid channel, where he found rather more wind. Liris held Minerva for a time, but the little Scotchman at last began to draw away, and as her gain became apparent Liris was put about, on starboard tack, for mid channel, when down near the head of the Swash. When she and Chocotaw came together Liris was well clear, Chocotaw's bowsprit was in Liris' wake, and Liris, planning herself on the weather bow each time they tacked, Liris finally getting away from under her by a little skillful work. They beat on down to buoy 10 in this order, the times at the buoy being:

Minerva.....	12 23 12	Chocotaw.....	12 27 11
Liris.....	12 24 29		

Sheets were eased a trifle for the next couple of miles to buoy 5, Minerva, taking in her jib-top-sail as soon as she struck the swells of the Hook, gaining a little on the others. The times at the buoy were:

Minerva.....	12 40 04	Chocotaw.....	12 45 01
Liris.....	12 41 27		

When outside the Hook the yachts met a long easy swell that laid the bowsprits level with the water at times and showed plenty of forefoot as well, while the wind fell much lighter. Liris tacked close in under the beach, working down along the shore, while Minerva followed her, back to back, keeping just outside of her. Chocotaw steered a course of her own, holding her over to the eastward on one long starboard tack and setting her clubtopsail when part way out. The roll of the sea and the light wind favored Minerva greatly alongside the beamy boats, and she made much of her gain here. She turned the Scotland with a good lead and set spinnaker to port. Chocotaw made her last tack well to the eastward of the Hook, while Liris was coming from the other direction, on starboard tack. When the two met Liris had the right of way, and Chocotaw had to tack under her bows, taking third place. The times at the Scotland Lightship were:

Minerva.....	1 38 12	Chocotaw.....	1 45 57
Liris.....	1 44 40		

All ran for home with spinnakers to port, Chocotaw drawing up and passing Liris before she was reached. At the turn Liris luffed across her wake and hailed for room at the buoy, while Chocotaw was compelled to give, going back to third place. As soon as spinnakers were in Mr. Fish luffed her out on Liris's weather, but the black boat met her, the two standing well in toward the point of Sandy Hook. This game was repeated several times, Chocotaw failing to force a passage, but before Buoy 10 was reached she had got a little lead of Liris, only to lose it again when they jibed at the turn, Liris being less than a hundred yards ahead of her. By this time Minerva was far up the bay and near the finish. The times were:

Minerva.....	2 38 17	Chocotaw.....	2 46 17
Liris.....	2 46 17		

As soon as Buoy 10 was passed Chocotaw began the tuffing, trimming sheets for a rush out on Liris's weather, and the flowing thereof to pay off through her lee when the first maneuver failed. This was repeated some six or eight times, until the pair were over near the East Bank, and a couple of miles off their course. Each attempt to weather Liris failed, leaving Chocotaw 50yds. astern. When well up the Bay Chocotaw, having her spinnaker boom on end, paid off quickly and made a rush for Liris's lee, but the other was too quick for her, though her bowsprit was swinging out and the sail set but little later than Chocotaw's. They ran on their true course, wing and wing, for a few minutes, Chocotaw gaining nothing, so she started the luffing again. After some further monkeying with spinnaker booms well forward she placed herself on Liris's weather, blanketing her, and then ran ahead until Liris was in her wake. A fine run now began again, Liris doing the luffing this time, and finally planting herself to windward of Chocotaw. From this position she soon ran ahead, covering the line by a couple of lengths but losing on allowance. In the course of this curious monkeying, which much increased Minerva's lead, each of the boats had sailed completely around the other, their positions at the finish being precisely the same as at Buoy 10. The full times were:

Start.				
Finish.	Elapsed.	Corrected.		
Minerva.....	11 00 33	3 33 31	4 23 31	4 29 10
Chocotaw.....	11 00 33	3 33 31	4 47 52	4 45 17
Liris.....	11 00 33	3 47 34	4 47 34	4 47 34

Minerva beats Chocotaw 16m. 7s. corrected time and Liris 18m. 24s. corrected time. Chocotaw beats Liris 2m. 17s. corrected time. As far as wind and boats were concerned the race was a perfect fair one, and the boats were all well sailed. Minerva won the \$125 and the Carroll cup. She now holds the Leland cup, subject to challenge from Liris, Marquitta, Tomahawk, Moccasin, Nymph, Gorilla and Banshee, all of which are enrolled in the Seawanna Y. C. Y. C. As far as the club was concerned, the race was a complete success, though the few entries were rather discouraging. The race, like that of Saturday, was managed by the race committee, Messrs. B. Simonds, W. A. Haines, M. M. Howland, W. C. Kerr and J. L. Ward.

MINERVA AND CHISPA.—A match race has been arranged between Minerva and Chispa, to be sailed on the Bay on Saturday next. Captain Joe Ellsworth will be with Com. Lawton in Chispa and a lively race may be looked for.

NO RACE FOR THE SEVENTIES.—The rumor of a match to be sailed soon between Katrina, Shamrock, Gracie and Titania is incorrect, as the four will not meet until the New York cruise.

MOCCASIN.—Mr. Morgan's new 40, lately launched at Piegrass's, had a trial trip on Tuesday.

BEVERLY Y. C., JUNE 17.

THE 157th regatta, first open sweepstakes, was sailed at Monument Beach on Tuesday, in a good three reefed southwester. The club was favored with a perfect day, an excellent entry and a very exciting race. The preparatory gun was fired exactly on time and in thirty seconds the old Mattie led off the first class, closely followed by champion Climax; five minutes later the champion Mist led off the second class, followed within a minute by Wildcat, Mollie, Superior, Widgeon and Gynnote.

Climax, Mollie and Gynnote returned to the line, the others two; course for these classes was a run to Bird Island, a short reach to Wings Neck and a run home, 11 miles.

Mattie sailed wonderfully, and to the surprise of every one held her own with Climax, while Mollie, Wildcat and Mist were fighting hard in third class.

At 1:15 third class was started, the class par excellence of the day. The entries were the champion Etna, built by Hanley, the '89 champion Daisy and 5 new twenties, built to beat Etna, Etta and Hermione, built by Jenney, Cayuse and Puzzle by Hanley, and Ada by Eben Holmes.

Cayuse got off with the lead, followed very closely by Hermione, Etta, Etna, Ada and Puzzle, all carrying three reefs, their course being 3 miles; a reef, but Etna had gained on her and ran through her lee as they rounded the judges' boat. Puzzle was run home, the back reef was returned.

They were followed by Rip and Edith in fourth class, Rip being Mr. Jefferson's new boat, just finished by Dunn, and the prettiest little boat on the bay, looking very like Kiowa, but broader and shallower.

Their course was twice round No. 3 and return, 6 1/2 miles. Rip had an allowance of 15s., but started 27s. ahead. She had not wind enough, and although sailing faster did not point with Edith, at the end of first round she was 42s. ahead; but on second round, as it breezed up, she sailed beautifully and spun out a lead of 1m. 38s.

Cayuse sailed like a witch and led next boat in her class at end of first round by 8m., Etta followed, with Etna 3s. behind, both being 3 miles; a reef, but Etna had gained on her and ran through her lee as they rounded the judges' boat. Puzzle was run home, the back reef was returned.

Mollie led second class, however, which was also a surprise, as it was thought too misty weather, but Mollie's present skipper is hard to beat. Mist was second with Wildcat, with a cracked tiller, and partially steered by an oar close to her and well within her time. Next came Superior swinging the whole of the Crawfish big sail. It was too much for her as they could not keep her off on her course, and were forced into a jibe on the line, getting goose-winged and tearing sail from boom to gaff. The race was a great success and result shows that the racing this year will be very lively. After race every one reefed down close before going home. All the races at Monument Beach this year will be sailed under the 1/2 W. L. & beam rule. Results as follows:

ing sail. It was too much for her, as they could not keep her off in her course, and were forced into a jibe on the line, getting nose-winged and tearing sail from boom to gaff. The race was a great success and result shows that the racing this year will be very lively. After the race every one reefed down close before going home. All the races at Monument Beach this year will be sailed under the $\frac{1}{2}$ W.L.+beam rule. Result as follows:

FERGUSON'S PATENT ADJUSTABLE
Reflecting Lamps.

With Silver Plated Locomotive Reflectors.
For Night Hunting and Fishing, Camping, Boating, Driving at Night, etc.
Excelsior Dash Lamp.

Clark's Muscallonge Rods,
Clark's Bass Casting Rods,
Clark's Special Lines,
Camp Cooking Utensils,
Camping Outfits,
And many other specialties of interest to the Angler and Sportsman.

THE JOHN WILKINSON COMPANY,
55 State Street, Chicago, Ill.

THE COMING HAND-GRASP.

Cork and celluloid, cork predominating. Patent applied for. Improvement over all other rods. Not affected by water or heat. Cork is protected by celluloid. Will not blister the hands. By using this combination can get a more perfect hand-grasp. Rod will not break. Hand-grasp can be made to match windings, and more durable than any other hand-grasp made. Admitted by expert anglers to be the coming hand-grasp. This season we make this hand-grasp only to order. We shall make no other next season.

NESSMUK'S POEMS.

FOREST RUNES, By Geo. W. Sears, {Nessmuk}

Large octavo, 208 pages, printed on heavy paper, bound in cloth, gold lettering, with portrait of the author. Price, \$1.50.

FOR SALE BY ALL BOOK DEALERS

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

YAWMAN & ERBE,

ROCHESTER, N. Y.

Send for Catalogue, Free.

All Anglers know of "Chubb" and the high reputation that his goods have obtained. If you need a rod or other tackle, send direct to him and get goods that are warranted.

His New Catalogue for 1890 contains description of everything that you need; it also contains articles on fishing, written by such well-known writers as Dr. James A. Henshall, Petronella, W. H. H. Murray, Geo. P. Goff, Norman, Bro. Gardner and others.

Send 25 cents, and receive Catalogue, post paid. This amount will be deducted from first order (if accompanied with Coupon in book) for one dollar's worth or more of our goods. Address

A BLACK BASS NUMBER.

The issue of "Forest and Stream" of July 24 will be a Black Bass Number. See announcement next week.

GAME IN THE GREAT WEST.

THE time is at hand when the Eastern men who hunt big game are preparing for a start to the Rocky Mountains. There has been much correspondence with guides, each hunter has appealed to such of his friends as make similar trips, to give him information as to localities which they have visited and men with whom they have been in camp. Regions have been looked up where some species of game, unknown to the inquirer, may be found in abundance. Bears, of course, are always in demand, but aside from this—sometimes dangerous—game, the hunter wants variety. If he has been killing elk, deer and antelope, he now wants to find a place where mountain sheep are abundant. If he has had his fill of sheep and goats, then moose and caribou seem to him to be desirable, above all things. Many a hunter of the present day longs to kill a bison.

For the next two months parties of Eastern sportsmen will be starting for the West, and will scatter themselves through the mountains, seeking out the secluded valleys furthest from the settlements, and, so far as possible, cutting themselves off, for the time, from the rest of mankind. Almost each camp of this kind will have a different object in view. One set of men will want to kill elk; another will look for sheep; another will devote its energies to exploration, will try to find new passes across the Continental Divide, or short cuts between localities now connected by roundabout trails; some will fish, some will shoot birds, but all will have a glorious time and will return in the autumn with renewed strength and vigor, and a stock of experiences that will ever be to them a delightful memory.

Never to so great an extent as this year have we been called upon to indicate big game localities in the West, and never has it been so difficult to give such information as it is in this year of our Lord 1890. The regions where for-

merly big game was abundant are now farms, often thriving towns. Where a dozen years ago the antelope, the elk and the deer grazed by thousands, the herbage is cropped by as many sheep, horses and cattle.

The game is actually scarcer and its range is continually contracting. The number of the hunters is increasing, and they of necessity all collect in the country where the game is found. As a rule the hunters of to-day kill with far more discretion and judgment than did those of ten years ago, but they are much more numerous. We know a number of men who refuse to kill female deer or elk. We know at least one man—he had never killed a buffalo—who within the last two years found himself within 60yds. of four buffalo in summer, and yet had sufficient control over himself to decline to fire at them, because he did not want to have a hand in the extinction of this grand race. Such a man is entitled to the respect and admiration of all sportsmen.

We may feel sure that a time is coming when the Rocky Mountain region will afford no better hunting than do now parts of Switzerland. There will be a little game left, but it will be shy and hard to get at, confined to the highest peaks of the range, and ever on the lookout for its enemies from below. Then the man who can return from his Western trip and boast that he killed, after a month or two of exhausting work, a couple of elk or sheep will be regarded with envy by his fellows.

It is true that so long as the Yellowstone Park is efficiently preserved there will be a breeding ground for big game which will furnish sport for hundreds of hunters, but speculators and land grabbers have fixed their greedy eyes on this beautiful spot, and are striving hard to ruin it as a game preserve and deface its natural beauties. The bill for the preservation of the Park has been amended by the Public Lands Committee of the House of Representatives, so as to grant a right of way to a railroad to be built through the Park, and if this amendment should become a law, the value of the Park as a game preserve would be destroyed. The passage of this amendment would mean the ruin of the Park.

The storm of protest evoked from newspapers of the better class by the announcement that the Public Lands Committee had agreed upon this amendment has had the effect of delaying the presentation of the report, and it looks now as if the committee intended to postpone it until all the friends of the Park have gone away for the summer. Then it may come up and the railroad lobby will try to force it through.

It is to be hoped that it will fail, and each sportsman or individual who is interested in the big game of the West or in the preservation of the National Park ought to write to his Congressman, urging him to oppose this amendment by every means in his power. The case is urgent.

FLY-RODS AND THEIR USE.

A SURPRISING change has taken place in the weight and length of rods during the past few years. It was but a short time ago that anglers considered it necessary to fish with fly-rods from 12 to 13ft. in length and weighing in the neighborhood of 12 to 14oz. And salmon rods were of enormous size. Think of swinging a 20ft. rod all day. No wonder we used to hear of men confined to their beds with swollen arms and hands. Now a 10ft. trout rod, of 7oz. weight, is considered a fairly heavy rod, and one of 8oz. and 10½ft. long, sufficiently powerful to kill the largest bass or landlocked salmon.

The perfect rod for trout fly-fishing should be of either 6 or 8 sections, if of bamboo, and not over 8½ft. long. Such a rod need not weigh over 5oz. at the utmost. The tip should be quite strong and able to pick up 50ft. of fairly heavy line and cast it in the wind. With such a rod one can cast from morning till night without the slightest fatigue, and feel that fly-fishing is really a pleasure. Mr. Heald, prominent in insurance circles in this city and a veteran fly-fisherman, has just returned from New Hampshire where he has been killing large trout on one of these little rods. He says he never knew what comfort was in fishing before, and the guides could not get over their wonder at seeing him handle 3 trout at once (one weighing over 2lbs.) on what they called a toothpick. Of course such small rods must be carefully made and are expensive.

The same change has taken place in bait-rods; the expert with a casting rod weighing 9oz. and not over 8ft. 6in. long, will cast a frog a hundred feet away, while the

fisherman with a long "pole" will hardly get his bait out 20ft.

One of the weakest points in the fly-casting of many anglers, in fact we might truly say of the majority of anglers, is the back cast. Of course, it is easy enough to watch the front cast and correct any faults, but the back cast is generally neglected. The result is disaster; fly after fly is cracked at the head or else entirely snapped off, and the fly maker is blamed for the angler's faults. It also frays out the leaders and wears out the lines.

The great trouble is that anglers will not give the line time to straighten out in its backward flight, and unless this is done it is sure to snap. Another mistake is in not lifting the line quick and clear from the water. The flies are drawn too close to the caster before making the next cast. This brings a great strain on the rod, and causes it to be thrown too far back in the effort to complete the cast. It is better to keep the rod down and take up the slack line by drawing it through the rings with the left hand. Then when the cast is made, let the slack run out with the forward motion.

SNAP SHOTS.

A SUGGESTIVE contrast between the value of yearlings and fry for stocking bodies of water is afforded by the experience of Mr. Charles G. Atkins, Superintendent of the Maine stations of the U. S. Fish Commission, as related in a recent letter to Col. M. McDonald, U. S. Commissioner of Fish and Fisheries. Mr. Atkins, on June 17, saw five landlocked salmon, the largest weighing about 2lbs., which were caught in Craig's Pond, and are the first ever taken there. The Commissioner informs us that 6,000 yearling landlocked salmon were planted in this pond in the spring of 1889, and the recent captures are from that source. Meanwhile, according to Mr. Atkins, 73,000 lake trout fry deposited in May, 1886, have as yet showed no trace of their existence.

At the special meeting of the Advisory Committee of the American Kennel Club, held yesterday, there were present Messrs. Perry, Terry, Wise, Anthony and Belmont. Mr. Peshall was not present. His letter declining to appear, published elsewhere, was read. The Committee declined to recognize his claim of unconstitutionality as to its composition and jurisdiction. After a protracted discussion it was decided that the Committee had jurisdiction to try the accused on counts two and three. Testimony on these counts was taken; and then the following resolutions were adopted:

Resolved, That it is the sense of this committee that it should decline to act upon the charges this day presented by A. P. Vredenburg, Secretary, against C. J. Peshall.

Resolved, That it is the unanimous sense of this committee that the recent publications made by Mr. Peshall in the sporting journals concerning the American Kennel Club and its Secretary, Mr. A. P. Vredenburg, are unjust, untrue and libellous.

Resolved, That the Secretary of this Club be authorized and directed to exhibit the books and accounts and vouchers of this Club to any delegate member of this Club at any time.

Resolved, That we have absolute confidence in the integrity and veracity of the Secretary of this Club.

Resolved, That the conduct and language of Mr. Peshall in the controversy, out of which these charges arose, have been in our opinion so extraordinary and outrageous as to make us seriously doubt whether he is in possession of his normal faculties.

Resolved, That the proceedings this day had and the evidence this day taken be submitted to the American Kennel Club for such action as it may seem best.

Dr. Perry tells us that in company with Mr. Jas. Watson, he went through the books of the American Kennel Club yesterday, including the bank books, and that they in all respects substantiate the published financial statements made by Secretary Vredenburg.

The Sundry Civil Service bill authorizes the expenditure in the Yellowstone National Park of seventy-five thousand dollars. This is to be devoted to completing the road from the Upper Geyser Basin to and around Shoshone Lake, thence across the Continental Divide to Yellowstone Lake and River, and down the latter to the Grand Cañon, thence over Mt. Washburne to intersect the Cook City road near Yancey's. The Gibbon and Madison Cañon roads are to be completed, and various others kept in repair and somewhat extended.

Major Taylor informs us that at the conference between the two English setter clubs the most amiable feeling prevailed, and there is not a doubt that the clubs will consolidate as one.

The Sportsman Tourist.

TWO AFTER TROUT.

[Concluded from Page 460.]

THE next morning I was awakened by the chatter of chickens and falling articles in the kitchen, and on looking out through the sitting room into the kitchen saw the cock of the harem with a half dozen hen wives having a picnic with divers and sundry articles of diet which were not on their menu.

"Jack!" called Mrs. Jessup, "come down and put the chickens out;" whereupon a rustling in the loft and tramping on the stairs heralded Jack's *entrée*, at which the fowls vamped cackling derision.

The morning was as nearly perfect as they make them. The sky was clear, a heavy frost had whitened things and a skim of ice inclosed the water in the pail. After breakfast, Jack took the oars and in one of Dick's fine boats we started off for a troll after some of the monsters of the lake. We went down the lake as far as Four-Mile Bay, into which we entered by an inlet across a peninsula; and shortly after emerging a strike at my troll resulted in landing a 7½-pound salmon trout. This was all we got for our trouble. We were now comparatively near the mouth of the stream last fished the day previous, and on motion it was agreed to run up as far as possible with the boat, lunch, and try for trout, which we did. A little shower fell while we were drinking tea, that invariable accompaniment of a Canadian trip; but it was soon past, and we began operations. It was a beautiful stream, with just enough fall to it, wooded on each side, and having here and there stranded pine logs, reminders of the recent drive. Taking out a trout here and there alternately, and taking in solid chunks of comfort simultaneously, we slowly worked up stream, towing Jack in the rear, until I saw a lovely hole just ahead, into which the water poured over a slanting shelf of rock, with a huge pine log stranded just above the hole and across the channel. Said I, "I hereby preempt that ranch and shall proceed to work it for all its worth."

"You can have it," said S., "and Jack and I will lie down here on the bank and take a nap."

So crawling around in the bushes, I reached the upper side of the log without any disturbance, laid my creel and bait box on the rock, disguised the hook with a fat worm and gently dropped over in. Well! if I didn't enjoy a season of solid satisfaction and a feast of fat things for a half-hour, I hope to be disinherited. While the boys below were snoozing I was cramming the minutes with unalloyed bliss and my creel with trout. In and out, in and out, again and again I despoiled that pool until I had twenty-three handsome fellows wriggling in my basket. "An even two dozen," said I, and dropped in again. Another tug and out came the twenty-fourth only to flip himself off just as I cleared the log with him. Before I could lay hands on him he was gone, and neither bait nor fly would tempt another, so waking the sleepers we moved on, reaching a dam and logging camp after a while, where we left the stream and by a circuitous road reached the boat, after a tiresome walk of what seemed to me five miles, though it could hardly have been so far. The road led through the woods all the way, and as we plodded along in a drizzling rain, here and there in the soft earth moose tracks appeared, telling of the recent passage of the huge animal. We managed to seat ourselves in the boat at last, and floated away homeward with thirty-nine beautiful trout, rounding out a day full of enjoyment to the last notch. Plebian fishing with a low-lived worm, eh? Anything you like. No fly that I had, and I had many good ones, would a trout notice, so it was worms or nothing, and we voted worms unanimously.

Rain fell that night and the next morning was windy and raw, but soon after breakfast Jack and company with bedding and commissary department were off for North River for big trout. A fine driving rain soon set in, or down, and comfort made itself scarce, but the rain ceased after a while though the air was chilly. We passed a large raft at the mouth of Four-Mile Bay bound for the Ottawa, the pulling power being a crib or small raft anchored some distance ahead of the raft, on which was a sort of capstan, and by means of this the raft or collection of boomed logs was worked up to the crib, which was then towed by a large bateau ahead again and anchored. At the foot of Trout Lake we passed through the outlet several hundred yards long into Turtle Lake, four and a half miles long, a good bass water, into which I put a troll and took in a couple of three-pounders for supper. At the foot of Turtle is a dam or logging camp, where we lunched and then made portage to the outlet below called Lost River, a broad stream thickly settled with boulders and quite picturesque. Some distance down we came to a headland, on one side of which was a rapids, the head of which was choked with logs; the other side was a bay across which was a log boom. We pulled the boat across the boom, and at the foot of this bay, after some search by Jack, was found an old portage across to the stream below the rapids. The stream is called Lost because the waters at the foot of the bay flow underground across to meet the other channel. This portage was a terror. Nothing but down spruces knotted and jagged, and rocks of all sizes, shapes and arrangements. I thought the boat would surely be stove in before we got her across, perhaps a hundred yards, but she was staunch and slid along as easy as she could.

Into the river again we slipped along down a mile or two and reached a point just above the mouth of North River, here a sluggish stream wide and deep, where we ran ashore and made the inevitable pot of tea, after which we set out up North River, trying for trout here and there, but not a rise could we get in the dead water. Then we took a trail that led to a dam a mile away, at the foot of another long stretch of dead water, or with sluggish current. Below the dam the water boiled and tumbled downward a steep descent of a hundred feet or more, a beautiful succession of falls and cascades, where there were surely trout. Just below the dam I took out a trout or two of 10in., and then we fished along the reach of water above for a mile or so, trying worm and fly here and there, but to no purpose. Jack had never been up further, and as it was getting along in the afternoon, and we saw no prospect of any improvement in the water, we reluctantly turned back, as we had no camping kit with us. Moose and deer tracks were numerous

along the bank, and I wished to be there with a Winchester in the season. At the dam Jack left us and went to the boat, while we staid to try the trout at the falls. There were lovely holes here, deep and dark among the rocks, over whose surfaces whirled meringues of foam, and into which poured roaring the flashing waters from above. Frequently we dropped into these holes from quite a distance above, and hooking a big fellow, were compelled to handle him with the utmost care. Meanwhile we got down somehow to where we could get him into hands. We took out here nine handsome fish that would make your mouth water. Then we went to the boat, partook of a bite that Jack had ready, and decided to return that night to the camp at foot of Turtle Lake, for if we did not reach the outlet from Trout into Turtle Lake before the raft reached there and broke up to get through, we might be detained a day or two, and we had not grub enough for that.

Embarking, we rowed up stream, making that ragged portage again with many a heave and grunt and ejaculation, camping about sundown pretty tired. But I was not so tired but that I noticed in the pool 100yds. below the sluiceway at the foot of Turtle Lake a very likely place for bass, and after getting the boat around I took rod, and with worm for bait returned, and wading out in the swift water just at the head of the pool, made a cast, being rewarded at once by a vigorous tug. Then there was sport. The bass was game and a fighter, but the Henshall was equal to the emergency, even in that swift water, and after a few minutes I had him where I could get my hand on him, as I had no landing net with me, taking out a three-pounder. I made tracks for my net, built a pen of stones in shallow water to confine my catch, and until it was pitch dark I had such sport as rarely falls to the lot of the bass fisher. Then I groped my way to the cabin, and we ate a full meal by the light of a candle, while the smoke from the fire on the hearth in the center of the cabin nearly put our eyes out; nevertheless we picked bass and trout bones tolerably clean. We spread our blankets on the hay and browse in the bunks, and in a jiffy floated away into the fisherman's dream-land.

By daybreak next morning I was up and after the fish again, repeating the experience of the previous night until called to breakfast, when I bade a reluctant good-bye to the bass of Goat River. We reached the outlet just in time to get in ahead of the loggers, and then skirting the south shore, trolled nearly all the way home, stopping once for lunch, but catching nothing, probably because the wind rose and the lake was quite rough. At 2 P. M. we reached the landing, and as the trout fishing was not what we wished in that vicinity, we concluded to go to Trout Creek for a day or two and see what we could see. As there was not time to send for the old man and team, Jack consented to back the grips to North Bay so that we might catch the evening train south. We bade good-bye to the Jessups, and taking the boat as far as the head of the lake, took foot the rest of the way, reaching our destination in ample time for supper, and at 7 P. M., on arrival of train on the Canadian Pacific road, we bade Jack good-bye and were off. I hope if any of my readers go to Trout Lake they may have the good fortune to have Jack McKenzie for guide, for he is companionable, modest, gentlemanly and efficient. They will find Dick Jessup and wife cordial, good-natured and anxious to please any who have occasion for their services. Their quarters are limited, but their hearts are big. If they haven't sufficient accommodations for their visitors, there is all out of doors to camp in.

At 8 P. M. the train slowed up at Trout Creek, a little hamlet of nine houses, and we hunted up the hotel without any difficulty, wherein, if I am not mistaken, the table is a trifle better than the bed—I might say two or three trifles. Here two branches of Trout Creek unite and empty into South River about two miles from the village, which latter stream has the reputation of harboring large trout. We found at the hotel Dr. Ellis, a professor in one of the Toronto colleges, who was up here for a short vacation with the trout and his camera. He confined himself to the fly, but so far with poor success, as the season was too early. This was Friday night and the Doctor had engaged a guide to go with him the next day to South River, where the guide had a boat, in which they could visit one rapid above and one below the bridge, as there was no good fishing in the sluggish current between rapids.

We concluded to fish down Trout Creek to its mouth, as there was no other boat on the river; so early in the morning we walked down the road a way and then across lots to the stream at a point where a mill had been burned, and there just below the dam with a coachman I took a small trout. S. had the same luck. I believe if we had fished with worms here we might have caught a good string, but encouraged by the first rise we persevered, but neither here nor below did we get another rise, so after a while we substituted the wiggler, taking out a fish here and there as we went down. The stream here is not very good fishing water. It is too sluggish. At length we came to a place where the creek shot down a solid rock face at an angle of about 45°, plunging into a pool "cribbed, cabined and confined" on each side with hevn logs, where evidently it was intended to place a mill. The water swirled and boiled here in great shape, and was deep. I casually dropped in. The water was some ten feet below me as I stood on the crib, and the only way to save a trout when hooked was to lift him clear, as the water rushing from the lower end over rocks precluded the possibility of using a net, had I one with me, which I hadn't. The trout took hold at once, and I trusted to my lancewood, and with reason, though some of the larger fish caused the rod to bend until I thought it would go. Out of that hole I took fourteen fine trout, and S. kept his end up gallantly, while on the other crib across the way stood a native with pole, line about the size of common wrapping twine, inch and a half hook, and a piece of pork, and though he fished all he knew how, when we finished he hadn't begun. He walked down the stream to where he could cross and then came up to examine our rigs. He didn't say much, but walked off into the woods, I hope a wiser man.

We fished along down and pretty soon came to the head of a long hole, into which flowed the stream with swift current and not much fall. I cast into the current and unreel, allowing the bait to float as far as it would without sinking much. I repeated this several times, and was about to give it up, when something vigorously struck and I realized that I had work out out for me.

The trout fought like a little tiger and gave me all I wanted to do in that swift water for a spell, but he began to weaken ere long, and I led him to the calmer water at the side of the pool and lifted him out with my hand, a 14-inch darling, and the largest so far. But he was the only one we could interest there; so, as we were getting down into more level country, we left the creek and seeking the road walked down to the bridge and cooled off in the shade, for the day was warm. As we were resting here, the Doctor and guide in his Peterborough canoe came paddling down stream on their way to the lower rapids, having had but moderate success at the upper. Flies were not the thing. The guide said that if they had had minnows they could have taken all the large fish they wished, as this was the bait for this season. They went on down to the rapids, but caught only one pound and a half trout, and that with a piece of chub for bait. When they returned, as the Doctor intended to leave for home the following evening and had hardly enough fish for a good showing, we turned over to him our largest, which made a good string. We walked back to the hotel together, and S. and I made arrangements with the guide to go down to the lower rapids, or both, on Monday with minnows and see what we could do; but on Sunday a succession of terrific thunder storms so muddled the water that fishing was out of the question.

The Doctor had fished the south branch of Trout Lake before we arrived with not very gratifying success, so as there were good reports of the north branch, though trout were not large, we concluded to try it on Monday, our last day out. On Sunday morning after a very leisurely and satisfactory breakfast, we lit pipes and strolled over to the woods, from which the creek issued on its way from the hills, on a tour of discovery. We found a good-sized stream with plenty of action and holes that fairly smelled of trout. We were satisfied after a half-mile tramp that it would pay to work this stream, and sauntered back to the hotel. Black flies had not put in a numerous appearance thus far, nor had mosquitoes been annoying, but it was about time for them to begin to get in their bloody work, so we provided ourselves with a little oil of tar with an odor of oil of pennyroyal sprinkled with a few drops of carbolic acid, which proved very effective, as the following day the flies seemed suddenly to have boiled out of the ground. The remainder of Sunday was exceedingly slow. Cat naps, with periodical visits to the dining room and considerable burning of the noxious weed, together with perusal of old Canadian papers, occupied the time, and we were very glad when bedtime came. Monday morning was on hand punctually as usual, and gave us delight, for it was fresh and clear, a lovely trouting day for us, whatever it might have been for those who must have clouds for fishing. We were on deck betimes, and after a satisfactory breakfast took rods, creels, two or three worms, the last of the lot, and with big expectations and a good deal of *esprit de corps* and such things, not forgetting lunch, in a few moments put our rods together in the edge of the woods, and were ready, Smith and I, two as happy fishermen as ever smoked the same pipe, whipped the same stream, or slept under the same blanket.

It was a royal morning, as I remarked. I soon had my first trout dangling by the nose, and S. followed suit, and the fun had begun. The worms soon gave out, and flies were tried but to no purpose, so we resorted to one of the best baits in the *repertoire* of the trouter, viz., the belly fin of a trout, and thenceforward confined ourselves to this with entire success. Allow me to state once more to make myself understood, that it was a *neplus ultra*, *e pluribus unum*, royal Trian purple sort of a day, one that is outlined against the background of other days like an arc light against the vault of heaven at midnight. I don't want to be wearisome with reiterating, you understand, but to emphasize the fact that you can't begin to appreciate what a fine day it was. The weather was delightful, just cool enough to be perfectly comfortable in the woods. The grand old forest was all around us, and through the waving branches the sunlight danced and flickered, evoking answering sparkles from the limpid water hastening downward between brown boulders and under mossy logs, where in the crystalline depths, under shelving rock or overhauling bank, the coy beauties lurked for their prey. Domestic sights and sounds banished. None to molest or annoy. No noise to disturb the delicious solitude or mar the soothing melody of the purling stream. Anything more delightful than this? If any of my readers vainly imagines that he can think of anything more suggestive of earthly bliss let him never show his ignorance. He can't do it. That settles it.

Onward and upward (like Excelsior) we went, crossing the stream occasionally on handy log or stepping stones, taking out the anxious trout at short intervals, and throwing many back, lingering here and there at likely pools where a large fellow was suspicious and needed coaxing—until our creels were full. Then we stopped, stringing the fish, secured them in the water in the shade with a branch over them, and after a bite and pipe resumed our way, repeating the programme again and again, until the westerling sun reminded us that if we took the train southward that night we must be getting homeward, so putting our backs to the headwaters we fished back again, calling on divers trout that weren't in when we called before, and reaching the edge of the woods at three o'clock, having picked up our strings as we came along, and now cleaning them in the swift running water. I want to remark that it was a very pretty collection of a good many over a hundred six to ten-inch trout that we carried to the hotel, also that it was a fine day. We got a box, and some fine dry cornmeal and salt, put in a layer of meal, then a layer of trout salted inside, then meal and trout alternately and put the lid on eighty of the largest, giving the rest to the landlord, who kindly allowed us to sample some for supper.

At 9:30 the train from North Bay slowed up for us and in the sleeper we trundled along toward Toronto, which we reached at sometime before breakfast in the morning. Here the station baggage man very kindly hunted up a basket for us as the box was unwieldy, and repacking the fish we took train for Buffalo, arriving home the same day with the fish in the finest possible condition, in which they remained until disposed of. The Grand Trunk officials everywhere were as good natured and obliging as they could be, for which I again tender them hearty thanks. So ended a red-letter week, an outing overflowing with enjoyment. May I and all my sportsmen friends be there or elsewhere in just such shape, when the fates are propitious.

O. O. S.

Natural History.

THE ADVENTURES OF A BLACK DUCK.

I AM called a Black Duck, but my proper name is the Dusky Duck (*Anas obscurus*). I was born on the reedy shores of the great and mysterious Lake Mistassini and was one of a family of eleven ducklings. Notwithstanding the watchfulness and great care of our parents, three of my brothers while quite young were devoured by a villainous fox. My other brothers and sisters were either killed or joined some other flocks and we never met again. To the best of my knowledge I am the only living member of my family left.

While young, being very inquisitive, I asked many questions from my elders, and frequently heard them speak in glowing terms of the sunny south, where they spent the winter months when the northern waters are covered with ice, and we are compelled to leave the scenes of our birth place and youth.

On a beautiful bright September day, an unusual commotion was observed among the old ducks, who assembled together on the placid waters in the middle of the lake and were engaged in important consultation. When the meeting was adjourned they returned to their respective families, we youngsters who were enjoying ourselves diving and splashing in the water, were summoned to approach them, and were then informed that the long looked for day for our departure southward had arrived, and that as soon as the moon that evening would appear over the mountains, following the chosen leaders, we would start on our long journey. How delighted we young ducks were at the prospect of a change of scenery and climate, which we fancied would be followed by pleasure and happiness—little did we dream that we were beginning a new life beset with dangers. At last the hour to start came. Several veteran voices gave a loud quack in which we all joined, and simultaneously a thousand of us rose on wing making a sweeping circle before adopting our final course. As we were passing over the heads of our larger relatives, the wild geese, they stretched out their long necks, and cheerfully honked adieu and good wishes for a happy journey, and gave us to understand that they would follow later on in the season. We had a long and fatiguing flight. The next morning found us in sight of Lake St. John, which we soon reached and settled down on its waters for a rest and food.

Here we saw the first signs of our chief enemy, whose habitations dotted the shores. My grandmother, to whom I was very much attached and to whom I kept near, told me she trembled for my safety and her anxiety would be very great, for I was young and inexperienced and would run much danger of being killed or wounded. I endeavored to quiet her fears by promising to be very careful. We soon after separated and I joined a small band of young ducks and we started off in search of food; without suspicion we approached the reedy shores and began eagerly to dive for the succulent herbs. While we were all cheerfully enjoying our meal in apparent safety, suddenly from among the reeds a frightful sound like a clap of thunder and lightning was heard and missiles fell among us, causing a strong commotion in the water and killing three of my companions. Filled with horror we made a bound from the water, rose on wing and hastily beat a retreat to a safer spot. Some of us were smarting under the wounds we had received, but fortunately we were not seriously disabled. But our poor dead companions, a brother, a sister and a cousin of my own, were left behind never more to be seen. We all looked in the direction of the dreaded spot we had so hurriedly left, and saw an upright being rapidly coming out of the reeds. Propelling himself in some floating vehicle, he stooped down, picked up two of his victims, and then rose again, looked around him, moved forward, raised a tubular instrument pointing it before him, and again a clap of thunder and lightning. He made another move ahead, and we observed him lift out of the water our other dead relative whose life he had just finished.

Shortly afterward my dear old grand dame and other old ducks joined us and found us in a deplorable condition of fear and consternation. In reply to our eager inquiries about the cause of the dreadful disaster, she told us that the upright biped we had seen was the being called man, the death-dealing tubular instrument he pointed at us was a gun. With this cruel instrument, charged with an infernal invention called powder and shot, he persecuted us wherever we could be found, even at great discomfort and expense, simply for the pleasure or profit of destroying our lives, and those who undertook such cruelties for pleasure considered it a noble and healthy pastime or sport. It certainly appeared to us a very cruel means of amusement, and we decided to shun man as much as possible for the future.

That night we again made a start, directing our course toward a great river, which my grandmother told me began as the outlet of greater lakes than Mistassini and ended in a gulf of salt water, and on each side of this grand river were the homes of our greatest enemies; therefore we would be compelled to seek the isolated portions where food could be found, and consequently our destination was the renowned Seal Shoals, called in French "Batture aux Loups-Marins." Here the best of herbs are abundant and thousands of ducks and geese assemble. The early morning found us passing over the highlands bordering the River St. Lawrence, making for the shoals, which we soon reached. Flying around and around several times to reconnoitre, we decided to settle down in a safe and quiet spot. We were not long there before I observed a crippled bird on the shores. I swam as near as I dared and made the acquaintance of a poor half-starved plover, who told me that he was badly wounded, but hoped to recover. He was afraid to go near the best feeding ground, for there were three or four city dandies roaming around and firing at every bird they came across.

In the afternoon a strong gale from the east sprung up and we left for more suitable feeding grounds. It was while passing the edge of a portion of the uncovered beach, the tide being low at the time, that we were assailed by the shots from two gunners who suddenly jumped up from a sunken pit dug out of the mud, where they had hidden themselves, so as to shoot at the poor ducks and geese as they fly over from one place to another. I fell like a leaden ball plump into the water in the channel alongside; fortunately, the shock from the sudden plunge revived my scattered senses, for I at once

made a dive and, as long as I could keep my breath, swam away under water. When I came to the surface I heard the sportsman who was out in a boat using fearful language, declaring that he had made a capital shot, that I was dead as a door nail; and with a dreadful bad word he swore he would get me by hook or by crook. Fortunately, I had swum off in an opposite direction to where he was looking for me, and keeping my body well under water, the waves hid me, and I soon left him swearing like a trooper. But he did not get. I was only stunned by the shot whizzing around my head and soon felt as well as ever.

This was my second experience of man and escape from death at his hands, and my grandmother, to whom I described the danger I had been in, told me I was now out in the civilized portion of the world and my life would be constantly exposed to similar danger and others too; for the king of all animals, the most intelligent, the most generous, and the grandest of all beings, when feeling over-worked, over-fed, or fatigued with city life, where he was engaged in struggling in business or the learned professions, trying to overreach his own species, or in dissipation, and had become blasé, considered it a delightful change and beneficial to his health to leave behind a loving family, beautiful home, luxuries, comforts and congenial companions, mothers, wives, sisters or sweethearts, to rush off to some wild spot, live on coarse food, dress in shabby clothes, sleep on hard and uncomfortable beds, rise before daylight, shiver all day in cold and wet, hide in ambush, use all possible means to decoy us and destroy our innocent lives; this he calls manly sport, and talks about as a splendid outing. North or south, east or west, wherever we go, our enemies exist and seek our extinction. O, noble man! how different are our ways from yours; we never destroy life for food or pleasure. We live on the plants which grow under water, which we dive deep to secure, we never harm any living thing. Unfortunately, our flesh to man is a delicious food, and a wise providence, to whose will we must submit, has ordained that we poor ducks shall live, suffer and die for the enjoyment of others. Such is life.

J. U. GREGORY.

NOTE.—The Adventures of a Black Duck originated with Eugene Renault, Esq., of Montmagny, Province of Quebec, who wrote it in French, and dedicated the story to Commodore J. U. Gregory, of Quebec, who lost the copy, but has, with the permission of Mr. Renault, translated remembered selections. This has necessarily very much altered the style and length of the original.

QUAIL INVADING DOMESTIC FOWLS' NESTS.—They have a breed of quail in Ohio which lay more eggs than they can hatch; and call on the neighbors. The Ashtabula Sentinel gives this encouraging report: "Joe Hamilton told us last week that his boys found a turkey's nest with several turkey eggs in it and 15 quail eggs. The turkey was setting on the whole lot, and father and mother quail were standing near her, apparently watching an opportunity to get a chance at the setting business themselves. Royal Edson, who was standing by and heard the story, related one quite similar. He sold a pair of guineas to a neighbor. A few days ago they found the nest, with one guinea egg and 15 or 18 quail eggs. We are able to report that there is going to be a large increase of quail this fall. We hear the whistle of cheery Bob White from our office window any day and are thankful we live so near his kingdom."

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

CLABROUGH 12, May 1, '90.	PARKER 10, hammer, June 6, '89.
COLT 12, July 25, '89.	PARKER 12, hammer, June 6, '89.
COLT 10 and 12, Oct. 24, '89.	REMINGTON 16, May 30, '89.
FOLSON 10 and 12, Sept. 26, '89.	REMINGTON 12, Dec. 5, '89, Feb. 5, '90.
FRANCOTTE 12, Dec. 12, '89.	REMINGTON 10, Dec. 26, '89.
GREENER 12, Aug. 1, '89.	SCOTT 10, Sept. 5, '89.
GREENER 10, Sept. 12-19, '89.	L. C. SMITH 12, Oct. 10, '89.
HOLLIS 10, Nov. 7, '89.	WHITNEY SAFETY 12, M'ch 6, '90.
LEFEVER 12, March 13, '90.	WINCHESTER 10 & 12, Oct. 3, '89.

THE NEW YORK WOODCOCK SEASON.

TO an inquiry from this office sent to the Attorney-General respecting an inconsistency in the New York laws of 1879 and 1890, prescribing the woodcock season, we have received the following reply:

Chapter 90 of the laws of 1890 amends Section 10 of Chapter 534 of the laws of 1879, which is the general act for the protection and preservation of game, etc., and said section, as so amended, provides that "No person shall kill or expose for sale, or have in his or her possession after the same has been killed any * * * ruffed grouse * * * or woodcock between the first day of January and the first day of September, except as is hereinafter provided * * *"

Section 9 of the act of 1879, as amended by Chapter 269, laws of 1884, provides that "No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any woodcock between the first day of January and the first day of September in the counties of Oneida and Delaware and in other parts of the State between the first day of January and the first day of August in each year. * * *"

This Section 10, as amended by the act of 1890, is inconsistent with Section 9 of the act of 1879, and being a later enactment, controls and repeals all inconsistent and irreconcilable provisions of Section 9. The mere fact that section 9 was the provision in the laws of 1879 which prescribed the time when woodcock might have been killed, and was the section that more particularly, perhaps, should have been mentioned instead of Section 10 of said act of 1879, which related to other birds than woodcock, does not change the rule that subsequent legislation repeals all prior legislation inconsistent therewith.

I am therefore of the opinion that it is unlawful to kill woodcock between the first day of January and the first day of September.

ED. G. WHITAKER,
Deputy Attorney-General.

ILLINOIS GAME SEASONS.

CHICAGO, June 23.—Editor Forest and Stream: In the latter part of April one of your Chicago correspondents said that the open season on ducks extended in Illinois to May 1, instead of to April 15. The following week he reiterated this misstatement. The third or fourth week he corrected it. In your issue of June 13 another Chicago correspondent announced that the open season on woodcock in this State began July 1 instead of July 15, and I find no correction of the error in your last issue.

The game laws of Illinois are not very rigidly observed, and there is no adequate provision for their enforcement. At the same time there are many true sportsmen who would as soon think of committing burglary as of shooting a bird out of season. All of these men, I presume, read FOREST AND STREAM, and they are very likely to pin their faith to its statements. If through it they should be misled into shooting woodcock in the close season they would be deeply mortified. It is to save them from making a mistake that I write this letter.

Of course their shooting would not materially affect the result. If they do not kill off the woodcock before the open season begins somebody else will. But where there are men not only willing but anxious to obey the game laws, it is almost criminal to mislead them as to what those laws provide.

The "Session Laws of 1889" contain the present game laws. Copies can be obtained at 50 cents each. Would it not be a good plan for FOREST AND STREAM to provide each of its regular Illinois contributors with one?

LAKE VIEW.

Chicago, Ill., June 28.—"Italian Joe," the well-known plover shooter of this city, was at my office this morning. Joe is also one of the most successful woodcock hunters of this region, and sends quantities of birds in to the market. He says that the woodcock along the Des Plaines River, ten or twelve miles from here, have done very well. He admits having killed two or three, just for luck, already, excusing himself with the old plea, that "everybody shoot-a de bird now." Joe says the weather is too hot to go hunting now, and I should think it was, if it ever gets that way. The past three days have been the hottest known here for a long time. The thermometer is 108° on the street near where I write this, and both business and pleasure are well nigh suspended.

Italian Joe gave me another instance of the beauty of our game laws out here. He told me that yesterday and to-day Chicago market was full of young prairie chickens! He said he thought there were over 100 in the lot he saw, and most of them were about as big as quail. He thought they came from Iowa. "Shame to kill-a de bird so young," said Joe. Well, yes, it might possibly be thought so. But under our law, it is little wonder they are killed, when men can be found brutal enough to kill or to buy them. It should be borne in mind that the game warden, who is the only one having legal eyes to see, did not see the illegal birds that Joe saw. The people can not act. It is only a half-breed foreigner, paid not to act, who can act, and he is not apt to act previous to the arrival of the milch kine in the gloaming. Oh, we've got a daisy law out here; if you're not too blame particular about what kind of a law you like.

E. HUGH.

COMPANIONS OF THE GROUSE.

IN the fall, when the cold rains and high winds come on, the American robin takes refuge in the deep woods and thick coverts, where he spends much of his time on the ground feeding and for shelter. Invariably at this season the ruffed grouse will be found associated with him. The grouse also loves the company of the chipmunk or little ground squirrel; and they are frequently together around stumps in the old woods. While eating my lunch once, seated on a large stone just within the edge of the forest, I discovered a grouse on the hillside a short distance away. He was standing up beside a stump, the color of which was identical with that of his breast and under feathers. Two chipmunks were running around him. He remained in sight for several minutes, when all three suddenly disappeared.

The grouse seeks the presence of the red squirrel also at times, as the following incident will show: While I was out among the Glenville Hills, a ruffed grouse broke from the dense cover in front of me among the black alders in the low grounds, and made straight for the top of a very deep gorge. Shortly after I saw in that direction, away up on the hillside, an old decayed stump and a red squirrel frisking about it. I stood for some time taking observations, during which my attention was more and more attracted to the queer antics of the squirrel. At last I caught sight of a small dark object not more than an inch in diameter behind, and about midway up the stump. It was but momentary glimpses, however, that I could get of it, while the squirrel kept up his movements as before. After this object had been seen I began to suspect that another animal was there, and was probably taking advantage of the presence of the squirrel to pass unnoticed. The little red fellow at last took up a position, where he sat very demure and innocent-like, eating a nut. The hidden one did not appear, so I moved up the hill to investigate. As I neared the spot a grouse darted away and the squirrel scrambled up a tree. The small dark object I had seen had been the head of the grouse. By good luck and a snap shot I managed to stop him. He proved to be the "cock of the woods"—very wise and very old.

The squirrel, having no use for, I allowed to escape. I heard him for some time after on his lofty perch, chattering away in apparent triumph at the success of the stratagem.

DORP.

SCHENECTADY, N. Y.

OMAHA, Neb., June 24.—Young doves are now full grown and very plentiful. E. M. Morseman, president of the Pacific Express Company, this city, has just returned from Wauka to Lake, Minn., where he has been muskallonging with a party of Eastern friends. The big catch was a 64-pounder, which fell to the host's luck. Dr. H. A. Morley and a number of others will go to Colorado early next month after bear and blacktail.—GRIS.

CONNECTICUT.—Game birds wintered finely in northeastern Connecticut, and the large number of old ones have reared strong broods. I never saw so many quail. They were in the fields, on stone walls and in the roads, whistling for dear life. I shot one—with a "Kodak."—F'LIN.

SHOT COUNT AND WEIGHT.

WITH the table of No. 8 shot we come to a sort which reaches the largest circle of interest. It is the shot above all others which is the favorite for so many purposes that more than ordinary interest attaches to its count and weight figures. In this as in all the other cases the charges measured were taken with the American Shooting Association standard 14oz. measure, and in the American chilled shot list each concern did its own measuring, using a struck measure, excepting only the Robertson shot, which was sent on in bulk and measured in the office here. The same exception applies to the soft shot and the two samples of English shot which came over in original package of about 8lbs. per number. A glance at the table finds the Leroy Company still at one end with the largest shot of the size, while the Collier Company take the other extreme, and the difference from the lowest to the highest is over 30 per cent. on the figures of the former so far as count goes. In the matter of weight the variations are not so great, and the changes run only through about 40grs. The average nearly reaches the grain to a pellet grade, and the Bailey, Farrell & Co.'s shot runs very close to that average. In order to institute direct comparison the further table of weight for three charges each of 100 pellets is given. The average weight here is 102½grs. for the 100 pellets, and the variation runs from 91 to 115½, depending presumably upon the sort of "temper" used in making up the melted compound ready for the tower.

We do not find in the 8 shot that wide variation which brings it directly into the domain of another number. The largest No. 9 had but 721 pellets to the 14oz., while the smallest No. 8 reaches only 669, quite close enough to be sure, only some 8 per cent. apart. The Cincinnati Shot Co., which has the reputation hereabout of making a very small shot, have no less than four other companies below them on the list. Compared with the New York makers the shot from the Ohio city is small. The two English companies are getting together much better on this number of shot than on some of the previous ones, but the variations both in the American and English samples are altogether too great, and on such a matter as shot measurement, where comparisons are continually making between guns, and where so much depends upon the sort of ammunition used, it seems that the gun people would bring a pressure upon the shot makers to secure some sort of a standard scale of sizes by count and then see to it that the standard is not departed from. These tables, which we have prepared at no small expense of time and labor, at once indicate the necessity for reform, and furnish the basis upon which the computations for a new and uniform scale may be fixed. To those gunners who load with system, who proportion charge of powder to charge of shot, and who know what they are doing—not by rule of thumb results but by careful experiment at screen—these tables are of more than passing value, and in a general way may serve to explain some seeming contradiction when reading and talking of gun test results.

COLORADO.—Berthoud, June.—My boys went up to my mountain cattle ranch last week and report grouse quite numerous; saw a number of fresh deer tracks near the cabin.—A. A. K.

FOREST AND STREAM, Box 2,882, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

CALIFORNIA BEAR RECORDS.

SOME two years ago I wrote an article for one of our local papers, containing a large part of the following. Being desirous of preserving some of these incidents of early California days, I have added some new matter and present the whole to the readers of FOREST AND STREAM, assuring them that all the incidents here narrated are true, to the best of my knowledge and belief. As I have no part in any of the adventures, excepting as a narrator, and as no fish stories will be allowed to slip in, to disturb the peace of the unsuspecting reader, he need have no hesitation in giving credence to every fact herein mentioned. These bear stories nearly all relate to the grizzly, the monarch of the American forests, and depict his ferocity and his foolishness. There is probably not a single grizzly left in the Sierra Nevada, at the present time, from Lassen county on the north to Tuolumne on the south, and perhaps further, both ways. The onward march of civilization has swept him almost out of the State, and, like the bison of the plains, he is surely doomed. His great courage has been a prime factor in his extermination, for, however it may be with members of his race in other places, I have yet to hear of the first case where he ever refused the gage of battle in the early days of this State. For this reason I believe that some of old Ephraim's doings should be rescued from oblivion and preserved in the columns of FOREST AND STREAM. I have endeavored to verify all of the following incidents, and believe them to have occurred almost exactly as related. Many of the participants (not on the bear's side of the battle, however) are still living in this State, and some in this vicinity, and it was from their own mouths that I had the major portion of these chronicles.

"I was with Hercules and Cadmus once,
When in a wood of Crete they bay'd the bear
With hounds of Sparta."
(Midsummer Night's Dream.)

The brown and black bears are still plentiful in our mountains, as any sheep owner will testify, but the grizzly, the terror of the hunter, has disappeared, probably never to be seen here again. His memory, however, still lingers in the stories of the early days, when our rivers and cañons swarmed with hardy miners. Many incidents, some terrible and some laughable, are recounted by our old pioneers about the doings of "Ephraim" in those stirring times. Even at the present day a good bear story crops up. One of these is worth relating. One of our worthy Teutonic citizens, the hero of many a moving accident by flood and field, owns, or did own, a saw-mill near Tamarack siding on the Central Pacific Railroad. A year or two ago some parties found where a bear made his home in a cave in that locality, and a number of men started out one day to capture him. Among them was the hero of this story. On arriving at the spot recent marks gave unmistakable evidence that bruin was at home, and a council of war was held. Some proposed smoking him out, others blowing him out with dynamite, etc., but none expressed a desire to "beard the lion in his den." At last our hero spoke up and said: "You 'vas all a pack of tam cowards! I'll show you how to get him from the cave out!" Thereupon he took a stout hunting knife and lashed it securely to the end of a long pole, and taking a torch of pitch pine in one hand, with his improvised lance in the other, boldly crawled into the hole. Presently a loud snort and a growl was heard by the anxious onlookers, quickly followed by the reappearance of our hero, safe in wind and limb, but minus his lance and torch and badly

rattled. Said he: "Poys, dat vas a close call! Ven I crawl't in dere, eferydings vas as black as ter tufel, and all at vonce I poke me mine torch right against de bear's nose, and he shust give one shnort and plow me mine light outd. I tell you I get me from dere outd poety kowick." The scheme was a courageous one, but its ending was ludicrous. He had located the position of the bear, however, and a few rifle shots soon ended the hunt successfully. Of course the bear was a black, for as before stated no grizzlies are now known to exist in this section of the State.

A story of a club-foot grizzly being seen around the neighborhood of Lake Tahoe every now and then crops up and goes the rounds of the local press. On one occasion it came out some eight or ten years ago, and created quite a sensation. A circumstantial tale was told, I think, in the Carson, Nev., papers, how a woodchopper had gone out to his lonely work in the neighborhood of Truckee, and had never returned; and search being made only his axe and his shoes, with his feet still in them, were discovered, but that unmistakable signs showed how he had been surprised by old clubfoot while at his work; how he had climbed a small tree to escape; how he had been shaken out of it like a ripe apple by the enraged brute; and had, then and there, been incontinently eaten up and devoured, all but the aforesaid axe and boots. This created considerable local excitement at the time, and about 100 hunters assembled, from far and near, at Truckee, and organized a hunt for this formidable animal. The mountains were scoured for three days, but without finding either a trace of the bear or any foundation for the story, and since that time old clubfoot has become a tradition only.

In the early days of the State, however, Ephraim was much too numerous, and his sudden appearance has stampeded many a camp of miners on the American River and its branches. For the following incidents I am indebted to C. A. Tuttle (now dead) and G. W. Applegate, two of our most respected pioneers and prominent citizens, whose fund of memories and power of narration were unequalled. The scene of these bygone happenings is sometimes in Placer and sometimes in El Dorado county. To illustrate the ease with which a full-grown grizzly can be killed when struck in the spot where it will do the most good, the following incident is given:

In the autumn of one of the early fifties, Dr. H. W. Nelson, now a prominent surgeon in the city of Sacramento, but then practicing in Greenwood, was out quail hunting. He had a double-barrel gun loaded with the proper charge for that kind of game, and no other weapon or means of defense with him. The doctor was making his way up a ravine, in a narrow trail bordered with dense chaparral, when suddenly a band of hunters from the neighboring mining camp of Georgetown made their appearance on the hill above him, in pursuit of a large bear. Some of the party saw him and shouted a warning that the bear was coming down the ravine, and for him to break for dear life. The doctor was equal to the occasion, however, and coolly shouted back to "let him come, I am ready for him." He had a theory based upon some previous investigations of the anatomy of a bear's head, that a charge of shot in the end of a grizzly's nose must reach the brain and prove fatal. Coolly cocking his gun he awaited events. In a moment or two the bear appeared out of the brush, not over 15ft. away, and on catching sight of the doctor reared up for a charge. The latter has often since averred that when the bear erected himself upon his hams he appeared to be at least 20ft. high. Never for an instant losing his presence of

mind, the doctor took quick aim and lodged the contents of both barrels in old Ephraim's snout, and he tumbled over as ignominiously slain as was Goliath with David's pebble.

This seems almost incredible, but is true beyond a peradventure. I wonder how many of us there are that would coolly stand in the presence of such a foe and put a theory to the test? Not many, I ween.

I find a feeling of wholesome respect for the California grizzly dwelling in the minds of all old-timers who had anything to do with his bearship. They all with one accord say that these animals were always ready for a fight, and never knew when to quit.

In the summer of 1850, G. W. Applegate and his brother John were mining at Horseshoe Bar on the American River. The nearest base of supplies at that time was Georgetown, eighteen miles distant by trail. One evening in early summer, having run short of provisions, George and his brother started out to walk to that camp to make purchases, and have them brought over by pack train on the ensuing day. Darkness soon overtook them, and, while descending into Cañon Creek, they heard a bear snort at some distance behind. In a few moments they heard it again, louder than before, and John rather anxiously remarked that he thought the bear was following them. George thought not, but in a few seconds after crossing the stream and beginning the ascent upon the other side, they both distinctly heard him come—splash, splash, splash, through the water directly upon their trail. It was as dark as Erebus, and they were without weapons larger than pocket knives—a serious position with an angry grizzly dogging their steps. Their first thought was to climb a tree, but knowing they were not far from the cabin of a man named Work, they took to their heels and did their best running to reach that haven of refuge ahead of their formidable follower. They reached the cabin, rushed in, slammed and fastened the door behind them, and with breathless intervals gasped out their tale. Work kept a bar for the sale of whisky, and he and his son, a stout young man, with two or three miners, were sitting on rude seats around a whisky barrel, playing cards, when the two frightened men rushed in. The cabin was built by planting posts firmly in the ground at a distance of some three feet apart, and in the form of a parallelogram, then nailing shakes upon these posts and on the roof. The sides were held together by cross beams, connecting the tops of the opposite posts. There was one rude window, made by cutting a hole in the side of the wall about four feet from the ground and covering this with greased paper, glass being an unattainable luxury. Notwithstanding that there is a belief that there was not a man in those days but wore a red shirt and a big revolver, there was not a firearm in the place.

In a few seconds the bear was heard angrily sniffing at the door, and an instant later his powerful paw came tearing through the frail shakes, and he poked his head and neck through the opening and gravely surveyed the terrified party. It was "devil take the hindmost" then, with a vengeance, and every man sprang upon the bar, and thence to the crossbeams, with the alacrity only given by terror. After sniffing a moment and calmly gazing around the room and up at the frightened men, the bear quietly withdrew his head and retired. After an interval of quiet, the men ventured down and were eagerly discussing the event, when the bear again made his presence known by rearing up and thrusting his head through the paper of the window. Upon this occasion some of the men stood their ground, and young Work, seizing an iron-pointed Jacob's staff, ran full tilt at the bear, and thrust it deeply into his chest. The bear again disappeared taking the Jacob's staff with him, and appeared no more that night. The following morning, search being made, the bear was found dead some yards from the cabin, with the staff thrust through its heart. It proved to be a female, and was severely wounded in several places with rifle balls. Subsequent inquiries elicited the fact, that on the previous day a party of hunters from Georgetown had captured two cubs, and wounded the mother, which had escaped. This was evidently the same bear in search of her cubs, hence her curious actions.

One morning, in the same summer, and at the same camp, the miners had just arisen, and had cooked and were eating their breakfast. A large iron pot had been filled with beans to stew over a slow fire during the day, for the common meal in the evening. A liberal slab of bacon had been put in with the beans, and the odor thereof was spreading on the morning breeze. Probably attracted by this a monster grizzly came slouching into the midst of the camp, and began nosing around for something to eat, paying no attention whatever to the affrighted men. The latter, with one accord, stampeded and made for the nearest trees. In a moment some fifty men could have been picked like ripe apples from the tops of the surrounding pines and oaks. Not a man among the lot had even a revolver on his person, and they simply had to sit on their perches and watch Old Ephraim demolish their pot of beans and bacon. This he did in a most deliberate manner. He first knocked the pot off the fire, and spilling its contents over the ground, proceeded to gather them up when cool enough for comfortable eating. After picking up every scrap of food to be found in the camp, and overturning every tent in the place, he walked off as deliberately as he came, followed by the curses of the despoiled miners. As soon as the men had gathered their wits they apprised the men of a neighboring camp, got all the firearms procurable, and followed bruin's track up the mountain. None of them being expert trackers, the trail was soon lost, and they spread out, forming a wide drive. One of them, a little Irishman named Shea, came to a large cliff of rocks, the face of which he proceeded to climb. When about half way up, and just as he raised his head above a shelf of the rock, he gave a terrified yell, and was seen by the men on his right and left to tumble backward, and roll to the bottom of the rocks. His companions all rushed up to ascertain the cause of the trouble, and see if he was seriously injured. The breath was knocked out of his body and all the sense out of his head, and all he could say was to gasp out, "Howly mother! Is it dead I am?" On his finally becoming assured that he was still alive, he pointed up to the shelf of rock, and with his eyes bulging out like a lobster's, explained, "B'ys, that devil of a bear is lyin' up on yon' rock, an' whin I poked me head up, the murthin' devil blew me backward off the rock wid wan blast uv his nose! Och, may the hivins be my bed this blissid night av I'm not sp'akin' the livin' truth!"

Surely enough, the bear was there, and was soon killed by the united fusillade of the whole party.

In the spring of the year, somewhere early in the fifties, a party of five left the mining camp of Coloma for the purpose of hunting deer for the market, in the locality of Mosquito Cañon. Meat of all kinds was then very scarce and high-priced, and a carcass of venison was worth two ounces of gold dust, although poor and out of season. Therefore hunting was a profitable occupation. On the morning of the second day in camp the party separated, each going his own way to hunt, and at night it was found that one of their members, named Broadus, failed to appear. Thinking that some accident had befallen him, the others started out in different directions to search for him the next morning, and, after a day spent in fruitless searching, they returned to camp only to find that another of their number, named William Jabine, was this night missing. After an anxious night, chiefly spent in discussing the probable fate of their missing companions, the remaining three started out on the trail of Jabine, he having told them the previous morning what part of the country he was going to travel. Slowly and carefully following his tracks, left in the soft soil and broken herbage, they found him about noon, terribly mangled and unconscious, but alive. The flesh on his face was torn and lacerated in a frightful manner, and he was otherwise injured in his chest and body. Further search revealed, near by, the dead body of their other missing comrade seated on a boulder, by the side of a small stream, with his head resting on his folded arms, which were supported by a shelf of rock in front of him. His whole under jaw had been bitten off and torn away, and a large pool of clotted blood at his feet showed that he had slowly bled to death, after having been attacked and wounded by a bear. The ground showed evidences of a fearful struggle, being torn up and liberally sprinkled with blood for yards around. The men were shocked and terrified, and hastily preparing a litter they slowly and painfully carried Jabine to the nearest mining camp, whence others went to bring in the body of Broadus for decent interment. Jabine finally recovered, but he was shockingly disfigured for life. He afterward told how he came upon the tracks of Broadus that fatal morning, and on reaching the spot where Broadus had received his death wound, he was suddenly dashed upon by a huge she bear that was followed by two small cubs. The bear had evidently been severely wounded by Broadus and was in a terrible rage. She seized Jabine before he could turn to flee, and falling with her whole weight upon his body and chest began biting his face. He soon lost consciousness, from the pressure on his chest, and remembered no more. The poor fellow became a misanthrope, owing to his terrible disfigurement, and was finally found drowned some few years ago in the river near Coloma, his death having occurred, as was generally believed, by his own act.

In the summer of '51 a man named Jebson, or Jephson, from Missouri, was mining on the American River somewhere near the mouth of Shirttail Cañon. He had a Portuguese partner named Cardozo, and it seems they had bad luck mining, and finally concluded to go on a hunting trip, as venison was still very high-priced in the mines, being the only fresh meat to be had the greater portion of the time. They procured rifles, pack mules and a couple of worthless curs and went up above the camp of Michigan Bluff (or rather, Iowa Hill) to a place called Brinstone Plains. Here they formed camp, and began hunting. They soon had a deer hung up, and the following night a bear came prowling around after the carcass, and was driven off by the dogs. The next day Jebson, who was an old bear trapper, investigated matters, and found bear signs quite plentiful. He and Cardozo then went to work and put up a deadfall, and baited it with the entrails of a deer. They made one serious mistake, in that they built the trap too near their camp. About midnight the trap was sprung, and there was a horrible bawling of a young bear emitted therefrom. The curs rushed toward the sound, the men jumped out of their blankets, and an instant afterward saw the dogs racing back with their tails between their legs and whining with fear, followed by an enraged grizzly. The dogs came straight to the men for protection, and matters looked serious. Jebson grabbed his rifle, and it being a moonlight night, fired at the charging bear. Owing to the shadows under the trees his aim was not good, and he made a clean miss. Yelling to Cardozo to climb for life, he sprang for a tree himself, and was soon out of danger. Cardozo was badly rattled, but made for the same tree, and throwing his arms and legs around the trunk began to climb. The harder he climbed the more he didn't get any higher, until finally he felt himself sitting on the ground at the butt of the tree, with his arms and legs still around it, having simply slipped back in spite of his exertions. Fortunately the dogs made for the neighboring brush, and the bear followed them, giving poor Cardozo time to recover his wits, and choose another tree.

After a short circle, the dogs dashed through the camp again, and this time the bear stopped, and in her rage, tore at the men's blankets and belongings like a fiend. Finally Jebson succeeded in reloading his rifle, and broke the bear's neck. It seems that this bear had cubs, and one of them got caught in the trap. This enraged the mother, and when the dogs rushed at her, she was in a perfect fury. I received this story from an old Portuguese, who heard it from Cardozo's own mouth, and he said that the latter used to roar with laughter when describing how he thought he was making fast time up the tree, when in reality he was settling back little by little, until he reached the ground. Cardozo used to wind up his story by saying: "If you eva go trappa de bear, you no maka de trap too neara de camp!"

The following encounters had no such happy endings: In 1850 a number of miners were camped on the spot where the little town of Todds Valley now stands. Among them were three brothers named Gaylor, who had just arrived from Illinois. These young men used to help out the proceeds of their claim by an occasional hunt, taking their venison down to the river when killed, where a carcass was readily disposed of for two ounces. One evening, when the sun was about an hour high, one of the brothers took his rifle and went out upon the hills and did not return that night. The following morning his two brothers set out in search, and soon found him dead, bitten through the spine, evidently by a bear. His rifle was unloaded, and the tracks showed where he had fled pursued by the vicious brute, been overtaken and killed. On the succeeding day a hunt was organized, and

some twenty men turned out to seek revenge. The bears, for there were two of them, were tracked into a deep, rocky cañon, running from Forest Hill to Big Bar. Large rocks were rolled down its sides, the bears were routed, and both killed.

Many such incidents could be related, some fatal and all dangerous, but only one more will be given. This occurred in February, 1851, on the divide between Volcano and Shirt-tail cañons, about four miles above the Baker ranch. There was about six inches of snow upon the ground, and it was a pleasant day. A packer with three mules left the Baker ranch with a load for the mining camp at Damascus, and a party of three deer hunters accompanied him half way, intending, if they got any venison, to have him bring it back to the ranch on his mules, when he returned in the evening. The hunters were armed with Kentucky rifles, and after parting company with the packer started off to the right over heavily timbered ground sloping down toward Volcano Cañon. They had not proceeded more than three-quarters of a mile when they perceived, coming up out of the cañon and about 100 yds. away, a monster grizzly. One of the party named Wright, an old bear hunter but new to the habits of the grizzly, prepared to fire. His companions begged him to desist, but he, laughing at their fears, fired and wounded the bear in the side. The latter reared upon his haunches, and, after waving his paws in the air two or three times, came directly for Wright with a fierce growl. The party all took to their heels and separated, but the bear soon overtook Wright and with one blow of his paw struck the man, face downward, upon the snow, and began biting him about the head, back and arms. The other hunters, seeing the desperate case of their companion, rushed up and fired at the bear at close range, fortunately killing him with a bullet in the base of the brain. Wright, on being relieved of the weight of his antagonist, sat up in a dazed condition, with the blood pouring in streams down his face. He had received several severe bites in the back and arms, but the worst wound was on the head, where the bear had struck him with his claws. His scalp was almost torn from his head, and a large piece of the skull some three inches in diameter was broken out and lifted from the brain as cleanly as if done by the surgeon's trephine. Strange to say, Wright complained of but little pain, excepting from a bite in the arm, and soon recovered his senses. His comrades replaced the mangled scalp, and bleeding soon ceased. A fire was built to keep him warm until the packer's return, and while one watched with the wounded man the other returned to the trail to intercept the pack train on its return. On the arrival of the mules, Wright was helped upon one of their backs, and rode unaided to the ranch. A surgeon was sent for from Greenwood Valley, who, on his arrival, removed the loose piece of bone from the skull and dressed the wounds. The membranes of the brain were uninjured and the man quickly recovered, but of course had a dangerous hole in his skull that incapacitated him for work. One Sunday, some weeks afterward, the miners held a meeting, subscribing several hundred dollars, and sent Wright home to his friends in Boston. Some months had elapsed, when one of his comrades in the hunt received an Eastern paper containing an account of the affair, and stating that the man was then in a Boston hospital; and that was the last ever heard of him in this country. Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

THE CONNECTICUT SEASON.

Editor Forest and Stream:

As the days of trout fishing draw to a close, I look back over the season and come to but one conclusion: It has been a most excellent year for trout fishing. Never in the recollection of the oldest inhabitants were there so many trout taken in any one season; and they have been very large for this locality too, often reaching 2 lbs.; and in some instances 3 lb. trout have been taken. And the general catch of a day's sport usually shows several of 1 lb. and 2 lb. All this in a locality where trout have been scarce for a number of years, and caused probably by stocking the streams with small fry.

But the trout-hog abounds wherever trout are to be found. I have a letter before me stating that a "man and his brother caught 239 trout in one day," week before last, and it is added that "they weighed 19 lbs.," or an average of 1 1/2 oz. each. Now if they were all of this average weight there was not a trout in the whole lot fit to save. If this was not "hogging," I fail to know the thing when I meet it. This is where the trout go. If we could have laws passed prohibiting the having in possession as well as the offering for sale of baby trout and also have the limit set at 8 inches instead of 6 as at present, it would help matters some.

Now a 5-inch trout from an average of 10 taken from different brooks weighs just a trifle over 1 oz., while an 8-inch trout weighs a trifle over 2 ozs., probably averaging 2 1/2 ozs. as I weighed some weighing 2 ozs. and some that weighed nearly as high as 3 ozs.; and certainly a 8 oz. trout is small enough for any one to save. NOTLIKS.

COLEBROOK, Ct., June 23.

WATERPROOF BOOTS.—Leavenworth, Kan., June 24.—"Big Reel" asks, in your issue of June 5, if there was ever a leather waterproof shoe really waterproof, etc. I don't know anything about shoes, but I have a pair of boots built on the cavalry style, only more so, that I have used for ten years, and they were an heirloom at the time they became my property. They originally cost \$25 made to order, and the material is horsehide, with oak-tanned taps sewed on. I have worn out a number of soles on them and the tops are as good as ever, and the boots are absolutely impervious to water, and look to-day as if they would outlast the writer. I generally get a piece of oak-tanned belt leather and take it to my shoemaker, with strict orders to pull out all previous stitches and sew the new tap on through the old holes.—NOMAD.

CHICAGO AND THE WEST.

CHICAGO, ILL., June 24.—The gentlemen I met in the first boat on Lone Stone Lake, in Wisconsin, proved to be Mr. C. D. Gammon and Mr. Cribben. These did the hospitalities of the camp, and presently Mr. W. W. McFarland and Mr. Tom Smythe came up in the other boat, and we had a pleasant talk before the serious business of fishing was resumed. It did not take long to learn that the old campaigners, Charlie Gammon and "Mac," had fixed up a very comfortable camp.

The guides of the party were Bert Louk and young Blodgett, both of Three Lakes Station, Wis. It is proper to say in advance that a trip to the mascallonge country, if it is to be pleasant or successful, necessitates the employment of a guide. The country is big and difficult, and a tenderfoot alone in it would be an object of pity, always supposing he wants to leave the railway and get out to where he can reasonably expect good fishing. Boats can be obtained by the guides at less trouble and about the same expense as that implied by taking in one's own boats as this party did. The guides do all the rowing, and a steady all-day gait is what takes the fish. The big catches are all made with such help, and the angler need not expect to go into that country and meet success without a guide to aid him. I presume that Louk and Blodgett are as well known as any of the guides of that region. Certainly our experience with them showed them pleasant, willing and intelligent. To any parties who want mascallonge, I should suggest that they write to either of the above, and leave most of the planning of the trip to them. As their time is taken up often a good way ahead, it would be well to write early and set a date. Then the guides will look around and take the party just where the best fishing is at that time. The regular charge of the guide is \$2.50 per day and board. One guide per boat is about the rule. Bert Louk told me he was always glad to answer questions for any party contemplating a trip into the woods, and I don't think any one would regret trying him. Such points as these are often neglected by those who "write up" a fishing country, and the would-be angler finds himself subjected to any amount of delay after his arrival on the grounds.

It seems that last year Charlie Gammon had these same oarsmen out with him on Lake Vieux Desert, or at least that is my recollection. At any rate, he had splendid luck up there and so tried it again this year. But though the entire party, four rods, fished faithfully for three days, they had no luck of the sort they wished. They caught quantities of big-mouth bass, trolling, and also wall-eyed pike, but Mr. MacFarland was lucky enough to take a few small mascallonge, only one of any size was struck, and that weighed only about 15lbs., also to Mr. McFarland's rod. It was on the advice of the two guides that the party had pulled out and come down to the lower waters. As all this was contrary to the reports I had seen printed in a New York angling paper the week before, I questioned the guides very sharply on the point. They told me emphatically that the New York paper had been hoaxed by a local correspondent, and that, owing, they thought, to the lately-erected dam at the foot of Vieux Desert, the fishing in that lake had been poor this spring and no good fish had been taken. The half-breed boys of an old resident of the lake had speared a lot of mascallonge, and had perhaps sold them, but the big fish had not begun to rise. The settler in question told our party that his boys speared 9 mascallonge in one night, going from his house up to the point and back. This man's name, I think, was Johnson. Any of the party will know it. It seems to me the railway company, interested as it is in keeping this magnificent fishing at its best, would do well to request this old settler to let up on his spearing and to see if it can't get rid of that dam. As to the dams all through these waters there is a difference of opinion, but most of the guides think the dams hurt the fishing. Everybody knows that there are plenty of good fish left in Vieux Desert, which is the largest of the series of lakes.

The truth about the mascallonge country for this season appeared to be this, at the time of my visit to the country: The season was late and the water very high, and the fish were thought to be late in their spawning. The big fish had just begun to rise a little, and there was every probability that July would be a better month than June this year. The lower lakes of the Eagle Waters chain were at that time the best. The guides advised anglers not to go to Tomahawk waters, but to keep on the Eagle Waters, east of the road. As to the branch of the road running up to the northwest from Monico Junction, the Gammon party did not visit that country, and we heard nothing about it, our guides not being familiar with it. As to the abundance of the mascallonge, and the question whether the waters are "fished out," it would look very ill for me, after a limited experience of four or five days, to pass any opinion upon that, and it is usually unwise to take the experience of any one party, either way. The fact is that mascallonge fishing is a good deal like salmon fishing. Now you strike it big, and now you don't. There is no fish more capricious or irregular. You can't bet on a mascallonge a little bit. He is a truly game fish, and like most other aristocrats of his sort, in that you must await his pleasure. If you don't happen to find him at home when you send up your card, don't show bad taste and bad judgment by saying he is no longer in the country, for on the very following day he may receive you with open mouth. The best thing to do is for me to tell what actually befell the members of our party, and the reader may have this comfort, that what he reads is true and untinged with any of the interesting and interested romance which may possibly invest certain local reports, such as those above alluded to, which are injurious to the best interests of a fishing country.

If my memory serves me right, it was six mascallonge that Mr. McFarland had taken before he came to Lone Stone, and that evening he added another to his score, as was testified by the revolver shot we heard from the upper end of the lake. This was a small but very gamy customer, which went out of water again and again, and once, so Mac thought, cleared 20ft. of surface before he struck the water again. The fish in this lake were very gamy, and more were lost than taken. Mr. Smythe, in the same boat with Mr. McFarland, had three strikes in the same day on Lone Stone, and lost them all. He was fast to a fine large fish, a 30-pounder, all the party thought, and held him for over five minutes; but this being his first experience at mascallonge fishing, he made the mistake of thinking these fish should be treated like perch. The

result need not be mentioned, but it cast a gloom over the camp, for this was the first and almost the only heavy fish of the trip.

There is a little bay at the head of this lake, and here on the following morning Mr. McFarland had a beautiful rise, the fish, a fine 10-pounder, going clear out of water as he struck, but not finding the hooks. Mac seemed to have all the luck. Charlie Gammon said he did not have a single mascallonge strike during the trip. This set us to studying, and we wondered if part of this could not be due to the fact that he was using a No. 6 Skinner instead of a No. 8, which latter is the usual bait on the lakes. Certainly the bulk of the strikes came to this No. 6 spoon. I remember that Mr. Skinner once wrote me that he did not think the largest fish were always caught on the largest spoon.

This was a silver and red spoon. The guides prefer this pattern, and we had better luck with it than with copper and silver, gold and silver, etc., etc.

I do not think much of trolling, for it looks too lazy and too easy to suit me, but there is more to trolling for mascallonge than at first might be thought. There is a right and a wrong way. For instance, the guides will not let you troll with a very long line, but will tell you that method will take no fish. The theory is that the fish live on the bars or close in shore. The boat is rowed just clear of the weeds in either case. Usually there are three spoons out. The "inside line" is thought to be worth more than both the others. It is the shortest, being only about 30ft. I should think. The next line out is directly in the rear of the boat, and is about 10 or 15ft. longer. This is usually a handline. I think it might well be dispensed with. I cannot see any conceivable sort of sportsmanship in fishing with a handline, though I suppose two-thirds of the mascallonge taken are yanked on handlines. The third or outside line is on the deep-water side of the boat, and is about 10ft. or so longer than the stern line. It is thought that the mascallonge, being disturbed from his bed, darts out beneath the boat. We often saw them do so. After the boat has passed it is thought that fish curiosity leads him to swing in behind to see what the boat was. About that time he sees one or the other of the graduated spoon hooks, and for one reason or another may make a run for it. Just why he does this nobody knows. Bert, one of the guides, said, "Why, he thinks it's something to eat, of course. That's the only thing any fish bites for." Blodgett thought the mascallonge struck more from rage than anything else. "It makes him hot to see the spoon come playin' along over where he was layin'," said he.

This revives the old question of why fish take the fly. I have only one comment here, and it is that if ever any fish bites through sheer fury and anger, in must be the mascallonge. Its whole appearance as it strikes, tense, quivering, going clear out of water in its rush, is one of the sheerest and most savage rage. Every line of its muscular body shows anger and impetuous haste to strike its hated object. Let no one think for a moment that the mascallonge is in the least like a pickerel. As well compare a trout with a bullhead. The guides contemptuously call the pickerel "snakes," and use no ceremony with them, for none is needed. The mascallonge, whether in water or not, is altogether a different fish from the pickerel. It is a beautiful fish, when first taken its skin is fairly of a lustrous dark green, mottled with darker spots, and all its outlines are strong and graceful. The eye is singularly different from those of most fishes, and resembles that of a fighting cock. It seems fairly to glare, and I do not believe it a mere flight of the imagination to say that a mascallonge when led up alongside of a boat will stare his captor squarely in the face and look wicked and fearless out of his eyes. We took some mascallonge on which the irregular up and down stripes across the body were so white and prominent as to give the fish a zebra look. As to the strength and fury of these fish in striking, I never saw anything like it, and the angler who has never hooked a mascallonge has a sensation ahead of him which he should hasten to experience. The fish is a strong, gamy fighter, and its qualities are not apt to be exaggerated by any writer.

The time of the gentlemen who made up the party was now becoming very short. The second afternoon after my arrival the teams came from Three Lakes to take the party out, and camp was reluctantly broken. Mr. Gammon, Mr. Cribben and Mr. Smythe running down to Chicago on the ten o'clock train that night. This left me in a still mascallongeless condition, and with a little impatience I persuaded Mr. McFarland to listen to the pleadings of Bert, the guide, who was himself not satisfied with the results of the trip, and to stay over for a couple of days with me. In my walk through the woods I had fallen upon a quaint character, an old timber prospector and woodsman by the name of Russell, who, with his wife, had lately settled on a homestead by the roadside, near Virgin Lake, near the "thoroughfare" leading up to Lake Julia. (In that country every stream navigable for boats and connecting two lakes, is called a "thoroughfare.") Julia was as good a water as any, and had not had a line wet in it this year. Mr. McFarland and I prevailed upon him to keep us for a couple of days. A boat and a few provisions were unloaded from the wagon as it passed on its way to town, and here the party really broke up, not without mutual regrets at parting. Business interests called the Chicago contingent home, though they longed to stay. "Mac" disliked to forsake his party, but could not resist the chance for another "lunge." As for myself, defrauded as I had been of my intended stay with these pleasant camp companions, I simply could not think of going back so soon, after having seen so little of the country and not having yet taken a mascallonge. The result was very pleasant, and neither Mr. McFarland nor myself had occasion to regret it, though we said good-by ruefully as the wagon rolled off amid the raillery of our friends, who openly commented upon us as "cranks," "chumps," etc.

From Russell's place on Virgin to the station at Three Lakes is only five miles. Accordingly Bert, the guide who was to stay with us, went on in to see his sweetheart, promising to be on hand early next morning. Therefore it was Mr. Russell who that evening after supper took us out for a short experimental row around Virgin Lake, to test the truth of the common report that there "were no mascallonge in Virgin."

We had not pulled more than three-quarters of a mile from the house, and were running under a deep green bank of forest, which made the beautifully clear water also look deeply green, when there came a sudden rush

and a great splash, whereat every man in the boat called out simultaneously with the joyful shout "lunge!" Again it was Mac's No. 6, and again Mac's little fall-down, broken-backed, patched-up bit of a lancewood bass rod had to stand a battle with a fish too big for it. In this bass rod I recognized the duplicate of a rod that I bought six years ago of Eaton, in this city, before the firm went out of business. I have the rod yet, and it is a good one, though too pliant for bait-casting.

At once on striking the fish, which we saw to be only about a six or eight pounder, Mac called out to Russell to pull out for deep water, and this was at once done, the fish being towed bodily behind the boat on the rod. This was kept up for ten or twelve minutes, I should think, and at last the fish began to break water and to give up, so that finally Mac led him alongside and he lay glaring at us near at hand. He was hooked through the upper jaw, far back, and such had been his struggles that the hook had cut a slit through the bone nearly two inches long, and was hanging loose. That is the way a mascallonge gets loose. They are a heavy fish, and will not stand snubbing. On a stiff rod this fish would have gotten away. Too stiff a rod is not desirable. The little bass rod held on tenaciously, and at length Mac passed his hand along the fish's back (a mascallonge will usually allow you to stroke and handle him in this way if you do not make any sudden motion), and by finding a hold on the eye sockets, lifted him, amid a general whoop of exultation, into the boat. This was a regular wild zebra of a fish, and a beauty if ever there was one. It weighed 61lbs.

We now struck a lot of "pike" and pickerel, and had got about 25lbs. of them in the boat when I got a heavy, surging strike, just as we got opposite the head of the rocky island. At once we turned about and pulled for deep water. "You've got your 'lunge' now, sure," said Mac; and so it did seem.

Now, I would rather not write about what happened, but the fact is, we towed that fish clear across the lake, up to the landing, and then began to row in circles, and still we never got him to the top. We shouted to Mrs. Russell to bring us down a gaff-hook or a revolver, but she did not hear us. We thought of beaching the fish, and planned a whole lot of things. At length we got him in, and I wish I may die if it wasn't a pickerel! A big fish, to be sure, and abnormally game for his kind, but only a pickerel! I went mournfully to bed soon after that, and hadn't very much to say to anybody.

The mosquitoes fairly swarmed. Unprotected, the sportsmen in that country would have no sport. But we were not seriously put out by these pests. We used good head nets and long gloves, and applied liberally a compound of pennyroyal and vaseline. A little smudge kettle, set in the main room of the house, did much to thin the fiends out, and on turning in for the night we availed ourselves of one of Charlie Gammon's camp inventions, which will guarantee a good night's rest to anybody in an atmosphere of liquid mosquito. This was simply a wide sheet, made by sewing together strips of mosquito bar. We spread it over the whole bed, and the high head board kept it off our faces. In camp, Charlie rigged up a frame, about 24ft. high, which extended entirely over the sleeping room of the tent. Over this he threw his mosquito sheet. On going to bed each man crawled under the net, which was then made fast at the bottom by heavy sticks rolled upon it. The frame was made of long and light tamarack poles, only two or three cross pieces on top being necessary. The space beneath the bar was plenty wide and long enough, so that no nightmare mascallonge dream would suffice to make one roll against the bar and pull it down. In the morning the bar above us was usually so black with dead mosquitoes we couldn't see the break of day. I presume more'n 400,000 mosquitoes wept themselves to death every night because they couldn't get at us. The mosquito game is one that can be beaten. If a fellow hasn't sense enough to go fixed for mosquitoes he would better stay at home with his mother.

I have spoken of towing the mascallonge behind the boat as soon as it is hooked. I found that this is the custom of the boatmen in that country. These boatmen are anxious for their reputations and like to come in with a good lot of fish. They have learned that the safest way to handle these big fish is to drag them along until they are exhausted, giving very little line. The guides rarely lose a fish, if given their way about it, but they approve only of very strong tackle, and do not seem to fully understand how the rod can save the line and how the reel can save the rod. I fished with a big reel full of silk line and one of Jim Clark's lancewood mascallonge rods. I found that the fish couldn't smash me when I was careful, and although I complied with the guide's request, and submitted to tow and "drown" all my fish on this trip, the next time I go up I shall do nothing of the kind, but shall pull for deep water, stop the boat and kill the fish fair and square on the rod, and have the fun if I lose the fish. I don't like this towing business, using the oars instead of the rod and reel. There isn't enough skill in it. It isn't fair and it isn't fishing.

On our first morning at Mrs. Russell's we ate an early breakfast, amid profuse apologies from the lady of the house, because she "hadn't yet got all her things over from the other house," and were out betimes. Bert, a very tired and sleepy Bert, who had sparked all night and walked five miles to row all day, thus offering us one more example of the foolishness of the young human heart, was on hand and we started up the "thoroughfare" to Julia, finally traversing its two miles of crooks and mosquitoes.

We had hardly gotten into the main lake and were pulling hard to get clear of the weeds, when a tremendous fish sprang for Mac's spoon, while he was just paying out his line. The impetus of the boat was too great, and the fish missed the spoon or barely struck it, falling back with a splash as great as if a calf had dropped in the lake. This was the largest mascallonge I saw on the trip. We thought it weighed between 20 and 30lbs. We could not get him to rise again.

We now started on around the lake, and in a pretty little bay of deep water we got a screaming hot strike on my spoon and at once started for clear water, and after a good "wrasse" we brought up and shot through the head a fine mascallonge of about our average, 5 or 6lbs. In working this, my first mascallonge of this trip, I followed the instructions of the guide implicitly, for I knew he wanted the fish as badly as I did. He directed me to keep the rod with the tip close to the water. These

guides do not like to see a rod held straight up or even at much of an angle at any time, even when trolling; they say the fish breaks away more easily then. I am always willing to learn and have confidence in the fellow whose business teaches him. I could not in this case help noting the difference between the guide's advice and the canons laid down by the angling authorities. For instance, I remember to have read the passage in Dawson's "Angling Talks," where the writer speaks of "instinctively dropping the tip of the rod when the fish leaped from the water." Now, that is just what a mascallonge guide will tell you instinctively not to do. A mascallonge, or some individuals of that fish, may go out of the water as often as a salmon and I don't see why it should be handled differently. Yet Bert told me to keep the rod bent in as much of a curve as the fish would stand, and not to give line except on a rush, always keeping the rod flat down and close to the water. "When a lunge comes out of water, he always shakes his head to throw the hook out of his mouth, and if the line is the least slack, he'll do it, sure. Now, if you keep the rod bent and the line lying close along the water, the spring left in the curve of the rod will keep the slack taken up all the time and hold the hook tight." Some fellows get scared when a lunge jumps out, and they let the rod go a little or slack down, and right there is about where the fish gets off." I must confess there seems a good deal of reason in this. We followed the advice, at any rate, and I only lost one mascallonge, and that one barely struck the hook and was gone. Mac lost two in the same way; but after we once hooked a fish we usually about counted on him. Another thing. The guides do not believe in a gaff. They say it is apt to tear out or straighten out in a heavy fish. They prefer to coax the fish close alongside and shoot it with the revolver right between the eyes. This seems a brutal and unsportsmanlike way of treating so noble a fish, one which I cannot help respecting in the extreme. It is probably the safest plan. At best, the guides say more fish are lost than saved, after being hooked, by the average angler. After being shot, the mascallonge gives a great flurry and is then at once lifted into the boat, where subsequently he may again take a fit of floundering around. It requires no marksmanship to strike the fish right, as the ordinary distance is only two or three feet, and may be only two or three inches.

We rowed around Lake Julia—a beautiful sheet of water it is, two or three miles in length—and every time we went around we caught a mascallonge. This was the best day Mac had had on the whole trip of two weeks, and we felicitated ourselves upon the happy result of his staying over. We took six mascallonge that day, and a greater fishing day, or one more truly enjoyable, I hardly remember to have had. We had no fish heavier than 7 or 8 lbs., but if the angler's mind were not perverted by hopes of the monster fish which are often taken in these lakes, he would think the landing of a 6 lbs. mascallonge a large slice off of heaven. There fell also to my rod that day a monster wall-eyed pike, which two days later weighed 63 lbs., which we thought at the time weighed 8 lbs. This fish made a tremendous, boring, pull-down sort of a fight. These "pike" are rarely taken so large as that on these lakes, they told me. Honors were easy on the mascallonge question, for Mac and I each caught three. Mac has been telling ugly stories here in Chicago about how I strangled a mascallonge to death. I presume I ought to explain that. The fact was, the mascallonge turned two or three somersaults the instant he discovered that the spoon hook was not good to eat, and looped the line tightly around his neck, under the gills. Since he made no fight, I thought it was only a pickarel, and so unceremoniously jerked him in. It is a false accusation that I can't land a mascallonge without first strangling him to death. Wait till I come to Mac's way of killing a mascallonge. I'll get around to that after a while, if the paper holds out. E. HOUGH.

[TO BE CONTINUED.]

THE ELK CREEK REGION.

WE were going to Wagon Wheel Gap, but the Sunday before starting the mail brought FOREST AND STREAM of May 29, and with it "The Wedding Trip of the Kennedys." Oh, no," said I, "we will try some other, nearer region along the line of the Denver & Rio Grande." So we rode out of Denver into the darkness of night, not knowing our destination and not caring, so long as the scenery was fine and the trout rise well.

Morning found us at Salida. Then came the slow climb over Marshall Pass and the descent into the valley of the Gunnison. West of the town of Gunnison we saw several fishermen along the banks of the river, and what was most to the point, we saw several strings of fine trout. At length we came to a spot where several mountain streams forced their way through the cañon to mingle their waters with those of the swirling, boiling, rushing, white-capped Gunnison. One of these should be our camping ground; so we alighted at Sapinero, the nearest station.

After dinner we secured a team and driver and went up Elk Creek as far as it was possible to go. There, in a beautiful cañon, we pitched our tent, and "Camp Pino-lita" has been our home for two weeks. We are only 7,800 ft. above sea level, and only six miles from the nearest log cabin; we have a bed of spruce, camp fare, cool evenings, icy mornings, but we are happy.

Oh, dwellers in cities, toilers by the great sea, this is the place for inspiration and for rest! Every breath is perfume, every sight a picture, every thought a poem, every sound a song. Yes, we have music; not the music of organ or of orchestra, but the matins of thrush and warbler awaken us, the sighing of the breeze in the pine tops rests at noon, and at night we are lulled to sleep by the far-away wail of the whippoorwill and the silvery murmur of the brook. And the flowers! such flowers! Nature seems to have dropped her basket right on this spot. The sage-clad mesa, that stretches away to the bleak cliffs and many-shaped peaks, is red and yellow and creamy with the bloom of cactus and yucca. About us are roses, hawthorn, moss pinks, gillias, lupines and scores more of brilliant flowers about which live pixies and wood elves.

We would be content without rod or rifle, but we brought them and so they have to be used. The trees about our tent are filled with squirrels, and mountain hares are plentiful. In the mountains close by cinnamons and silver-tips make their lairs. Seven bears have been killed within three miles of our camp in the past two weeks. In the quaking aspens and brushy cañons

that open upon Elk Creek, willow grouse are nesting, and near the headwaters of the stream elk and deer are breeding. It is a splendid place to study natural history, but all hunters who are after venison in June ought to return scalps.

The trout fishing is superb. When we reached here the water was high and somewhat muddy. The fish would take nothing but grasshoppers. Then, as the stream went down, they took brown-hackles tipped with fish eyes. Now they rise well to brown-hackles, gray-hackles and coachmen. Local fishermen use live bait for river fishing, but I have had first-rate luck with the coachman and grizzly-king, tipped with fish eyes. In every case peacock bodies should be used, but not gaudy, highly colored flies. Of course, fishing will be better next month than it is now, but we cannot complain. We have taken all we could eat. What more could we ask?

The small streams rush through cañons in rifles and cascades. Then they wander idly through level parks, forming deep pools beneath the willows. In these the fish run from $\frac{1}{2}$ to 4 lb. In the Gunnison the trout average 1 lb., and sometimes a 3-pounder is reeled in. Never, in the West, have I struck a region where the trout are so wily and require so much skill in securing them. It may be because the season is early, but the sport is all the more enjoyable on this account.

The only thing to destroy the sweet spirit of my dreams is the thought that vacation must soon come to an end. Before it does, we are to have a grand bear hunt, of which more anon. SHOSHONE.

ELK CREEK, Col., June 18.

Of the "Bridal Tour of the Kennedys" "Nomad" writes from Leavenworth, Kan.: "I will venture the rash assertion that no feminine hand ever wrote a word of it. If I am wrong I am willing to stand corrected and to be forgiven. It is certainly as quaint and concise an article as has appeared in any issue of FOREST AND STREAM that I ever read, and I have perused the latter for years. I must congratulate you upon your original acquisition, and hope to hear more from the same source in your future numbers."

NEW ENGLAND WATERS.

THE fishing trips are not quite all over yet, though the great majority of those fond of the sport, and can afford to indulge in it, have been on their annual trip to the trout waters and have returned. Four of the members of the Inglewood Club have just returned from the club's preserve, and report an excellent trip. The party consisted of Mr. Samuel Shaw, of the Murdock Parlor Grate Co., the scribe of the party; Mr. John Wetherbee, Mr. Geo. W. Walker and E. Noyes Whitcomb. The club's preserve is in the southeasterly part of New Brunswick, and now comprises some 70,000 acres, including the recent additional lease of some 20,000 acres. Although they started on the 28th of May, they found the roads poor and the season very cold and backward. Mr. Shaw reports the trout fishing excellent, he having taken over fifty in one day, after having rejected and returned to the water all under one pound. He is very enthusiastic concerning the game on the club's preserve, and thinks that the shooting this fall will be excellent. He staid longer than the rest of the party to explore the recently leased lands down the West Branch. With his guides he passed many excellent salmon pools—to be, as this river is to be stocked with sea salmon. The club will let loose this season 40,000 sea salmon and 55,000 landlocked salmon.

Thus far not many of the members of the Inglewood have availed themselves of the spring fishing. Mr. Henry Litchfield, the tackle dealer on Washington street, vice-president and treasurer of the club, has been kept at home by business, but he hopes to go later. Mr. Fred Whiting, one of the proprietors of the Boston Herald, was ready to go with the first party in May, but was hindered at the last moment. He will make his trip later and take in the fall shooting, which promises to be excellent.

It seems that the club lately formed by Mr. Cram, president of the New Brunswick Railroad, has obtained a lease of all the lands on the Tobique River, above The Forks, and that that famous hunting and fishing section, heretofore known only to the more venturesome, is to become private property, and to be opened up to the club. So they go. The lakes and streams in Maine and New Brunswick, and even the woods and fields in Massachusetts, will soon all be leased to private parties, and the public will be excluded. Why, there are two clubs now forming, one to control the shooting on certain lands in Dedham, Mass., and the other will try to lease both the fishing and shooting of a certain tract in Bedford. The farmers, who understand the matter, are said not to be against the leasing of the fishing and shooting rights of their worn-out pastures and meadows, and are inclined to look upon the rental as so much clear gain. But there is considerable opposition from the boys, who have heretofore roamed these lands and fished the waters as it pleased them, and there are some dire threats. Indeed they have already begun to carry some of their threats into execution. In one case on the Cape—I am requested not to publish the name of the owner of the waters—a most diabolical revenge has been carried out. The gentleman in question has a trout pond that he has taken a great deal of pains to stock. Above the pond is a beautiful stream, the source of the water supply. Up this stream the trout are very fond of ascending. Frequently the gentleman has invited friends and sportsmen to fish this stream, with most satisfactory results to the invited, and rarely, in his good nature, has he denied any one who has politely asked him, the pleasure of taking a few trout from his waters. He is a very genial gentleman, and one much beloved and respected by all true sportsmen. But the poacher is the avowed enemy of just such gentlemen, and our friend was not exempt. One morning a few days ago he found that the most of the trout in his stream were gone. Some miscreants had fastened a net across the stream, cutting off all egress from the stream into the pond. Then they had gone up the stream and thrown in lime, to the extent, I am told, that every trout had been driven down the stream by the polluted water, and hence into the seine. His trout were gone. The only solution to the mystery is that it had been done in the night time and during the very early June morning, by some roughs in the neighborhood, to whom the owner had denied the privilege of fishing the stream as much as they desired.

There are still a few of the noted sportsmen at the Maine lakes. Mr. Edgar W. Curtis, of Meriden, Conn., has lately gone back to Richardson Lake, with a friend. He has recovered in part from the illness that destroyed part of the pleasure of his early trip. Good catches of trout continue to be reported from Rangeley. The Stevens Hotel and Excursion Co. of Boston is taking parties up to Tufts, Grindstone and Dutton ponds in Kingfield. One party has been there ten days and report over 500 trout taken. Six more excursion parties are reported for the camps there. The company has control of 3,100 acres about the ponds, and are intending to build a hotel. C. W. Crane, of the Boston leather trade, with Dr. Pratt, went on a fishing trip to Webster, Mass., the other day, and took 12 nice trout, rejecting all not of a respectable size. J. S. Richardson, salesman in the dry goods jobbing house of Jackson, Mandell & Daniel, with a friend, went on a fishing trip last Saturday to a stream in Bedford, and took 17 good trout. The streams in Massachusetts are turning out wonder strings of trout this year. But up in New Hampshire the case is different, especially in the White Mountain region. The streams have been terribly stripped there already.

A gentleman in the dry goods trade of this city has recently been on a fishing trip into the region above mentioned. He hired a team at the railroad station and drove several miles to what was once a famous trout stream, and where in years gone by he might reasonably have expected a handsome string of good trout in point of size. The day was fine. The season was just right. The gentleman regarded himself as "something of a fisherman." With a friend the stream was faithfully fished. They were not absolutely "skunked," but they did catch one or two fingerlings that they were ashamed to bring home. They were disgusted. What was the trouble? They learned at the hotel, on their way out, something that the guide books do not mention. The boys in the neighborhood made a practice every spring, just a day or two before the law is off, of going to this stream and catching everything that will bite the smallest hook. There is a wonder in the neighborhood as to "why the trout in that brook are not so large as they used to be." The Boston dry goods gentleman came back fully in favor of ponds and streams controlled by clubs and parties of fishermen who know how to treat a trout stream. SPECIAL.

GREEN RIVER.

BRATTLEBORO, Vt.—Friend Mel and I had agreed early in the winter on April 29 as the proper day to take our annual day's outing for trout, so the evening before found us driving out of Brattleboro, destination Greene River.

We took along a liberal supply of provisions intending to make our coffee and cook our meals beside the brook. It was our idea to stop in a sugar house over night and build a good fire in the arch, but after a drive of ten or twelve miles, by which time we were nearly starved, we found the house locked, and on application to the owner he said it was full of sap buckets and wood, but that we could come to the house and be welcome. This offer we declined, as it was our intention to bunk by ourselves. Friend Mel now bethought himself of a school house a mile further up the road, so along we went only to find it locked and no way to effect an entrance without breaking in, so we had to drive a couple of miles further along and put up at the house of one of the men who worked in a saw mill. Here we made our coffee and found a bed for the night. Next morning we were out at 4, and going down to a dam below the house Mel got four trout and I one, not very large but a nice legal size. Then we had breakfast, and our team being at hand drove up the road two miles and struck in on a small brook running into the river. This we fished down with fair success until we were most to the river, when we met a party coming up, who looked very much disgusted to see us on the brook, as they had fished up the river with poor success.

Fastening up our lines we walked down stream without fishing until we came to another brook running into the river. We fished up this quarter of a mile and were doing nicely until we met two fishermen who had got up at 3 o'clock to fish the stream before any one else came on it. The look of disgust on their face as they told this can be better imagined than described, but most likely it was a reflection of the one on ours on meeting them. They had fished down three miles and had a nice mess of trout, so we turned and fished down to the river again.

It was a lovely day and many times I would be lost in listening to the drum of the partridge or the scolding of a red squirrel, but when I wished to find Mel I had only to look for a cloud of smoke rolling up through the alders, for he does keep it hot when fishing, with that old brown pipe of his.

We finally struck back on the river again and walked down to the dams, near where we lodged. Then we fished down two miles further, and darkness coming on warned us that we had a ten-mile drive before us, so with the greatest reluctance we reeled up and started for the team, and after a few hours drive over hills and through valleys were back in Brattleboro, with a nice mess of trout, part of which went to Albany; and when eating them with the children at home, my twelve-year-old and I planned a day's trouting of which I may tell at some other time. DEXTER.

SOME SEA FISHING.—A salmon weighing 24 lbs. was caught in a trap at Lowell Island, Mass., about the middle of June. Salmon are extremely rare in this locality and this was of unusual size. A salmon of 16 lbs. was taken in a trap at Salt Island, near Gloucester, Mass., June 23. Seals are remarkably abundant on the Maine coast and have brought disaster to the salmon fishery, frightening the fish away from the weirs (for which the angler will be truly thankful) and sometimes eating half the salmon before they can be taken from the weirs. Weakfish, striped bass and drum are reported plentiful on the New Jersey coast at present. A great run of striped bass has entered the Susquehanna River and the fishermen's nets have been broken by their immense numbers. Fishermen are catching codfish from the rocks on Baker's Island, Mass. On June 17, two men took over two dozen cod, weighing from 10 to 15 lbs. This is a new experience for the anglers of Cape Ann. Along the southeastern coast of Massachusetts good catches have been made. Two men recently took 250 bluefish off Sciticut Neck. Among the large fishes taken in the locality was a tautog weighing 94 lbs.

ANGLING NOTES.

THE wonderful run of bluefish still continues, and the markets are glutted with them. They are in fine condition, and the price exceedingly low. A few striped bass, weakfish and kingfish have been taken during the past week, but they are yet far from plenty. The young bluefish known as "snapping mackerel" have been seen in large numbers and give promise of fine sport in the fall. Large blackfish are quite plenty around the north end of Long Island, and have been caught weighing as high as 9 lbs.

W. Romeyn, the famous Keeseville angler, writes that though high water has greatly interfered with angling in the North Woods, he has killed some fine lake trout from 5 to 16 lbs. in weight.

Many anglers are about starting for the famous Nipigon, the land of big waters, big trout and big flies. But even there the fishing has begun to tell on the supply and size. It is seldom a speckled trout is killed of over 3 or 3½ lbs. in weight, whereas in years past they were frequently caught weighing from 5 to 8 lbs.

FISHING ON ONION CREEK.

AUSTIN, Texas.—The people of Austin have sporting proclivities in common with the inhabitants of other sections of our country, and one of our favorite resorts for going fishing is Onion Creek, some six or nine miles from the city—depending upon the particular point aimed at. Why the mellifluous Spanish name of "Arroyo de los Cebollos" (Thay-bol'-los) was finally rendered into plain and unromantic Onion Creek, is now past finding out; but the attractiveness of the locality remains the same, and every fair day of spring and early summer loads of fishers, maidens fair and mature dames, with attendant escort, duly equipped with rods, baskets and the usual camp impedimenta, not forgetting old clothes and straw hats if they are sensible, will be found en route in the early morning and returning with the shades of night, possibly wet, bedraggled, sunburnt and "Oh, so tired!" and without fish, but still satisfied with the day spent amid groves, waters, flowers and in the free open air.

Austin is called, and justly, the "City of Hills," but when on the route to Onion Creek the plateau ridge, some two miles from the city, is reached, all parties with eyes for beautiful scenery always halt, for what a panorama is exhibited! Austin, the pride of Texas, is like a magnificent jewel in its setting. Over the foreground of prairie flowers, motts of live oak and spreading elm, this gem of a city, its feet bathed in the shining Colorado, through the clear and brilliant air appears as if spread out before one, for, from this superior height, the minor hills upon which Austin rests are not noticeable. To the right opens up the valley of the Colorado, with its gardens and orchards, while to the left the juniper-clad mountains rise up in their majesty; the nearer foothills distinct in the crystal atmosphere, and the heights and gorges lost in the purple haze. At the gateway of these purple mountains, some two miles above the city, Austin has commenced the stupendous undertaking of damming the Colorado for the purpose of water and electric light, a surplus power of 12,000 h.p. being left available for other purposes. A solid stone dam 50ft, thick and 60ft, high will hold back the waters of a river flowing for 300 miles, forming a mountain-bordered lake for 30 miles above. As the river is now well stocked with bass naturally besides other fish, what visions of fine fishing are opened for the future.

A few miles of travel on the plateau amid farms and growing crops, then the opening of numerous gates and crossing of pastures, and then the short descent to the creek is made, a camp site selected under a spreading elm and near an overhanging bluff, from the base of which an everlasting spring furnishes cool and palatable water. This particular spot selected abounds in beautiful scenery and can fairly be classed as "cañon," for the bluff on the southern side of the creek is fully 100ft, in height and impassable at its base, while on the side we are camped the bluff rises 30ft, or more, and only a narrow strip of land intervenes between it and the water's edge. Trees, vines and ferns have availed themselves of every crevice in the rocks, and the ruggedness of the broken masses from the cliffs are partly hidden from view.

Our camp arrangements are soon made and each of the party starts out as inclination leads, some for flowers, some to view the scenery (especially the young fellow who has a companion addicted to scenery), but the knowing one soon rigs his rod, and with bait and minnow net seeks some pool or whirling eddy, hoping for solitude and filled with hopes of catching a few—dare I say it?—catfish.

Now, brother fishermen of the trout and bass persuasion, don't look down upon me with grief, but rather with envy, when I confess that I like to catch catfish, that is, such catfish as are found in this rock and gravel-bottomed stream. They are the aristocracy of their kind—small generally, but slender, bright and clean-looking, and speckled on their sides until fairly rivaling the trout, and what is more they will sometimes rise to the fly, which is more, than I can say of the bass in this section. But my catfish, aristocrat as he is, in common with your dude trout, prefers the succulent worm or tender minnow.

Our lone fisherman in the course of two or three hours, if successful, returns with a string of the "speckled beauties" (s. b. is not copyright and I have privilege to use it), mingled with a few "gasper," perch and possibly a few bass; but the bass as a rule, while quite plentiful in this stream, are only to be caught by the knowing one and he a fisherman, at early morn or late eve by careful fishing of their lurking places.

Dinner is then the order of the day, and while fish are frying baskets are unpacked, cloths spread upon the close turf, and the lazy ones delegated to keep off ants and creeping things. But soon all are deep in the mysteries of the Onion Creek catfish, and no person, whether resident or the stranger from abroad, has ever been known to quit the feast so long as fish were forthcoming.

The afternoon is passed as inclination wills, and the setting sun finds our party on the road home, while soon the cool of evening and the aroma of the dewy prairies revives the spirits of the gorged feasters, and when the point of road is reached where the view of Austin opens,

now sparkling with electric lights, a hurrah from the men and murmurs of delight from the ladies are frequent, the horses are urged to a faster gait, and soon the party, singing and shouting, are upon the iron bridge, which, with its graceful proportions, now in the moonlight appearing like cobwebs, crosses the Colorado and gives access to the city.

At some future time I will give you an account of how the fishermen intent on bass passes his night and day of recreation on Onion Creek, that is, if time can be purchased from business to take the trip.

ST. LAWRENCE RIVER NETS.—Last week Mr. W. H. Thompson, secretary of the Anglers' Association of the St. Lawrence River, secured President H. H. Warner's steam yacht and took with him the game protector and a party on a search for nets. In Henderson Harbor they found a pound net 4 rods square, 22ft. deep, with a leader of the same depth half a mile long. They at once commenced to take it up, and a party armed with several guns came down claiming to own it, and proposed to protect it. The officers took the guns and arrested the parties and took them to Alexandria Bay, where their trial was begun. They asked for an adjournment, which was granted, and later they procured from the county judge an order to take the case before the grand jury. The net was burned the same evening, and was so large that it took from 11 P. M. until nearly morning to destroy it.

A LONG ISLAND POMPAÑO.—We are indebted to Mr. E. G. Blackford, President of the New York Fish Commission, for the following interesting note on a rare pompano of very large size: "I received this morning (June 24) from Bay Shore, Long Island, a specimen of the *Trachymotus goreensis* weighing 20lbs. It was a magnificent fish, and it is the first that I have ever known to have been caught in this vicinity. The furthest north, previous to this, has been caught in the Chesapeake Bay." This increases the list of pompanoes taken on Long Island to four kinds—the common Carolina pompano, the ovate pompano, the silvery and the African, the last, known also, as the permit. The silvery pompano is a very little known form which we have seen in Great South Bay, Long Island.

THE PERE MARQUETTE RIVER, in western Michigan, writes "C. H. B.," has trout and grayling for all, if they only knew how to catch them. This is the finest trout and grayling stream I ever chanced to meet. I have been out ten times, a little while each day, since May 1, and my catch numbers 460 speckled trout and ten grayling of various sizes, 7 to 15in. in length, and weighing up to 24oz. On May 23 I took eighty-three trout in less than four hours with fly. Could not give it to them fast enough. They would come by twos, and on one occasion three fine trout were brought to creel at one cast. This I never saw before, and do not remember of reading about. They were all nearly of a size, two 10in. and one 9in., combined weight 2½lbs. Most are fish with white and creamy-colored flesh, but once in a while a real old salmon-color fellow will fall a victim.

NEWPORT BASS.—Sachuest Neck, R. I., June 28.—Striped bass have made their appearance and quite a number have been taken with rod and reel. Largest reported 35lbs. West Island, I hear, has taken five fish. Graves Point reported three yesterday. Eleven fish have been taken at Sachuest Neck, two of 15lbs., the rest weighing, largest 11lbs., smallest 5lbs. dressed. Indications point toward a very good season's fishing. Conditions as to wind and weather have been very poor for bass fishing. Two of the eleven fish taken at Sachuest were taken during still, hot northwest weather, and water very clear, and as poor a time for bass fishing as could well be selected.—WM. M. HUGHES.

CONNECTICUT.—I spent three days of last week in northeastern Connecticut, most of the time roaming over the fields and through the woods. The trout fishing has been the best that section has seen for thirty years, so an old fisherman told me. A little brook running within a quarter of a mile from our country house was fished by two gentlemen from Rhode Island one afternoon, one catching 35 and the other 28. A few of these were splendid fellows of a pound or over. The bass in a nearby lake were jumping one afternoon very gamy, but only a few have been caught as yet.—F. LIN.

TROUTING IN THE GREENBRIER RIVER, VIRGINIA.—Staunton, Va., June 24.—In our Virginia mountains there are many fine trout fishing streams. The following named gentlemen have just returned from a four days' sport in the head streams of the Greenbrier River, Pocahontas county, West Virginia. The score was as follows: James Bumgardner, Jr., 293, George Beall 267, Chas. L. Cooke 246, R. P. Bell 179, F. R. Webb 62. Mr. Webb was unwell most of the time. About 200 too small were returned to their native element.—CAXTON.

OUANICHE AT LAKE ST. JOHN.—A telegram sent to us from Quebec, June 30, reads: "Party of nine took 200 ouaniche at Grand Discharge, Lake St. John, Friday. Splendid sport.—J. G. Scott." We have in type for next week an interesting budget of angling news from Quebec.

A GRAY DRUM weighing 42lbs. was taken on the New Jersey coast, near Asbury Park, June 20.

WITH FLY-ROD AND CAMERA.

IN size, interest of text, wealth of illustration, and beauty of production, the most notable work on salmon fishing issued. See advertisement elsewhere.

FIXTURES.

DOG SHOWS.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. R. W. Meek, Secretary.
Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.
Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.
Sept. 23 to 28.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.
Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.
November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.
Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.
Nov. 10.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.
Nov. 10.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

THE AMERICAN KENNEL CLUB WAR.

Editor Forest and Stream:

In reply to the card, published and signed by Major Taylor, Mr. Wilmerding and Mr. La Rue, in which they deny the statement made by me in a former issue of your paper, so far as said statement applies to them individually, wherein I stated, substantially, that two of said committee had stated that they had not audited the account of Mr. Vredenburg, but had signed the statement that had been prepared by him, permit me now in reply to said card signed by the aforesaid gentlemen to say that so far as Major Taylor is concerned I have never had any conversation with him in regard to said matter, and that the two members of the committee to whom I referred are Mr. Wilmerding and Mr. La Rue. Mr. Wilmerding has been for the year last past and is now the delegate of the N. J. K. C.

He has known for some time and for a long time before his appointment upon said committee that the accounts of the treasurer of the A. K. C. had been questioned in many ways by several members of the N. J. K. C., and especially the item which has been so often referred to—\$1,228.28. Mr. Wilmerding knew at the time of his appointment on said committee and at the time he signed the statement that I had charged in all the sporting papers that it was not earned by the club; that it had been book-kept and juggled into the accounts; that myself and others, members of the N. J. K. C., had had conversations with him regarding this item, and notwithstanding these facts, Mr. Wilmerding, down to and including the time of the last meeting of the N. J. K. C., which was held on the first Tuesday in this month, was in total ignorance of the items going to make up this sum.

A few days after the publication of the January, 1890, issue of the *Kennel Gazette*, in fact on Feb. 18, 1890, about 12 o'clock I called at the office of Mr. Wilmerding and stated to him, that as he was well aware I wanted to get those items, and that as he was on that committee appointed to audit the treasurer's accounts, "I supposed he could and would give them to me." In reply thereto, he said, substantially, "that he had simply looked over Mr. Vredenburg's books that were presented to him and had signed the statement. He had found that the accounts had been added up correctly, but that he could not give me any of the items, and that he was there only a short time." In fact from his conversation I soon discovered that he knew less about the accounts than I did.

I then stated to him that, as he was the delegate of the N. J. K. C., and it had been stated that delegates could get these items, or information regarding the books of the A. K. C., I would write a letter to the secretary of the A. K. C. stating what I wanted, and then get him also to write a letter, indorsing my request. This was agreed to and I sat down at Mr. Wilmerding's desk and wrote this letter:

New York, Feb. 18, 1890.—A. P. Vredenburg, Esq., Secretary A. K. C.: Will you kindly give me the items that go to make up the sum of \$1,228.28 balance on hand as appears in your report made to the annual meeting in February, 1889, or in other words the items of receipts from Dec. 5, 1888 to Jan. 11, 1889, also the items of expense between said dates, and very much oblige, C. J. PESHALL, Member of the N. J. K. C.

When I finished this letter Mr. Wilmerding read it and then wrote the following letter to Mr. Vredenburg:

Mr. A. P. Vredenburg, Secretary—Dear Sir: The writer of the inclosed letter is the president of the New Jersey Kennel Club. Will you kindly give him such information as he desires, and oblige A. C. WILMERDING, Delegate N. J. K. C.

Mr. Wilmerding then called his clerk, and inclosing both the above letters in one envelope, addressed to Mr. Vredenburg, sent it to No. 41 Broadway with instructions to bring back the answer. A short time thereafter Mr. Wilmerding's clerk returned and said that Mr. Vredenburg said, substantially, "that he was so busy he hadn't time to eat his lunch, let alone go over his books."

Mr. Wilmerding and myself smiled upon each other, as we always do when we are together, and parted. The next morning I received the following letter:

Office of American Kennel Club, *American Kennel Gazette*, American Kennel Club Stud Book, 44 and 46 Broadway.—New York, Feb. 18, 1890.—Mr. C. J. Peshall, Jersey City, N. J.: Dear Sir—Replying to your communication of even date, I beg to refer you to Mr. A. C. Wilmerding, delegate N. J. K. C. for the information you desire, as he has examined my books on the 17th inst., and is, therefore, in a position to supply it. Yours truly, A. P. VREDEBURGH, Sec'y.

The envelope covering the above letter bears on its left upper corner the address of the American Kennel Club, the N. Y. Post Office stamp, as follows: "New York, Feb. 18, 5 P. M., P." and on its back is the following, "Jersey City, N. J., Feb. 18, 7:30 P. M., 1890, Rec'd." and it is addressed to Mr. C. J. Peshall, Jersey City, N. J.

After reading Mr. Vredenburg's letter I thought it very strange that if Mr. Wilmerding had, as Mr. Vredenburg said, "again examined my books on the 17th inst., and is, therefore, in a position to supply it," that he (Mr. Wilmerding), one of the auditing committee, could not give me this information. The same morning I received this letter I again called upon Mr. Wilmerding at his office, and after a cordial greeting, I asked him if he had those items for me. His reply was substantially, "No, I have not heard anything more about them." I then took from my pocket Mr. Vredenburg's letter, handed it to him and he read it. He returned the letter to me, and said substantially, "I have not got the items, I can't give them to you." I then concluded that, as I did not care to become a shuttlecock between the delegate and the secretary, I would pursue the chase no longer in that quarter.

At the last meeting of the N. J. K. C., and in the presence of all the members then assembled, and in reply to a question by me, Mr. Wilmerding stated that "he couldn't get the items."

Before I sent in my letter, to which the card of the auditing committee refers, I left it with Mr. Wilmerding for his perusal. He objected to that portion referring to the two members of the auditing committee, and I then said to him, "Well, Mr. Wilmerding, I have heretofore understood from you that you did not audit these accounts, and knew nothing about these items," and his reply, substantially, was that Mr. Vredenburg had presented the annual statement and the books, and that he had gone over them. I asked him if he had looked at the vouchers, etc., and he said no. I then told him that I would leave the letter as it was, as the accounts had not been audited, and that he, in answer to it, could state just what he had done.

So far as Mr. La Rue, the other member of this committee, is concerned, I will say that I have had several conversations with him since he signed that report, and I found from his conversations that he was not present with Mr. Wilmerding and Major Taylor, but went to the office of the A. K. C. by himself and made his examination of the books that were presented to him by the treasurer. I also asked him if he had gone over the vouchers, etc., and had audited the accounts, and his reply was no. I asked him if he could give me those items and he said no. I recollect reading a letter written by Mr. La Rue in which he stated, substantially, "That he had looked over the books and the statement submitted to him for his examination," and I now affirm that the accounts have never been audited by any committee. The salad was prepared by Mr. Vredenburg on the day this so-called auditing committee was appointed, for I find in the *Kennel Gazette* for December, 1889, in the report made by Mr. Vredenburg, the following:

The secretary suggested that he should make out his statement for the year 1889 for publication, and that the chair appoint a committee who would indorse on the bottom of his account that they had examined his accounts and found them correct as stated.

This committee evidently ate that salad, and from their card I should judge that it had soured upon their stomachs. That the officers of the A. K. C. imposed upon the committee is evident, for the reason that the salad, which is now nauseating them, was garnished with the private books or accounts which were kept by Mr. Lewis under his exhaustive contract with the stud book committee; that is, if they did not inform this committee of the facts regarding that contract.

In reply to Mr. Vredenburg's letter, appearing in your last issue, in answer to my article, I will say that I am surprised that he has now at this late day become so indignant at my attacks upon what I have designated repeatedly in the sporting papers for the last year, the reckless clique management of the A. K. C. I have substantially charged that the accounts were juggled and false over and over again. He does not answer in one instance any of the questions which I have often kindly asked him, neither has he, even in his last communication, denied any of the statements that I have made regarding the management. I know that you and your readers will agree with me when I say that his letter is too silly to notice. He has evidently just lost his temper.

In regard to my recommending him for a position of trust and confidence (it was that of private secretary), I will now say that I would gladly do so again, for I consider him in every way qualified for that position. Ever since his return from Europe he has had great experience in that position, and he now possesses one of the most necessary qualifications, which is simply to obey orders and do what he is told. I long ago stated, in the sporting press, that he had ceased to be the secretary of the A. K. C., except in name.

If I have made any charges which are untrue, or even distorted, against him or the clique management, and they will convince me of the fact, I will say now, as I have said before, there is no apology too great for him or them to demand, or too abject for me to make. Will Mr. Vredenburg now give us the items? PESHALL.

JERSEY CITY, June 27.

Editor Forest and Stream:

Were I the enemy of the A. K. C. that I am commonly held to be, I would delight in the prospect of Mr. Peshall's disqualification on the grounds proposed by the secretary of that institution. Nothing could be more fatal to it than such a disqualification. The dog world will accept a disqualification of Mr. Peshall if it is shown that he has been guilty of falsehood, but to base it on his having at last turned on those who have been heaping insult on him for months, charging him with hypocrisy, etc., when he has hitherto shown a forbearance not at all incumbent on him, will just sink the machine. And Messrs. "Workers" I just dare you to disqualify Mr. Peshall for any such cause as you have hitherto shown, and I say most unhesitatingly that very many of the leading clubs of America will refuse to recognize your disqualification; if you doubt it, just try it on if you dare. I do not know who is the Westminster Kennel Club now, but if it is still the club of Mr. Smith and Mr. Donner, they will refuse to abide by your action, openly as they opposed Mr. Peshall's action in the past, but they draw the line at honesty, right and manliness. One thing is certain, the day of personal "editorials," personal government, and the constituting of the governing body of American dog affairs a mere social club for the edification of a select party, has gone forever. Can you learn the lesson of your reign? W. WADE.

HULZON, Pa., June 27.

Charges have been preferred against Mr. Peshall as follows:

OFFICE of American Kennel Club, *American Kennel Gazette*, American Kennel Club Stud Book, 44 and 46 Broadway, New York, June 27.—Mr. Charles J. Peshall, Jersey City, N. J. Dear Sir: I beg to forward you herewith a copy of the charges and specifications preferred against you, and to advise you that a meeting of the advisory committee has been ordered for Wednesday, July 2, at 1:30 P. M., to be held at the office of the club, for the purpose of considering said charges. I am instructed by the committee to inform you that all the books and papers belonging to the club will be in the custody of said committee, and that you will be afforded the privilege of pointing out such items that you may find in support of your accusations, as published

in the sporting papers, of June 19 and 21. The committee will afford you every facility you desire in conducting your defense. Yours etc., A. P. VREDENBURGH, Sec'y.

OFFICE of American Kennel Club, *American Kennel Gazette*, American Kennel Club Stud Book, 44 and 46 Broadway.

A. P. Vredenburg, Sec'y, vs. Charles J. Peshall. CHARGE I. That Charles J. Peshall did circulate and continue to circulate false, malicious and libelous letters calculated to impair the authority and usefulness of the American Kennel Club and its publications, and to injure its reputation and standing as an officer of said club. Specifications: In that he caused to be published in the *FOREST AND STREAM*, June 19, 1890; *Turf, Field and Farm*, June 19, 1890; *American Field*, June 21, 1890, a letter signed by himself containing false statements regarding the management and financial condition of the club.

CHARGE II. That Charles J. Peshall wilfully violated rule 32 of the rules governing bench shows as adopted May, 1887. Specification: In that he exhibited a dog, at a show held under A. K. C. rules, in his own name as owner, at which time said dog was not his property.

CHARGE III. That Charles J. Peshall wilfully violated rule 25 of the rules governing bench shows, as adopted December 6, 1888. Specification: In that he misrepresented the value of a dog, at the time of making a sale. Specification: In that he conspired with one John H. Lewis to give a fictitious value to the dog, for the purpose of enabling said Lewis to offer the dog for sale, at a price beyond its real value.

The subscriber believes that he can substantiate the above charges, and would ask for a sentence of permanent disqualification against said Charles J. Peshall.

(Signed) A. P. VREDENBURGH, Sec'y.

To this Mr. Peshall sent the following reply:

A. P. Vredenburg, Secretary A. K. C.:

DEAR SIR—I beg to acknowledge your letter dated June 27, 1890, wherein you inclose charges and specifications made against me and entitled: "A. P. Vredenburg, Secretary, vs. Charles J. Peshall," which charges are made by you as secretary and so attested. You have failed to inclose to me a copy of a resolution authorizing you, as secretary of the A. K. C., to prefer said charges, or any charges, against me. Permit me to say that without such direction I fail to find either in the constitution or rules of the A. K. C. any authority for you, as secretary, to prefer charges against a member of the club. Therefore I am constrained to believe that in this matter you have not only exceeded your authority, but you are prostituting your office for the purpose of diverting the attention of the dog men and breeders of this country from the public charges that I have made against the clique management of the A. K. C. I am confident that there has not been a meeting of the A. K. C. held since the publication of the articles by me, to which you have referred in your so-called charges.

You notify me to appear before the Advisory Committee of the American Kennel Club. I do not recognize that there is any such committee having a constitutional existence. I find nothing whatever respecting an Advisory Committee in the Constitution or Rules of the American Kennel Club as in force Dec. 6, 1887. The Constitution and Rules as then in force have never been altered.

As you may learn by reference to the *American Kennel Gazette*, January, 1890, certain amendments were adopted Feb. 23, 1888, by the Executive Committee. But as the *Kennel Gazette* rightly states, the Executive Committee had no power to amend the Constitution or Rules of the American Kennel Club. That power was by the Constitution vested in the club alone. Consequently, as the *Gazette* states, the amendments, which purported to have been adopted by the Executive Committee, were null and void.

Again, on Dec. 6, 1888, and on Dec. 19, 1889, further amendments of the Constitution and Rules were adopted by the Executive Committee, but these likewise, as the *Gazette* states, were unconstitutional and void.

I find upon examination that it is Rule 25 which provides:

Any person may prefer charges against any other person before the American Kennel Club, provided said charges be in writing, and they shall be heard at the first opportunity by the Advisory Committee, from whose decision, however, an appeal may be taken to the full Executive Committee.

But this is one of these rules which are null and void, never having been adopted by the club but by the Executive Committee.

As the *Kennel Gazette* of January, 1890, reports, a "special meeting of the club" was held Jan. 18 to ratify the amendments adopted by the Executive Committee, as noted above. This was under Article XI, adopted May, 1887:

This constitution may be revised or amended at any meeting of the Association, by two-thirds vote, but no such amendment shall be considered unless the same shall have been submitted to the members of the Association at least two weeks prior to such meeting.

If this meeting of Jan. 18, 1890, called to correct the blunders of Feb. 23, 1888, Dec. 6, 1888, and Dec. 19, 1888, had been "a meeting of the association," that is to say, a meeting of a majority of the members of the association, the amendments adopted by it would now be in force. But it was not in any sense a meeting of the club. A quorum was not present. There were but 8 clubs represented out of 45. In the absence of any stated quorum, a majority of the members is absolutely necessary to constitute a quorum. Therefore, the old constitution, which was in force Dec. 6, 1887, still holds good; and that constitution provides neither for an advisory committee, nor for a *Kennel Gazette*, nor for associate members; nor does it anywhere exempt the treasurer of the A. K. C. from giving a detailed statement of the items that go to make up that entry of \$1,228.23.

This Advisory Committee has no power whatever to act and no authority whatever to try any person, and if they did so it would be at their own individual peril and subject them to an action by any one feeling aggrieved.

Again, at least, four of the members of this so-called Advisory Committee are affected by the charges which you claim I have made, and at least four of them would be used by me as witnesses upon the trial involving said issues.

I am willing to appear before the American Kennel Club at any time and substantiate all the charges that I have made against the management.

The charges you make in regard to my violation of the rules, are simply ridiculous and untrue in every particular.

These being my views, I must respectfully decline to accept your kind invitation to appear before the so-called Advisory Committee on Wednesday afternoon next.

Very respectfully, C. J. PESHALL.

JERSEY CITY, N. J., July 1.

TORONTO DOG SHOW.—*Editor Forest and Stream*: The premium lists of the Industrial Exhibition Association's second grand international bench show of dogs to be held at the city of Toronto, Canada, Sept. 15 to 19, are now ready, and can be had by applying to the secretary. A new building, 200ft. long by 100ft. wide, and costing \$8,000, is being erected specially for the show. A large number of inquiries regarding the show are already coming in, and it promises to be the largest and most important ever held in the Dominion. The Toronto Exhibition is annually visited by over 350,000 people, and the majority will undoubtedly want to see the canines.—C. A. STONE, Secretary and Superintendent, Toronto.

DOGS OF THE DAY.

MR. PESHALL has made certain charges against the A. K. C. management specific enough in detail to be a *prima-facie* case. In response Mr. Vredenburg, a paid employee of the club, takes it upon himself, not to disprove the allegations, but to inconspicuously denounce the whole statement as false. As a retort to Mr. Peshall's statement this reply falls flat for two prominent reasons. Mr. Peshall is a gentleman who would not state what he knew to be false for any consideration; people who do not believe in his methods at least believe in his veracity. Secondly, because specific statements can only be refuted by specific contradictions. As a method of disproving Mr. Peshall's statements Mr. Vredenburg has hit upon the remarkable idea of bringing charges against him before the A. K. C.

The case comes under the following clauses of Rule 25:

Any person may prefer charges against any other person before the American Kennel Club, provided said charges be in writing, and they shall be heard at the first opportunity by the Advisory Committee, from whose decision, however, an appeal may be taken to the full Executive Committee. No person shall, however, be disqualified without due notice, and formal charges and specifications, and an opportunity given of being heard in his own defense, and the American Kennel Club will not recognize any ex-parte proceedings on the part of any club.

It is apparent that Mr. Vredenburg has followed out the form provided by the rules, though there is fair room for exception on the score of specification. The meaning of the word specification is, naturally, specific statement; and certainly such cannot be said of Mr. Vredenburg's specifications, for they give no name, date nor place.

A pertinent question in connection with the concluding specification is: Has John N. Lewis been likewise indicted for the conspiracy so vaguely set forth. Mr. Vredenburg seems to have changed his mind since he told me a short time ago that he would not constitute himself a smelling committee to make charges against people. And what a shaking up of old bones there will be if putting a bit on the price is to be a matter for "permanent disqualification." I know of one prominent case in which a leading member of the A. K. C. was concerned. After Mr. Peshall has been railroaded to eternal perdition I may be tempted to assist Mr. Vredenburg in his crusade in the interest of virtue in dog trades, just to see how the thing will work when a similar case against a different person is presented with a request for a sentence of permanent disqualification.

The pug kennel prize affair at Cincinnati, to which reference was made last week, came up for decision before the local bench show on Dr. Cryer's protest, based upon Mr. Mortimer's statement that he never awarded any such prize. The committee decided that Mr. Mortimer had awarded the prize, stating that it was marked in his book. I hardly think that decision will stand in the face of Mr. Mortimer's letter, of which I gave a copy last week; he said that he never awarded any open kennel prize. The judge will undoubtedly maintain his position, and should it be shown that it is marked in his book while he repudiates it, the A. K. C. will have to decide whether a decision given under a misunderstanding as to the conditions must hold good.

I understand that the case of the rejudging of the cocker spaniel class to accommodate late arrivals will form the ground for an objection lodged by the A. K. C. through Mr. Vredenburg.

Mr. Stretch, who got Dublin Scot and Charleroi II. in part trade for Christopher, is advertising the former to be sold for \$250.

Several important additions have been made to the well known collie kennels of Messrs. McEwen & Gibson of Byron, Ont. The *Stock-Keeper* says: "We understand that Mr. R. McEwen, of Alloway Lodge, Byron, Ontario, has purchased from Mr. L. P. C. Asley, Scent, by Sefton—Minnie, a young brother of the Champion Metchley Wonders's. This is a very nice young dog, with the head of the strain, plenty of bone, a good coat, and his influence for good on the Canadian bitches should be very great. Mr. McEwen has also bought Mr. Asley's bitch by Christopher—Sweet Phyllis, by The Squire, who goes out, served by Mr. T. H. Stretch's dog, Ormskirk Amazeant. Mr. McEwen will thus possess not only a brother to Mr. Megson's champion, but will soon have a litter of puppies by the best son of Christopher, out of one of his best-bred daughters." The dog Scent has been renamed Metchley Wonder II. J. W.

DOG TALK.

THE Warwick Kennels, at Bridgeport, Conn., are again coming to the front. We found Hair's Belton (Yale Belton—Polly Blue) showing good form. Topsy Laverack (Tempest—Pebble) is not looking as well as we have seen, but in Belle Laverack's litter by Ned Laverack (Old Perfection—Lit Laverack) Dr. Hair has a bonanza in six of the finest pure Laverack puppies I ever saw in my life. The kennelman threw two of them out on the dung-heap supposedly dead, but the heat of the manure revived them, and they are as strong as any of them now. The Doctor has recently purchased Rosa Gath, by Gath's Joy (Gath—Gem) out of Rosa (Dashing Monarch—Leila), not a bench winner, but a good fielder. While we went to dinner the new purchase started back to Virginia without a guide. We hope the Doctor succeeded in recovering her.

It is reported that Mr. E. B. Sears has purchased a crack St. Bernard bitch of Sydney W. Smith, Leeds Eng. Mr. Sears not being at his office when we passed through the city en route for old England we could not learn the particulars. He has also purchased the bitch Madam, by Merchant Prince out of Nun, and two puppies by Beauchamp.

While at Bridgeport the other day I ran across the English setter bitch Daisy Foreman II. (Warwick Albert—Daisy Foreman), one of the puppy class winners at New York last season. She is a sight to behold from a bad attack of pneumonia. We certainly hope she will entirely recover, but consider it doubtful. NAMQUOIT.

EASTERN FIELD TRIAL DERBY ENTRIES.

SARATOGA SPRINGS, June 25.—*Editor Forest and Stream*: Mr. George T. Hodgson, Athens, Ga., one of the members of the Eastern F. T. C., wrote me just before the closing of the Eastern F. T. Derby not to let him or his four dogs be closed out; that he was going away and would give me particulars on return. Not seeing his name or dogs in published list he at once wrote, sending names of dogs as below.

BLACK JACK—Black and white English setter dog, June, 1889 (Paul Gladstone—Bohemian Girl).

DAVE W.—Orange and white English setter dog, July, 1889 (Gath's Mark—Daisy F.).

HAL—Liver and white English setter dog, July, 1889 (Gath's Mark—Daisy F.).

THICKSEY—Orange and white English setter bitch, July, 1889 (Gath's Mark—Daisy F.).

WASHINGTON A. COSTER, Sec'y.

THE PUG SPECIAL AT CINCINNATI.—Cincinnati, O., June 29.—*Editor Forest and Stream:* Considerable comment has been made lately in the sporting papers by the award of the kennel prize at Cincinnati show for best four pugs to the Eberhart Pug Kennels. An item in *Fanciers' Journal* of June 21 is misleading, and if unexplained would do an injustice to the Cincinnati Kennel Club. It states that "the prize not being in the judge's book was not awarded by Mr. Mortimer," and "that Dr. Coyer will protest the award, as after Mr. Mortimer left the management gave it to the Eberhart Pug Kennels." This is all wrong. The prize was in the judge's book, being on the first page, and was awarded by Mr. Mortimer as the book will show. These are the plain facts as the book will show. I was ring steward for Mr. Mortimer, and while assisting him (in that capacity) in awarding the specials on the morning of the second day of our show, I saw him write it down in the book to the Eberhart Kennels. I said to him then, "Much obliged, Mr. Mortimer." He replied, "Don't mention it, my boy." Mr. Mortimer's reputation as a judge and of knowing just what he is doing is too well known to us all to need further comment. Dr. Coyer has protested the award, and the Cincinnati Kennel Club at a special meeting June 21, decided that the award must stand as made.—AL. G. EBERHART, Manager Eberhart Pug Kennels.

A FOX-TERRIER COURSING CLUB.—Omaha, June 25.—*Editor Forest and Stream:* A fox-terrier coursing club is being organized in this city, under the auspices of the old coursing club. There are fine facilities here for such a club—cotton-tails and jacks in abundance and the finest coursing stretch in the world. Nor do we lack gentlemen who thoroughly understand the sport. Mr. John Short, proprietor of the grand bakery, has had thirty years' experience, and was the first to introduce the grand sport of coursing in Chicago years ago, having been a slipper of greyhounds in England when a lad. Mr. Evans, the County Auditor, is another rare specimen from the old school, and T. H. Lamb, superintendent of Fairmount Park at the Bluffs, is another slipper, having indulged in coursing extensively years ago in an early day, when liberal cash prizes will be offered. There are probably seventy-five fox-terriers owned by gentlemen in this city, and the club will undoubtedly flourish like a green bay tree.—SANDY.

CORA OF WETHERAL.—This well-known champion English setter bitch died on Monday, June 30, from heart disease. Mr. Windholz will have a hard task to find an animal to replace her, as she was undoubtedly very nearly the best of her breed in this country.

KENNEL NOTES.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Maid Marion. By Merry Mount Kennels, Wollaston Heights, Mass., for orange St. Bernard bitch, whelped Feb. 25, 1890, by Bonivard, Jr. (Bonivard—Judie) out of Madam Barry (Barnard—Fannie).

Joy K., Rowdy Rod, Jr. and Bell Noble. By N. Wallace, Farmington, Conn., for black and white English setters, two dogs and one bitch, whelped April 21, 1890, by Rowdy Rod (Rodrigo—June A.) out of Pearl Noble (Count Noble—Jennie II.).

Rowdy K., Ned Noble, Salvator, Tenny and Mado Noble. By N. Wallace, Farmington, Conn., for black, white and tan English setters, four dogs and one bitch, whelped April 21, 1890, by Rowdy Rod (Rodrigo—June A.) out of Pearl Noble (Count Noble—Jennie II.).

Jennie Noble. By N. Wallace, Farmington, Conn., for chestnut and white English setter bitch, whelped April 21, 1890, by Rowdy Rod (Rodrigo—June A.) out of Pearl Noble (Count Noble—Jennie II.).

Helen Ford. By L. Gardner, Mt. Vernon, N. Y., for white, black and tan English setter bitch, whelped March 4, 1890, by Roger (Count Noble—Queen Meg) out of Galatia (Mack B.—Chica).

BRED.

Prepared Blanks sent free on application.

Daisy—Portwood Tiger. O. G. Ricketson's (Pittsburgh, Pa.) bull bitch Daisy to J. B. Matthews's Portwood Tiger, June 27.

Belle of Bang's—Duke of Vernon. Vernon Kennels' (Mt. Vernon, N. Y.) pointer bitch Belle of Bang's (Bang—Miss Merrimack) to L. Gardner's Duke of Vernon (Glendale—Spotless), April 22.

London—London. J. B. Matthews's (Pittsburgh, Pa.) St. Bernard bitch London (champion) Philinimon—Lady Linton to Dr. Roberts's champion Pot (Garnet—Bo-Peep), May 31.

Berlin—Home Ruler. Merry Mount Kennels' (Wollaston Heights, Mass.) St. Bernard bitch Berlin (Hector—Bernie V.) to C. J. Wheelock's Home Ruler (champion Boniface—Floss), June—.

Daisy Foreman—Count Howard. G. V. Neal's (New Haven, Conn.) English setter bitch Daisy Foreman (champion Foreman—Jolly Nelly) to F. Windholz's Count Howard (Sir Alister—Mena), June 19.

Snow Ball—Rockingham. J. W. Seeger's (New York) English setter bitch Snow Ball to F. Windholz's Rockingham (Belthus—Bess), June 15.

Flame—Gladstone's Boy. J. W. Murnan's (Keeling, Tenn.) English setter bitch Flame (Count Noble—Dashing Novice) to Dr. G. W. Ware's Gladstone's Boy (Gladstone—champion Sue), June 27.

Chautauqua Belle—Roger. Harry Yates's (Rochester, N. Y.) English setter bitch Chautauqua Belle (Ted Llewellyn—Marcella II.) to L. Gardner's Roger (Count Noble—Queen Meg), May 3.

Forest Corinne—Garry IV. Forest Kennels' (Groton, N. Y.) Irish setter bitch Forest Corinne (champion Prince—Little Nell) to Fred Mackay's Garry IV (imported Sarsfield—Nora), June 23.

White Nellie—Spiven. Forest Kennels' (Groton, N. Y.) bull-terrier bitch White Nellie (California Terror—imported Rose) to V. J. Meyer's Spiven (champion Baron—Nellie), May 20.

WHELPS.

Prepared Blanks sent free on application.

Blue Jennie. N. McIntosh's (Providence, R. I.) English setter bitch Blue Jennie (Royal Blue—Blue Nel) June 22, five (four dogs), by C. C. Gray's Blue Monarch (Dashing Monarch—List).

New Forest Russet. T. J. Tyrell's (Philadelphia, Pa.) fox-terrier bitch New Forest Russet (New Forest Rustic—Gay), June 27, nine (six dogs), by W. T. McAlees's Telford (champion Ruby Mixer—Temptation).

SALES.

Prepared Blanks sent free on application.

Toby. Black, white and tan beagle bitch, whelped May 2, 1890, by champion Little Duke out of Queenie, by Quaker City Kennels, Philadelphia, Pa., to Samuel Green, Wheeling, W. Va.

Handy. Black and tan collie dog, whelped Jan. 2, 1889, by Bruce out of Lady, by Quaker City Kennels, Philadelphia, Pa., to J. H. Madden, Cleveland, O.

Bruce. Sable collie dog, whelped May 19, 1889, by Clifton out of Maggie, by Quaker City Kennels, Philadelphia, Pa., to Andrew Young, Georgetown, Md.

Swarts. Blue deerhound dog, whelped Oct. 12, 1889, by Robin out of Thora II., by Quaker City Kennels, Philadelphia, Pa., to Samuel Hopkins, Providence, R. I.

Robber. Black Newfoundland dog, whelped Sept. 9, 1889, by Black Prince out of Juno, by Quaker City Kennels, Philadelphia, Pa., to Robt. Stinger, Binghamton, N. Y.

Don. Stone fawn pug dog, whelped Jan. 4, 1890, by champion George out of Nellie, by Quaker City Kennels, Philadelphia, Pa., to Samuel Green, New York, N. Y.

Jake. Orange tawny St. Bernard dog, whelped Aug. 9, 1889, by Rene out of Alma, by Quaker City Kennels, Philadelphia, Pa., to Jos. Winkle, Louisville, Ky.

Maid Marion. Orange, white marks, St. Bernard bitch, whelped Feb. 25, 1890, by Bonivard, Jr. out of Madam Barry, by Merry Mount Kennels, Wollaston Heights, Mass., to Chas. Halkerty, Trawada, N. Y.

Anthony. White bull-terrier dog, whelped Jan. 6, 1889, by Nitche out of Nellie, by Quaker City Kennels, Philadelphia, Pa., to Sam'l Abrams, Raleigh, N. C.

Nellie. White, black and tan fox-terrier bitch, whelped Aug. 7, 1889, by Stark out of Starlight, by Quaker City Kennels, Philadelphia, Pa., to Wm. S. Robinson, Dayton, O.

Prince. White, black and tan fox-terrier dog, whelped July 9, 1889, by General Grant out of Susan, by Quaker City Kennels, Philadelphia, Pa., to Sam'l Johnson, Allentown, Pa.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

FOX HUNTER, Birmingham, Ala.—1. My hound has a dry bark; when he begins to yelp he begins this coughing. 2. Is afflicted with a desire to sneeze, although never successful, drawing his breath through his nostrils, as if something was in nasal pipe; otherwise very healthy. Ans. It looks as though the dog had some growth in the posterior nares (back of the nose and upper throat); you had better consult a specialist. Nasally it sometimes hang down so as to irritate the throat and cause a cough, and also obstruct nose breathing.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE BERLIN SHOOT.

HAMBURG, June 24.—The American riflemen to-day went to the Schuetzenhof at Baxbeck. In the point shooting competition two Americans won prizes, but in the competition for the silver cup, the Americans were beaten by the Hamburgs. Fred P. Laute, of the Howard Rifle Club of Newark arrived yesterday, and to-day he took part in a shoot of the Hamburg Rifle Club, winning eighth prize on the honor medal target. Fred W. Hofele was first and Geb Krauss second. E. Fisher, W. Weber, E. Schroeder and Barney Walther, all Americans, were among the leading prize winners. The Americans are giving accounts of themselves in all the contests in the different cities. Some heavy bets have been made in New York that Gus Zimmerman will win the first goblet in the rapid-fire contest on July 8. President Weber said that the Independents, although defeated, were not downcast. Jubilee medals of the Hamburg Rifle Association were presented to President Weber, Captain Diehl, and the five Americans who competed for the cup, and the following time was followed by a banquet, and there was a grand ball. Most of the marksmen will start for Berlin tomorrow.

HANOVER, June 29.—In the shooting in honor of the American riflemen the following New Yorkers were successful: At the field target "Germany," Zimmerman won second prize; at the rifle target "Hanover," Walther took first prize and Zimmerman second; at the Slanging competition, Zimmerman and Stein won stars and Krauss, Busse, Walther, Zimmerman, Simon, Sieburg, Stein and Schroeder won cups.

The Berlin correspondent of the London Times contributes the following preliminary notice of the big Berlin shoot:

In the second week of July (6th to 18th), Pankow, a suburb of Berlin, is to be the scene of a sort of international Wimbledon, for which the capital of England is famous. The occasion is, by courtesy, so to speak, for the gathering itself is but the tenth triennial shooting match (Bundeschiessen) of the German Schuetzenbund, or Federation of Riflemen, which was founded in 1861 by the present Duke of Saxe-Coburg with a view to foster the National idea and thus hasten the attainment of political unity. Like the British Association, the Schuetzenbund was appointed to be perpetual, so to speak, in its character, and at intervals of three years since its creation it has held its meetings in the chief cities and centers of the nation. Last year the place selected was Frankfurt-on-the-Main, and this summer Berlin, for the first time, is to be the trying-place, on which account it was resolved to invest the meeting with more of an international character than it has hitherto possessed. Consequently a resolution was issued by the committee of the meeting to the riflemen of those of Germany's neighbors with whom she is on a friendly and familiar footing; and to the crack shots of England, too, the central committee, of which the honorable chairman is Herr Von Forckenbeck, Chief Burgomaster of Berlin, made the following warm, if quaintly worded appeal in the columns of the Times:

"To the Riflemen of England.—Berlin, the capital of the German Empire, is preparing to celebrate, during the days from the 6th to the 18th of July, a. e., the X Shooting Match of the German Rifle Shooters' Union (X Deutsche Bundeschiessen). Our brave fellow-shooters in England are hereby urgently invited to participate in this national festival, which is intended to revive and to strengthen the bonds of faithful alliance existing between the kindred people of England and Germany.

"Competing peacefully and without envy for the honorary prizes, valiant men shall meet filled with the pride and the joyous knowledge of being the sons of the great and powerful Teutonic family, whose members, clear in their aims and well versed in their arms, are using their strength for securing the blessings of peace to themselves and to the world.

"The capital of the Empire will receive the guests with pleasure; a hearty welcome is waiting them, and everything that Berlin, with its highly-developed life, is able to offer shall be kept at the disposal of our brave English fellow-shots.

"Once more we invite the English rifle shooters to prepare for the joyous excursion to the capital of the German Empire, which cannot fail to them—Welcome, brave English rifle-shooters, in Berlin."

America has already responded heartily to a similar appeal, and New York alone is to send over 500 of its best shots, selected from the numerous rifle clubs of that city, to compete in Pankow with the champions of Germany. True, it would seem that the majority of these half-thousand Americans are of German origin, who, under the pretext of visiting, or revisiting, as the case may be, the land of their origin; and yet the circumstances of their presence here will give the rifle meeting its distinctive stamp and make it a memorable one. Crossing the Atlantic—315 of them by the Fulda and 210 by the Wieland—these American riflemen, wearing their New York uniforms, are, with all the pomp of music and of banners, to make their entry into Berlin on the 3d of July, marching through the chief streets past the Schloss, where they will salute the Emperor, and thence to the Rathaus, there to be welcomed by the Burgomaster, and deposit their colors till they depart again. Next day these American riflemen, with many others of their countrymen, are to celebrate Independence Day (Fourth of July) by a grand banquet in the Kaiserhof, at which the United States Minister will preside.

The match itself is to be inaugurated (on Sunday, the 6th of July) by a grand procession, to be devised and arranged by the Berlin Society of Artists (headed by the historical painter, Anton von Werner) at a cost of 50,000 marks. This costumed procession, in which all the competitive riflemen are to take part, will illustrate the gradual development of the art of shooting from the period of slings to the present time of repeating rifles, and will also contain allegorical presentations of the various cities where the Schuetzenbund has hitherto held its triennial meetings. Forming up on the Königsplatz, this historical and symbolical procession will march down the Liaden, past the Schloss and so on to the suburban Pankow, where several hundred acres of arable and pasture land have been recently bought by the Government and furnished with all the structures essential to its success. These include a Fest Halle, or banqueting hall, capable of seating 5,000 persons; a Schiess Halle, or shooting pavilion, 220 metres long by 16 deep; several band stands, a grandy Gaben Tempel, or pavilion, for the exhibition of prizes, for which the city of Berlin has contributed 40,000 marks, and which comprises 5,200 medals and a large number of very handsome presentation cups (one being offered by the Emperor) and other silver-wrought articles of great beauty and value, which I have had an opportunity of examining and admiring.

What strikes an English mind as a peculiarity of the forthcoming shooting match is the shortness of its ranges, of which the longest is only 300 metres. At this distance there are to be 50 target slings, and the marksman has a right to have a right to port for his gun, and the same number at 175 metres range, which the shooter must aim at standing upright and free. In addition, there will be three "running boars" and as many "running hares" at 60 and 35 metres respectively, while pistol practice is to be available at five targets with a 35-metres range. It ought to be mentioned that the targets are more elaborately constructed than in England, and will be preceded by a Bismarck rifle target, graduated off into ten concentric rings, with a corresponding score of points, lessening from the center outward. I believe that any rifle may be used (the Martini-Henry has hitherto been the favorite weapon of the Schuetzenbund), but bullets with a mantle of steel, nickel or copper are forbidden, nor may "professional" shots compete. Unfamiliarity with the Berlin meeting, in point of time, will very closely precede the Bismarck rifle target, and all the same that some English volunteers and non-military marksmen may see their way to coming over here, and certainly, whatever their success in prize-taking under conditions new to them, they could scarcely, at least, fail to carry home with them some ideas and methods which might with profit be appreciated in England. If such be the case, any zealous rifle shots, they certainly could not enter more at a time more favorable to their purpose than the present, when the relations between the courts and governments of Great Britain and Germany are so

friendly, and when they would be sure to receive as cordial a welcome in Berlin as the Burgomaster promises. I may add that all inquiries on the subject of the forthcoming shooting match may be addressed to the "Central-Ausschuss für das X Deutsche Bundeschiessen, 24, Burgstrasse, Berlin."

BOSTON, June 28.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day with a good attendance of riflemen. The shooting conditions were good, with a light 6 to 3 o'clock wind. Mr. Kelley won the elegant victory medal. On July 4 there will be no shoot at this range on account of the celebration at Winchester. Following are the best scores made to-day, distance 300 yds., standard American target:

J Francis.....109	W Peters.....103	N O Good.....92
S Wilder.....106		

Champion Rest Match.

S Wilder.....105	W Peters.....94
------------------	-----------------

All-Comers' Rest Match.

J Francis.....114	W Peters.....103	A S Hunt.....95
W P Thompson.....109	F C Towne.....101	N O Good.....93
S Wilder.....107	P Wood.....99	W Simmons.....89
J N Eames.....105	M S Down.....98	A N Mann.....88

L V D Penmet.....8	5	10	9	9	10	6	9-10-88
M Sumnerfield.....8	9	9	9	7	7	8	9-10-85
M Billmeyer.....8	8	8	8	8	9	10	7-8-82
W O Mackwitz.....8	10	10	10	6	8	7	9-79
A McBean.....7	7	9	7	6	7	10	8-77
A E Bengel.....10	6	4	6	4	8	10	8-71

UNSER PRITZ.

EPHRAATA, Pa., June 27.—The members of the North End Rifle Club met at their range, near Ephrata, this afternoon, at 1 o'clock. The weather was cool, clear, and very stormy most of the time. Ten members were present. The distance was 300 yds., at hand shooting, best score out of 100, Standard American target:

G Alexander.....	8	10	10	8	8	9	8	10	10	7-80
W Bauer.....	7	10	8	10	10	8	9	10	7	9-80

The next shoot will be Friday, July 11.—D. B. LEFEVER, Sec'y.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

July 24.—Fourth Annual Tournament of the Niles Gun Club, Niles, O. Thos. Cramer, Secretary.

July 4.—Slater Gun Club's Second Annual Tournament, Slater, Mo. E. W. Vaughan, Pres.

July 4.—Towanda, Pa., Second Annual Tournament. Guaranteed cash and merchandise prizes. W. F. Dittich, Sec'y.

July 4.—The Red Hook Gun Club's Tournament, at Red Hook, N. Y. J. Carroll, Sec'y.

July 4.—South Side Gun Club, Newark, N. J. Shooting on the grounds, commencing at 10 o'clock and continuing all day. W. R. Hobart, Secretary and Treasurer.

July 4.—Irvington Gun Club Shoot, with open sweeps, at T. B. Ward's, Elmsford, N. Y.

July 4-5.—Canastota, N. Y., Gun Club Tournament. A.S.A. rules. J. B. Tolley's Tournament, Catskill, N. Y. Guaranteed purses. Geo. F. Tolley, Sec'y.

July 8-10.—Richmond, Mich., Gun Club, Second Annual Tournament. Open to Michigan men only. W. E. Walton, Secretary.

July 9-10.—Springfield, Mass., Shooting Club Tournament, with guaranteed purses. H. A. Penrose, of Corry, Pa., Manager.

July 15-17.—Saratoga Gun Club Tournament, at Saratoga Springs, N. Y. \$1,500 guaranteed. All money prizes, no merchandise. W. A. Coster, Sec'y.

July 22-24.—First Annual Tournament of the Central City Sportsmen's Association, at Jackson, Mich. \$1,000 guaranteed; \$400 extra in merchandise. H. G. Sutton, Manager.

Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa. Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World, Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E. Limberg, Sec'y.

THE ROCKY MOUNTAIN MEET.

CHEYENNE, Wyo., June 20.—*Editor Forest and Stream:* The second annual tournament of the Rocky Mountain Sportsmen's Association closed to-day after a four days' meet, which was not only one of the largest, but also one of the most successful tournaments ever held in the United States. The opening day of the tournament was one of the fairest in point of weather so far this year. There were about 300 members in attendance and also a good audience, among whom were many ladies. The arrangements by the local committee were most complete, as was attested by the smooth manner in which the shoot progressed, not the slightest hitch occurring. Considering that the first day is usually spent in arranging things, this speaks well for their efforts in that direction.

The big event of the day was at 10 live birds, with an entrance of \$10 and \$100 cash added. All the best shots were entered and made an effort to capture a portion of the \$470 which comprised the pot. Frank Parmalee, of Omaha, killed 10 straight and was disqualified for not being a member of the association, but those in the tie with him very generously donated him his share of the winnings in this shoot. Following is the summary of this event and the scores of the other shoots:

Seventh event, 10 live birds, entrance \$10, divided 40, 30, 20 and 10 per cent, \$100 cash added, open to members of the R. M. S. A. only: Bergersen, Marshall, Compton, Tuff and Craig first, 10; Lanterman, Kazabee, J. Schuneman, Jilson, Davis and Holland second, 9; E. F. Thomas, Haywood and S. Schuneman third, 8; Bostwick, Kennitt, Mechleng, Von Kennel, Chrystie, Sydnam, Lower and Dr. Holcomb fourth, 7. Thirty-six entries.

First event, preparatory shoot, 15 single standard targets, entrance \$2, four moneys, divided, 40, 30, 20 and 10 per cent. Open to the world—W. M. Holland, Pickett, Lane first money with 15 birds; Haywood, Bergersen second with 14; Kazabee, Lewis, E. Schuneman, Camp, Compton, Von Kennel, J. Schuneman, Lower, third with 13; Craig, Tuff, Kennitt, Ramsay, Christie fourth with 12. Thirty-two entries.

Second event, class A contest, 25 single standard targets, entrance \$7, five moneys, divided, 30, 25, 20, 15 and 10 per cent; \$100 added cash. Open to members of R. M. S. A. only. J. Schuneman first with 24; Haywood, Mechleng, Craig, Bergersen, second with 23; Camp, Lane, Kennitt third with 22; Sydnam, Pickett, Stevens, Ellis fourth with 21; Holland, Lower, Ramsey fifth with 20. Twenty entries.

Third event, class B contest, 25 single standard targets, entrance \$3, five moneys, divided, 30, 25, 20, 15 and 10 per cent, \$70 cash added, open to members of the R. M. S. A. only. W. E. Young first, 20; Ed. Schuneman, Jilson second, 19; E. F. Thomas third, 17; Christie, Lanterman fourth, 16; Marshall, Telfer fifth, 15. Twelve entries.

Fifth event, class A contest, 10 single standard targets, five unknown traps, entrance \$3, four moneys, divided, 40, 30, 20 and 10 per cent, open to members of R. M. S. A. only—J. Schuneman,

Meckling, Craig first, 8; Haywood, Holland, Compton, Lower, Camp, Davis second, 7; Suydam, Kennicut, Bergersen third, 6; Tuff, Barlow, Stevens fourth, 5; 15 entries.

Sixth event, class B contest, at 10 single standard targets, 5 unknown traps, entrance \$2, 4 moneys, div. 40, 30, 20 and 10 per cent., open to members of R. M. S. A. only: Marshall, Christie, Davis 8; W. E. Young, Moorehouse and E. Schuneman second, 7; Jilson and Thomas third, 6; Bostwick, Lanterman, Lewis and Clark fourth, 5; 15 entries.

Eighth event, class A contest, at 15 singles and 3 pairs standard targets, \$4 entrance, 5 moneys, div. 30, 25, 20, 15 and 10 per cent., \$40 added, open to members of R. M. S. A. only: Haywood first, 19; Lane, Compton, Meckling and Parmalee second, 18; J. Schuneman and Kennicut third, 17; Holland, Stevens, Bergersen and Suydam fourth, 16; Tuff and Ellis fifth, 15; 17 entries.

Ninth event, class B contest, at 15 singles and 3 pairs standard targets, \$3 entrance, 5 moneys, div. 30, 25, 20, 15 and 10 per cent., \$30 added, open to members of R. M. S. A. only: E. F. Thomas first, 18; Marshall second, 15; Lanterman and W. L. Thomas third, 14; Schuneman, Young, Dolan, Davis and Degen fourth, 13; Dr. Allen, Christie and Bostwick fifth, 12; 27 entries.

Eleventh event, miss and out, entrance \$2, standard targets, open to the world: Haywood won on entrance; 15 entries.

This ended the regular programme and there remaining some time for the following special events:

Special, open to the world, at 10 standards, \$2 entrance: Pickett and Holland first, 10; Lewis second, 9; Clark, Stevens, Bergersen and Argue third, 8; 17 entries.

Special No. 1, open to the world, entrance \$2.50, at 15 standards: Holland, Kennicut, Parmalee, Compton, Bergersen and Camp first, 14; Meckling, Christie, Stevens, W. L. Thomas, Pickett, Lane and Holcombe second, 13; Haywood, Suydam, Tuff and Dolan third, 12; Von Kennel and Complete fourth, 11; 24 entries.

Special, open to the world, 10 standards, \$1 entrance, J. Schuneman, Meckling, first, 10; Clark, second, 9; Pickett, third, 8. Fourteen entries.

Special, open to the world, 5 standards, \$1 entrance, J. Schuneman, Lewis, Lane, first, 8; Argue, Pickett, second, 4. Ten entries. Special, open to the world, 15 standards, \$2.50 entrance. John Schuneman, first, 10; Lanterman, second, 14; Parmalee, Bergersen, Pickett, third, 13. Seventeen entries.

Special No. 1, \$2 entrance, 15 standards, W. L. Thomas, first, 14; Lanterman, Marshall, Young, second, 13; E. Schuneman, Davis, third, 12; Leffler, Dougan, Callahan, fourth, 11. Eighteen entries.

B class special No. 2, 10 standards, \$1 entrance, Dougan, first, 9; 15 entries.

B class special No. 3, 10 standards, \$2 entrance, Christie, first, 9; Clark second, 8; J. Lane, Marshall, Lanterman, S. Warren, Cooper, third, 7. Eleven entries.

An annual meeting of the association was held at the court house Tuesday evening, June 17. President Hampson was in the chair and Gen. W. A. Richards acted as secretary.

This was the result of the election of officers: President—C. M. Hampson, Denver. Vice president—Dr. H. J. Lanterman, Buena Vista. Secretary and treasurer—M. Hewitt, Denver. Directors—D. Ramsey, Colorado; Dr. A. A. Holcombe, Wyoming; Hon. Ralph E. Twitchell, New Mexico; M. W. Browning, Utah; W. F. Fish, Omaha. Delegate-at-large—H. Dougan, Leadville, Colo.

Second Day.

The interest and attendance on the second day was fully equal to that of the first, and the shooters were increased by the addition of fifty or more new arrivals. The weather continued perfect, and the shooting throughout the day was good. Following are the results of the day's events:

Twelfth event, 10 single standard targets, entrance \$1.50, four moneys, div. 40, 30, 20 and 10 per cent., open to the world: Compton, Lanterman, first, 10; W. L. Thomas, Meckling, E. Schuneman, Howland, second, 9; Mulvaney, Kazabee, Parmalee, J. Schuneman, Ramsey, E. F. Thomas, third, 8; Lower, Von Kennel, fourth, 7; 25 entries.

Thirteenth event, Class A contest, 20 singles and 3 pairs standard targets, entrance \$5, five moneys, div. 30, 25, 20, 15 and 10 per cent., \$50 cash added, open to members R. M. S. A. only: Meckling, first, \$25; J. Schuneman, second, 23; Bergersen, Ramsey, third, 22; Howland, Young, fourth, 21; Tuff, fifth, 20; 16 entries.

Fourteenth event, Class B contest, 20 singles and 3 pairs standard targets, entrance \$3.50, five moneys, div. 30, 25, 20, 15 and 10 per cent., \$50 cash added, open to members R. M. S. A. only: Stevens, first, 23; Davis, second, 22; Thomas, second, 21; E. Schuneman, third, 20; Kazabee, Callahan, Complete, fourth, 19; Von Kennel, fifth, 18; 27 entries.

Fifteenth event, 7 live birds, entrance \$7, three moneys, div. 50, 30 and 20 per cent., open to the world: Meckling, E. F. Thomas, Sedam, Bergersen, Parmalee, first, 7; Haywood, Tuff, Compton, J. Schuneman, Pickett, Camp, Hampson, Marshall, Kazabee, second, 6; Kennicut, Lanterman, Holcombe, Complete, Mulvaney, Christie, third, 5; 35 entries.

Sixteenth event, Class A contest, 15 single standard targets, five unknown traps, entrance \$3, four moneys, div. 40, 30, 20 and 10 per cent., open to members R. M. S. A. only: Holland, first, 14; Tuff, Meckling, second, 13; E. Lane, Christie, third, 12; J. Schuneman, Haywood, Sedam, fourth, 11; 20 entries.

Seventeenth event, Class B contest, 15 single standard targets, five unknown traps, entrance \$1.50, five moneys, divided 40, 30 and 20 and 10 per cent. Open to members R. M. S. A. only: Von Kennel, Allen, Williams, first, 11; E. Schuneman, Kazabee, Davis, J. Lewis, J. Lane, second, 10; Smith, Jilson, Werley, third, 9; E. F. Warren, Barter, Lanterman, Dougan, Christie, fourth, 27 entries.

Eighteenth event, 9 live birds, entrance \$4.50, three moneys, divided 40, 30 and 20 per cent., \$70 cash added. Open to members R. M. S. A. only: Holland, J. Schuneman, Kennicut, Davis, Lewis, Craig, Complete, first, 9; Haywood, Sedam, Tuff, Meckling, E. F. Thomas, Bostwick, E. Schuneman, Bergersen, Trengoning, Dolan, second, 8; Christie, Young, Von Kennel, Kazabee, Camp, Marshall, Lewis, third, 7; 38 entries.

Nineteenth event, Class A contest, 25 single standard targets, entrance \$5, five moneys, divided 30, 25, 20, 15 and 10 per cent., \$90 cash added. Open to members R. M. S. A. only: Haywood first, 24; Meckling, Holcombe, Bergersen, second, 22; J. Schuneman, Pickett, third, 21; Camp, Ramsey, Craig, Sedam, fourth, 20; Kennicut, Young, Tuff, fifth, 19; 20 entries.

Twentieth event, Class B contest, 25 single standard targets, entrance \$3.50, five moneys, divided 30, 25, 20, 15 and 10 per cent., \$90 cash added. Open to members R. M. S. A. only: Kazabee first, 23; Davis second, 22; Craig, Haywood, Sedam, Tuff, Meckling, E. F. Thomas, Bostwick, E. Schuneman, Bergersen, Trengoning, Dolan, second, 8; Christie, Young, Von Kennel, Kazabee, Camp, Marshall, Lewis, third, 7; 38 entries.

Twenty-first event, Class A contest, 25 single standard targets, entrance \$5, five moneys, divided 30, 25, 20, 15 and 10 per cent., \$90 cash added. Open to members R. M. S. A. only: Kazabee first, 23; Davis second, 22; Craig, Haywood, Sedam, Tuff, Meckling, E. F. Thomas, Bostwick, E. Schuneman, Bergersen, Trengoning, Dolan, second, 8; Christie, Young, Von Kennel, Kazabee, Camp, Marshall, Lewis, third, 7; 38 entries.

Twenty-second event, Class B contest, 25 single standard targets, entrance \$3.50, five moneys, divided 30, 25, 20, 15 and 10 per cent., \$90 cash added. Open to members R. M. S. A. only: Kazabee first, 23; Davis second, 22; Craig, Haywood, Sedam, Tuff, Meckling, E. F. Thomas, Bostwick, E. Schuneman, Bergersen, Trengoning, Dolan, second, 8; Christie, Young, Von Kennel, Kazabee, Camp, Marshall, Lewis, third, 7; 38 entries.

This ended the regular programme of the second day, and in addition thereto the following specials were shot:

Special, 10 singles, \$1 entrance: Lanterman, Craig, Pickett and Bergersen, first, 9; Trengoning and Jilson second, 8; Compton, Parmalee and Davis third, 7. Fifteen entries.

Special, 10 singles, \$2 entrance: E. Schuneman, F. Lane and Ellis first, 10; Pickett, Parmalee, Meckling and Holland second, 9; Tuff, E. F. Thomas, Bostwick, Compton and W. L. Thomas third, 8. Eighteen entries.

Special, 10 singles, \$2 entrance: Pickett, Stevens, Haywood, Parmalee and Bergersen first, 10; Tuff, Meckling, J. Schuneman and Compton second, 9; Kennicut, Lanterman and Holcombe third, 7. Sixteen entries.

Special, 15 singles, \$3 entrance: Bergersen first, 15; Pickett and Haywood second, 13; Camp, Meckling and Holcombe third, 12. Nine entries.

Special, 10 singles, \$1 entrance: Kazabee first, 10; Haywood, Bergersen, Holcombe and Camp second, 9. Ten entries.

Special, 10 singles, \$2 entrance: Pickett, Thomas, Williams, Trengoning and Davis first, 8; Bergersen, Lewis and Complete second, 7; Dougan, Moorehouse, Stevens and Marshall third, 6. Twelve entries.

Special, 10 singles, \$2 entrance: Pickett and Ellis first, 10; Lane second, 9; Lower, Thomas, Marshall and Sedam third, 8. Thirteen entries.

Special, 25 singles, \$2.50 entrance: Meckling, Pickett and Haywood first, 23; Holland and Thomas second, 22; Tuff and Ellis third, 21; Holcombe, Christie and Lane fourth, 20. Twelve entries.

Special, 10 singles, \$2 entrance: E. Schuneman, Lane and Ellis first, 10; Parmalee, Meckling and Holland second, 8; E. F. Thomas, Bostwick, Compton and W. L. Thomas third, 8. Nineteen entries.

Special, 10 singles, \$2 entrance: Lanterman, Craig, Pickett and Bergersen first, 9; Trengoning and Jilson second, 8; Compton, Parmalee, Sedam and East third, 7. Twenty-one entries.

Third Day.

The big attraction for the third day of the tournament was scheduled as follows: Fifteen live birds, entrance \$12. Four moneys divided, 40, 30, 20 and 10 per cent., \$150 cash added, open to members of the Rocky Mountain Sportsmen Association only.

There were twenty-eight entries and first money was taken by Camp and Ed. Schuneman, who divided \$152.40. They killed 15 single birds. Sedam, Young and another divided \$14.30 and was divided by Bostwick, John Schuneman and Christie, each killing 14 birds. Meckling, Tuff, Holland, Von Kennel, Dolan, Olsen and Williams each killed 13 and divided \$76.20. Bergersen, Marshall, Craig, Davis, Lower, Suydam, Pickett and Stevens killed 12 each and divided \$38.10, the fourth money.

The nine live-bird contest was declared off. The other event of particular interest was the team shoot, open to three members of any club belonging to the association, 15 single and three pairs of standard targets. Entrance \$9 per team, three moneys, divided 50, 30 and 20 per cent.; \$30 cash added to first, \$20 cash added to second, 17 entries. First money went to Queen City team, of Denver, with a score of 53. Second was divided by Cheyenne Gun Club No. 2 and Leadville with 50 each. Magic City team and Cheyenne team No. 1 divided third money, 46 birds.

Twenty-eight standard targets, entrance \$3, three moneys, divided 50, 30 and 20 per cent., open to the world, 18 entries—First money went to Haywood and Pickett, 10 each. Second, Clark, Camp, Thomas, Davis and Christie, 9 each. Third, Machling, Ramsey, Craig and Bergersen, 8 each.

Class A contest, 22 single standard targets, 5 unknown traps, entrance \$5, five moneys divided 30, 25, 20, 15 and 10 per cent., \$75 cash added, open to members only, 15 entries—First money went to Schuneman and Dolan, 15 each; second, Holland and Mulvaney, 14 each; third, Craig and Tuff, 19 each. Fourth, Kazabee 18. Fifth, Bergersen 17.

Class A contest, at 15 single standards, \$2 entrance, 4 moneys, div. 40, 30, 20 and 10 per cent., open to members R. M. S. A. only, 18 entries: First went to Pickett, 15 birds; second, Bergersen, Ramsey, J. Schuneman and Camp, 14; third, Kazabee and Machling, 14 each; fourth, East, Holcombe, Holland, Haywood and C. B. Lane, 12.

Class A contest, at 10 standards, \$2.50 entrance, 3 moneys, div. 50, 30 and 20 per cent., open to members R. M. S. A. only, 23 entries: First, Haywood, Pickett and Bergersen, 10; second, Davis, Kazabee, Tuff, Whitmore, Thomas and Christie, 9; third, Ellis, Holland, Clark, Machling, Hawkins, Craig and Lower, 8. B and C shoot, at standards, entrance \$1, open to the world, 12 entries: Bergersen took all the money, 40 straight.

Class B contest, at 25 standards, 5 unknown traps, \$4 entrance, 5 moneys, div. 30, 25, 20, 15 and 10 per cent., \$40 added, open to members K. M. S. A. only, 21 entries: First, Whitmore, W. L. Thomas, E. Schuneman, Dougan and Clark, 19; second, Christie and Dolan, 18; third, Von Kennel and East, 17; fourth, E. F. Thomas, Bostwick and Cooper, 16; fifth, Allen and Lane, 15.

Class B contest, at 15 standards, \$2 entrance, 4 moneys, div. 40, 30 and 10 per cent., open to members R. M. S. A. only, 23 entries: First, Gilson, second, C. B. Lane and Warren, 9; third, Dougan and Von Kennel, 8.

Class B contest, at 25 standards, 5 unknown traps, \$4 entrance, 5 moneys, div. 30, 25, 20, 15 and 10 per cent., \$40 added, open to members R. M. S. A. only, 21 entries: First, Stevens, 14; second, Whitmore, Schuneman and Dougan, 13; third, Clark, Mulvaney, Smith and Dolan, 12; fourth, East, Von Kennel, Christie and Olsen, 11.

There were five special shoots of minor importance. Nearly all were for 10 standard birds with a \$2 entrance. The scores made were about the same as in the regular shoots.

A meeting of the directors was held at the Inter-Ocean Thursday evening and the following resolutions adopted:

Resolved, That the thanks of the Rocky Mountain Sportsmen's Association are hereby extended to the individual members of the gun clubs and the citizens of Cheyenne for their kind and hospitable entertainment during our visit to their city, assuring them of a cordial welcome when they may find it convenient to visit our different homes. Also that a copy of these resolutions be given to the city papers for publication.

Fourth Day.

The greatest tournament ever held in the West, if not in the United States, ended to-day. The attendance was good, the weather fair and the contests interesting. Some of the best work of the tournament was done on the last day, and all of the best shots battled for the honor of the trophy.

Too much credit cannot be given Dr. A. A. Holcombe, chairman; John Schuneman, secretary; Pete Bergersen, George East and Ed Schuneman, of the local committee, for their untiring efforts and the successful way in which the meeting was conducted.

John Schuneman, of the Magic City Gun Club of Cheyenne, gets the \$50 diamond championship badge for the year, making the highest average in the five years. His brother, Ed Schuneman, of the same club, will wear the Standard Target Club gold badge offered to the best B class shooter. D. L. Meckling, Denver, was second in A class events and takes home the elegant Parker hammerless gun. This trophy should also have remained in Cheyenne, but Peter Bergersen has been poorly physically through the tournament and fell behind. When Pete is at him—Sedam, Young is too good for him. Haywood, of Denver, and Holland, of Leadville, were of Meckling's heels.

Following are the scores of the last day:

Thirty-third event, 10 single standard targets, entrance \$1.50. Three moneys, divided 50, 30, and 20 per cent. Open to the world. J. Schuneman, Kazabee, first, 10; Bergersen, Tuff, second, 9; Christie, Haywood, Meckling, Bostwick, Mulvaney, third, 8. Nineteen entries.

Thirty-fourth event, 9 live birds, entrance \$9. Three moneys, divided 50, 30, and 20 per cent. Open to the world. Bergersen, Tuff, Sedam, first, 9; Bostwick, Parmalee, second, 8; J. Schuneman, third, 7. \$30.00, \$18.20, \$12.15. Nine entries.

Thirty-fifth event, class A contest, U. S. Cartridge Company's shoot, 30 singles and 5 pairs standard targets, entrance \$10. Eight moneys, divided 25, 20, 15, 10, 5, and 5 per cent.; \$125 cash added. Open to the world. M. A. A. only: J. Schuneman, first, 35; Kazabee, Holland, Craig, second, 33; Holcombe, third, 32; Bergersen, Camp, Tuff, fourth, 31; Davis, fifth, 28; Meckling, sixth, 27; Sedam, seventh, 23. Twelve entries. \$56.75, \$45, \$34.65, \$23.60, \$23.60, \$23.60, \$12.55.

Thirty-sixth event, Class B contest, U. S. Cartridge Co.'s shoot, 30 singles and 5 pairs standard targets, entrance \$7, 8 moneys, divided 50, 30, 20, 15, 10, 5, and 5 per cent.; \$125 cash added. Open to the world. M. A. A. only: E. Schuneman, first, 35; Kazabee, Holland, Craig, second, 33; Holcombe, third, 32; Bergersen, Camp, Tuff, fourth, 31; Davis, fifth, 28; Meckling, sixth, 27; Sedam, seventh, 23. Twelve entries. \$56.75, \$45, \$34.65, \$23.60, \$23.60, \$23.60, \$12.55.

Thirty-seventh event, 12 live birds, entrance \$10, 4 moneys, divided 50, 30, 20 and 10 per cent., \$40 cash added, open to members of the R. M. S. A. only: J. Schuneman first, 12; Bostwick, E. Schuneman, Haywood, Davis and Kazabee second, 11; Bergersen, Craig, Tuff, Meckling, Sedam, Marshall and W. L. Thomas third, 10; Holland, Von Kennel, Hampton, J. J. Clark and Stevens fourth, 9; \$80.40, \$60.30, \$40.20 and \$20. Twenty-three entries.

Thirty-eighth event—A new contest was made in place of the consolation shoot, entrance \$2.50, 20 single standards, field glasses, Bergersen second, 10; Haywood, Kazabee and third, 18; Craig, Sedam, Stevens, W. L. Thomas, Davis and Mulvaney fourth, 17. Twenty-two entries.

This ended the regular programme, and the tournament closed with a couple of specials which resulted as follows:

Special, 20 singles, \$3 entrance: Kazabee, J. Schuneman, Bergersen, first, 20; Camp, Clark, Holland, Tuff, second, 19; Thomas third, 18; E. Schuneman, fourth, 17; 21 entries.

Special, 15 singles, \$2.50 entrance: Camp, J. Schuneman, W. L. Thomas, first, 15; Parmalee, Bergersen, Holland, second, 14; Kazabee third, 13; 9 entries.

ASSOCIATION RULES.—The following rules and regulations governed the meeting: The Rocky Mountain Sportsmen's Association territory embraced in Colorado, Wyoming, Utah and New Mexico. Any gun club or club in this district is entitled to membership in the Association. Only one club from each territory belonging to the Association are entitled to enter contests open to the Association. Except where otherwise specified score shot by the rapid firing system. American Association rules governed all contests. Class A, 70 per cent. and over; Class B, under 70 per cent. Any shooter was transferred from one class to another when his shooting score was under 70 per cent. Five sets Standard traps were used. Live birds were shot from King's ground traps.

CLEVELAND, June 6.—The members of the Cleveland Gun Club enjoyed their customary bout with the clay targets at Blue Rock this afternoon, and made scores they needn't be ashamed to face anybody with. The following are the results:

Rudolph.....	23	Silsby.....	23	Williams.....	22
W H Tamblin.....	22	Harris.....	17	Hibbard.....	21
Jones.....	19	March.....	20	Wilson.....	17
Elworthy.....	22	Frederick.....	19	Alberis.....	16
Flick.....	22				

In shooting off ties Silsby won badge A and Williams badge B.

At shoot No. 3, 5 traps, Keystone system, the score was follows:

Jones.....	9	Silsby.....	23	Flick.....	22
Williams.....	18	Jones.....	16	Cathan.....	16
Flick.....	18	Hibbard.....	18	Rudolph.....	23
Frederick.....	18	Williams.....	23	Alexander.....	22
Wilson.....	15	Tamblin.....	23	Turner.....	19
Rudolph.....	19	Asley.....	21		

TOURNAMENT OF THE NORTHWEST.

PORTLAND, Ore., June 23.—Editor Forest and Stream: The sixth annual trap-shooting tournament of the Sportsman's Association of the Northwest, which ran Thursday, Friday and Saturday last, was a bouncing success, as the attendance and scores will show in this report. Portland, Seattle, Tacoma, Spokane Falls, Walla Walla, The Dalles and Eugene had representatives to the tournament, all told there being about fifty shooters in attendance. H. T. Hudson, secretary of the Association, and Buell Lamberson, secretary of the Multnomah Rod and Gun Club, had made every preparation, in the line of accommodations, for the event. A large tent was utilized as a sort of headquarters room, and also served the further purpose of making a convenient place for the ammunition, gun cases and other traps usually carried by nitrods. Sandwiches and liquid refreshments were served from the grand stand, and the shooting continued the entire day. There was no interruption from the time the first shot was fired until late in the evening, when it became too dark to see. The five traps used in shooting the regular tournament contests were cast of the grand stand, so that the shooters faced the river, and two more used in practice and pool shooting were south of the grand stand, far enough away so that the noise in one place did not interfere with the shooting in the other. The only target used was the Peoria blackbird, with 5 traps.

The following officers were elected to serve during the ensuing year: T. A. Bringham, Tacoma, President; H. H. Lewis, Seattle, First Vice-President; H. A. Herrick, Spokane Falls, Second Vice-President, and Fred McBroome, Spokane Falls, Secretary and Treasurer. It was decided to hold the next annual tournament in Spokane Falls next June, the exact time to be decided later.

The first match on Thursday was at 10 singles, entrance \$2.50, divided 40, 30, 20 and 10 per cent.:

Levis and Cooper making a full score, were obliged to shoot off the tie. This gave the victory to Cooper, who brought down 20 more straight, Lewis missing his twentieth bird. The *Globe* trophy is presented by the Tacoma *Globe* and is valued at \$350.

The following highest average prizes were awarded at the close of the day's shooting: First prize, gold badge, W. A. Eberly; second, E. S. Barlow; third, F. Conley; fourth, D. Cooper; fifth, A. W. McNaughton; sixth, T. A. Bringham.

DAYTON.

DAYTON, Ohio, June 28.—The four days' trap shooting tournament closed last evening with a brilliant contest for the Pony House purse of \$100 in gold, with 50 participants and a fine audience, by all odds the grandest tourney ever shot here. The committee to whom is due all of the arrangement and management of this very successful affair are Messrs. Rolla O. Heikes, Thomas B. Hannah and Scott McDonald, and visitors and local shooters were copious in expressions of gratification all through the week, and Messrs. W. H. Wolstencroft, John Ruble, E. D. Miller and others of the crack shots who were here say that the thing to do is to let the *FOREST AND STREAM* say so to the world of trap shooters.

The shooting grounds were located in a broad, level field in the eastern part of the city, street cars running to the grounds, 10 traps in line, a broad canvas canopy covering the firing platform, the contestants not facing the sun at any time of day, a dozen tents for dining hall, dressing rooms, etc., conveniently located, and a day's shooting, the rapid firing, and the system of checks enabled the cashier, Mr. Hannah, to hand each winner his money the instant the last shot in any match was fired, whether one man took the pot, or 'twas divided. The record would not be complete without giving credit also for the fact that not an error was made in scoring or paying during the tourney. The contests were open to all the world, \$1,000 in guaranteed purses, \$400 in cash, and \$100 contribution purse for averages. Shooting begun at 9 o'clock each morning and closed at dark, weather fine all the way through.

Tuesday, June 28.

First event, first day, 10 singles, \$1 entrance, 19 entries, 40, 30, 20 and 10 per cent.: Edwards 8, Parker 7, Lane 4, Underwood 6, Buntin 9, Heikes 9, Wolstencroft 8, North 9, Benscotten 9, Pratchett 10, Keller 7, Vincent 7, Reams 6, East 6, Miller 9, Strawn 6, Ruble 9, Davenport 5, McDonald 9. Pratchett first, Heikes, Benscotten and North div. second, Edwards and Wolstencroft third, Vincent fourth.

Second event, 15 singles, \$1.50 entrance, 28 entries: Kneisley 12, Edwards 13, Strawn 11, North 14, Heikes 15, Vincent 12, Spross 12, Lane 3, Underwood 6, Smith 12, East 10, Glasford 12, See 13, McDonald 13, Pratchett 15, Wolstencroft 15, Benscotten 15, Buntin 15, Keller 12, E. D. Miller 10, Ruble 15, Reams 12, Parker 14, Eldridge 11, C. E. Miller 9, Shorty Bacon 13, Taylor 12, Davenport 8, Pratchett, Wolstencroft, Benscotten, Buntin, Heikes and Ruble div. first, North and Parker div. second, Edwards, Shorty Bacon, See and McDonald div. third, Vincent, Spross and Smith div. fourth.

Third event, 10 singles, \$1 entrance, 28 entries: Edwards 7, North 10, Buntin 7, Strawn 8, Glasford 9, Ross 8, Eldridge 8, Knight 8, Kneisley 9, Spross 8, McDonald 8, C. E. Miller 5, E. D. CHICAGO, Ill., June 28.—Mr. H. A. Penrose, of the Keystone Target Co., was a low bidder for legal business connected with the Peoria Co.'s infringement suits, out of which it is hoped some sort of an adjustment may come. It is understood here that the Keystone Co. has bought out the Standard Co. New developments in the target world are likely this year. The enterprising secretary of the Grand Calumet Heights Club is out with a neat invitation to the Fourth of July entertainment of that club, which will include a rifle contest for the Jenney & Graham rifle, a trap-shoot for the gold medal which the secretary, Mr. Geo. E. Marshall, has offered for a handicap competition, and a lot of fireworks. There will be a fine time for everybody, and doubtless a large portion of the membership of that active young club will be on hand. The election of officers for the ensuing year was held at the Grand Pacific Hotel, June 25, and resulted as follows: A. W. Harlan, President; F. R. Bissell, Vice-President; W. Metcalf, Treasurer; Geo. E. Marshall, Secretary; Directors, Wm. L. Pierce, Samuel Booth, L. L. Davis, L. J. Marks.

HOME TALENT.—The Richmond Gun Club of Michigan gives a tournament July 8 to 10, with over \$500 in guaranteed prizes, etc. "It is for Michigan men only," says the programme, and in explanation it is said: "We have made this tournament open to Michigan men only, for following reasons: If you will glance over the scores in all the large open tournaments held in this State during the last two years, you will find that professional shooters from other States have carried off the lion's share of the money. A large majority of Michigan shooters have learned to keep away from tournaments where professionals congregate. Under these circumstances we believe that we can have a larger attendance, and that all will be better satisfied if they do not have to stand in line with the crack shots of the day. Michigan has few (if any) professional shooters; so to the business man, and all who love to press the trigger occasionally for the sport there is in it, with a chance to win, we extend to you a cordial invitation to attend."

WELLINGTON, Mass., June 28.—The merchandise match of the Wellington Gun Club closed to-day with the following scores: Sanborn 18, Bowker and George 17, Chase 16, Dodge, Hooper, Bennett, Bond and Perry 14, Bradstreet, Walker and Shumway 13, Cowie, Dill and Porter 12. The winners for the month were: Bond first with 49, Bennett and Sanborn second, 48; Bradstreet and Chase third, 45; Porter fourth, 38. These scores were made out of a possible 60.

WHITE PLAINS, N. Y., June 27.—Sweepstakes at live birds and blueberries. Event 1, 5 live birds: Paulding 5, Platt 4, Dick 3, Husted 3, Rowley 4. Event 2, 10 blueberries: Platt 7, Paulding 7, Dick 8, Husted 10, Stymus 5, Rowley 10. Event 3, 15 blueberries: Platt 10, Paulding 8, Dick 11, Husted 8, Stymus 8, Rowley 12. Event No. 4, 3 putt doubles: Paulding 3, Platt 4, Husted 2, Rowley 5, Stymus 3.—C. P. ROWLEY.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1889-90.
Commodore: HENRY STANTON, { New York.
Secretary-Treasurer: F. L. DUNNELL, {
Vice-Com. Rear-Com. Purser.
Central Div., Geo. A. Warden, { E. L. French, { J. K. Bakewell,
Eastern Div., Dr. J. A. Gage, { A. S. Putnam, { Ralph F. Brazer,
Northern Div., W. J. White, { W. J. Read, { C. M. Whitlaw,
Atlantic Div., M. V. Brokaw, { I. V. Dorland, { W. R. Haviland,
Yonkers, N. Y.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp will pay \$1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—B. E. Knapp, 31 Montauk Block, Chicago, Ill.
Applications for membership should be made to the Secy-Treas., on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

FIXTURES.

JULY.
1-15. Central Div., Lake Chautauqua, N. Y.
4. Lake Hopatcong, Annual.
4-7. Delaware River Meet, Delanco.
5. New Jersey Athletic, Bergen Point, Second Annual.
2. South Boston, Open.
2. Lake St. Louis, Annual, La-china.
8-22. A. C. A. Meet, Jessup's Neck, Maryland.
1. Ianthe, Annual.
12-26. W. C. A. Meet, Ballas Island.
12. South Boston, Open.
25-Aug. 8. Northern Div. A. C. A. Lake of Two Mountains.
26. South Boston, Club.
AUGUST.
23. South Boston, Open.
30. Orange, Annual.
30, 31, Sept. 1. South Boston, Harbor Meet.
20. New Jersey Athletic, Bergen Point, Fall.

IANTHE C. C.

THE spring regatta of the Ianthe C. C. was held from the club house on the Passaic River, June 14. A number of guests, including many ladies, were present. The weather was anything but desirable for canoeing, it being very hot and the wind very light from the S.W. Shortly after the start of the sailing race a severe thunder storm came up and lasted during the remainder of the afternoon, the consequence of which the sailing maneuvering and upset, the sailing and paddling combined, and the hurry-scurry races were called off.

The paddling races were straightaway over a course about half a mile long, and the sailing race over a triangular course about a mile and a half around.

First race, senior paddling: C. V. Schuyler, of the Arlington C. C., first in Nipic; G. P. Douglas, Ianthe C. C., second in Passaic; L. B. Palmer, Ianthe C. C., third in Nerina.

Second race, junior paddling: Jas. Duguid, Jr., of the Ianthe C. C., first in Ianthe; W. B. Dailey, Arlington C. C., second in Kisco, and Geo. L. Metz, Ianthe C. C., third in Lasata. E. W. Edinger, of the Crescent C. C., was the first to cross the finish line, but was disqualified for fouling Dailey.

Third race, tandem paddling, G. P. Douglas and W. R. Burling of the Ianthe C. C. in canoe Passaic finished first, and C. T. Hoff and W. B. Dailey of the Arlington C. C. in Kisco second; a mixed crew composed of Edinger of the Crescent C. C., and Gibson of the Arlington C. C. did not finish.

Fourth race, paddling, any canoe, C. T. Hoff, Arlington C. C., first in Redfox; James Duguid, Jr., Ianthe C. C., second, in Scoot. W. R. Burling, Ianthe C. C., and C. V. Schuyler, Arlington C. C., in the order named.

The senior and junior sailing races were started together. Seniors: L. B. Palmer, Ianthe C. C., first in Nerina; Geo. P. Douglas, Ianthe C. C., second, in Passaic; and I. V. Dorland, Arlington C. C., third, in Meda. Geo. W. Cox and C. P. Coe, of the Crescent C. C., did not finish. Juniors: W. B. Dailey, Arlington C. C., first, in Kisco; Richard Hobart, Ianthe C. C., second, in Cynisca; C. V. Schuyler, Arlington C. C., upset and withdrew. G. W. Baxter and W. P. Dodge, Ianthe C. C., and E. W. Edinger, Crescent C. C., also withdrew.

A MAY CRUISE IN CANADA.

FRIDAY, May 23, saw thirty-three members of the Lake Saint Louis C. C., of Lachine, at the Grand Trunk depot en route to Huntington, with two baggage cars loaded with canoes, which placed about sixty-five miles away on the Grand Trunk Railway. I cannot adequately describe this delegation; one would have to meet them on their journey to appreciate fully the different qualities possessed by this party; we had people to suit every body's taste, and it is really impossible to single out each individual. But as many of our boys, unlike their American cousins, have not named their canoes, I will in some cases give the names of the members who brought themselves into prominence to give the name, and the first will be our highly esteemed commodore, Alex. W. Morris, who at the last moment, owing to a business engagement, was unable to go with us, which left the party in charge of the vice, Geo. Auldjo. We gave the people on the train an imitation of a few fellows enjoying themselves, by dressing up in our nigger costumes intended for the concert that evening. A fine station as the train pulled up crowds of people were on hand to welcome us, and indeed so thoroughly had the local press advertised our trip that all the way down the river people were on the banks to see us pass.

On arriving at Huntington a brass band was on hand and escorted us down to Mrs. Moir's hotel, where, having put away our canoes and thanked the band, we were ready for supper, and that evening I do not think was a complete success, owing, I may fairly say, not to any fault of ours, but simply to the wretched taste of the audience. Those in the upper part of the house were continually setting off firecrackers. Of course, these people were not expected to behave any better or know anything, but the miserable ignorance of the balance of the audience, who laughed when there was no jest whatever, and at times when there really was occasion for a laugh did not even smile, shows the class of people we were performing before. As an example, Percy Barclay, a reciter of no mean repute, gave them "The Bells," which many times, before more enlightened audiences in Montreal, has been very well received, but here was laughed at, and when he gave them a parody on an Indian opera, I really believe they were laughing at him. Last on in the program was a nigger (those at the '89 meet will remember him), White and Hamilton gave most comical illustrations; no one in the audience laughed. Now, in the face of this, who could try to give an entertainment to the people of Huntington.

Next morning the working part of our cruise began, and having been reinforced by four members of the Saint Roch C. C. and three more of our own men, two of whom drove 18 miles to join us, we started at 8 o'clock for Ormstown, with our Rear-Com. Sydney P. Howard and S. Jackson as whippers-in. An enterprising photographer took our photos just after leaving, but I am afraid they will not be a success, as the current was swift and 17 is a large number of canoes to take at once. Before we had gone three miles, word was sent from the rear that the first mishap had occurred, the crew of the Maud had their first river dip for 1890. They went over and could not explain how. After going a few miles further we stopped for a game of baseball, and which side won no one can tell, the umpire making his escape during a dispute which broke up the game. About 11 o'clock, as we were approaching a very dangerous rapid, I imagine our surprise to see, on a high bit of rock, a bonfire, and at times when there really was occasion for a laugh did not even smile, shows the class of people enough for their kindness to us. To entertain them we gave banjo and violin solos, songs, etc., and to show what we could do in our canoes, one member in the Marion L. and two in the Pauline ran over the dam, which has a fall of about 5ft. They both passed the dam in safety, but the Marion L. ran on a rock below the rapids and swamped.

The rapids below here again are the ones full of rocks and very swift, the current running 12 miles per hour, and here our first casualty occurred, the water course is very narrow, and one large rock in the center awaits your arrival and invites you to call, and unless you have good luck you certainly will spend a few moments there, as three of our canoes did. One had a hole stove in about six square we had to cut up the foot boards, got putty and nails, and patch the break.

After leaving Ormstown about 4 o'clock we had a run of 17 miles to Saint Martine, and each man knew it behooved him to exert himself to get there before dark and not to jolly along as we had been doing in the earlier part of the day.

At seven that evening we arrived at St. Martine, the proprietor of the hotel had a bonfire and brought a host of friends to welcome us. Some of the boys terrified the "habitations" by dressing up in fancy costumes and parading not only the streets, but the houses also, and two went to bed with Ethiopian countenances, much to their own discomfort and to the chagrin of the proprietor when he beheld his beds in the morning. We had the comfort of sleeping 37 young people in 5 bedrooms, to rest not—

"Hushed by buzzing night-flies to his slumber!"

No, by jove, they had no room. Next morning, after helping the niggers get their normal color, we started for Chateaugay and a goose hunt, the vice commodore capturing the bird. After going a few miles further some one asked for a drink, and when that occurred we generally got 8 or 10 canoes together and compared notes. While doing this, a happy thought struck some one to hoist a sail in the center and all join in a row and sail down. Imagine a prettier sight if you can than 17 canoes abreast and sailing down a peaceful river, with one man in a colorful flannel coat, with a few songs to enliven the scene, it reminded one of the words:

"And the health-seeker findeth there
The wine of life in the pleasant air."

But all good things have an end, and a few miles down a mill-dam makes us separate.

We have now reached our last rapids, and in these the Coquette all came to grief, knocked a hole in her which we patched up, and on entering the waves he did not see a large rock, and before he knew it was broadside on, with his bow up stream. Quick as thought he and his mate turned in their canoe and paddled down stern foremost. It was the best piece of canoeing I ever saw, had they not done so their canoe would have been broken to pieces.

In a few minutes we arrived at the mouth of the river, and after going the party together we left for the basin, three miles below, where a separation took place. We had to cross here a lake about five or six miles wide, and it was blowing a gale of wind. Some went by stage to Caugnawaga and walked over the bridge, others stayed at the basin all night, but it is of those who crossed in canoes that I would speak, and none of them would go through it again.

Coquette left the shore to head for an island, but found it too rough to land, and were forced to cross; their experience was terrible, one having to paddle and the other bail all the time. Buntie got half way across, swamped, and her crew were saved by the lightskip keeper. Pauline and two others reached shore with their crews in an exhausted condition and waded some two miles to Lachine, the balance of the party of the Ianthe C. C. did not finish, and even then found the sea very high, but take it all in all there is not one who would not have liked to start the same trip over again on the following Friday. MARION L., A. C. A. 966.

TORONTO C. C., JUNE 21.

ON Saturday the spring regatta of the Toronto C. C. was held at the Island Park and was numerously attended, a large proportion of the visitors being ladies, who gave an additional charm to the day's proceedings. Seven events were contested for. The course was a triangular one, the first event being a buoy, the two boats which started held perhaps the four best paddlers in the club, and opinion was considerably divided as to the probable winners. H. Wright and M. F. Johnson were one team and Tilley and De-la-fosse the other. The first named won the toss and chose the inside course. Tilley and De-la-fosse got the best of the start and led by about half a length for a short distance, but at the first change of the wind the lead was never regained. H. Wright and Johnson were putting in some powerful strokes, and turned their buoy nearly two lengths ahead of Tilley and De-la-fosse who steered a bad course, having made for the wrong buoy. Wright and Johnson, however, had great difficulty in straightening out, and when they had succeeded in doing so, they steered too close in, the result being that the De-la-fosse crew closed up.

At the second change of the wind the lead was never regained, and Wright and Johnson moved clean away from their opponents and won easily by three or four lengths, Tilley and De-la-fosse giving up near the finish.

The next event was the decked paddling race for which there were three starters: Matheson, A. M. Rice, and W. Sparrow. Matheson secured the lead at the start, Sparrow second, and Rice third. It was a close race between the Matheson and Sparrow, with Rice practically out of the race. On the run home Matheson took the lead, both he and Sparrow being very tired. About 100yds. from the finish Matheson stopped to fix his rudder, and Sparrow took the lead. About 20yds. from the finish Sparrow led by half a length, but Matheson was using every ounce, and gradually crept upon Sparrow till about 3yds. from the finish his

canoe was sent ahead, and he was given the race by about 4ft. Time 7.19. This was the closest race of the day, and created much excitement.

The singles was the next event, and Johnston won this easily at the finish, the other starters being De-la-fosse and Hackburn. At the start Hackburn took a good lead, De-la-fosse being second, and Johnston third. The last named paddled standing, but having started with a short paddle he had to discard it for a longer one, losing two lengths doing so. He quickly set to work to cut down the lead the others had gained, but at the turn De-la-fosse was first. Hackburn in turning upset his canoe, and was then out of the race. Johnston and De-la-fosse were about on level terms shortly after turning the buoy, and for about 100yds. it was a great race between them. Johnston then forged rapidly ahead and came in a winner. De-la-fosse stopping 20yds. from the finish. Time, 5.10.

There were only two entries for the fours, the crews being, Johnston, Hackburn, Morse, Wright, stroke; Jacques, Elgie, Rogers, Tilley, stroke. Wright's crew had the best of the start by a length. Tilley's canoe crept up on Wright's, and the two were on fairly level terms till the turn, Wright turning first. About 100yds. from the finish Wright put on a fast stroke and easily drew away from the other boat, Wright's canoe winning easily by six or seven lengths. Time, 5:25.

The next event, the hurry-scurry, had more fun in it than anything else. The conditions were: Run 10yds, swim 30yds. to their canoes, get the best of the start, and for about 100yds. it was won easily by De-la-fosse, whose swimming ability gave him a long start over the others. Sparrow was second.

The handicap tandems had six starters, and it ended in a win for Johnston and Kelly, Brown and Iredale being second, time 6:25.

The last race was the sailing upset, and it was won by W. Lee, W. Sparrow again getting second.

Of the seven events Johnston started in four, the tandems, singles, fours and handicap tandems, and got first in each. W. Sparrow got three seconds.

BROOKLYN C. C.

THE annual regatta of the Brooklyn C. C. was sailed on June 21, off Bay Ridge, in a strong N.W. breeze. The junior sailing race brought off the following results:

Dark Secret, F. R. Kellogg, 1
Plumtree, W. T. Winthrop, 2
Bunch, W. H. Cammeyer, 3
Euryllida, H. H. Smyth, 4

The senior sailing had for starters:
Bat, L. B. Palmer, Ianthe.
Passaic, G. P. Douglass, Ianthe.
Teaser, W. D. Anderson, New York.
Vagabond, C. J. Stevens, New York.
Ianthe, W. T. Winthrop, Ianthe.
Beta, T. S. Oxholm, Yonkers.
Echo, George W. Cox, Crescent.
Nipic, C. V. Schuyler, Ianthe.
Eclipse, F. L. Dunnell, Brooklyn.
Eros, F. C. Moore, Knickerbocker.
Seabright, D. Denison, Crescent.
Fiche, W. W. Whitlock, Brooklyn.
Rattier, R. S. Blake, Brooklyn.
Uno won at 4:07:28, with Eclipse at 4:07:35. Course 3 miles.

The next race was for canoe yawls, three times around, 4½ miles. The starters were:
Restless, H. P. Allen, Marine and Field.
Nomad, Arthur Hurst, Marine and Field.
Vin, John Johnson, Brooklyn.
Gale, D. Denison, Crescent.
Kuo-ne-shie, W. M. Brownell, Crescent.
Galloux started in the lead and kept this position throughout the course.

The sailing and paddling race was over a 3-mile course the starters being:
Passaic, F. P. Douglas, Ianthe.
Eclipse, F. L. Dunnell, Brooklyn.
Eros, F. C. Moore, Knickerbocker.
Passaic won.

The course for tandem paddling was 1½ miles, the starters being:
Plumtree, G. P. Douglas & Stewart, Yonkers.
Miguel, Edinger & Leatt, Crescent.
Nipic, Schuyler & Hoff, Arlington.
Uno won. Nipic capsized.

The last race was a half-mile paddle:
Ianthe, W. T. Stewart, 1
Euryllida, F. Kellogg, 2
Eclipse, F. L. Dunnell, 3
The judges were Com. Wilkin, W. Miller, M. M. Davis, D. A. Nash, all of the Brooklyn C. C., and Richard Hobart, of the Ianthe C. C.

ROCHESTER C. C. WILSON CUP.

THE second race for the Wilson Cup was sailed on Thursday last, June 26. The starting gun was fired at 4:37 P. M. Marie started first and secured a long lead, but was overhauled by Polly Wiggle, Surprise and Massawippa before turning the first buoy. The turn was made in the following order: Marie, Polly Wiggle, Surprise, Massawippa, Midget and Toodles, not over 15s. apart. On the run down the wind Massawippa passed Surprise and Polly Wiggle, but was in turn headed by Polly Wiggle at the buoy. The second round was clean and exciting, all the canoes being in a bunch and a very hard and gusty wind having sprung up. It was see-saw all the way up, first one then another having the lead. The buoy was turned by Marie first, followed by Polly Wiggle, Surprise, Midget and Massawippa; Toodles withdrew.

On the run down the wind to the second buoy Massawippa capsize and withdrew. The buoy being turned by Polly Wiggle, Marie and Surprise in the order named, with Midget hopelessly in the rear, it was still anybody's race, there only being 14s. between the first and third boats, and 1m. between the third and fourth; but on the run to the home buoy Marie forged ahead crossing the line 1m. ahead of Polly Wiggle and Surprise, Surprise being obliged to luff across the line, thereby losing to Polly Wiggle. The times were as follows:

Round, 1st 2d Elapsed.
Surprise, McVean, 34 00 38 30 1 12 30
Marie, Stewart, 31 00 40 00 1 11 00
Polly Wiggle, F. L. Smith, 34 00 38 00 1 12 00
Midget, Moody, 35 00 39 00 1 14 00
Massawippa, Martia, 53 00 Capsized.
Toodles, Dodge, Withdrew.

POINTE CLAIRE CANOE CREW.—The second of the series for the Pointe Claire canoe trophy was sailed on June 21 and resulted as follows. Start at 3:48:

Isis, D. A. Poe, 1st Round, 2d Round, 3d Round
Albino, H. McLean, Withdrew.
Mab, C. Archibald, 4 32 5 50 7 31 45
Mab has won one leg for the trophy, Isis one and there are three races yet to sail.

NEW YORK C. C.—The handsome new house of the New York C. C. was used for the first time on June 21, a number of visitors being present to take part in the annual regatta. In consequence of the rain and heavy weather the races were postponed until later in the season. A scrub race was sailed, Mr. Schieffelin coming in first and Vaux second.

CHIMMON'S ISLAND.—The Norwalk C. C. will camp on Chimmon's Island, off Norwalk, this month. The island has been specially fitted up for camping parties, tents, etc., being to rent there.

A. C. A. MEMBERSHIP.—Eastern Division: William P. Seymour, Holyoke, Mass.; Frank P. Sames, Hartford, Conn.

LAWN TENNIS, baseball goods and exercising machines are set forth at length in the catalogue of Schoverling, Daly & Gales, of 803 Broadway, New York. They also carry a large line of the best bicycles and tricycles.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Paynee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adv.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 320 pages, price \$2.50. For sale by FOREST AND STREAM.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

UVIRA'S LOG.

THE following account of the new Fife cutter *Uvira* and her recent voyage across the Atlantic is copied from the *Mail of Halifax*, N. S., of June 18. The new boat, which was launched head next week, in which case she will race in the 40ft. class, with *Alga*, *Thelma* and *Millicent*. As already announced in the *Mail*, Mr. Fraser's new yacht *Uvira* arrived from England yesterday in command of Capt. Wm. Ross, who speaks in the highest terms of the splendid sailing and seagoing qualities of the boat, and states that she is the best craft he has ever sailed in during his 18 years experience as captain. The captain also may be seen at Marblehead on the seamanship of his crew. The official dimensions of the boat are as follows: Length from fore part of stem under the bowsprit to the aft side of the head of the stern post, 50ft.; main breadth to outside of plank, 11ft. 3in.; depth of hold from upper deck to ceiling at midships, 8ft. 6in.; depth from top of beam amidships to top of keel, 9ft.; depth from top of deck at side amidships to bottom of keel, 11ft. 3in.; round of beam at midships, 16ft. 6in.; designer, William Fife, Jr., of Fairlie, Ayrshire, naval architect. The ladies' cabin is located in the after part and has two large sleeping berths. The apartment is finished in white and gold. The saloon, which is situated amidships, is finished in mahogany and walnut and upholstered in red. It is fitted with silver plated lamps. In the forward part of the boat is the men's cabin, which is finished in polished woods. The *Uvira* was launched on May 24, by Captain Wm. Ross on May 10 by the builders, W. A. Black & Co., Southampton, who built her for the sum of \$8,000. The craft left Tye, Cornwall, England, on May 24. The weather was fine, but a very light breeze was blowing. The following extracts from the log will give an idea of her speed and seagoing qualities. Her run was a very good one considering she had head winds to contend with all the time.

May 25—Wind south west, thick, cloudy weather, and heavy sea. Distance 101 miles.
May 26—Wind west by south, fine weather. Boat speeding along nicely—104 miles.
May 27—Wind west by north, fine weather. All sails set—114 miles.
May 28—Wind north west, heavy sea. Boat running with canvas all set—90 miles.
May 29—Wind west southwest, heavy seas running. Boat close hauled, and going at the rate of 9 knots an hour. In the latter part of the day experienced more moderate weather. Total distance sailed 173 miles.
May 30—Heavy gales from south-south west with thick and rainy weather, blowing a gale, but rode through splendidly. At 2 P. M. the weather moderated, but a huge swell was prevailing. Boat running along under two reefed mainsail and two reefed foresail. Distance 92 miles.
May 31—Variable winds, foggy, heavy sea from west, winds west, west north west to south west. All sails set—77 miles.
June 1—Wind west south west, heavy gale and heavy sea from west. On this day the cutter showed some magnificent work going to windward, making the run for the day 177 miles. She made as high as 11 knots an hour.
June 2—Weather moderate, bordering on a calm with light variable wind—66 miles.
June 3—A succession of calms with rain accompanied by fog—48 miles.
June 4—Winds varying from west south west to west, heavy sea from south west, all sails set. Signs of a heavy storm approaching—99 miles.
June 5—Wind from north east to east, light winds—94 miles.
June 6—Heavy gale from east, boat running under a reefed square sail—164 miles.
June 7—Weather first part of day moderate. At 6 A. M. a heavy squall from the north west was experienced, and all sails were hauled down. Run this day for two hours, when a reefed foresail and two reefed mainsail were set. Although the weather was exceedingly boisterous the craft behaved admirably. Only 31 miles were made.
June 8—Day opened with stormy winds from west north west. Heavy gales were encountered. Huge clouds appeared in the sky, and every indication of the coming of a heavy storm. The sails were reefed fore and aft. Boat passed through the storm without sustaining any damage, and made the very good run of 122 miles.
June 9—Moderate winds from west, sea quite calm. At 6 P. M. wind increasing from south west, and changed quickly to west-north-west. Heavy sea prevailing—70 miles.
June 10—Heavy gale from the west, thick weather and rough seas prevailing from the south west. Running under close reefed foresail and mainsail—120 miles.
June 11—Heavy winds from the south west, close reefed fore and aft, wind changed to north-west with very heavy seas—82 miles. At 4 o'clock arrived at Cape Royal, Newfoundland, all well. Remained there two days.
June 12—Left Cape Royal at daylight and rounded Cape Race at 8 A. M. Winds north west, and very heavy sea from the west. At 12 o'clock Cape Pine bore north north-west, distant 12 miles.
June 14—Westerly winds and a heavy sea prevailing. Towards evening the wind increased and later on developed into a heavy blow from the south.
June 15—At 1 o'clock P. M. wind south-south-west, thick and rainy, heavy sea. Wind hauled to the north-west. Passed a barque under close reefed sails.

June 16—Wind in morning from north-west. Afternoon, wind south-west, moderate with very light sea running. At 10 o'clock in the morning White Head was sighted.
June 17—Arrived in Halifax at 9 o'clock in the morning, weather fine. All hands well and hearty. Examined craft and found everything O. K., not even a rope missing. Dishes remained intact and all furniture in first class condition.

BEVERLY Y. C., JUNE 28.

158TH REGATTA, FIRST CHAMPIONSHIP, MARBLEHEAD.
THE first championship race was sailed in a S.E. wind, which, though light inside the harbor, amounted to a fair sailing breeze with quite a little lump of a sea outside. The entries were few in number, but good in quality. In first class, *Saladin* did not have her new mast stepped in time, leaving race to *Hawk* and *Mopsa*, the former sailing very fast and winning with ease, the course being a beat to Half-way Rock, a reach to Pig Breaker and a run home, 10 miles.

In third class the new flagship was missed; she was entered, but did not arrive in time. *Wanda* and *Kathleen* got off on the wing closely followed by *Nixie*, allowed to a job and mainsail, and *Edith*. *Kiowa* tried to shoot across *Wanda's* stern, but was fouled and badly delayed by *Nixie*, the result being she was a long way behind at the start. The course was a broad reach to Bowditch Ledge, going outside No. 6; then a run to Curtis Point and a beat to No. 5, where sheets were eased a little for the run in.

Kathleen took the lead, closely pressed by *Wanda*; *Nixie*, carrying a balloon jib, which was contrary to the rules, was following them.

Kiowa soon passed *Nixie* and caught *Edith*, but found herself in a bad place; she tried repeatedly to pass *Edith* to windward, but the latter was too much, and a series of luffing matches was the only result; while *Nixie* was in such a position as to hinder her in going through *Edith's* lee. The result was that while the leaders were sailing a straight course the others were going round in circles, until *Kiowa* got through *Edith's* lee at Bowditch and started after the leaders.

Kathleen rounded Bowditch first, closely pressed by *Wanda*, then *Nixie*. *Kiowa* was nearly two minutes behind *Kathleen*, with the others at 15-second gaps.

Edith and *Nixie* held further off shore, getting a better air, and began to gain; *Kiowa* kept after the leaders, steadily gaining and closing through the lee of *Nixie* and *Wanda*, and finally establishing an overlap on *Kathleen* before the mark was reached, the boats rounding as follows: *Kiowa*, *Kathleen*, *Wanda*, *Edith*, *Nixie*, *Nixie*.

Once on the wind *Kiowa* had it all her own way, sailing away from the fleet easily, and opening a good gap, though the heat was only about a mile and a half. *Edith*, while pushing *Wanda* closely for second place, and well inside her allowance, broke a three-bulb main block.

Wanda, though a second class boat, sailed in third class by invitation of the class, and her measurement proves the flaws in the B. Y. C. rule, which is boom, gaff, and height of upper peak halliard block, divided by three, the result added to waterline and divided by two. *Wanda* is 10ft. longer than *Kiowa* on waterline, and her sail is decidedly larger in actual area, but the change through the lee of *Nixie* and *Wanda*, and finally establishing an overlap on *Kathleen* before the mark was reached, the boats rounding as follows: *Kiowa*, *Kathleen*, *Wanda*, *Edith*, *Nixie*, *Nixie*.

FIRST CLASS.			
	Length.	Elapsed.	Corrected.
Hawk, sloop, Gordon Dexter.....	38.3	1 52 30	1 51 27
Mopsa, sloop, F. E. Lyman.....	38.3	2 02 22	
THIRD CLASS.			
Kiowa, cat, W. Lloyd Jeffries.....	22.7	1 38 40	1 27 37
Kathleen, sloop, R. S. Peabody.....	25.5	1 41 30	1 32 55
Wanda, cat, R. C. Robbins.....	22.7	1 41 51	1 30 48
Nixie, sloop, A. L. Cochran.....	24.5	1 43 30	1 34 05
Nixie, cat, W. O. Taylor.....	22.1	1 45 42	1 33 04
Edith, cat, F. E. Wood.....	20.5	Disabled.	
FOURTH CLASS.			
Dolphin, cat, Royal Robbins.....	18.0	1 54 52	1 39 11

It was a good day for Cape cats, Hanley's new *Madge* winning her race at 11:30, the same time as the beating *Mabel*, *Tartar*, and *Myrtle*. Winner of prizes: First class, *Hawk*; second class, *Kiowa*; third class, *Kathleen*; fourth class, *Dolphin*. Legs for champion pennants on actual time won by *Hawk*, *Kiowa* and *Dolphin*. Judge, F. Elliott Cabot.

SMALL STEAM LAUNCHES.

BURLINGTON, Iowa, June 10.—Editor *Forest and Stream*: It would be to the interest of every owner of a small pleasure steam launch, plying on waters controlled by the U. S. steamboat inspection laws, to use their influence to have the law modified in regard to licensed officers. A boat which can be efficiently handled by one man ought not to be compelled to carry two, as is now the case. If he wishes to go on a trip and his partner is unable to go, he has to hunt up a man who has papers for pilot or engineer, or stay at home. It does not matter whether the said pilot or engineer is under the influence of "original packages" or not, so he has papers. Last winter I made application, through the U. S. steamboat inspection laws, to use their influence to have the law modified in regard to licensed officers. A boat which can be efficiently handled by one man ought not to be compelled to carry two, as is now the case. If he wishes to go on a trip and his partner is unable to go, he has to hunt up a man who has papers for pilot or engineer, or stay at home. It does not matter whether the said pilot or engineer is under the influence of "original packages" or not, so he has papers. Last winter I made application, through the U. SPECIAL CLASS.
Diadem, L. A. Hayward.....18.02 1 42 24 1 18 30
Pet, J. W. McFarland.....19.03 1 42 22 1 15 09

ROYAL NOVA SCOTIA YACHT SQUADRON.—The new house and grounds of the Royal Nova Scotia Yacht Squadron were opened on June 14, a very large number of guests being present. Com. Edwards was in charge of the ceremonies, giving an interesting résumé of the club's history in the course of his address. The flag was hoisted on the new house by Mrs. Edwards. In the afternoon a race was sailed between five of the yachts of the squadron, the finish being timed:
Wenonah, schooner.....3 55 30 Psyche, cutter.....4 18 05
Minnehaha, sloop.....4 01 25 Daphne, sloop.....4 26 00
Hilred, sloop.....4 04 30
Mr. Marquand, of the schooner Ruth, lately of Halifax, has presented a handsome cup to the squadron.

SPECIAL MATCHES.—A large number of private matches have been made this season. Minerva has a series of three with Liris, to be sailed in August, beside the postponed match with Chispa. Liris has a match with Clara that will probably be sailed as part of some regatta in which both start. Huron has a match with Iroquois, the latter getting her right allowance. Huron has also a match with Thetis. Kathleen will sail a match on July 9 with Mirth. Mr. J. W. Beekman's fast center-board sloop of the Oyster Bay Y. C. No important racing will take place among the sevens until the Fleet Cup race.

WEST LYNN Y. C. ANNUAL, June 17.—The annual regatta of the West Lynn Y. C. was sailed on June 17 in a light S.W. wind, that died out during the race. The courses were 4, 7 and 3 miles. The times were:

FIRST CLASS KEELS—20FT. AND OVER.			
Length.	Elapsed.	Corrected.

Jaunty.....1 22 46 3 09 17 1 46 31 1 44 59

Millie tried away her mast-head. Beside the regular class prizes, special prizes were offered for the winners under a length and sail area rule. Mignon, Egbert and Mucilage being the winners. On June 21, Ladies' Day was celebrated by a reception at the club house, with a review of the fleet by Com. Hasbrouck, followed by a race between Jessie, Edna and Victor for the Booth trophy and cash prizes, over a 12-mile course around Green Island Buoy. The times were:

FIRST CLASS.			
Start.	Finish.	Elapsed.	Corrected.
Jessie.....	3 28 56	5 54 07	2 05 11 2 05 11
Edna.....	3 28 06	5 54 44	2 06 58 2 05 28
Victor.....	2 27 31	5 54 50	2 07 19 2 04 58

Jessie took the Booth trophy for the third time, thus holding it, while the prizes under the length and sail area rule went to Victor and Edna. The day ended with a concert and a display of fireworks in the evening.

HULL Y. C. OPEN REGATTA, June 17.—The racing season of the Hull Y. C. opened on June 17 with an open regatta off the new club house, the course being from a line between the club pier and float, leaving flagboat on starboard, to and around Hull Club buoy, the flagboat on starboard, leaving it on starboard; thence to and around the Hull Club buoy, leaving it on starboard (near Prince's Head), leaving it on the starboard; thence to and across starting line, leaving flagboat on the starboard, and repeat. The wind was strong from the west. The full times were:

Wraith, W. Whitlock.....4 28 10 38 10
Vagabond, C. J. Stevens.....Disabled.
Beta, T. S. Oxholm.....Disabled.
Beta started her mainsheet, but failed at the deck and capsize, and was disqualified. Diadem was protested by Zeet for fouling a mark and was disqualified, and Rocket protests Peri's measurement. The judges were W. A. Cary, J. J. Souther, E. C. North, and F. H. Brown.

SEAWANAHKA Y. C. CRUISE.—The fleet of the Seawanahka Y. C. assembled at the rendezvous, Black Rock, on June 25, there being present Medusa, cutter, Com. Center, Mirth, schtr., Vice-Com. Hill; Iroquois, schtr., Rear-Com. Ellis; Huron, Capt. Duncan; Rajah, Capt. Hubbard; Nymph, Capt. Flint; Minerva, Capt. Carroll; Kathleen, Capt. Zerega; Varuna, Capt. Weeks; Mirth, Capt. Beekman; Indolent, Capt. Cruizer; Topsy, Capt. Townsend; Clara, Capt. Barron; and the steamers Radha, Capt. Wolfe and Eclecta, Capt. Newland. A meeting of captains was held on board the flagship, at which it was decided to sail on Thursday for New London, to witness the Yale-Harvard race, continuing on to Newport on Saturday, and then around the Cape, and as far as possible to the eastward, returning to Marblehead by July 10. In the evening the yachtsmen were present at a reception given in their honor by Mrs. T. W. Pearsall. On Thursday a pleasant run was made to New London, the wind being north to northwest. Here Marguerite, Liris and Zeig joined the fleet. On Saturday the cruise was continued to Newport, with a fresh southwest wind, the fleet anchoring at 2 P. M.

GOLDEN FLEECER, steam yacht, has been purchased in England by Mr. F. P. Osborn.

SOUTH BOSTON Y. C.—A regatta was sailed on June 21, by the South Boston Y. C., the wind being strong southwest. The times were:

Janish, C. H. Hatch, Jr.....15.00 Withdrawn.

The judges were Messrs. F. Smith, W. B. Chandler, Edward Pentz, Edward Kelliber and Wm. Wells.

ST. LAWRENCE Y. C., June 21.—The first of the series races of the St. Lawrence Y. C. for the season of 1890 was sailed Saturday afternoon, being little more than a drifting match from the start to almost the finish. The starters and their helmsmen were:

FIRST CLASS—26FT. L.W.L. AND OVER.
Chaparron, W. Clouston.....3 58 30 White Squall, J. Gesner.....3 59 00
Black Eagle, O. H. Levin.....3 59 00 Viking, J. L. Smith.....3 59 15

CHANGES OF OWNERSHIP.—Lydia, schr., has been sold by Frederick Grinnell to Ogden G. Wilkinson of Philadelphia; Helen, cutter, has been sold to E. L. Scott of Philadelphia, who will use her for cruising about Bar Harbor; Alice, cutter, has been sold to Mr. Richardson of New York; Columbia, schr., has been sold by H. M. Flagler to J. T. Perkins for \$19,000.

MINERVA AND CHISPA.—The match between Minerva and Chispa for \$250 per side, which was to have been sailed on Saturday, was postponed at Mr. Carroll's request, and will not be sailed at present. The match was arranged after the Atlantic Y. C. regatta, Mr. Carroll challenging Com. Lawton.

PLEON Y. C., Marblehead.—The first pennant regatta of the Pleon Y. C. was sailed on June 18 with 14 starters in the three classes, the wind being fresh from S.W. The winners were Minnie in the dory class, Unknown in the 16ft. class, and Mr. Crowninshield's new Wasp in the smaller class.

HUBBE'S YACHT AGENCY.—We call attention to the advertisement on another page of Hubbe's Yacht and Steamboat Agency. Mr. Hubbe has had a long experience among yachts and vessels of all kinds, and is prepared to furnish designs or to buy and sell all classes of marine property.

YAMA.—Mr. Ames's cutter left Winttingham's yard on June 27, being towed to Thirty-fifth street, North River, where she was placed in a tow of canal boats for Troy. She will be fitted out as rapidly as possible on her arrival at Oswego.

SEAWANHAKA C. Y. C.—One of the handsomest of the club boats which come to us each year is that of the Seawanhaka C. Y. C., and that of 1890 is no exception. It contains a list of 330 members and 140 yachts.

CORINTHIAN Y. C. OF MARBLEHEAD.—The new book of this very successful young club shows a membership of 361 and a fleet of 150 yachts, from Volunteer and Sea Fox down to the smallest cats.

IVERNA.—On June 14 Iverna was docked at Southampton and her centerboard removed, the slot being filled with lead. The trunk was removed entirely.

SANS PEUR.—Mr. Morgan's steam yacht sailed from Southampton on June 18 in charge of Capt. Craven.

CHIKITA AND PAPPOOSE.—These two forties are fitting out at Lawley's, the former for a cruise to the Maine coast.

GLADYS.—Mr. Vanderbilt's new 30 will be coppered at Lawley's.

ANAQUA.—This name has been given to Mr. Thayer's new 30.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

F. OAKDALE, Long Island.—The mouse you sent us is the jumping or deer mouse, sometimes called the Canadian jerboa. Its Latin name is *Zapus hudsonius*.

B., Brooklyn, N. Y.—Would fish of any size go over Niagara Falls and live? Ans. We can only conjecture the result of such a fall. The probability is that the air bladder would be ruptured and death ensue.

O. H. B., Manistee, Mich.—Please tell me if there is any way to soften a meerschaum pipe so that it will color again after it has been only partly colored (burnt). Ans. It is commonly supposed that a meerschaum can be softened by being boiled in wax, and that then it will color again. Just how this is done is, we believe, a trade secret.

T. A. T., Rhinebeck, N. Y.—Please state where good black bass fishing may be found in the upper part of the Delaware River? Ans. One of the best places known to us is Egypt Mills, Pike Co., Pa., where bass are plentiful, bait abundant and expenses small. Port Jervis (N. Y., L. E. & W. R. R.) is another good point. Between that place and the East Branch of the Delaware Pond's Eddy, Lackawaxen, Cocheton and Callicoon are noted resorts for black bass fishing.

W. H. B., Norfolk, Va.—1. Kindly let me know if there is such an article as gunning boots or shoes of leather which are absolutely water-proof. If so, where can they be obtained? What kind of pants would you suggest to protect one from the briars. Ans. 1. We know of no leather boots that are absolutely water-proof unless constantly dressed with grease or some water-proof mixture. 2. Wear canvas overalls outside your trousers. Nothing will always resist the briars, but the canvas is the best thing we know of.

J. E. H., New York.—I have a Gordon that, some three months since, dropped a nice litter, and at the end of seven weeks I separated the mother from the pups. A few days ago I allowed her to get in the pen containing three of them and they tried very hard to get some milk but the fountain was dry. She then seemingly with some effort threw up some partially digested food which the puppies at once devoured. I concluded she was not feeling well. The following morning she again repeated the action, and it struck me at once that this was the way in which, when necessary, they could feed their young. She is a fine breeder, and in raising about forty pups I have yet to lose my first one while with the mother. Ans. It is a very common occurrence for a bitch to feed her offspring in this manner.

J. Sweetland tells us a funny story of how five Siwash got away with a bear at his camp just across the bay from here. Mr. Bruin intruded himself in among the pots and kettles, picking out a dainty meal. While so engaged he attracted the attention of a Siwash, who at once called his mates to his help. Ground is pretty rocky round the camp, and plenty of loose stones ready to hand. They at once fell on the bear, like the Jews of old did on Stephen, and stoned him to death. He would at first endeavor to follow his assailants, but being surrounded a stone in the rear would turn him. So he vain gave himself up to the flesh-pots of the tenas kluckmens.—Union City Tribune.

THE COMING HAND-GRASP.

Cork and celluloid, cork predominating. Patent applied for. Improvement over all other rods. Not affected by water or heat. Cork is protected by celluloid. Will not blister the hands. By using the combination can get a more perfect hand-grasp. Rod will not sink. Hand-grasp can be made to match windings, and more durable than any other hand-grasp made. Admitted by expert anglers to be the coming hand-grasp. This season we make this hand-grasp only to order. We shall make no other next season.

FOR SALE BY ALL BOOK DEALERS.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

YAWMAN & ERBE,

ROCHESTER, N. Y.

Send for Catalogue, Free.

All Anglers know of "Chubb" and the high reputation that his goods have obtained. If you need a rod or other tackle, send direct to him and get goods that are warranted.

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1, black bass; No. 2, bass and pickerel; No. 3, muscallonge, salmon trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction, one minnow having been known to catch twenty-five bass before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

G. F. CLARK. JEFFERSON BORDEN.

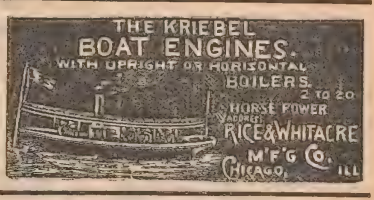

The ACME FOLDING BOAT CO.
MIAMISBURG, O.
The only portable boat that combines handsome model with compactness. No bagging; smooth, uniform surface. All parts of frame adjustable to compensate for stretching and shrinkage of canvas. Flooring forms the shipping case. The Acme is endorsed by prominent sportsmen everywhere. Capt. Paul Boyton, the famous swimmer, who has a 12 ft. boat, writes: "In all my experience with boats of every description, I never saw anything so compact and perfect. Her strength, lightness and beauty of model surprised me. She is easy to set up and to pack. She will be my companion on all my hunting expeditions, as I can carry her behind on my saddle as easily as I can a roll of camp blankets."

The King Folding Boats and Canoes
Are adapted to Life Saving, Military, Exploring, Surveying, Scientific and Sporting interests. Strength and simplicity of construction are requisite to their several emergencies. They can be built up or taken to pieces by anybody entirely without the aid of tools in from five to twenty minutes. The beam can be increased or diminished at will 12 to 24 in. according to size of boat, requiring but a few seconds of labor to effect the change. This extraordinary advantage is often an hourly necessity in leaving and approaching shore, and in varying depths of water. Always steady without ballast. Most unique boat on earth. Send for circular. Inventor and mfr. CHAS. W. KING, 338 So. Rose st., Kalamazoo, Mich.

A BLACK BASS NUMBER.
OUR black bass supplement, which will be published July 24, will contain a variety of material which will be of permanent value to anglers and all who are interested in this famous fish. The supplement will be in character much like those already published devoted to other fish. Illustrations will be given of all the species, with an account of their lives, habits, and the various modes of angling for them. There will be papers specially devoted to black bass fishing, among which will be one by "Kingfisher," recounting "Some Personal Recollections of the Bass Family." This is in "Kingfisher's" best style and will be relished by all who have enjoyed his accounts of the camps of the Kingfishers. There will be a paper by Dr. J. A. Henshall on the "Bass and Bass Islands of Lake Erie." Dr. Henshall will also contribute notes on black bass angling.

SNAP SHOTS.
THE California Sportsmen's Protective Association has issued an address calling attention to the growth of the preserve system in that State, by which various clubs have largely taken up the available shooting and fishing territory, and urging united action to frustrate the plans of the clubs for holding their territory and acquiring more. As has already been reported in these columns, the feeling in California is decidedly strong against the holders of exclusive fishing and hunting leases, and the association was formed primarily for the purpose of combating this system. The introduction of the address is as follows, "This pamphlet is issued by the sportsmen's Protective Association of California for the purpose of directing the attention of sportsmen to the same-preserve evil which has worked its way among us

and assumed such formidable proportions that it excites alarm for the future of true sportsmanship in the mind of every man who has its best interests at heart." The purpose of the association is stated to be "the abolition of game preserves, the enforcement of existing game laws and to secure the enactment of such further laws as may be deemed necessary and wise; the protection of the game and fish now in the State; the introduction and propagation of such desirable game animals, birds and fish as may flourish in the State, if introduced; the encouragement of field sports among its members, and to secure to all lovers of the rod and gun such rights, privileges and pleasures as come within the province of an association of sportsmen."

The present season has been an unusual one because of the abundance of fresh-water and salt-water game fish, which has everywhere made joyful the heart of the angler. The trouting has been something unprecedented within recent years; reports come from all parts of the country that the fish are of unusual number and size. This condition of affairs may be directly traced to the mildness of the past winter. The brooks were open and there was abundance of food. In severe winters, which freeze small streams and ponds to the bottom, it is to be presumed many fish are destroyed; and such a season as the present may therefore be ascribed in part to the open winter.

The shooting season of 1890 is full of promise. From all parts of the country quail are reported to be exceedingly numerous. Bob White's cheery whistle is heard everywhere piping the prophesy of good things to come; the nests contain unprecedented numbers of eggs; and the outlook for the quail shooter is of decidedly rosy hue. This is largely due to the mildness of last winter. The quail is of our game birds peculiarly susceptible to destruction by heavy snow and ice storms; unusually severe winters are followed by a corresponding scarcity of birds; and after mild seasons the quail supply is abundant. Large numbers of ruffed grouse have been observed in New England; the broods are many and large. This can hardly be credited to the open winter, for the grouse is a bird which is in a large degree independent of weather conditions through the winter. It finds its food without difficulty mostly above the snow, and is not starved out as the quail may be. Woodcock are reported to be less abundant than usual by the trout fishermen, who usually observe the birds while on their trouting expeditions; but this may be accounted for by the fact that it has been a wet season, and the birds have not repaired to the brooks as in dry seasons, and so the anglers have not had an opportunity of seeing them.

Secretary W. O. Bonnie advises us that the Kentucky Legislature has failed to pass the proposed fish and game bill prepared by the Kentucky Fish and Game Club. A portion of the bill passed the Senate but did not find favor with the House. This is the more to be regretted because the game and fish laws of Kentucky are in a most deplorable condition and their reformation is urgently needed. No reasons were given for refusing to adopt the suggestions in the bill prepared by the Club. The Club, however, is so strong numerically and has manifested such a determined intention to secure the reform that we confidently look for renewed efforts at the next Legislature, and in time the needed laws will certainly be enacted. Meanwhile, the Club should not lose any time in educating the public by doing missionary work. No game and fish laws are effectual until the public sentiment has advanced to an appreciation of their value; and by keeping this matter alive and discussing it in the papers of the State, Kentucky sportsmen can surely prepare the way for the laws they deem necessary.

Skill in sport is well enough in its way, but after all it is the "duffers" who have the fun. A game of base ball by League teams is a pretty spectacle, and thousands pay their gate-money to see the hired experts go through the performance. But for a real, simon-pure, downright good time commend us to a Fourth of July match in the country played by scrub nines, where every individual player is umpire and captain in his own person, and does the mugging and the shouting with enthusiasm and enjoyment unknown to the salaried professional. As men play at ball on the Fourth who would never think of playing on any other day of the year, so they are coming

to shoot at the traps. Fourth of July scores are always remarkable for their "goose-eggs." Low totals prevail. They tell plainly that the shooters are novices. On no other day in the year would a general average be found so low. Trap-shooting has advantages over baseball as a noise producing pastime; the shooter enjoys in addition to the excitement of the competition the patriotic satisfaction that he is celebrating the day with a proper amount of racket. And as for the scores, it matters not at all that they make a poor showing compared with those of the experts. The Fourth of July scrub teams have the fun, high totals or low, win or lose. And that is more than can be said of the expert who is in it for what he can make out of it and makes nothing.

The New York woodcock season will open Sept. 1. The time was changed by a law of the last Legislature, which we quoted last week. Like the average New York game statute this one is a decided bungle, since it imposes a new season without any reference to the former section naming the season; and thus leaves open to conjecture the intent of the Legislature. When the codification committee shall have completed its labors, the New York fish and game statutes, let us hope, will be in plain intelligible form, suited to the comprehension of common people. Any persons having any suggestions to make respecting the laws, should communicate with the secretary of the Commission, Deputy Attorney-General Ed. G. Whittaker, Albany.

We have received from Mr. Frank M. Coleman, of Johnstown, Pa., an unique memento of the great Johnstown flood. This is an artotype engraving of Mr. John Tracy's painting of the two dogs Croxteth and Sensation. Mr. Coleman tells us that the picture was in his residence which was swept away by the flood, and the artotype lay at least thirty feet under the water during the deluge. It is certainly an interesting relic. A suit brought to recover damages caused by the flood has recently been decided in favor of the South Fork Fishing Club; and it is stated that no further action will be taken against the club looking to the recovery of damages caused by the breaking of its Conemaugh dam.

No good reason suggests itself why poetry and ornithology should no go hand in hand; there is certainly enough of the poetical in the ascertained facts of bird life to give scope for the versifiers. But here is a poet in the June Century who writes:

And oft is heard the drum of quail.
This is followed by a line,
And meadowlarks are soaring high.
The curious phase of this is that the poem is one inspired by bird music; and its author might justly be thought to be something of an observer of bird life.

The intense heat of the July days that have passed has made the woodcock shooting in those States where summer shooting is still permitted harder and more disagreeable work than usual. While this is bad for the shooter it is good for the birds, and if we are obliged to swelter we may feel that this torrid heat will keep many a gunner from killing the summer birds. The majority of good sportsmen believe that summer shooting should be done away with. It is to be hoped that the day is not far distant when public sentiment all over the land will condemn this wasteful practice.

The "original package" decision, which is making trouble with the commodity to which it directly referred and which is capable of making more trouble with respect to game imported into the several States and there sold out of season, will be offset if an amendment now under discussion in the Senate shall be passed. It is to the effect that any article of inter-State commerce shall, when imported into any State, become subject to the laws of that State.

Black bass, wall-eyed pike and other game fishes are dying by thousands in Cedar and Leading creeks, the principal tributaries of the Little Kanawha river, West Virginia. The cause of this mortality is utterly unknown as usual, but its effect threatens to be the annihilation of the best fishes of the region. The systematic investigation of phenomena of this serious nature ought to be one of the urgent duties of the Government.

The Sportsman Tourist.

THE LIFE AND TIMES OF OLD JACK.

A Pioneer Dog.

A FOR-SURE STORY.

"WHY, 'Old Jack,' as you call him, was a dog!" exclaimed my wife.

"Well, what of that?" said I. "Didn't he have a 'Life and Times'?"

"O, now, don't be silly," returned my spouse. "Do you suppose that any editor would be foolish enough to print such stuff, even if you were—er—did write it? Any decent editor, I mean."

"Well, that depends," said I, assuming as dignified a manner as I could, and at the same time rubbing up my spectacles preparatory to an attempt on the life of Old Jack. To speak the truth, I was nettled. I never had a friend during all my boyhood years in whom I believed more thoroughly than I did in Old Jack, and now to hear him spoken slightly of by one who never saw him, and who, of course, knew nothing of his many noble qualities, was a little too much; and so, after my spectacles were duly polished and my pencil properly sharpened, I deliberately turned my back on the offending woman and wrote as follows:

Old Jack was a dog, it is very true, but then he was a pioneer dog, and that goes a great way with most people nowadays. He never saved any little boy from drowning, nor any drunken man from freezing, nor did any other one great and signally heroic act; for he wasn't that kind of a dog. He was what was called in his day a "coon dog;" but surely no coon dog ever made better use of his opportunities, and at the same time established a better reputation for true doghood, than did Old Jack.

It was a great many years ago when this story opens, and for that matter, a great many when it ends; for Old Jack has been dead so many years that I'll venture there is scarcely a half dozen persons living who have any recollection of him outside of myself and an aged aunt who used to live in the family.

A way back as early as 1832, which was before I was born, my father was a "mover"—moving from Kentucky to the new State of Indiana. Four horses were hitched to the great wagon which held the "plunder," and in which, well up to the front, rode the young woman who was in process of time to become my mother. There are no wagons to be seen nowadays like that one. It had a long, crooked bed, which was fringed all around with chains, that jingled and clanked as the wagon pitched and jolted over roots and stones, making a din that could be heard for hundreds of yards away.

The movers had crossed the Ohio River at the then new and promising town of Madison some time in the forenoon, and had climbed the big hill and crossed the plateau on which North Madison has since been built, and were I do not know how far on their journey (for my mother, who told me this part of the story, never said, when they heard a peculiar noise, and one so loud, that my father, who was riding the left wheel horse, cried "Whoa!" and the team stopped still.

"What was that noise?" said my father.

"I don't know," answered my mother, "but I have heard something like it several times, though not so loud as just now."

"We'll wait till Wiley comes up," said my father. "Maybe he'll know."

In a few moments Wiley was heard crying "Hoocy!" to old Boss and the other cattle, which were moving from Kentucky to Indiana also.

"Wiley, have you heard any peculiar noises—any noises like the howls of a dog in a hollow stump or in a barrel or anything, this morning?"

"No sir!" said Wiley, as with his big toe he cut the rim of high land between horse tracks filled with water, thus uniting two little seas by one little strait.

"Well, we have. Do you know what it is?" and my father looked at the lad as though he suspected him of knowing more than he chose to tell.

"No sir!" promptly answered Wiley, as with his great toe he continued his geographical feats.

Wiley was a good boy, as boys went in the days, Mr. Editor, before you and I were born—better, I dare say, than most of the boys of this day were. I have often heard my mother say that bound boy as he was, if you sent him to feed the horses or slop the pigs or salt the sheep you could rely upon him doing it. In all the ordinary affairs of life he was a trusty, truthful boy. But in the extraordinary affairs, and especially when it came to the accounting for strange and mysterious sounds heard while moving, Wiley was not quite so reliable. He was known at least on one occasion to solemnly declare he didn't know whence came certain strange and mysterious sounds, when it was subsequently demonstrated beyond a reasonable doubt that he did know.

When the noon hour came round the movers stopped for refreshments, and one of the first things to be done was to loosen the chains that held in place the immense "feed box" to the "hind-end gate" of the wagon and place it in position for the use of the horses. No sooner was this done and the cover removed than out popped a lithe, active young dog more than half grown. And never did a dog evince greater joy at his liberation than did that one. He leaped up against my father, licked his hands, and whined his thanks after the fashion of all good and glad dogs in all times of the world's history. Then espying my mother, who was busy kindling a fire to boil the camp kettle, he ran to her, and would have displayed his joy in the same boisterous manner had she not said with a stamp of her foot, "Begone! you dirty dog, you!" Then he fled to Wiley, who was not far off, doing his utmost to look astonished at what had happened, and leaping against him he licked his hands, receiving in return a sly pat on the head. And from Wiley he fled at the cows, and driving them a proper distance from the wagon he trotted back in a proud sort of way, and with a sort of here-I-raise-my-Ebenezer air he lay down under the wagon, and from that moment on he was a member of my father's family.

There was of course much ob-ing and ah-ing at the sudden and unexpected appearance of the dog, and Wiley was questioned and cross-questioned as only a suspected boy can be; and little by little it came out that he had "found" the dog at the Madison ferry, and had

put him in the feed box to keep him from following, and under the pressure of cow driving had subsequently forgotten all about it. I am thus particular with this part of my story because it is with dogs, much as it is with men, a good pedigree is everything. Still there have been men who mounted up high in the world without any recorded pedigree at all; and I am proud to say that Old Jack was a notable instance of the like good fortune among dogs.

From the day he became a member of my father's family Jack made his way in the world. He was, as already intimated, a lithe, active fellow when he jumped out of the feed box; and he ultimately grew to be a medium-sized big dog. His coat was a glossy black, with a white snip down his forehead, with a snowy throat and breast, and also some white on his legs, a white stripe on his belly and a tuft of white on his rather long tail. My father, being an ardent Jacksonian man, named the dog Andrew Jackson, but that was too great an every-day load for him to carry, and it soon dwindled into plain Jack, which in his old age was turned into Old Jack.

I suppose that like all other young dogs Jack had his ups and downs during the first year or two that he became an inmate of my father's family. No doubt he got into many a scrape chasing the chickens, tugging at the sheets on the clothes line and digging holes in the yard in the wrong places, and the like; and that he received many a good "licking" for his mischief. And no doubt he and Wiley were fast friends, and Wiley did his very best to teach him how to track possums and coons and other varmints with which the Indiana woods abounded in the pioneer days. But as to any and all of these matters I have no certain knowledge. My knowledge begins with the day my father died, which was on a mellow September day, when I was just twenty-eight months old. I remember the day well, young as I was, for the unusual commotion in and about the house distressed me so much that I ran off, literally "took to the woods," and soon was a lost boy.

Of course my disappearance created excitement, and it was not long before the neighbors were off in search of me, and when I was found, which was late in the afternoon, I was fairly jubilant at my rescue. Jack was with me—had been with me in all my wanderings, and no one can tell what a comfort it was to me to know that he kept right along at my side all the time. My mother in after years always maintained that it was Jack who had run off, and that I had only followed; but my recollection of that doleful day is such as to warrant the statement that it was I who had run off and that Jack had gone along to see me well out of it.

After my father's death there were only four families left in the neighborhood, and my mother, abandoning her home, took me and went to live with a brother at Hope-well. Jack staid behind, I never knew why, but he did, and made his home with the nearest neighbor, Serrill Winchester.

At the end of two years my mother, being reinforced by her mother and a sister, returned to the old home; and I well remember that when the wagons drove up to the old home, Jack was there and leaping up to my mother, licked her in the face and was not scolded for it either. After thus greeting her, he sprang at me and gave me if possible a more boisterous greeting than he had given my mother; and from that moment on till the day of his most tragic death, he and I were the fastest of friends.

Right away after our return I remember to have learned that Jack had acquired a great reputation as a "varmint" hunter. The neighborhood to which we had returned was called by the name of Shiloh. This was the name given to the church organization, whose log meeting house stood within sight of our house on my father's farm. The territory of the neighborhood extended about two and a half miles from east to west, and was in width about one mile. A road traversed the entire distance the long way and the meeting house was located about the center. A dozen families in round numbers had moved into this neighborhood and it constituted the hunting ground of Jack. He visited every cabin in the circuit of the neighborhood except two, which gave rise to the saying, that "Jack hated Methodists and despised Whigs;" for the one cabin was Methodist and the other Whig. Jack was a Presbyterian—outwardly at the least. I don't think he knew or cared about the decrees, infant baptism, or any other of the tenets of the church, and he was certainly somewhat lax in his morals, for he would as soon hunt on Sunday as on a week day, a practice that no true blue Presbyterian of Shiloh would for a moment tolerate in a man. William Young was the Methodist who had built his cabin within the sacred precincts of the Shiloh neighborhood, and to William Young's cabin Jack was never known to go; but then William was never known to go to the Shiloh meeting house, and I think that accounted for the go-by Jack gave to his cabin. He knew all the men and women and children who attended the Shiloh church and he constituted himself the special protector of their hen roosts and corn fields—all except the one lone Whig of the settlement. Why Jack withheld the light of his countenance from our estimable Whig neighbor I am sure I cannot make out. I very well remember that I used to hear the members of his party spoken of as "nasty, stinking Whigs," and I confess that there was a time when I supposed there was a difference in odor between Whigs and Democrats, and knowing as I did the keenness of Jack's scent, it seemed very reasonable to me that he should avoid the Whig's cabin. But now that I know the phrase was used in a Pick-wickian sense and meant nothing, I am utterly unable to account for Jack's demeanor toward that Whig. He not only attended our meeting house but he visited at my mother's, and no good reason was ever assigned so far as I know for Jack's mistreatment of him and his. We always contented ourselves by saying, "Jack hated Methodists and despised Whigs."

If I have not said it already, I say it now; the woods were alive with foxes, raccoons and opossums, and the drifts along the streams fairly swarmed with minks, all of which animals preyed upon the poultry, while the coons in addition were little less destructive to green corn than so many pigs. I have heard old men tell of hearing the coons in the cornfields "smacking their chops" on the young corn in the ear, with a noise like that made by hogs eating, and it is a well known historical fact that in the early settlement of Indiana the coons, with the aid of the squirrels, would often destroy entire fields of corn.

As to the poultry, between the animals already men-

tioned it ran a sorry chance. Among my earliest recollections is the "barking" of the foxes in the thickets surrounding the fields. One of the commonest night alarms was the squalling of some poor luckless hen, as she was being carried away bodily by a night prowler to be devoured in the woods. At such times all was excitement, not only in the roost, but in the family at the house, and if Jack was home he of course joined in the chase that was sure to follow, and the mischief deer had to move lively or he was in turn a victim himself.

While the depredations hinted at by the vermin of the woods were being carried on at all the homes in the neighborhood, it is a singular fact that Jack was the only coon dog in it. Old Jesse Young, a noted hunter who lived at the extreme eastern end of the neighborhood, had two dogs, both of them excellent to run down wounded deer, and they had on more than one occasion shown the courage to tackle a wounded bear, but they were both strangely indifferent to the smaller and more pestiferous animals of the woods.

Jack was in no sense a deer dog. I verily believe he would as soon have thought of running down a sheep as a deer. Show him the track of one and he would give you a reproachful look and trot off the other way. Once he so exasperated a hunter who wanted him to run down a deer he had wounded, that Wiley Harrell, who was by, always claimed great merit to himself for having prevented the hunter from shooting the dog in revenge for what he declared to be his cowardice. Nor was he any better for bears. I remember that a wounded one was once chased through the neighborhood by old Jesse Young, and all the dogs, Jack with them, were brought out to hunt down the beast. But he showed at the very outset that he had no stomach for a tussle with a bear. He not only refused to track, but went straight home. He was not going to be ripped up by an enraged bear—not he. Wise dog!

For he who fights and runs away
May live to fight another day.

Jack never fooled away his time, nor wasted his strength, barking after squirrels, running after rabbits, nor digging after chipmunks. Nor was he much of a farm dog, as that term goes now. He could watch a gap, just as a born woodsman could settle himself down to steady toil; but does he ever do it? Jack could worry a pig, or chase a cow or a horse, but he seldom did, especially if old Mink (a homely, good-natured old feiste, whose very existence would long ago have been forgotten but for Jack's good company he happened to get into), was about, and he usually was. At such times it required rather a peremptory command by some one in authority to set Jack on. Mink might bark and snap, and snarl and blather around to his heart's content, for what else was he fit for? Let him chase the cows, and swing by their tails and be kicked at; Jack didn't care. He was not going to wear himself out in doing the work of a common drudge, when the woods were full of game, and the hen roosts and green corn needed protection so badly. It is very true, however, that if Mink happened to be from home, Jack would show prudence as a watch dog. He would look after the rascally pigs and the mischievous cows, and if company came, he would run down a chicken with considerable zeal; but he evidently disliked all such work and thought of nothing but rambling in the woods.

All canine hunters, I suppose, experience pleasure in the chase, but it is not rare that one should find his greatest pleasure while hunting alone? It is an every day occurrence to find dogs that will hunt with their masters, or in packs, but Jack always went on his hunting expeditions alone. He never hunted while in the woods with man or boy, nor for that matter did he ever hunt in company with any dog, save with Mink, and his hunting with him was confined to a very limited range around home. It always seemed to me that even around home, Jack tolerated Mink much as my uncle used to tolerate me when he went squirrel hunting. I could go, but I must keep close to his heels and carry the dead squirrels. He did the hunting.

Jack's method, I am thinking, was not in the usual dog line. He would lie around home and sleep the same as any other dog till the desire to go a-hunting came over him, which was usually well along in the afternoon, when he could be seen to rise to a sitting posture, prick his ears forward and listen and look and work his flexible nostrils as though he heard, saw or smelled something unusual. This is a well known habit with all dogs, and it may be that some one of their senses is impressed with the more or less near presence of an object or objects of which man with his duller senses can know nothing. But I never thought that Jack on such occasions heard, saw or smelled anything out of the usual run. The desire to go hunting had come over him and that was his way to get ready. Possibly he examined the place he was in in the manner indicated to ascertain whether or not any game was there, or it may have been a sort of mechanical act, just as we sometimes see a man, who, while setting out on a hunting expedition, will every once in a while bring his gun to shoulder as if game were actually at hand. Be this as it may, after listening and looking and smelling a proper length of time, the dog would trot off down the path, cross the stile and enter the highway, and thence go straight to a neighbor's house. It might be the nearest or it might be the furthest, but he stuck to our Presbyterian settlement, ignoring, as above stated, the Methodist man and the Whig. This was not his universal custom, but it may be said to have been his usual one. The neighbor's cabin to which he thus usually went served as a sort of base of operations as well as of supplies. Being well known to every man, woman and child in the neighborhood, his advent never caused fear or wonder. The children were always glad to see him, for he was noted for his gentleness, while their fathers and mothers were no less glad because he was looked upon as a sort of protection to their property. Of course he got his supper. Hospitality was the rule in Shiloh as well as elsewhere in the new State of Indiana in that day. A stray dog whose ownership was unknown could hardly pass by without receiving a crust, much less a dog so well known and in such high favor as Jack.

At dark he went forth alone to the woods and the hunt began. Often he caught his game on the ground—more often, no doubt, than was ever known to us. I can remember the frequency with which I and others used to find the remains of possums and coons half buried by rotten logs, in old stumps and in other out-of-the-way places on the farm. Very often, however, he carried the

trophy to the place where he had got his supper, and exhibited it to the family to receive their praises, at which he never failed to exhibit the greatest pride. More often, I think, he buried his quarry, or left it unburied and went in further search of game. Of course, he frequently treed coons, and generally when this was the case he stayed by the tree till daylight. His bark was sharp and ringing and known to all in the neighborhood, and it was seldom, indeed, that some one did not go to him in the morning with such aid as rifle or ax could give. The night's hunt was followed by the day's rest, usually at the home of the man who had gone to his relief in the morning, or else at the cabin whence he had set forth the evening before. However, he had no uniform habit in this regard. He might return home the second day or he might stay out for two or three days, or even more. He might make one house headquarters for the entire time he was out on any particular hunt, or he might stop in for a longer or shorter period at the houses of two or three persons.

In this manner Old Jack lived and hunted. During the hunting seasons, which to him were in the fall and spring of the year, he seldom failed to take one tramp a week, and some weeks he went forth twice, and he has been known to stay out the whole week. Our own home he very naturally made his headquarters more frequently and for longer extended periods during his hunting seasons than any home of our neighbors, while during the winter and the very hot summer he was always at home.

Old Jack confined his hunting operations to the Shiloh neighborhood, because, as I suppose, he knew the people in it; and he hunted down the noxious animals that infested its woods and thickets, because, as I further suppose, he loved the sport. I do not accord to him any sentiment of duty. Nevertheless, may I not praise him? Does he not deserve to be mentioned in the history of good dogs?

But alas, alas! Jack fell a victim to his own zeal. He had grown old; his teeth were well worn down; his claws were blunt and his muzzle had grown gray. Still he kept on hunting. The bears had clean disappeared; it was only now and then a deer was seen, and old Jesse Young the hunter had oiled "Old Crate," his deer gun, and hung her up on the gun rack, whence she was very seldom taken down. But old Jack kept bringing in the possums and coons. Of course these were much less numerous in the woods than they had been in his early doghood days, but he was still recognized as a valuable member of the Shiloh community.

One bright spring day Jack left home and went to the extreme western edge of the neighborhood, stopping at the house of Joseph Young, whence he made a foray into the woods. He did not return to Mr. Young's nor did he return home. His absence occasioned talk. Inquiries were made, but no one had seen or heard anything of the dog. He must have met with an accident, reasoned the people, and so he had. A small boy living just over the neighborhood line reported to his father one evening after driving the cows home that he heard a wonderfully strange noise that came apparently from a hollow stump. The noise frightened the cows, he said, as well as himself. My uncle hearing of the boy's story some days afterward, went to the place, where he found a dead sycamore stub, at the roots of which a dog had evidently been digging, and which showed a hole large enough for Jack to have crawled in, but which was closed with dirt and rotten wood thrown up from the inside. Climbing to an overhanging limb of an adjacent tree my uncle peeped into the hollow stub which was ten or twelve feet high, and there, side by side, lay old Jack and two possums.

The manner of the dog's death was plain to be seen. He had hunted his game to their den; and digging in after them had banked up the hole at which he went in. The game unearthed and killed, he found himself a prisoner, but lacked the intelligence requisite to effect his own escape. He had evidently scratched and dug, but without judgment; he had howled for help but no one heard him save a frightened cow-boy, and he had died the lingering, awful death of starvation, with the dead bodies of his victims lying untouched by his side.

By the time this history was finished my wife had sunk into a sound slumber and, as I had not the heart to waken her, it goes to the public without running the gauntlet of her criticism.

Natural History.

THE TRUMPET FISH.

A LATE issue of the Pensacola, Florida, *News* reports: "Capt. Wm. Johnson of the fishing smack G. L. Daboll was yesterday exhibiting one of the most curiously formed specimens of the fish family ever seen hereabouts. It was caught well off shore in the gulf and its like was never seen either by the hundreds of men who have fished on the gulf grounds for twenty years or more or by many masters of ships now in port and who have seen the strange fishes of every part of the globe. In form it somewhat resembles the garfish, but to no known family of that species does it belong. It has the snout of a sword-fish, the mouth of a sucker, the body of an eel and the tail of a rat. It is scaleless and of varying flesh tints in color. In the works of the United States Fish Commission it has no place; nor may any reference to it be found in the Smithsonian Institution's publications. It is about 4 ft. in length. Its snout is about 9 in. long, nearly round, being about 4 in. in circumference and hollow throughout its length. It was caught with a hook and line."

The curiosity referred to is the trumpet fish (*Fistularia*), of which the books describe two species, *tabacaria* and *serrata*; it is, however, not certain that the two forms are really distinct. We may as well confess that the author of the above graphic description is in error as to the occurrence of these fishes in the publications of the U. S. Fish Commission and National Museum. Both are described in Bulletin 16, National Museum, and we find one of them in the first Report of the Fish Commission and in its Bulletin for 1887. From the Bulletin we learn that 35 examples of *Fistularia tabacaria* were seized by Dr. Beaman near Somers Point, N. J., in 1887, and that the species is moderately common in Great South Bay, Long Island, and occasional around Cape Cod. Dr. Storer had a specimen from Martha's Vineyard, which is well fig-

ured in his "History of Mass. Fishes," plate xxv., figure 1, and described in his text under its old name of tobacco-pipe fish—a name as venerable as Catesby. Dr. Kay illustrates Storer's specimen in his work on the "Zoology of New York." The fish was known, also, to Dr. Mitchell early in the nineteenth century. The trumpet fish is, indeed, a curiosity, but of rather ancient fame, and we wonder at some of our contemporaries for their failure to recognize an old friend in a new dress.

DO SNAKES LIKE MUSIC?

Editor *Forest and Stream*:

In some recent numbers of *The American Naturalist*, Mr. Robt. E. Stearns discussed the effects of musical sounds on animals, and gave some interesting details of various cases in which animals were thus affected. Among others Mr. Stearns mentioned some snakes tamed by a gentleman in New York and trained chiefly by means of music. These reptiles were said to comprehend rewards and punishments administered through music, exhibiting either pleasure or anger according to their preference of one or another musical instrument, and a distaste for others. The owner of these highly moral and musical snakes would confer a favor on students of ophiology if he would kindly afford us some insight into his mode of discipline, and of the particular effect on the reptiles. In what manner do they evince displeasure or the contrary? And has he observed them to act in the same manner at other disturbing noises which are not music? This latter is a very important point.

It is an ancient belief that snakes are sensitive to "music," and the oriental snake charmers have for ages worked on this belief in exhibiting their so-called "dancing" cobras and other snakes. But what kind of "music"? Can we call the tum-tumming of the Indian drums or the noise of the bamboo pipes music? That snakes are easily affected by noise, that is by a jarring sound, a sudden knock—any sharp concussion in fact that conveys a vibration through solids—can be verified by any one who observes them closely. And so are some lizards and batrachians. In my work on snakes ("Curiosities and Wonders of Serpent Life") I have devoted a whole chapter to the examination of this subject, and may here be permitted to repeat my conviction that it is music as sound, as noise only, that affects them. Subsequent observations have tended rather to confirm than to negative this impression.

When we consider that snakes have only very imperfectly developed organs of hearing, no tympanic cavity, and no external orifice, we may well doubt the existence of a sensitive ear. But, on the contrary, when we contemplate the form of a snake and of many other reptiles prone upon the ground, we can well conceive the probability of an extreme sensitiveness to sounds as conveyed through solids, or even through fluid mediums, as vibrations. I have seen reptiles start at any heavy article being placed down suddenly near them, or when anything has been dragged along the ground or the shelf where they might be. A sudden bell or outburst of music might affect them similarly.

At the reptile house in our Zoological Gardens, where are long passages at the back of the cages, you may observe that the snakes are on the alert at familiar noises, such as the trolley wheels; they listen to the stopping of the trolley on which the keeper mounts to feed them, and recognize the noise caused by the grating of the key, when the trap-door of their cages is about to be opened. You would think from these occurrences that they possessed a very sensitive ear, but the sensitiveness, in my opinion, lies in their bones, their muscles and their nerves. They feel sound rather than hear it. The sensation of vibration through solids would naturally be more acute in creatures with their whole body along the ground, as those versed in acoustics would explain. The Indian throws himself flat upon the ground and presses his ear close to it to listen for a far-off sound, or to detect a distant footsteps. You may have a watch about you and be wholly unconscious of its ticking until you inadvertently lean against the table, or place your elbow upon it, when immediately the ticking of your watch becomes audible. It ticks no louder than before, but the sound is conveyed to you by a solid conductor.

As for the so-called "dancing" of snakes, the waving of their heads to and fro, that is a common habit when they partly erect themselves and are unusually excited. They do this, music or no music, only the jugglers take advantage of the action and time their "music" to suit it. Mr. Stearns, I believe, came to the conclusion that it is sound not as melody, but as noise only, that affects animals; and of course unusual and unfamiliar sounds are more disturbing than familiar ones.

Still, as we all have so much to learn, or to unlearn about snakes, any information founded on actual and careful observation is always of value, and I trust we may be favored with further details regarding these tame and intelligent New York snakes alluded to by Mr. R. E. Stearns.

CATHERINE C. HOPLEY.

LONDON, England.

STRIPED BASS IN FRESH WATER.—A Savannah, Ga., paper reports: "One of the strange freaks of the electric storm at Thunderbolt Sunday morning was the effect the lightning had on two of the eight rock fish in the fountain in the Savannah Yacht Club house grounds. They seem to have been crazed by the shock, each showing a dark line on its back, and they are unable to swim for any length of time in a natural position, but turn over and float as if they were dead. When righted in the water they attempt to swim, but gasp as if out of the water, and soon flop over belly up, and come to the surface. The strangest part of all is that though the fish received the electric shock several days ago they still survive. The rock fish are great pets with the members of the club, and, though a salt-water fish, have lived and thrived in the artesian fountain for the last four years. They will come to the surface and take shrimp and prawn from the hand, and are beautiful specimens, about twenty inches in length." The above extract relates to some rock fish, or striped bass, which were mentioned in this journal March 14, 1889. The fact, well authenticated, that this salt water species has been reared in water from an artesian well is sufficiently interesting and important to warrant its repetition here. In about one year the fish increased in length from 6 in. to nearly 20 in. on a diet of crabs and oysters. This experiment should justify additional

efforts to raise striped bass in fresh-water ponds and lakes. In this connection we may recall the 45 lbs. bass of this species which was found on the shore of Flax Pond, in the village of East Wareham, Mass., last April. While it is not known whether the fish will become sexually mature in fresh water there is no question that it can be profitably grown in such surroundings. As early as 1854 Prof. Baird recorded another successful experiment with the striped bass. Through the kindness of Mr. Thomas Lee we have been able to see a letter from one of his Savannah correspondents relative to the probable method by which the lightning reached the fish. In the tank containing them there is a pipe under which they can go about as far as the dorsal fin, and the two injured fish may have been wedged in there and got a shock. They have a large, round, black spot at the beginning of the dorsal fin. The fish are in the habit of resting under the supply-pipe in the position indicated.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

CLABROUGH 12, May 1, '90.	PARKER 10, hammer, June 6, '89.
COLT 12, July 25, '89.	PARKER 12, hammerless, June 6, '89.
COLT 10 and 12, Oct. 24, '89.	REMINGTON 16, May 30, '89.
FOLSON 10 and 12, Sept. 25, '89.	REMINGTON 12, Dec. 5, '89, Feb. 6, '90.
FRANCOTTE 12, Dec. 12, '89.	REMINGTON 10, Dec. 26, '89.
GREENER 12, Aug. 1, '89.	SCOTT 10, Sept. 5, '89.
GREENER 10, Sept. 12-19, '89.	L. C. SMITH 12, Oct. 10, '89.
HOLLIS 10, Nov. 7, '89.	WHITNEY SAFETY 12, M'ch 6, '90.
LEFEVER 12, March 13, '90.	WINCHESTER 10 & 12, Oct. 3, '89.

A TURKEY CALL.

Editor *Forest and Stream*:

I have used different kinds of calls, and for twenty years or more one superior to them all, and superior, I think, to that described by "A. J. W.," if I understand his description.

To make this call, take a piece of dry and straight-grained black walnut, $\frac{3}{4}$ in. thick and large enough to be when finished $3\frac{1}{2}$ in. long and $1\frac{1}{2}$ in. wide. With a $\frac{3}{4}$ in. centerbit bore a hole $\frac{1}{2}$ in. from each end, with other holes between, trimming away the remaining wood until a slot is made $\frac{3}{4}$ in. long and $\frac{1}{2}$ in. wide, with semi-circular ends,

as in the first figure. This rough block is now worked down until the sides are each $\frac{1}{8}$ in. and the ends $\frac{1}{2}$ in. thick the corners being rounded off, as shown by the full lines in the front view. The front of this box is a piece of $\frac{1}{8}$ in. black walnut, glued fast and with a brad or half a stout pin in each corner. The back is of the same material and thickness, but projects on one side, as shown by the broken line and also in the end view. Before it is fastened on, the top side is cut away, as shown, leaving an opening $\frac{1}{2}$ in. wide adjoining the projecting portion of the back. The latter is glued and nailed as described for the front. A little rosin on the end of the projecting part completes the call. The object of the varying curve of the projecting part is to change the sound.

To manipulate the call, take the gun across the left arm or across the legs, and one end of the call between the thumb and forefinger of the right hand, and place the edge of that projection perpendicular to the side of the stock and lightly stroke the stock toward the person.

With a good ear and a little practice, the sportsman can deceive the wariest of old gobblers. It is a fine thing for calling when a flock of turkeys have been scattered by a dog or otherwise. A man with a good ear can successfully call with his mouth turkeys that have been scattered; this requires considerable practice. During the latter years of my hunting turkeys my calling was principally done with my mouth.

The wide part of the box projection should be so put on that when the stroke is made the wide part will be between the person and the main part of the box.

KANKAKEE, Illinois.

H. L.

CARIBOU HEADS.—Mr. W. Holberton has on exhibition at 18 Vesey street, five heads of woodland caribou, that for size and beauty cannot be equalled by any we have ever seen. Most of them carry from 28 to 32 points, and the spades are wonderfully developed. The heads come from Newfoundland, where the woodland caribou are said to be found larger and with finer heads than in any other part of North America. Mr. Holberton intends visiting the hunting and fishing grounds of Newfoundland this coming fall with the intention of finding out what sport can be had there for the benefit of those who wish to visit this far off wilderness.

WOODCOCK IN A TREE.—Baltimore, July 2.—The other day when hunting woodcock, I started one that lit in a tree. Did you ever hear of a like case? I did not.—W. H. F. [No. We have seen English snipe alight in a tree, but have never seen woodcock do so.]

SHOT COUNT AND WEIGHT.

THE table of No. 7 shot in our series of examinations of the leading brands of shot now on the market is presented in this number. The same explanations apply to these figures as were given with the other sizes. Each company was invited to use an American Shooting Association standard measure of 1½oz. shot in filling each of ten vials of the five sizes of shot under examination. Just as the charges came they were counted and weighed, and every result is given, together with an average for each company. Then to bring all to an even basis of comparison a count of 100 pellets was thrice repeated and thus a new weight figure secured. The Omaha Company, making no chilled shot, has been represented by a run of soft shot, and to secure a transatlantic comparison, shot was secured from two of the largest English towers.

The extensive use made of this size shot will make the table particularly interesting to a broad circle of shooters. The largest size shot of this number, it will be seen, comes from the Colwell Lead Co. of this city, though the Leroy Co. is a close follower. The other extreme on the list is occupied by the Robertson shot house, of Baltimore, and the Selby Co. of San Francisco most nearly strikes the average. The difference of the smallest above the largest sized still holds over 30 per cent., as has been the case in each number so far considered. The English shot keep well up the list above the average of the American shot, and the two English companies get very close into line on this size shot. This is the more marked in view of their wide divergence in some of the higher numbered shot. There would seem to be as much or even more need of a revision of English shot screens, than for a similar service on this side the water. The same general praise must be given this as the other shot sent by the contributing companies for the appearance and even run of the product of each works, bright, even shot was the rule, with dumb-bells and pear-shaped pellets few in number.

With this table before him, the sportsman can buy his shot supply intelligently. He may also verify his bag labels by a short test with the balance and a count. He will know that a reliance upon mere numbers may lead him astray as to the quantity of his charge over 30 per cent., and may gauge his charge as to quantity and weight in proportion to the powder used.

A CAMP BED.

AFTER many years of camping, both for business and pleasure, I have found that the traditional "saddle blanket," or pair of double blankets, with an arm for a pillow, are not sufficient for the average camper not used to hard life, or even for those used to it, if violent exercise is required.

My latest device, suitable for all service, has been made up as follows: A mattress body, made up of a piece of "hair boiler felting," ¾ to 1 in. thick, 6 ft. long and 2 ft. wide, care being taken to procure felting not odorous with common glue, or else the odor is very lasting. This is cased in ticking of good quality, to prevent any stiff hair from working through, tied 5 in. apart, mattress fashion, and inclosed in removable slip and washable calico.

If preferred the mattress can be made in two parts 3 to 3½ ft. long, as it is the shoulders and hips that require protection, and one piece will answer when portability is an object, or a friend can be accommodated. The lengths of mattresses, of course, are to be proportioned to the persons using them, but don't get them too wide, and

more, I do not advise double widths, as usually a person is more comfortable sleeping alone, while two mattresses can be joined if desired. A pair of narrow, long, double blankets and a small thin pillow complete the bed proper. Some way my ears could never be induced to fit properly in the seat of a saddle or the inequalities of a folded overcoat, and a sunburned neck does not rest comfortably in a coil of rope or block of wood, as I have used and seen used on many occasions.

Next have made, or rather have it made first, as it is indispensable, a sheet 7½ to 8 ft. square of light waterproof duck, the same as is used in the best canvas hunting suits, and also a sack of the same material 18 in. long and 12 in. wide, the latter to act as a receptacle for extra clothing, toilet articles and the et ceteras always requisite, to be used as a supplemental pillow also.

In packing the articles the canvas is spread out and mattress thrown in the middle, blanket folded in quarters and placed at head of mattress, with pillow and sack on top. Then fold canvas sheet carefully and roll the package, commencing at head, into as neat and compact a bundle as possible, securing it with two straps made up in shawl-strap manner. A light dog chain around the whole, with padlock, passes it as checkable baggage on all railroads with which I have had dealings.

Thus you have all your belonging in one bulk, free from rain, mud, dust and burrs, and ready for boat, wagon or pack, excellent as a substitute for a stool, and with partial opening of the roll it gives a comfortable place for a siesta. At night place the mattress near one edge of the canvas, so the loose part can be drawn over in case it is needed to keep off dew, rain or wind, for it will have to rain very hard indeed to run the sleeper out, if a slightly elevated place for a bed has been chosen, so water will not run under it, and the canvas is properly tucked at foot and side.

Give your bedding all the air and sunshine possible, and if you are in a section where ticks, redbugs or other pests of a biting nature abound, sprinkle a small quantity of insect powder over your bedding when rolling it, and you will not be troubled at night.

Of the many uses that can be made of the canvas sheets it is needless to speak, as they will at once be apparent, so I will finish with one word of advice: As you have a place for all your tricks and traps, keep them in it and don't disturb your mates by always looking for something.

J. V. B.
TEXAS.

SOUTH DAKOTA.—Britton.—We are situated in the northeast corner of the State, in the county of Marshall, and adjoining the military and Indian reservations of the Sisseton tribe, of the Sioux nation. This is a vast tract of beautiful land, and is filled with numerous fresh-water lakes, which are nearly all stocked with pickerel and what I think are yellow perch. These lakes are very popular with the people of this vicinity as camping places, and as the country has only been settled five or six years they still afford abundant fishing. In the spring and fall these lakes and marshes are covered with ducks and geese, which means good shooting. The hills and valleys are full of grouse and plover. Altogether we live adjoining a hunter's paradise. We should be pleased to welcome any of our sporting brethren who should "be moved" to visit our city, and will promise them a royal good time in September.—Rix.

A BOOK ABOUT INDIANS.—THE FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Ado.

MORE PARROT.

Editor Forest and Stream:

For our delectation "J. V. B." and "Tarpon" have served parrot stewed and parrot pot-pie, and with your permission I will add a roast.

Away back in the forties it was my good fortune to accompany a "picnic" excursion managed by "Uncle Sam" to Mexico. This "picnic" is recorded in history as the "Mexican War." Our jolly excursionists left Vera Cruz one morning for a visit to the Capitol City, arriving that afternoon at the river Don Juan, where we camped for the night. After slaking the raging thirst that had possessed me several hours, I lay down beneath a tree in the grove that skirted the river, with my knapsack for a pillow. I was scarcely settled for a good rest when a parrot with labored flight crossed the stream and alighted on a limb above me. It instantly occurred to me that the bird would be an acceptable addition to the bill of fare for supper. To think was to act, and ere the bird had time fairly to scan the intruder of his haunts, he came to the ground minus his head. I soon had him plucked and could but admire his plump form, and my mouth watered at the thought of "quail on toast," as it were, for the menu regularly served consisted principally of bean soup, wormy side bacon and mouldy hardtack. Now, whether it was because I am more selfish than the average man, or the demoralizing influence of surroundings was to blame, I let others judge; but I candidly confess, that instead of taking my prize to the camp-fire, where the company cook was making coffee, where perhaps I would be asked to share the bird with others, I sneaked off to a thick covert to banquet alone. I found plenty of dry twigs and limbs handy, and with whittlings, a bit of cotton from the lining of my cap, powder from a cartridge and the flintlock of my musket, I soon had a good fire, and spitting the bird with the ramrod I did him to a turn, and until reading the article by "J. V. B." remembered it as a rare tid-bit. After reading said article I reflected that perhaps my appreciation was enhanced by the sauce of hunger; but since the hearty indorsement of the pot-pie by "Tarpon," I am again loyal to the old time predilection, and asseverate that the parrot is worthy to be classed with game birds.

HUNTER.

TOOT AND THE BIG BUCK.

HERE is a good story told by the veteran Judge Porter in a letter to Dr. E. Sterling, of Cleveland. Judge Porter writes from Toledo: In those days of 1836 you remind me of, deer and turkeys were abundant in the limits of the city; wolves also were plenty, with occasionally a bear. Otter were often found in the vicinity. Ruffed grouse, prairie chicken and quail were as common and numerous as the imported sparrow in your public square in Cleveland. As for fish, there was no end to them; they were as numerous as the hosts of the Philistines encompassed against the armies of Israel, and some of them would bear comparison with that redoubtable chief who was slain with a stone from David's sling—the *Esop nobilior* and the *Aeipenser rubicandus*—marvels in size, the former turning the scales at 60 lbs. and the latter over 160.

In the early days about here the man that carried a shotgun was looked upon as rather a low down pot-hunter. The first double-barreled shotgun I remember to have seen here was brought by a man by the name of Goodsell, in 1835. He brought with him a small black and tan foxhound he called Toot. In mentioning this I am reminded of a most singular incident in deer hunting. Goodsell,

like most sportsmen, would have you believe that his dog and his gun were the best in the world of their kind. We occasionally took a turn in the woods together for deer, seldom missed to start a big buck within a mile of where I am now writing. Toot would give chase, and in twenty minutes time would cease barking and come back to us. This had often occurred, when Goodsell would declare that the deer had taken to the water (Lake Erie) some six miles away. I did not believe a word of it. One morning, as usual, we started the big buck and Toot went off bellowing on the track. In less than twenty minutes he ceased his barking. "Taken to water again," said Goodsell, when all at once we heard a crashing in the underbrush, and next Toot hove in sight, his tail between his legs, closely followed by the big buck, every hair on his neck and back in reverse order, plunging with his fore feet, and the dog dodging to avoid the sharp hoofs of the deer. When he was within twenty feet of us Goodsell blazed away with one barrel and made a hole clean through the deer as big as your foot. This was the only deer I ever knew him to shoot. He still extolled the virtues of Toot, declaring that it was not every dog that, when failing to hold his game at bay, could escort his quarry into camp. E. D. POTTER.

CHINESE PHEASANTS.

MACOMB, Ill., July 1.—*Editor Forest and Stream:* I send you the photo of a Chinese pheasant, which was killed in Sinn county, Oregon, and sent to me. These pheasants are natives of China; and eight years ago eleven of them were imported from China to Sinn county, Oregon, and turned loose. It is now estimated that from these there are now a million in the State. They lay twelve eggs at a sitting, and sit three times a year. They wean their young when ten days old, and go to laying again. They are not quite as large as a prairie chicken, but much more a game bird and finer eating. They lay and sit in the grass and wheatfields; and will stand for a dog. They are very shy and will fly very fast and run almost as fast as a dog. The male has a green head with a white ring around the neck, the breast is a maroon, and the back is speckled like a prairie chicken. Their tail is about eighteen inches long and runs to a point like a wild pigeon. They gather together in the fall in large flocks, and will eat wheat, corn, or most anything that a barn fowl will eat. I think they will do well all through the west and south and as far east as Pennsylvania. I sent to Sinn county last fall and got a pair and turned them loose on Mr. Rexroat's farm, near Pennington's Point, McDonough county, Illinois. They have been seen together frequently until about four weeks ago, since then the female has not been seen and probably she is nesting. Should these birds do well in this State and accumulate as fast as they have in Oregon, it will carry joy to the hearts of sportsmen. W. O. BLAISDELL.

PENNSYLVANIA GAME.—Goshen, N. Y., July 2.—I am just in from a three weeks' outing in the wilds of Pennsylvania over in Pike. I had some very fine sport with the pickerel and took a few bass, but the bass are not hungry or did not like my style of casting. I saw a fine pair of deer and some bear tracks, and I think one night the wildcats had a wake by the racket they made. I had my spaniel, Hornell Sport, with me and he did not like their music a bit, he crept close to my side. This fall I expect to go back again for something larger than fish.—A. V.

HARRISBURG, Pa., July 1.—The annual meeting of the Red House Gunning and Fishing Club was held to-night, at the club room in the Gross House, when the following officers were unanimously elected: President, Fred W. Ebel; Secretary, John C. Balsley; Treasurer, H. S. Reinhold; Executive Committee, Dr. T. S. Hollinshead, Richard Jones and N. Russ. The club at present has 30 members and is in a flourishing condition.

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

SOME MASCALLONGE EXPERIENCE.

[Continued from page 475.]

WHEN I began fishing on Julia Lake, I took the advice of Charlie Burton and Hank Smith, who had had good luck with the mascallonge years ago, and used a "pike's tongue" on the spoon hook. The lower jaw of a wall-eyed pike, from the anterior angle back to the gills, affords a tough and pearly white bit of semi-cartilaginous flesh, roughly triangular in form and perhaps a couple of inches in length, which is rather a showy bait in the water. The guides told me not to use this, as "a lunge might grab at that and miss the spoon." As I thought this not in accord with the mouth and habits of this fish, I for once disregarded this *ex cathedra* advice, and fished all day with the "tongue" on the spoon. I caught so many fish at first that Mac also cut a "tongue," and believe we both used them nearly all day. All that I could deduce was that I think one will catch a great many more wall-eyed pike, and probably larger ones, if he uses the "tongue," and will catch just as many mascallonge; but whether or not any more mascallonge than on the plain spoon, I should not like to say.

I have spoken of Lake Julia as a beautiful water. It is more than that, and one could well go into raptures over it if he were not so blindly intent on striking a mascallonge. It is surrounded on all sides by deep pine forest. Its water is deep, even close in shore, and as clear as any of these stained swamp waters can be. There is a fine little island with a high rocky point, and this would make a great camping spot. Just across from the island there runs into the lake the coldest cold spring that ever delighted the throat of a thirsty man. This little smile of nature bubbles directly out from the cavern left by the up torn roots of a great tree. The roots project out and cover it, making the most beautiful little cold-storage chamber in the world. Tricking thence through the

heavy moss, this little diamond stream suffuses all the air about with grateful coolness. At the close of each trip around the lake, we cached our fish here in the cold moss, and when at night we took them up—a glorious sight they made as we uncovered them—they were stark cold and stiff. It is a blessed little spring.

Near at hand here some one has made a rough attempt at building a "deer fence," to guide the running deer down to a stand near the open runway. I should say that the law against hounding is altogether disregarded all through this country, summer, fall and winter. Bert, our guide, told us that much, admitted having killed a great many deer in summer, and declared his intention of doing so in future whenever he had a chance. That is not my idea of what a guide should be, and I wish the boys up there would look at it differently. They will miss the deer before long. At present there are a great many deer in that country. The party saw four or five over on Lone Stone, we saw four on Lake Julia that one day. I saw one over on Whitefish the next day, and Mrs. Russell saw one on Virgin Lake. One could kill a deer any evening he chose in that country. They come into the water to feed, and hang around until near morning. Mac and Bert nearly finished plans for a combined mascallonge and deer trip next fall, Mac intending to bring his family up to Russell's house, which is a very good point indeed for a central camp. There is an unfished lake about a mile above Julia. Bert and Blodgett also intend cutting a trail from Seven Mile over to Butternut this fall. That is good deer and new mascallonge ground. Let me repeat, for those who want to go into this region and have success, that the way to do is to pull out from the beaten track and "stand in" with men like the above mentioned, who will get to good waters where the tenderfeet are afraid to go.

From the lower end of Lake Julia a half mile trail leads over to Whitefish, and from Whitefish there is a "thoroughfare" to Virgin. From Whitefish also there is a waterway, via Big Lake, Dog Lake, and I don't know how many others, clear on around to where the road to Three Lakes Station crosses the bridge (a great point for pike fishing) between two large lakes of what they call the "Main Chain." This is all in the Eagle waters. You can go by boat all the way from Three Lakes to Russell's house, where we were, but it is a journey of about forty miles. The Mannegold party, of whom, I believe, I made mention last week, came around that way. They had some fish, and seemed to find little difference between the various lakes.

It seems that the South Side Gun Club, of Milwaukee, of which Mr. Mannegold is an officer, contemplates establishing a "deer park," whatever that may mean, on the country between Virgin and Julia, and Mr. Russell acts as their purchasing agent. A few hundred acres have already been purchased, we heard, but just at present the club don't know just exactly what it does want to do about it. It was intended to fence a large tract. That might serve to keep the deer out of the park, I don't believe it would keep them in. It seems to me that if the gentlemen would spend that fence money in stopping illegal killing of deer in that region, they would have far better shooting. The country is swampy, heavily undergrown and very wild about these lakes. From what has been hurriedly noted about the wonderful waterways of the whole region, it may seem that this would be thought a wonderful country, if it were not so ridiculously easy of access.

When we were stowing away our fish that night we spoke of this, and concluding that we had about all the fish we ought to have, we resolved to put in the next day in running over to Whitefish Lake and seeing what more we could of the country.

All day long we noticed some loons flying about over the lake, as indeed we saw them every day on any lake where we happened to be. On this day, as we were running along the willows close in shore, we were surprised to see a fine male loon slip gently out of the grass into the water. We peered in, and there, about a foot above the water and two or three yards from the shore, was a shallow nest with two big chocolate-colored eggs in it. The eggs were about as big as goose eggs. Bert wanted to take them, and spoke about killing the old loon and getting the young birds on the next day. For, as we stood peering at the nest, we heard a faint "cheep, cheep, cheep," much like a little chicken, and saw the end of one of the eggs already broken through by young Br'er Loon. Is this a fortune that has fallen to many? If so, we were thrice fortunate, for we found three loon's nests on this trip, and I do not think that record is often equalled.

We were going down the "thoroughfare" that evening, talking about luck as we went. Mac attributed all his good luck to a pair of mis-mated striped stockings, which his servant girl had rolled up together and put in his valise. Now, when this happens by pure accident, it is an infallible sign of good luck. Mac knew this, and always kept that pair of stockings on the boat seat where he could make fetich to them. On this evening, the mosquitoes being exceedingly bad, he had drawn these stockings on over his hands and wrists. Thus attired, he presented a unique and picturesque effect. We were just turning a sharp bend of the creek, when we saw another loon, a full plumaged female, slide out of the bushes and into the water. "There's another nest!" cried Bert, and we set out after the old bird.

The water was so shallow that the loon could not dive quite out of sight, and so narrow that she could not take wing. Her attempts to get under were ludicrous in the extreme, she simply standing on end and wildly waving her paddles in the air. I suppose it is human nature to shoot, and Bert fired a shot at her as she started down. I do not think it struck her, for we could find not a drop of blood on her nor a ruffled feather. She went on, indistinctly trying to dive, and Mac reached out and caught her in his stockinged hands and brought her into the boat. Now, has any one beat that record? Does any one now doubt the efficacy of mis-mated stockings with stripes on them? As for me, I don't want any sure thing, and I am no gambler, but I will just say that if any gentleman thinks he is a bad man at catching wild loons alive, that I will back W. W. McFarland, of Austin, Chicago suburb, against him for any sum from \$1,000 up, both men to wear stockings on their hands, Hurlingham rules to govern. This challenge is open to the world, and Mr. McFarland now holds the loon belt as the unparalleled premier loon catcher. There is a good deal of talk about Chicago's pretensions, but money talks, and I

want it understood that Chicago is the only city of the world that has an Auditorium, a World's Fair, and a man that can catch live, wild loons with stockings on his hands.

We put the poor wild creature on the bottom of the boat. She was perfectly quiet and submissive. Her head was erect and her eyes bright, but she had no challenge in her gaze. She seemed unhurt, but subdued. We pitied her. Bert insisted on killing her and rifling the nest. He said it would be at least \$5 to him. We told him he would have to make that \$5 some other way. There was no resisting the pathos of that gaze. In went Mrs. Loon to the water. On the following day the Mannegold party, fishing on Julia, found a dead loon at the upper end of the creek, a mile from where we caught ours. Could it after all have been our bird? We hoped not. If so, what killed her? We could not find a mark on the bird anywhere. Was it fright, humiliation, or shock of the bullet on the water above her back? We hope still it was not our bird.

I am not yet done with loon stories. We saw a pair of loons going to and from their nest on the island of Virgin Lake the next day, and one of the Mannegold party, a little later, actually picked up the two young birds on the water and brought them to the house. They were tiny black balls of down, much like little chickens. Under persuasion these birds also were returned to the water near the island, and we hope that the old birds, who filled all the air of the dusky evening with their wild and mournful complainings, found their little black babies all safe again. How strange the love of each creature for its young. Nature, they call that, but beautiful, in any view. And where shall we find Nature thus, and feel the beauty and touchiness of it all, unless we go to the woods and streams? E. HOUGH.

[TO BE CONCLUDED.]

CHAT OF MICHIGAN WATERS.

GRAND HAVEN, Mich., June 19.—*Editor Forest and Stream:* I send you by this mail a photograph of trout caught by Mr. Andrew Gerber, of Fremont, Mich. I saw in one of your late numbers the statement that the best stream fishing was to be had in the vicinity of White Cloud, Mich. While the fishing at White Cloud is excellent, it is by no means the best. I have fished a great deal at White Cloud, but this spring have spent most of my spare time on the streams near Fremont, and always with success. Ever since the middle of May the trout have been ravenous for the fly, and time and again have I fished with a bait-fisherman and beaten him hollow.

In regard to the color of trout. I spent several hours the other day at the State fish hatchery at Paris, Mich., and noticed brook trout in the same pond, of the same age, on the same bottom, fed on the same food, hatched from the same lot of spawn, and their color ranged all the way from the very lightest to a deep black—one individual in fact being so dark that the spots could hardly be seen. It seems clear to me that they are "just born that way."

The mosquitoes are getting so troublesome that the greatest fishing crank can only enjoy himself by liberal applications of dope.

The woodcock shooting through this part of the State is going to be good this fall, the birds have had a good spring for breeding. I have seen numbers of them while trout fishing. My mind's eye is full of photographs of places where they congregate, and I hope to see them all again next September.

A few days ago I fished with a friend of mine at Chippewa Lake. We caught a fine lot of small-mouthed black bass, ranging from 2 to 3 lbs. For a long, tough, hard-fought battle, let me recommend the Chippewa Lake bass. You don't see him for several minutes after you hook him, then you get a good look at him in the air.

Chippewa Lake is about 10 miles from Big Rapids, Mich., and can be reached by rail. It is not much frequented by visitors, gives fair hotel accommodations, and for any one who wants fish, fish and lots of them, this is the place to go.

I hate to hear any one argue against the artificial stocking of trout streams. Why in this part of Michigan, instead of enjoying the best fishing in the State, we would have none at all if we didn't stock and re-stock our streams. Take for example two representative streams, the Cedar and the Cushman, within easy drive of Fremont, neither of them natural trout streams, but both of them, owing to the fact of them having been stocked, furnishing sport and food for hundreds of people. Now I am sure that ten pounds per day is a very small average for the fish taken from either of these streams during the open season, to say nothing of those taken illegally. That would be about 2,400 lbs. per year. One of your correspondents would have us believe that the fish from these two streams costs the State \$2,400 a year. With the number of streams in this part of the State and the number of fishermen to take the fish, the country would soon be bankrupt. And to people here, there is no doubt that re-stocking these same streams each year helps to keep up the supply. We put the fry away up in the head waters of the little tributaries where they are safe till they get old enough to seek the deep waters of the larger stream. Charlie Morgan and I have not taken our voyage down the White River yet, but hope to soon. The canvas boat works to perfection. MAC.

TROUT NETTING IN CONNECTICUT.—Thomas B. Broder, of this city, was arraigned before Justice of the Peace Sidney E. Clark, at Windsor, to-day. He entered a plea of guilty on four counts for netting trout in West Brook (a fine trout stream) in Windsor. Justice Clark imposed a fine of \$7 on each count and costs, which amounted to \$20.62, making the picnic cost Broder \$48.62. It is about time that the public understood that the fish and game laws mean something—especially when Detective W. C. Fielding and President A. C. Collins get a faint clew. It will be remembered that Lewis M. Hoskins and Charles McKinney, of Tariffville, helped Broder in his netting exploit. The two former were fined last Saturday, and today the city man was before the justice with the above result. Justice Clark addressed the prisoner substantially as follows: "Netting trout is a flagrant violation of the fish law. You, living in the city, and having the advantage of the daily papers, should know the law better than persons living in the country. If you come before me again for the same offense you will go to jail."—*Hartford Times*.

CHICAGO AND THE WEST.

CHICAGO, Ill., June 27.—One evening last week, as was announced to be the intention, Mr. A. Hirth, of Spaldings', Mr. John Soderbery, of Blomgren Bros., Mr. A. H. Harryman and myself started for Yorkville, on the Fox River, not far from the scene of Mr. Loeb's piscatorial accomplishments. Mr. Hirth also brought along his friend, Dr. Shayne, and we all took the 4:30 train for Aurora, over the C. B. & Q., changing there for Yorkville, which is 12 miles further and just 51 miles from Chicago. We reached this place at 6:18 P. M.

As soon as we saw the river we knew we should have no fishing, for it was running full of muddy water, tribute of the recent storms. We therefore made no pretense at fishing, beyond catching a few bullheads and rock bass the next day, and three small black bass, so diminutive that we threw them back. We did, however, find what seems to us a very good fishing water when the river is right. There is no dam from Yorkville to the Mississippi, except two corporation dams with good fishways, so we were told, and the bass run up this stream in quantities. There is said to be a fishway in Yorkville dam, though how good a one we could not tell. Below the dam there are two or three islands and several bars, where, without violating the law against fishing under a dam, one can, in proper time, have fine sport with the fly at small-mouthed black bass. Of this we had abundant proof, for we saw numbers of fish, though we could do nothing with them. Mr. Wolfred N. Low tells me he used to go fishing often at Yorkville, but never had any luck there. I presume that, as with all other river fishing, the sport here is capricious, but am nevertheless inclined to class this as one more of the cheap and good fishing trips out of Chicago. I think some day I will write a book and call it "Five Dollar Fishing Trips From Chicago." We left the city one evening, staid two nights at Yorkville and got back at about 9 A. M. the second morning, and the total expense of the trip was just \$5.35 apiece, and that included a 12 miles ride by livery, bright and early one lovely morning, to catch the 6:37 train at Aurora. Almost any of the little trips, such as I sometimes speak of around here, can be made for a sum not any greater, and this is what commends them to many whose limited means does not prevent them from enjoying a day off.

I may have told some pretty tough fish stories lately from this country, but I am going to tell one now that will discount anything yet, and the funny part of it is that it is true or, at least, I think it is true. If I should simply offer to wager that I could take a man to a place where he could have small-mouthed black bass jump into his boat—half a dozen of them, probably a dozen, more likely two dozen, and perhaps fifty, I should be thought a trifle wild, no doubt, but that is just about what it amounts to, and just about what I am nearly ready to do.

At Yorkville we heard a good deal of talk about "jumping bass," and learned that it had been practiced quietly because it was thought illegal. One man said he had caught 140 bass in that way one night. Another admitted having taken a dozen one evening. A boy came into town the evening we were there, and he had three bass that he had "jumped." We heard of another party who had six taken in that way. Mr. Hirth and Dr. Shayne were fishing near the bridge in the evening when two men came along, one with a long pole. They said that, as the water was high and muddy and the night dark, it was a good time to "jump bass," and they were going to do it. An arrangement was made by which Dr. Shayne was to go along with them. Mr. Hirth came over to the hotel and began to tell about how his friend was fishing over there in the dark with bait and how he would soon show us a string of bass, etc., etc. We told him that we could not be fooled about bass fishing that way, and that if his friend caught any bass, he would do it with a seine. On the following morning he really did have eight or ten magnificent small-mouthed bass, some of them four or five pounders. He said the boat took over 50, and claimed that some one had stolen more than two dozen out of the washtub where he left them at the rear of the hotel. He disclaimed any use of a seine, and told the following story:

"We only went down about three miles in all," said he; "you have to go down stream to jump them. The night was dark. They ran the boat along, about 8 ft. from the bank, at a little angle to the bank, and the fellow in the stern kept thrashing the water along the bank with the pole and stirring up the grass and bushes. They said the bass lay inshore and went to sleep, and were scared by the noise, so that when they saw the boat as they started for deep water they would try to spring over it. I don't know what the theory is, but I know we caught an awful lot of bass. I should think that more than half the bass went clear over the boat. They said they sometimes had a net up on that side of the boat, and held the shore side of the boat down close to the water's edge, so they could get over the edge easier. I had bass hit me in the face as I sat in the boat. One hit one of the men on the nose and hurt him. The boat got full of flapping bass. I didn't mind it at first, but I feel like a horse thief now. You could clean out all the fish in the river that way. I thought I would just go and get some fish for the crowd to take home, seeing they weren't biting any."

For myself, I do not care about taking home any fish that I can not catch myself and catch on a rod and line. I have no reputation that suffers badly enough to hurt me if I come home without any fish, and I do not see any use in countenancing any such practice as this, or a worse one, for the sake of getting some fish to take home. But here was really a very curious thing, and I confess I should have liked to see it tried, with my own eyes, and some day I may.

I have no proof to offer on this fish story but the following: Young Reddick, a barber and fisher of Yorkville, was taking me across the river in his boat when we felt a fish strike the side of the boat as we approached a clump of lily pads on a bar. We had just been talking of "jumping" fish. "You see how they do it," said he. When I was a boy, down in Indiana, we used to be ignorant enough to go seining. We never could do much at catching bass in the seine, for they would jump over it. When they got to going over it in that way, we would just reverse the seine, and carry it with the float line in front, and the lead line held up a little behind. The bass would jump over the float line, and we caught them on the seine, not in it."

I have tried to tell this story to several friends, but they

won't hear it. Charlie Burton said, "If you print that yarn you'll have to leave the town." They all talk about this way. Now, either there's a lot of us awfully fooled, or else we've got a big joke on a good many people.

I consulted Mr. Wolfred N. Low, a prominent attorney and sportsman of this city, as to the illegality of such fishing. "It is probably illegal," said he, "under that clause of the law which prohibits any other device than hook and line."

This is my story, and, if it is true, we have found one of the most destructive methods of killing bass yet discovered on Fox River.

June 28.—Anent my fish story, about the bass jumping into the boat: it seems that one of the doubters who scoffed at such an idea lately met a friend of his from Indiana, to whom he told the yarn as a paralyser. "Well, now," said the Indiana man, "if that man wants to bet you \$50 that you can catch fish that way, don't you take him up, or you will lose. I have caught many a bass in just that way on the Kankakee."

Mr. Hirth has been having a good deal of trouble lately with his customers, to whom he has related the foregoing story of the jumping bass. No one would believe him, and at last he grew desperate and concluded he might as well hang for a sheep as a lamb, and began telling the following, for which he vouched with great solemnity of countenance:

"I had lain my rod down on the bank," said he, "and the tip was resting on a bush in such a way that the minnow was about four feet above the water. I stepped away for a moment, and when I came back I heard a splashing in the water, and I hope I may never if there wasn't a string of bass like an endless chain jumping for my minnow! The nose of each fish touched the tail of the one ahead of it, and such was the steadiness of their movement that there was a regular arc of bass in the air. It looked like a stiff string of bass. As fast as one fell it darted back under the water and started in again. I saw I had a chance such as only comes once in a lifetime, and I ran to get my Kodak, so that I could have indisputable photographic proof; but when I got back one of the bass had got the minnow and they were all gone. I was very much disappointed."

This last story I do not more than half believe myself, but a good many people will believe before they will the other, which is true.

Mr. L. J. Marks, of the Board of Trade, has just returned from a week's fishing trip up in Wisconsin. He is pretty well sunburned, and tells some fair to middling stories, but he is a good deal longer on sunburn and stories than he is on fish.

Mr. C. W. Lee, also of the Board of Trade, writes me to-day: "Mr. R. H. Mabbatt, one of the Board, one day last week caught forty-five bass in one of the Oconomowoc Lakes, none of which weighed less than 2 lbs.; pretty good, I think, for a place that has been fished to death."

I presume I may mention in this connection as well as anywhere, that Mr. Lee himself starts next week for a long trip of pleasure. He goes first to his former home in Ohio for a visit, then to Montreal, and then takes a trip for England, through which country and France he will make an extended tour, visiting the remotest districts especially, and using chiefly the bicycle for getting about the country. Mr. Lee will study the sports, especially the water sports, of the old country, and will tell FOREST AND STREAM something about them. His return is about the middle of September.

Two gentlemen known in sporting circles here, whose names are suppressed out of consideration for their families, went fishing last week on an alleged preserved and planted trout stream near Mukwanago, Wis. They waded, toiled, sweated and swore through several miles of mosquitoes and mud, and caught 30 or 40 fish. Unfortunately the fish were all chubs. They saw no trout. They flatly contradicted the report that a mascalonge was lately taken at Mukwanago Lake, and say that the man who says that there ever was a mascalonge or a trout in that region is a fabricator or a mistaker, one of the both. E. HOUGH.

WHO ARE THE FISH HOGS?

SHEBOYGAN FALLS, Wis., June 30.—*Editor Forest and Stream:* In your issue of June 26 under the head of "Angling Notes," it is suggested that "it would be better to do away with all bait-fishing and stick to the artificial fly, so that the trout would grow up and increase and there would be plenty for all."

Now, if the circumstances are the same in New York State as in Wisconsin, I beg to differ, for the reason that more "fingerlings" are taken from the trout streams of this State by the exclusive fly-casters than by those who use bait. On my jaunts for brook trout I have noticed, as a rule, that the bait-fishermen throw back all trout under 6 in. that are likely to live, while the so-called only true anglers for trout, the fly-fishermen, creel everything they succeed in landing, regardless of size, their sole aim evidently being to make a "big count." On a recent trip an old, well-known and legitimate sportsman of Fond du Lac, in a short time one day, took from one of the streams of the State, on a single hook, baited with angle worms, thirteen speckled beauties that weighed 11 lbs., and I venture to say that he had as much real sport and made a far better showing than a party of five elaborately equipped fly fishermen I met on a later trip, who at the time had ninety-two, mostly fingerlings, the whole lot of which would not balance the scales with the Fond du Lac man's thirteen.

Another unjust feature of such a law would be its discriminating tendency in favor of fly-fishermen, who really do more to deplete the trout streams than the bait-fishermen do. Another objection is the expense of an outfit such as is necessary for successful fly-fishing, which the ordinary fisherman cannot afford, and we hold that the farmer's boy or the sportsman of moderate means is as much entitled to take trout from streams stocked by the State (providing they use legitimate means) as their brother anglers, the fly-fishermen, who are fortunate in possessing a more plethoric purse. There is, too, a class of pirates that hail from the cities who ought not to be tolerated on a trout stream. As an example, of which there are many, a party of three Chicagoans came up into Wisconsin recently, and hiring three local nincompoops to fish for them, they camped on one of the best trout streams in the State for about two weeks, shipping hundreds of trout to friends at home, to whom we presume they conveyed the idea that the precious gifts were solely

of their own catching. Such parties would no doubt be welcome if they would content themselves with taking what trout they require to eat while in camp and a reasonable mess to take home when they break camp. I believe the most effectual and just method for the better preservation of brook trout, in addition to the present provisions, would be to shorten the lawful season for catching, say from May 1 to July 15. W. C. T.

EARLY MORNING ON THE STREAM.

"COME, old man, wake up, if you're going trout fishing with me." This greeting, emphasized by several and sundry boists of the bed clothes, met my unwilling ears full four hours earlier than any decent man has a right to be out of bed, one beautiful morning not so long ago, a morning the charms of which at a reasonable hour might have been remarkable, but to me at 4 A. M. seemed the very personification of everything to be avoided. However, with a resolute cousin forty pounds heavier than yourself at one end of the sheet, and nothing but an innate sense of modesty at the other, beef will usually tell; and after a hearty breakfast, preceded by a milk punch such as only the fair hands of the aforesaid cousin's wife can concoct, life seemed more worthy the living, and the trout brook, eight miles away, nearer than good resolutions on New Year's day.

Immediately after breakfast our caleche came around the corner, and, reader, I wish with all my heart you could have seen the general get-up. It had been originally painted a bright red, body, wheels and shafts, but what with time, mud and accidents, it resembled nothing so much in this world as a very bad case of eczema. I never in all my experience with country turnouts, and I have driven in almost every town in New England, saw its equal. Horse strong and well built, but not pretty; and harness with the aid of several ropes, etc., in a fair state of preservation. The driver was a genuine Yankee, with face upon which the ravages of time were plainly visible, also the marks of wind and weather, with hands like a side of mutton, and hard. Heavens! when I was introduced to Zeke Sprague and he gripped my digits as though he were holding a plow handle, he left a mark that has not been obliterated yet.

"From the city, I guess," was his first question, in a tone that fully harmonized with his exterior. "Wal, I rather guess we can show ye some traout fishin', and if ye don't say Zeke knows his biz before the day's through I'll eat my head."

Meantime lunch, poles and bait had been carefully laid in the bottom of the team, and Zeke, cousin and myself piled in and the equipage started.

Long before the first mile, we was passed our rural friend knew my entire genealogy, even to the remote ancestry who came over in 1647, all my business prospects, who were my friends, everything that had happened during an uneventful life, and a great many things that never did happen. You can't help admiring a man who is not afraid to ask you if the fair creature upon whom all your hopes of future happiness are centered, squints. Think of the generations of "Gallic" ancestors that man must have had to ask such a question in entire good faith. He ought to have been chief questioner in the Inquisition. The expression of surprise that came over his face when I told him that one eye had been entirely destroyed when she was a child, and all the fingers of her right hand taken off by a hay-cutter when she was spending a summer in the country, was immensely funny. He was apparently lost to the world for a minute, and then to me, "Kinder think I should hustle 'round and get a girl that's all there." It rather staggered him, as he said, to see "such a nice-looking young feller running after a girl that was all chopped up, unless"—and this in a calmly ruminative tone—"she's got spondulicks."

However, he asked no more questions, confining himself to very unique descriptions of the farms passed, charmingly frank accounts of their owners, one of whom I remember "was so gol-darned mean that he wouldn't shave 'cause soap cost fifteen cents." He kept us in a constant state of explosion until the brook was reached, just as the sun peeped over a high hill to the eastward; and in truth I made a vow then, a vow by the way, that somehow I forgot the next morning, to be up with the lark and enjoy the brightest, pleasantest time of the whole day.

Don't smile, I'll wager all my own hats that sometime in your life you've promised yourself the same thing. Have you forgotten those long walks you were going to take before breakfast? Be honest and don't throw a stone at me, until you have gone back 10 or 12 years, waked up at, say, 5:30 A. M., thought "to-morrow will do just as well, I don't feel like getting up this morning." Did to-morrow ever come?

What a curious sensation a man has when, his pole jointed, reel and line ready for business, he carefully creeps to a likely looking spot and gently drops his wiggling worm in just the right place. Nobody ever caught a 100 lbs. brook trout, but, by Jove, that pull must mean at least a 50-pounder. You strike and land a measly little fellow, just large enough to have swallowed the hook and, it seems to you, a foot of the leader. Curious, isn't it, but it's always the little fish that are firmly hooked, the big one usually just manages to catch his lip, drop on the bank, and after you have grabbed for him and frightened all the fish within 10 miles, slide back into the brook with a sort of "Come birdie, spring is here," air, and leave you, if you have the passion of a fisherman, the solace of strong language, and mighty poor comfort it is, too.

Still, all the big ones do not escape, and we meet at 11 o'clock to compare notes and fish, and to eat lunch.

Total 42 fish, two of which are considerably over 1 lb. It's rather early yet, the meadow flooded and the fish not particularly hungry. Still, 42 fish are not to be sneered at, and, the sand-viches. Did ever two slices of ham with a little bread taste better? The happiest time in a man's life must be when, after a morning's exercise in the open air, he stretches out at full length on the grass, in the shade, and listens to the noises made by God's creatures, with every sense at perfect rest. So ended my first trout expedition of the year, for business called me to Boston by the afternoon train, with fish enough for my breakfast and a few over for friends.

May Zeke Sprague and his miraculous equipage be preserved until the trout cease to haunt Wadeleigh brook, A. F. E.

ANGLING NOTES.

AS both Decoration Day and the glorious Fourth came on Friday this year, very little business was transacted on the Saturdays following; this gave many people a chance to pass three days in the country, and anglers made the most of the opportunity. Last Thursday, notwithstanding the weather, the cars and boats were crowded to their utmost capacity, and fishermen with creels and rod cases were to be seen in every direction. Some were bound for the cool forests and lakes of the Adirondacks, while others were off for the wide waters of the St. Lawrence, with its thousand shady islands and savage maskallonge. The majority, however, had to content themselves with shorter trips and seek the blue-fish in the surf along the coast, or the gentle weakfish in the quiet waters of Barnegat or Jamaica bays. The various clubs in the mountains received a big contingent, especially Blooming Grove Park, when the Fourth of July always draws a large number of members and guests, who are glad to escape from the noise and confusion of the hot city, and take a much needed rest among the cool mountains and snaky forests of Pike county, to say nothing of enjoying the luxury of a well-appointed club house, and the trout and black bass fishing for which this association is famous. What a change there is between Blooming Grove Park of to-day and the same place ten years ago. Great improvements have been made for the better and the club now is one of the finest in the country.

The owners of property on the west branch of the Neversink still have considerable trouble with poachers; nine of them were arrested last week. They consider it smart up there to get the best of one of those "city fellows." They take his money, and a good deal of it, too, for land, taxes, etc., and then take every advantage of him. After people paid a big price for their land, hoping to have a place where they could run up from the city and enjoy a little quiet trout fishing in the streams running through their property, they found that notwithstanding the liberal price paid, the residents refused to recognize their rights, but proceeded to trespass whenever it suited them, and resented any interference. Even after having been repeatedly ordered off and having the law explained to them, they still thought it smart to poach whenever the owner's back was turned. After a number of law suits had been decided against them they began to open their eyes to the fact that people still can own property in this country when they pay for it, yet the temptation is very great, particularly when they find they have ruined the fishing in the public parts of the stream (there are miles upon miles still open) by catching the fingerlings and snaring and set-lining the big ones. The poachers laid great stress on the fact that these streams had been stocked at the public expense. This question, of course, had nothing to do with the right to trespass, even admitting the fact that at one time some trout were put in by the State, it does not affect the question at all. The owners also bought trout and turned them into the stream but no one ever claimed an exclusive right to the fish, they can be caught by any one in the proper season, but it conveys no right for people to go on a person's land without permission. Another point which has been settled by the courts is that the land owner owns to the center of the bed of the stream, so that if he owns both sides he controls the stream, unless it is a public highway.

Frank Dunning, a well known sportsman of this city, has just returned from the Restigouche River. He reports the salmon fishing excellent. His best score for one day of about seven hours fishing, was seven salmon, the largest weighed 36lbs.

Col. S. N. Martin, of Summit, N. J., reports fine striped bass fishing in Chesapeake Bay. One day having lent his rod to a friend, he killed two striped bass weighing respectively 6 and 10lbs., on a little 6oz. Holberton style of fly-rod.

POSTING AND POLLUTING.

MANCHESTER GREEN, Conn.—*Editor Forest and Stream:* The time has now come to call a halt, and make an impartial examination of our game and fish laws, and to understand just what effect these laws have upon the rights of the many, and if other legislation is necessary to protect these rights then let us have it.

I am led to make these remarks by the attempt which is being made to put the fishing waters of the State into the control of a few so called sportsmen, who, entirely ignoring the rights of others, seek only their own gratification. There are whole-souled men—farmers and others—who have large tracts of land in this vicinity, through which course fine streams, who would scorn the idea of leasing the streams, and who believe in the God-given right of enjoyment for all. There are others who have as little regard for anything but self as can be imagined, men who have as small conception of neighborly amenities as a baboon. I have in mind one who posts the streams through the land occupied by him, and fishes in every other stream attainable. Another sells his meadow to parties for \$4 a year and considers he has much gain, but has as little conception of the comfort and pleasure realized by a day's outing as a native of Zambesi. His ideas are purely utilitarian. There is nothing to him in nature's beauties—

"A primrose on the river's brim,
A yellow primrose is to him,
And nothing more."

That there is need of stringent laws, to prevent the taking of game or fish out of season and in an improper manner, no man of ideas denies, and we should also have proper laws to prevent the pollution of streams by any means, either by mills, factories, or in other ways. There are those who cannot be prevented from violating these laws, except by a heavy penalty and that rigidly enforced. For instance, several days before April 1 a person was seen, by one of my neighbors, with over 40 trout. The man who saw the trout would not divulge the name of the person who had them. Now the man who caught those trout took an unfair advantage of those more conscientious, who would not fish out of season, and such a man knowing the law deserves punishment. There is no doubt that the fish and game laws could be much more easily enforced, if the majority of people un-

derstood that these laws were for the benefit of all. Many of them say these laws are only for the wealthy. The city men lease the streams and woodlands, and prevent others from taking game or fish. I had this very thing said to me yesterday by an intelligent mechanic, who enjoys a day out when his labors will permit. It is better to pass just laws now, than to have these citizens, when they understand their power, pass those that are worse in retaliation.

I was fishing a stream some fifteen miles from Hartford a few days since, and had been quite fortunate in my catch of trout. Then it got late, and I was about starting for home, I noticed an open meadow below the road and thought I would make a few more casts. Before leaving the stream as I stepped into the meadow, a notice confronted me forbidding fishing and signed with the name of a Hartford man. On inquiry of a farmer near by if this man, whose name was attached to the notice, owned the land through which the stream flowed, he said not one foot of it. The land belonged to a farmer living near by. I said, "Very well, unless the owner of the land forbids me to fish I shall keep on." And I did so. This posting streams is the kind of business that brings the laws into disrepute.

If the farmers would take hold with others and oblige the mill owners to cease the pollution of the streams by running abominations into them as they now do, the area of fishing waters would be increased, and the farmers would have pure water for their cattle and other purposes.

The laws passed by the State for the protection of fish are supposed to be for the purpose of increasing the supply, and should apply to any cause which tends to fish destruction except in a legitimate manner. The pollution of streams by the refuse from mills is one great source of destruction. One stream of the many in the State in which the fish are destroyed by this means is the Hockanum River, a stream naturally as pure as any in the Commonwealth. It flows from Soipic Lake, above Rockville in Tolland county, through the towns of Vernon, Ellington, Manchester and East Hartford, into the Connecticut River opposite the south part of the city of Hartford. From Rockville to its mouth it is a stream of inky blackness, flowing through a large acreage of meadow and pasture land, and is not fit for any purpose except to set machinery in motion. It is a villainous mixture, emitting an intolerable stench, and but for the long time it has run in this condition it would be considered a nuisance. The stream leaves Rockville with pollution enough to create a pestilence.

In some places such matter is utilized for fertilizers, and it could be done here, and undoubtedly made a source of revenue.

No one has the right to destroy the usefulness of the water for those on the stream below; and it is due to the people of the State that legislative action be had in this respect, and proper laws passed restraining mill owners from the pollution of streams. JONATHAN.

HINTS FOR STRIPED BASS FISHING.

A FEW facts about the above fish, obtained from personal observation, may be of interest. You see a bass after traveling around some, or in other words, say one that will weigh about 20lbs., has got the deceptive ways of the world down to a pretty fine point, and when you start out to catch him, things have got to be about right, or he shows a lack of interest in hook coverings which is truly discouraging. The most important thing, and at the same time the one most neglected, is to get bait of the same kind as that upon which the bass are feeding at the time. I remember one occasion, when they were feeding on young mullet, which venturing too near the shore, lost control of themselves in the breakers. After trying lobsters, menhaden, mummichogs and live eels, without the slightest success, although the bass breeched for mullet within a few inches of where the bait struck the water, I gave it up for the time, until, finding a few mullet in a creek near by and returning to the ground, almost every cast was rewarded by a strike. In surf fishing with a rod most fishermen make the mistake of casting their bait too far from the shore, which is a bad fault, as the bass are mostly inside the breakers, for the very purpose of taking advantage of the force of the sea, which loosens, for a few seconds at a time, the crabs, small lobsters, etc., from the kelp and cracks in the rocks, and causes the smaller fish to get flurried, when they fall an easy prey to the striped bass, which has a most perfect control of himself, either in a breaking sea or a swiftly running current. So when surf fishing do not cast too far from shore; the bass are generally inside the breakers in the white water.

The most killing bait I have ever fished with, in running water, is live eels. In striking an eel a bass always takes him head on. This is because, having no holding teeth, he would lose the slippery prize most every time if he grabbed it by the tail or in the body. So in fishing for bass with this bait, hook the eel by the under and upper jaw, about a quarter of an inch back from end of snout, and it will rarely happen that you have a strike without hooking your fish, it being understood, however, that you manage your rod, reel and line properly.

A mistake often made is, after having hooked the fish, in not holding him hard enough from start to finish. In shrimping for bass, which kind of fishing is most successful when the tide running through some bridge makes numerous eddies, you can not have too fine a leader on too small a hook. By a small hook I do not mean a trout hook, but the kind the boys buy—five or six for a cent—to catch mummichogs with. The little eye in the hook gives a fine chance to tie the leader. If you have no luck at first, try every eddy you can find, as a few yards often makes a great difference in the catch.

Bass caught shrimping generally run from 1lb. to 5lbs. in weight. Always take a quart or two of shrimp to bait up with, throwing over a dozen or so every minute, to toll up, should a school be passing. Put but one shrimp on the hook, and pick out the largest for this purpose. In fishing in a tideway with live bait, do not always let it be tailed out by the running water, as on a number of occasions I have seen a bass refuse to strike at an eel headed against the current, but take it at once if cast the other way and let swim down with the tide; these instances were at places which had been fished very hard during the season, and probably the knowing ones had been pricked by a hook, or quite caught on by seeing their friends and relatives led off by the nose. One rea-

son for bass not being as plenty as of old is the pollution of our fresh ponds and rivers by sewerage, etc., thus cutting off one of their winter haunts, from which they used to come out much refreshed to meet the fishermen in spring. WILLARD NYE, JR.

NEW BEDFORD, MASS.

COURAGE OF SPAWNING FISH.—Some days, while wading and casting for bass in Lone Stone Lake, Wis., I inadvertently stepped on the spawning bed of a rock bass, or "goggle-eye" as they are sometimes called in the West. The fish ran out, and a moment later came back at me and struck quite a severe blow on my leg as I stood in the water. I stood quiet, and the little creature—it was only about a half or three-quarters of a pound in weight—ran at my leg again and again, bunting quite forcibly with its head. The whole demeanor of the fish was one of great anger. As the water cleared, I could see it very plainly, and it could see me as well, but it showed no signs of moving off, and evidently meant fight. I stepped away from its nest I had unfortunately trodden upon, and its possessor then abandoned the fight. This was June 15, I believe. We could see a good many black bass nests shining on the bottom of the lake near the shore. The men of that country said they often caught bass by leaving the bait lying on the bed or "nest." On finding it there upon their return, one or the other of the bass would seize it and carry it off from the bed, and the fish could then be hooked. I caught only one bass here, a big-mouth. The guides did not know there was a large-mouthed bass in the lake, though the small-mouthed were plentiful. I believe the bass were still spawning at that date. There was a small amount of spawn in the fish I caught. Bass do not usually bite much during the spawning season, except on the beds. I found this fish at the edge of a bank of rushes.—E. HOUGH.

SOME WISCONSIN FISHES.—The Smithsonian Institution is in receipt of a letter from Mr. W. W. Abbott, of Neenah, Wis., containing sketches of two fish of that locality. One of them was recognized by an old fisherman as a "shovel-nosed sturgeon," which he had seen elsewhere; the other is known at Neenah by the names "shad," "mooneye," "cisco" or "herring." The "shovel-nosed sturgeon" is the paddle fish of the Ohio and Mississippi valleys (*Polyodon spathula*), and we presume that it was found in Lake Winnebago, which communicates with Lake Michigan through Green Bay. The paddle fish is common in the Mississippi Valley, but it is not often found in Lake Winnebago. The paddle fish is also known as the spoonbill cat and duckbill cat. It is frequently considered unfit for food, but we have often eaten it in Western hotels under the name of salmon and found it very palatable. The species to which the other names are applied is usually called "mooneye." It is the *Hyodon tergisus* of the books and is placed between the whitefish and herrings on account of its structure. Mr. Abbott states that the flesh of this species is white, fine grained and soft, and tastes slightly muddy. The fish takes the artificial fly readily at sundown and is a game fighter. Its weight ranges from $\frac{1}{2}$ to 2lbs.

"TWO AFTER TROUT."—Montreal, Que., June 29.—*Editor Forest and Stream:* I spent part of to-day reading my FOREST AND STREAM, and was very much interested in the article signed "O. O. S." "Two After Trout." I've been there. The reason that the Toronto hardware dealer was afraid to sell him the spring scales (although his objections could probably be overcome) is that it has been against the law to sell them in Canada for the past few years, because they are unreliable, and any person buying goods weighed on them is liable to be sold. Or perhaps the idea of the Government was to prevent honest fishermen from calling a 4oz. trout a 4 pounder. I guess "O. O. S." struck it about right when he said that "perhaps the scales weren't just on the square." The black bass season is open here now, and we expect to make some great catches during the coming month.—I. L. S.

LAKE DUNMORE (VERMONT) FISHING.—This lake is eight miles from Middlebury. The mountains come down to the water's edge. The lake is about five to seven miles long, one to one and a half miles wide, very deep and well supplied with salmon trout, black bass and perch. The fish so far are more plentiful than usual, the increase being credited to the work of the State Fish Commission. One gentleman had been out three times and took thirty-eight trout, the smallest 6lbs., largest 15lbs. A gentleman from Brandon has taken over 100 trout, among which were a number of 18 and 20-pounders.—W. A. WILCOX.

A RESTIGOUCHE SALMON SCORE.—A Bridgeport, Conn., exchange reports: Mr. H. R. Ives, a cousin of E. R. Ives, Esq., of this city, and a prominent manufacturer of Montreal, has recently been salmon fishing with the Restigouche Salmon Club, Matapedia, Quebec, and reports the following catch, which is enough to set any fisherman longing for a chance in such waters: First day, 9 salmon, seven of which weighed as follows: 27lbs., 23 $\frac{1}{2}$, 21 $\frac{1}{2}$, 22, 17, 24, 26; in all 160 $\frac{1}{2}$ lbs. In the evening of the same day he killed a 38-pound fish. This report accompanied a fish sent to E. R. Ives, Esq., which arrived in good condition.

TWO FISH ON ONE HOOK.—Tangerine, Fla.—An uncle of mine was out in a boat fishing for bream with a very small minnow for bait, when a shower came up and he pulled in to shore to get out of the wet, leaving his lines in the water. After the shower he started out again and found that he had hooked a good-sized catfish during the rain; but you can imagine his surprise when unhooking it that instead of its taking the original bait a fair-sized rock bass had been caught first, and the cat had pounced upon the bass.—TANGER.

BASS IN THE CORN FIELDS.—Mr. S. F. Denton has just returned from Illinois, where he had gone to do some collecting. He found the Big Vermilion and Illinois rivers beyond their banks and collecting entirely out of the question. While wading in water up to his neck his feet were still on the grassy banks of the river. The people of the country were fishing at Peru for bass with hook and line, and minnow bait, in the cornfields.

CUTTHUNK BASS FISHING this season is excellent. Some large fish have been taken. Last year, it will be remembered, the fishing was a failure.

SEA FISHING OFF THE MAINE COAST.

HAVING never seen anything about deep sea fishing for cod and pollock in FOREST AND STREAM, I have thought it might interest some of the readers of the paper to read an account of one of a number of days' fishing which I enjoyed during the summer of 1888 in company with two friends, among the men who make a living with their hooks and lines.

Joe S., Lin H. and the writer were camping, or rather staying, aboard of an old pinkie, whose days of usefulness were past, excepting the purposes for which her owners used her, that is, for a temporary stopping place while fishing, and for a place where they could dress down and store their catch until sold. She was anchored in a snug little harbor known as Damis Cove, on an island of the same name, noted all along the coast as a safe place to be when the heaviest storms were raging. The owners had kindly vacated the premises for the time being, leaving us in full possession of a house and all the equipments for comfort; that is a good cooking stove and utensils, bunks, beds, etc.

Of the party Joe was the oldest in age and experience, having lived on the island the first sixteen years of his life and visited it every two or three years since. He knew all the harbors and most of the fishing shoals, and above all could sail the boats with the best of them, and was also a good cook. Lin was on his first camping trip and expected lots of time to rest, as he expressed it, and he did not get it, which will perhaps partially account for what followed. As for myself, I had camped out several times and was anxious to gain all knowledge possible on the subject, for I expected to be able to use it in the future, so I was ready for anything and took what came and tried to make the best of it.

And now to the twenty-four hours that proved to be the most memorable of our trip. We had enjoyed good fishing on the shoal near by, but were wishing for a chance to go outside, when we heard that pollock were biting freely on the western grounds about 9 miles off shore. We immediately made preparations to go over to Cape Newagen after bait. Lin did not want to go, so Joe and I started about the middle of the afternoon, expecting to get back that night. We got over to the cape just as the fishermen were coming in with their day's catch. We helped them unload and dress down, which means to prepare the fish for salting. The fish, which were mostly pollock, with some cod and haddock mixed in, were thrown from the boats with small pitchforks into half hogsheads, called tubs. A tub and a half was considered a good day's catch. The first operation in dressing down, is to take the fish by the head, draw it over the edge of the tub, and with the cutting knife the throat is cut to the backbone, just in front of the nape bones, with one stroke. With another the belly is slit and continued well down the side of the anal fin; the backbone is then broken at its connection with the skull and another cut of the knife takes the head off, and the fish is ready for gutting. The liver is carefully taken out and saved for the purpose of making cod liver oil, all kinds going into the same barrel. The oil is now an important item in the year's profits. After gutting the fish is thrown on to the splitting table, where the backbone is taken out with two distinct cuts of a knife, made for the purpose, leaving the fish flat and ready for salting after it has been rinsed off in clean water. The whole operation of dressing down is done so quickly that one must realize how fast an expert can do it. The splitting requires long practice and a strong wrist to do it neatly and quickly. This job all done we get supper and then it is time to start for the bait. The net is loaded on to one of the large dories, Joe and I taking the place of one man for a share of the bait. John Gray and Joe take the oars for a three mile row, and I trim the boat and enjoy myself, after reaching the grounds and while waiting for the herring to school, which they do just after sundown. John Gray, who is about 60 years old and has been fishing ever since he was strong enough to pull an oar, tells us much about the life of a fisherman and the habits of the fish.

Not many minutes after the sun went out of sight behind the Georgetown hills, we heard the herrings coming toward our station. The sound we heard was like that a heavy shower would make as the rain struck the water, and was caused by the fish as they flipped out of the water, their tails striking with a spat as they went under again. The noise was incessant and could be heard for a long way each side of us. There was a big run, and as at times countless numbers would throw themselves a foot and more above the water in their endeavor to escape the rush of some large fish or seal, it would seem as if every herring in the ocean had gathered together and run into that particular bay. It was a sight never to be forgotten, and one that even those who were in that same place nearly every day during the season saw but once or twice in a year. As they came near we let out about 60ft. of our net, which was 30ft. wide and over 100ft. long, with inch meshes. In less than five minutes after the first fish struck the net the floats commenced to sink, and we hauled it back into the dory and Joe and John rowed back to the dock. After picking out the fish and placing the net in position for another trip, all done at the same time, we found that we had captured nearly a barrel of bait. Often times the catch is less than a bushel, barely enough to last a man for one day's fishing, and as the herring are very soft and will not last over twenty-four hours, the trip after bait has to be taken every night. By this time it had got to be so late, 11 o'clock, and there being no wind, Joe and I concluded not to try to go back to the island, and accepted Mr. Gray's invitation to stay with him. We went up to the house, and after a light lunch were shown to our room, and for the first time in six weeks I slept in a soft bed.

In the morning we wished we had taken our blankets and slept in the dry salt bin as we had done before; the bed was too soft after being used to a common board and blanket. We only had three hours' sleep anyway, as we were called to breakfast at 2 A. M.; before 3 we were down to the boats. We got under way as soon as possible and started out; some of the boats were even then out of sight. As we went out of the harbor we could plainly see Seguin Light off our starboard bow, with several smaller lights inshore in plain sight. There was a fine wind blowing off shore that would have carried us right out to the fishing grounds, but it was Lin's last day with us, and as Monhegan Light came in sight off the south end of the island we hauled off and headed for the

island, never thinking but that he would be thankful for the chance of going out with us, although we knew that he did not enjoy such trips as we did. It was nearly daylight before we rounded to beside the old pinkie, and as Joe went down the companion way I took out what blankets and things we did not want, and as I went down the companion way I heard Lin growling, almost swearing at Joe for waking him; he said it was a pretty time of day to get up, and that he would not go out with us. We got out. If we had staid, there would have been music. He never knew what he escaped that day, for Joe kept getting madder every minute, and several times after we were well out of the harbor he swore he would go back and string him up to the masthead by the heels and see if that would wake him up; but as we went along the calmness of the mighty ocean along with the exercise of rowing (for the wind had all died out and we had settled down to the long row ahead of us) soon caused us to think different thoughts, and we afterward set it down as one of the pleasant "episodes of the trip," as old Sam of the Kingfisher family would have called it.

All the same, our well-meant thoughts of doing Lin a favor cost us a nine-mile row, which was no fun, and what to us was worse, the loss of the best part of the fishing, for when we arrived on the ground nearly every boat had a half catch. Notwithstanding the drift of the undertow which that morning was directly opposite the flow of the tide, we found ourselves afoot of another boat and had hooked on to their anchor line before we had caught a fish, and then we had to pick up our anchor, which, as we had about sixty fathoms of line, was no easy job, and then get under way and try again. This time we did better, and we were soon hauling in some big pollock. It was not long before we felt well repaid for all our trouble. We were fishing in thirty fathoms of water, using what is called a 6lbs. line with a 1lb. sinker. For bait we had on each hook three half herrings. One man could tend to two lines, if he wanted to work hard enough; one was enough for us when the fish were biting. It was exciting when one had hooked a 6 or 8lbs. pollock, for they can make a good fight at the end of 180ft. of line. We dare not let them run, and at times on their way up they would turn head down and sulk, all we could do was to hold hard and wait for them to give in, and then one had to take line pretty fast in order to keep them coming; by the time the fish got to the top of the water they were nearly drowned, and often times, when the hook broke loose as we were lifting them over the side of the boat and they dropped back, we would have time to gaff them and sometimes catch them with our hands by putting the fingers in the gills before they could recover sufficiently to get out of reach. The pollock is a very handsome fish, and we were told that they were often shipped Wet and sold as black salmon.

After we had been fishing an hour or so the sea breeze came up, and as it kept blowing harder and more steady right against the tide, it soon kicked up a bad choppy sea, and it became more and more like work to catch fish, and as a memento of the day I carried black and blue spots on the sides of my legs for more than a week. I stood in the narrow forward standing room, and as the boat would jerk and jump around it threw me up against the washboards, first one side then the other, until I finally had to give up fishing. Then, to amuse ourselves, we commenced to tell up some Leach's petrel (*Cymochorea leucorhoa*) with fish liver cut fine, which they devoured greedily. We soon had twenty-five or thirty alongside the boat where we tried to catch them with our hands, but it was no go; they were too quick. We kept this up until tired, and then we tried angling for some 2 or 3 hagens or jaegers (*Stercorarius parasiticus*) that were hanging around; they would dart down and pick up all the liver we could throw them. As the smallest lines we had with us were so heavy as to sink the bait before it got far enough away from the boat for them to take it, we were not successful in that venture. Joe told me that he had often caught them in this way when a boy; they were more plenty then and would come nearly as close as the petrels did. The fishermen have a grudge against them, and kill them whenever they can, so that they have learned to keep further away and out of danger. At this time the wind was blowing very hard, and we began to think that it was time to start for the island, especially as a thick fog had settled down and hid the whole shore from view, and all but two of the other boats had gone in. So we up anchor, hoisted the foresail, and started. We dare not put up the mainsail and jib, there was too much wind and sea. The wind was fair, and the difference in the speed and ease with which we went into the harbor was very noticeable when we compared it with the ash breeze and hard work of coming out. The first two or three miles we had to steer by compass, and then we had the whistling buoy booming away off the port side; after passing that we sighted the red buoy that lies near Bantam Reef—a very dangerous spot, and one on which many a good boat has gone to pieces in the past—then the mountains on the mainland loomed up through the mist, and then the lower lying islands became visible.

Just off the mouth of the harbor Joe sighted a splitting knife floating in the water, and tacked about to pick it up; he lost sight of it while tending to the sails, and, as I was lying down at the time, we failed to find it again. However, we kept on for a little sail on this tack; the boat seemed to fairly fly over the waves, and, although we got wet with the spray that dashed into the air from the bow, we thoroughly enjoyed it, and were sorry it could not last longer. As there was no land between us and the other side of the ocean, and as we were not provisioned for a long cruise, we concluded to turn around and head for the island, where we soon found ourselves on board the old pinkie again, and our day's fishing was at an end. As we had had nearly twenty-four hours of a new experience, we concluded that we had fun enough for one day. We made short work of dressing down our half tub of fish. Nearly all of the other boats went in with a tub and a half to two men, and by the time the fishermen had packed away their catch and had their supper it was time to go for bait again. Thus, the men who follow fishing for a living get only three to four hours' sleep out of the twenty-four, unless it is during a spell of bad weather and on Sundays. Still, all the fishermen that I met were, as a rule, the healthiest, most independent and best-hearted men it has been my privilege to meet, and my wish is that they may always be so.

ELMER T. JUDD.

LAKE CHAMPLAIN FISHING.—I came up here just as the ice was going out, but in time to catch a few frostfish. I cannot see anything to mark a difference between these and the salt-water smelt (*Osmerus mordax*), and take it they are identical, but that some stay the year round is certain, as dead ones wash up now and then in summer, although they never take bait after the ice goes. They were ripe and spawning the last of March. They seemed to move in schools and did not bite at all well last winter. The three men I fished with seldom took over twenty dozen a day altogether. Wall-eyed pike would occasionally take the bait (a piece of frostfish) and yellow perch, ripe and spawning also, and now and then a ling. Wall-eyed pike are plentiful this summer, and the black bass have begun to take hold, though not freely, on the rocky shores, that is, with live bait, although I have no doubt they would rise to a fly.—THOMAS LEE.

BALTIMORE, Md.—There is good fishing at present in Bush River. Rock, white perch, yellow perch, catfish and eels are all common. "Peelers" are the most successful bait.—A. L. S.

Fishculture.

THE TROUT CULTURE DELUSION.

Editor Forest and Stream;

I have read the communication of Mr. Wm. N. Byers, in your issue of June 19, and desire to answer his points *seriatim*. And first, I did not in the remotest manner manifest disappointment because my former article did not provoke or attract more attention, as any unbiased reader will acknowledge who reads said article. Indeed, one of the oldest and most experienced anglers in this country, one who has and continues to angle over a wider range of territory than probably any other person in this country, read my article in question and also the subsequent one, said he was fully convinced that my article could not be successfully controverted, and he is himself an extensive writer of angling literature who was formerly, in common with all of us, enthusiastically in favor of trout culture, but who now acknowledges that it is a delusion, so far as producing a visible increase of mature trout is concerned. This is the verdict of all well-informed men who have no axe to grind. The fact that there were fifteen years ago several hundred persons engaged in trout culture in this country, whereas there is not a baker's dozen so engaged to-day, except by virtue of public funds, is of itself sufficient testimony of the futility of the now exploded business.

I have no certain means of knowing whether I have previously heard of Mr. Byers, consequently I am not "after" him any more than others of the rapidly diminishing and already very small circle of ill-informed persons who are either consciously or unconsciously endeavoring to keep alive a gross delusion.

Mr. Byers seems to think that because of an alleged catch of sixty-four fish in one day, most of which were planted fish, that he has sufficient evidence of the success of trout culture. And he says he can give a list of fifty or a hundred streams, impliedly, which have been improved by stocking. How does Mr. Byers know that those streams have been thus improved? Has he fished them all? I have personal knowledge of numerous streams which have been stocked and some of them repeatedly, and very many more which have never been stocked, and it is nothing remarkable to take sixty-four or more fingerlings from any of these streams, no matter whether stocked or not. The larger specimens are generally from the unstocked streams.

Mr. Byers says I will ask how he knows that the fish referred to by him are Eastern trout? Mr. Byers evidently thinks me very green regarding the various types of brook trout.

In next to the last paragraph of Mr. Byers' article, the object of the communication will be apparent to the general reader. He has waters to lease to some embryo trout culturist, providing he can find some one verdant enough to try it.

In his last paragraph, Mr. Byers attempts to be sarcastic, by his gratuitous assertion that I mourn a life wasted trying to raise dollar trout to sell at twenty-five cents. I presume this is just as truthful as his other fish stories. Of course I did not even intimate anything of the kind. On the contrary, I take pride in having given the subject of inland many more years of personal attention than any other fishculture, including trout culture (while that branch of the business remained within the pale of respectability), American.

And finally, Mr. Byers will condescend to show me how to raise trout, as well as how to catch, cook and eat both wild and tame ones, if I will only come out there, and I won't even have to risk my life in a Territory. Very kind of him truly!

And now in conclusion, I wish to say to my callow friend, that, judging from the general tenor of his communication, I was probably years in a "territory" before he was born, and knew something of "black-spotted" trout, of native anglers and mouthee tenderfeet. What he does not know about fishculture would make a huge volume, while what he does know could be written on the address-side of a postal card. I speak of his apparent knowledge. Mr. Byers has a "heap" to learn before he will be capable of enlightening any old fishculturist. If he lives long enough in Colorado, he will find that the Eastern trout will conform to the peculiarities of the native trout both as to spawning season and markings. He will also learn that there will be cycles of abundance and scarcity of trout in all waters adapted to them, precisely as in the case of all varieties of fish, and without the least regard to artificial stocking. The fact that more Eastern trout are taken than native ones proves nothing except the probable fact that the Eastern trout were introduced

at the time of greatest depletion and that an overstock was introduced as is generally the case when done at public expense, leaving of course a larger portion of the Eastern types as survivors.

I find that I have passed over the paragraph concerning the "market" fisherman, impliedly the fish hog. Now, while I never raised a trout or caught one for the market, I think I know all about the genus "fish hog." The so-called market fisherman (for trout) is a whiskey bummer who hangs around the saloons and goes a-fishing just often enough to keep himself in whiskey money for such occasions when he cannot sponge treats.

It is rare that any other character catches trout for sale. This class has not and will not in all time catch as many trout as the professional anglers catch in a single season. The real fish hog is the unprincipled lout who generally under the guise of membership in some club, brings to his reel the scores and hundreds of fingerlings which so often figure in reported scores, like Mr. Byers' sixty-four, but with no mention of weight. I trust that Mr. B. will yet tell us how much the sixty-four fish weighed. I am also desirous to have that list of fifty or a hundred trout streams which have been so improved by stocking. Let him publish it in *FOREST AND STREAM*. The R. R. Co. which runs that special daily fishing train would doubtless assist in the information, providing a considerable number of them discharge their waters into the South Platte.

There is no doubt that the State of Colorado reaps benefit from the tourists who visit its picturesque scenery, and a small proportion of whom may occasionally go a-fishing, but I do not think that the fishing factor has much to do with it. The railroad fishing racket is well understood by many Eastern tourists, and they too well know that it "plays out" with the native stock of fishes, and they are constantly seeking "pastures new." One thing more. Will Mr. Byers please publish a list of that number of people in the region of Denver who are engaged in artificial trout culture. There are thousands of readers of *FOREST AND STREAM* who will be glad to hear of and from them, if they are making a success of the business. During the past decade, I have had scores of letters from Colorado concerning fishculture, and not one of them ever referred to a case of success in trout culture, nor do I believe that a solitary case of success can be shown in all the State. If there can be, I am sure that the public will be glad to have corroborating facts and figures, and I am equally certain that *FOREST AND STREAM* will eagerly spread the information throughout the country, and I will certainly aid to the extent of my limited ability.

MILTON P. PEIRCE.

COLUMBUS, Ohio.

NEW JERSEY FISH LAW VIOLATORS.

HERE in the Highlands of New Jersey we have waters of every variety, from streams tumbling and roaring down the mountain sides to those which seem to lazily drift through the meadowland into the swamp, and at times half hiding under the bank overhanging with alder bushes—streams that are small and suitable for fingerlings, to others which are large enough for salmon. What a variety of bottoms for streams we find as we pass from the Delaware to the Passaic. Slate, limestone, granite, red shale, clay and muck; each one seeming to have its influence on the water, more especially so in the spring, when it draws color from the soil it goes through. The granite, limestone and shale vary but slightly from each other, while the clay with its yellow, the muck with its black, and the shale with its rosy tint, give an individuality to each which is very pleasant to remember in after times when the season is over. Brooks in the limestone formation, which come into life from a single spring, to those in the granite region, where it takes hundreds of trickling springs to form a stream large enough to be the home of the funny tribe. There is probably not another place of its size in this country where such a variety of streams and lakes can be found that are so well suited to the habits of the game fishes.

Are there trout in the streams and bass in the lakes? Certainly; all the recklessness of the legislature in the past in allowing six months to catch trout against three and one-half now, the man who goes out at night to spear eels and suckers, but also brings back trout to his friend, who goes out to take a walk but also takes a net with him under his coat—all these have not been able to utterly destroy the fishing.

For a few years no fish baskets were allowed, but an old gentleman, who had been sent to represent his party in the legislature, advocated the replacing of the baskets. He represented that the eels and suckers of Paulens Kill and other streams were getting large and fat and being wasted, and the legislature good-humoredly passed the bill, to please him. These baskets are not supposed to kill trout and bass, but they do kill hundreds every year and I have never known a basket that did not kill trout as well as suckers and eels.

The law has been enforced but a very few times, as you may easily tell by the naive way in which the native of Sussex, Warren, and Morris will tell you how many suckers he caught the last time he was out with his net, and then he will hold his hands apart, showing how long were the trout he caught.

The larger lakes, like Hopatcong and Budd's Lake, have their regular seiners, and in some towns, as Morristown and Hackettstown, there are men who have seines and use them whenever they have a chance, for the bass and pickerel of the Passaic and Shongum to the trout of the Musconetcong.

A new fish commissioner has been appointed at Morristown and we have every reason to believe that he will be entirely harmless, as far as the prosecution of those that break the game law is concerned, for he is a member of a club which has a small lake a few miles from Morristown, and some of this club's doings would not look quite correct if viewed impartially. The lake that this club has is but a few miles in area; they want to keep it highly stocked with bass, and as the natural increase is not sufficient they have to adopt other means to keep the fishing up to the standard.

One way to keep it stocked is to buy small bass and put them in the lake, but they also have a document from the commissioners giving them authority to net any public stream in the State for stocking public waters, and the public stream they stock is the one that empties into their lake. This stream is hardly large enough for a good trout stream, and, as there is an impassable dam only a few hundred yards above, the fish must find their way, in a day or two, into the club's private lake. The other way was by making a contract with a well known poacher who agreed to furnish bass of various sizes, which he did, some of them weighing 4lbs. and over. This commissioner may help stock our streams with trout, which is more of a favorite with him than bass, but we can hardly expect him to enforce law.

Hopatcong also has a commissioner, and he has done a great deal of good this summer by preventing illegal fishing, and every person he stops or drives away will deter ten others from attempting it. With strict enforcement of the law and judicious stocking of streams we could in a few years time have sport that would satisfy any reasonable devotee of the rod and line.

HOPATCONG.

SHAD IN UTAH LAKE.—The Commissioner of Fisheries is informed by Mr. Musser, Fish Commissioner of Utah, that more than 100 shad averaging 1½ lbs. each were caught in Utah Lake in November, 1889. The experiment of introducing shad may, therefore, be considered worthy of repetition.

INCREASE OF POTOMAC RIVER SHAD.

THE inspector of marine products in Washington, Mr. Gwynne Harris, has made the following report of the shad and herring catch of the Potomac River for the spring of 1890:

Number of shad landed in Washington.....	420,391
Number of shad landed in Alexandria.....	21,000
Shipped by steamer Sue to Baltimore.....	9,300
Shipped by steamer Corcoran to Baltimore.....	7,340
Sold and salted on the different shores and shipped by gilliers and trap-netters.....	28,900
Total.....	486,931

Number of herring landed in Washington.....	8,264,568
Number of herring landed in Alexandria.....	3,151,450
Shipped by steamer Sue to Baltimore.....	192,000
Sold and salted on the different shores.....	3,378,000
Total.....	14,986,018

The Commissioner of Fish and Fisheries, Hon. Marshall McDonald, informs us that this is a larger catch of shad than we have had since 1880, and shows an increase of about 100,000 over last year.

DELAWARE RIVER FISHES.—Hundreds of large shad were seen going down the Delaware River July 3. These have finished spawning and are on their way to sea. Hon. Henry C. Ford, while fishing in the vicinity of Delaware, Pike county, Pa., saw a Kennebec salmon leap a rift less than 20ft. from his boat. He thinks the fish was fully 3½ ft. long and would weigh 25 or 30 lbs. Governor Beaver has just reappointed, for three years, the present Board of Fish Commissioners. Mr. Ford has shown himself to be a most efficient president, a man of liberal and comprehensive ideas, and his successful administration has received the approval and indorsement of the public, which is now reflected in the official act of Governor Beaver.

CHANNEL CATFISH REARED IN PONDS.—Mr. J. J. Straubhan, Superintendent of the Put-in-Bay station of the U. S. Fish Commission, has informed the Commissioner of the successful rearing in small ponds of the channel catfish (*Ambloplites abudus*). In two ponds near Chagrin Falls, Ohio, neither of them containing over a quarter acre, examples of last year's hatch have been taken early in June. It has been considered doubtful by the Commissioner and fishculturists generally whether this species would breed in small inclosures.

BROOK TROUT PLANTING IN MICHIGAN.—Mr. Alexander Starbuck informs us on the authority of Mr. F. G. Heath, a former official of the Grand Rapids and Indiana R. R., that the number of brook trout fry deposited by the State Fish Commission last spring in streams reached by the northern division of that road, amounted to 449,000. The waters have been amply stocked for several seasons and anglers are coming from far and near to enjoy the fruits of intelligent labor.

SUCCESSFUL ARTIFICIAL HATCHING.—Marine fish have been artificially hatched in Norway and afterward kept three years in a salt water pond, where they thrived and grew wonderfully and will soon be matured and ready to spawn.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. R. W. Meek, Secretary.
Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.
Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.
Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.
Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.
Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.
November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Anburndale, Mass.
Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.
Nov. 10.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.
Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratogo Springs, N. Y., Secretary.
Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.
1891.
Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.
Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

THE A. K. C. AFFAIRS.

THE Advisory Committee of the American Kennel Club met at the office, 44 Broadway, July 2, to hear the charges preferred by Secretary A. P. Vredenburgh, on which he asked for the permanent disqualification of Mr. C. J. Peshall. All the members of the committee were present, Messrs. Terry, Perry, Wise, Anthony and Belmont. Mr. Peshall did not appear, but sent a letter (which was published in our last issue) refusing to acknowledge the constitutional existence of the Advisory Committee and its authority to act in this affair. The letter was read, but as the question of constitutionality had already been decided at a previous meeting, no weight was given to Mr. Peshall's contention. The charges, as served on Mr. Peshall were these:

CHARGE I. That Charles J. Peshall did circulate and continue to circulate false, malicious and libelous letters calculated to impair the authority and usefulness of the American Kennel Club and its publications, and to injure my reputation and standing as an officer of said club.

CHARGE II. That Charles J. Peshall wilfully violated rule 32 of the rules governing bench shows as adopted May, 1887. Specification: In that he exhibited a dog, at a show held under A. K. C. rules, in his own name as owner, at which time said dog was not his property.

CHARGE III. That Charles J. Peshall wilfully violated rule 25 of the rules governing bench shows, as adopted December 6, 1888. Specification: In that he misrepresented the value of a dog, at the time of making a sale. Specification: In that he conspired with one John N. Lewis to give a fictitious value to the dog, for the purpose of enabling said

Lewis to offer the dog for sale, at a price beyond its real value.

There was a prolonged discussion respecting the jurisdiction of the club to try Mr. Peshall on the several charges. It was urged by Mr. Wise that the offense named in charge one was not an offense in connection with dogs, dog shows or field trials, and therefore could not be heard by the club. They also urged that the second charge was outlawed by the lapse of time, the offense charged having been the showing of the dog Nick of Naso at the Waverly, N. J., show, in 1887. The three charges were taken up and voted upon with respect to jurisdiction. On the first charge, Messrs. Wise and Perry voted that the Committee could not consider the charge. Messrs. Terry and Anthony voted that it could consider it, and Mr. Belmont refused to vote on the ground that this was a personal matter. The vote being a tie was lost. Mr. Wise voted against taking up the second charge, the rest voted for it. As to the third charge the vote was unanimous that the club had jurisdiction. On motion of Mr. Belmont, however, charge second was deferred until the Committee could assure itself that it had jurisdiction; and the hearing of charge three was taken up.

Mr. Vredenburgh stated that after the alleged sale of the dog Nick of Naso, Mr. Peshall had come into the office of the A. K. C. and had exhibited to him a note for \$1,000, which he asserted he had received from Mr. John N. Lewis in payment for the dog. Upon Mr. Vredenburgh's saying to him that he had understood that Lewis had previously owned an interest in the dog, Mr. Peshall declared that he had been sole owner of Nick of Naso and had sold the dog for the \$1,000 as shown in the note he exhibited. Mr. A. D. Lewis was present when this conversation took place and he corroborated Mr. Vredenburgh's account of it. Mr. Vredenburgh further stated that in proceedings instituted by one Ralph to recover the sum of \$1,000 from Mr. Peshall, Mr. Peshall had stated in a deposition that Messrs. Livesly and Lewis and himself had owned the dog Nick of Naso conjointly, each having a third interest; but that Messrs. Livesly and Lewis had never paid their share of the purchase, and therefore Mr. Peshall had taken the dog back and had subsequently sold it to Mr. Lewis and at Mr. Lewis's request had taken from him a note for \$1,000, in order that the dog might have this fictitious price put upon it, but that, as a matter of fact, Mr. Lewis had never intended to pay the \$1,000, and that Mr. Peshall had never expected to receive the \$1,000; and that the agreement between the two was that the note was never to be given into the hands of a third party, but was to be held by Mr. Peshall. Mr. James H. Elliot, the attorney who was engaged in the action to recover the \$1,000 from Mr. Peshall in behalf of Ralph, was present at the meeting and corroborated Mr. Vredenburgh's statement, saying further that it had been his intention to attach the Lewis \$1,000 note, and that Mr. Peshall's representation as to its worthlessness had been made by Mr. Peshall to prevent such an attachment. He further stated that the so-called deposition by Mr. Peshall quoted by Mr. Vredenburgh had never been signed by Mr. Peshall; that it was a statement drawn up from Mr. Peshall's conversation, and Mr. Peshall after looking it over had assented to its correctness, and had agreed to sign it before the referee, but when the time came to sign it he had given Mr. Elliot the slip and had not signed it. After the testimony on these charges had been given, Mr. Wise submitted the following resolutions, which were unanimously adopted as reported in our last week's issue:

Resolved, That it is the sense of this committee that it should decline to act upon the charges this day presented by A. P. Vredenburgh, Secretary, against C. S. Peshall.

Resolved, That it is the unanimous sense of this committee that the recent publications made by Mr. Peshall in the sporting journals concerning the American Kennel Club and its Secretary, Mr. A. P. Vredenburgh, are unjust, untrue and libelous.

Resolved, That the Secretary of this Club be authorized and directed to exhibit the books and accounts and vouchers of this Club to any delegate member of this Club at any time.

Resolved, That we have absolute confidence in the integrity and veracity of the Secretary of this Club.

Resolved, That the conduct and language of Mr. Peshall in the controversy, out of which these charges arose, have been in our opinion so extraordinary and outrageous as to make us seriously doubt whether he is in possession of his normal faculties.

Resolved, That the proceedings this day had and the evidence this day taken be submitted to the American Kennel Club for such action as it may seem best.

The official report of the meeting was expected in time for publication this week, but has been deferred, and Secretary Vredenburgh advises us that it will be ready for publication in our next issue.

Editor Forest and Stream:

Not to embarrass the question to be below referred to with any mention of the other features of the attack of Messrs. Peshall, Malcolm and a few others, upon the management of the A. K. C., and Mr. Vredenburgh and myself in particular (I refer only to official duties), I beg to state that I have not at any time or in any manner paid into the treasury of the A. K. C. any money whatsoever to fill a deficit directly or indirectly, nor has any one else.

The accounts of the club have been kept strictly on business principles, and all the earnings and expenditures as stated from time to time by the treasurer are the honest and legitimate receipts for the regular and legitimate work rendered and privileges granted by the A. K. C. organization, disbursed for only that which was honestly and legitimately required. There has been no juggling with the accounts. The amount of \$1228.28 rendered as a balance in one of the treasurer's reports, which it has been claimed was not properly obtained, has been explained and proved to the satisfaction of the Auditing Committee, and any delegates who desired to see the books.

AUGUST BELMONT, JR., Pres. A. K. C.

HEMPSTEAD, N. Y., July 7.

Editor Forest and Stream:

Veni, vidi, and if I didn't conquer I at least got down as gracefully off the fence as I could, fully prepared to give my assistance to the A. K. C. in its fight with Mr. Peshall over the accounts. It came about this way: Last Wednesday morning I was engaged with the Spaniel Club committee in an out of the way place to which Mr. Wilmerding had taken us, when who should walk in but Dr. J. Frank Perry and Mr. Vredenburgh. I do not know whether the sight of them or the reason for their arrival was the greater surprise. They had come to ask me to go down and make as close an examination of the A. K. C. books as I could and convince myself that there was nothing wrong. Dr. Perry was the spokesman and said that he had spent an hour or more in looking into things, but, to use his own expression, he felt a little rusty as to the exact charges that had been made. That he had asked Mr. Vredenburgh to let me make as complete an examination as I thought fit, and together they sallied forth from 44 Broadway to find me. I should say in this connection that Dr. Perry had written from Boston asking whether it was in my opinion essential for him to be in New York at the Advisory Committee meeting. That I sent a postal card in response saying his presence was imperatively necessary, also that I would be in the city and to let me know where I could meet him. His reply I did not get till I returned to Philadelphia. I mention this to remove any suspicion that the request made of me was at all premeditated. The spaniel club business being soon over, I was at liberty to accompany Dr. Perry.

To let my readers know what I proposed looking for I will tell as briefly as I can what Mr. Peshall has repeatedly told me within the past two or three months.

Mr. Peshall said that Mr. Vredenburg left for Europe at the time the A. K. C. books were balanced in June, 1888. That to make it pleasant for him while abroad the committee had, out of the balance (about \$700), given him \$500. That then Mr. Lewis took charge under what Mr. Peshall calls the exhaustive contract, whereby he was to take whatever surplus there was over paying expenses, the A. K. C. to pay half the rent of the office. That on Mr. Vredenburg's return the A. K. C. balance had dwindled down to the Dec. 5 balance of \$5 and some cents, and that there was nothing in the treasury beyond that odd five dollar bill, and there was none except members' dues which then began to be paid in, and that they ran the balance up to about \$220, and that Mr. Belmont, or some one for him, put in \$1,000 so as to bring the cash on hand up to what it would have been had Mr. Lewis not taken all under his exhaustive contract. All this was told me subsequent to my having looked at the books last April, when I was given to understand that the jump to Jan. 12 in the 1889 statement of accounts covered the alleged introduction of the thousand dollars.

I had said when Mr. Peshall gave me the above story that it was all possible to be done, but that a glance at the bank book would settle the matter and that some day I would get an opportunity to look into it.

When I went to 44 Broadway with Dr. Perry I had that object in view as the pivotal point, but there was first of all some talk over the accounts. I asked Mr. Vredenburg if he had not received \$500 when the books were balanced in June. He said no; that in May he had received two checks, one of \$200 and the other of \$300, which made up the \$500. "That was when you went to Europe?" "Oh, dear, no," was the answer. "I did not go away until September, but during the intervening three months I was not running the Stud Book. That Mr. Lewis was doing, and he was drawing the same remuneration I had done, which was \$68.75 a month."

"Mr. Peshall says he took all and paid all from the time of the June balance until Dec. 5."

"I know he says so, but Mr. Terry and Mr. Lewis will tell you there was no such arrangement."

Then we got to the alleged \$1,000 deposit, and I stated what my information was. Mr. Vredenburg began explaining and showing the various ledger accounts, including that of Mr. Lewis's salary, when I said: "It is possible to arrange these things, Mr. Vredenburg; you can settle it, however, very conclusively by showing your bank book." Looking at me with a peculiar "Do you mean it? sort of look, he got up without a word, walked across the room and returned with the book. While he was doing so I said to Dr. Perry: "I do not say that Mr. Vredenburg has faked his books in any way, but it is impossible to do that with the bank book, every figure of which is placed in it by other parties."

As soon as Mr. Vredenburg turned with the book in his hand I knew Mr. Peshall's case was higher than Gilderoy's kite. This is what I picked out of the bank book to tell the story:

The first deposit made by Mr. Vredenburg after his return from Europe was on Dec. 11, and consisted of \$284.50. The previous deposit was made on Sept. 5, the day Mr. Vredenburg left, and the day book showed ad interim receipts of \$670. So that it will be seen that Mr. Lewis did not have an exhaustive contract, otherwise he would not have handed to Mr. Vredenburg for deposit \$284.50. To go on with the bank book—Between Dec. 11 and Jan. 11 (the date of the A. K. C. statement for 1889 commencing) there were some six or seven deposits, and the last was on Jan. 3, between which and Jan. 21 no deposit was made. The total amount of those deposits from Dec. 11, and including Jan. 3, was \$807.40, in sums ranging from \$50 to \$200 odd.

Here there were all three of Mr. Peshall's main allegations, completely and conclusively contradicted.

First—Mr. Vredenburg was not paid \$500 out of the June balance, but before that balance was struck.

Second—Mr. Lewis did not have an exhaustive contract, but turned over to Mr. Vredenburg \$284.50 out of \$670 received by him during Mr. Vredenburg's absence.

Third—There was no deposit of either \$500 or \$1,000 or any such sum to the credit of the A. K. C. bank account at any period from Sept. 5, 1888, to Jan. 11, 1889.

I may say that as a further check upon the bank balance—this time as shown on the stub of the check book, because the bank book does not show daily balances, I cast a balance on the day book at an odd date. This was done in round figures, and I made it \$1,050. Then I asked Mr. Vredenburg what his stub showed to have been in the bank on that date, and it was within \$10 of the amount. There was nothing else for me to do but to express to Mr. Vredenburg my thorough conviction that there was not one glimmer of truth in the suggestion that the books or the bank account had been tampered with in any way whatever as had been stated.

J. W.

Editor Forest and Stream:

Again has the American Kennel Club manifested its unfortunate mania for degrading itself in the public's estimation in the "trial" or attempt to "try" Mr. Peshall. I purposely eschew all suppositions as to the motives leading the actors in this serio-comic drama, motives are among the things that "no fellow can find out," but did kennel history in America ever present so degrading a piece of ruthless arrogance and blind confidence that the public will be ever tolerant? Here is a notice served on Mr. Peshall dated June 27, requiring him to appear before his judges and accusers on July 2. He is accused of low dirty cheating, conspiring in fact, and for his defense he must produce certain other parties, how easily accessible I do not know. It is fair to presume that in the ordinary course, Mr. Peshall got this notice on Saturday June 28. Next day being Sunday, it must be counted out, he must appear on Wednesday morning, so he is given Saturday, Monday and Tuesday to stir round and get his witnesses in shape! There are many lawyers among dog men, Messrs. Smith, Wise and others, and I would ask them how such a hasty pudding as this would be regarded in our courts? One of the gentlemen I name is a member of the court that tries Mr. Peshall, I would ask him how he relishes donning the judicial ermine in such high-pressure proceedings? Then if there is one principle of law (is it law, or equity, or what?) that the layman most heartily believes in it is that no judge or jury may sit in judgment in a case wherein they are personally biased. This is a fixed and recognized principle five hundred years old; yet here is Mr. Peshall required to appear before a court, a majority of whom have just voted that he is a *persona ingrata* to them! There is an old axiom as to the wisdom of seeing the devil and holding court below—would Mr. Peshall be any wiser in appearing this modern *Vehmgericht*? From his previous history I cannot but believe that there is one member of the court who voted aye in the *persona ingrata* drama, who will not bow to this extraordinary and scandalous proceeding.

I write this at the very hour the court is to convene, and do not consider what the verdict may, or may not be, and I ask every honest American dog lover to think carefully and soberly over this astonishing affair, putting aside all previous opinions at all concerning the points at issue, and make up his mind to such action as he deems wisest and just.

W. WADE.

BULFON, Pa., July 2.

Editor Forest and Stream:

Mr. Peshall's letter in last week's issue of your paper seems to be devoted somewhat to me. Now I never for a moment expected to be drawn into this controversy; I hate these things, and would much rather be left out of them.

At a meeting of the American Kennel Club I was appointed one of a committee of three to audit the club's accounts. I did as requested, and did so conscientiously, but did not know that I was appointed for the purpose of gathering facts and figures for my friend, Mr. Peshall.

I was strongly of the impression, that with the dog public in general, that my signature to a statement to the effect that I had examined the accounts and found them correct was sufficient. But it seems that with Mr. Peshall this was quite the opposite.

I am not a statistician, neither am I a walking vocabulary, "full of wise saws and modern instances," hence of the several score of pages that we examined of the A. K. C. accounts, I could not for the life of me carry in my mind what expenditures occurred between such and such a date, or to small fractions what the receipts were between one week and another, when Mr. Peshall asked me. I made never a note, as the expectations of my being cross-examined in my own office (or anywhere else) were foreign indeed to my mind. I found the books as they should have been, after a most careful examination, and thought that enough. I am a very busy man, as is well known among my friends, my office hours frequently being from nine in the morning till anywhere from seven to ten or eleven o'clock at night, so one can readily imagine that canine matters in general and dog rows in particular do not absorb my attention to any great degree.

When I was asked to examine the A. K. C. books I did so from a sense of duty, devoting considerable time (about two or three hours) of a busy afternoon to it, and as I observed before, did not expect to be called upon for data by anybody. Hence when Mr. Peshall called upon me so many times, buttonholing me in my office during business hours, and haranguing me by the half hour at the time, I have no doubt that I got up that stereotyped answer for him, "I don't know," which after all seems to have been what he was seeking.

I am entirely unbiased in the matter of his dispute with the Kennel Club, and am more than sorry that things should be as they are, but still asseverate most emphatically that our committee did examine the accounts, and that said accounts were absolutely correct in every particular.

A. CLINTON WILMERDING.

KENNEL COOKERY.

BY HIBERNIA.

THIS article will be better understood by those who have read "Kennel Fare," published in the FOREST AND STREAM of June 12.

Of course I take it for granted that the reader interested in the subject has purchased a farmer's boiler and the other utensils described in the former article, all of which are absolutely necessary in a kennel kitchen. Also that the bins are filled with bread, meal of different kinds, and such other foods as were recommended and could be procured easily and cheaply, and the local butcher has been arranged with to supply you with his waste meats two or three times a week. When the butcher's offal arrives, clean the stomach and tripe carefully, cut off the hoofs and throw them aside, and put everything else in the boiler, adding enough water to just cover the contents. Use plenty of salt, not the fine table quality, but such as is used in corning beef and pork. It will cost about 85 cents per large bag. The salt will help to preserve the meat and will properly season the rest of the mess.

If the meat is tainted in the slightest, put in the boiler from a quart to a peck of broken charcoal. The contents of the boiler should cook briskly for several hours until the meat will readily part from the bones; then allow the fire to go out. To pick the meat from the heads (it will readily drop from the other bones) use what is known as a "ladies' wedge," a little tool which can be bought from any hardware dealer. The bones should be thrown into a barrel as they have a commercial value, and it is surprising what a quantity accumulates in the course of a year at even a small kennel.

The cooked meat should be lifted out of the boiler by means of the shovel recommended in the article on "Kennel Fare" and dropped into a barrel or other vessel. (I use a galvanized iron ash can.) A tight cover should be put on and the vessel removed to a cool place.

The liquor remaining in the boiler is really a strong *consommé* soup and should be diluted with an equal quantity of water. Now if you will take bread, cut it up in slices, half an inch thick, and pour the liquor over it, you have a very simple meal for dogs and which will be highly relished by them. The bread should not be "sloppy," but only sufficient liquor used to saturate it thoroughly without any draining to the bottom of the feeding trough. To mix the bread and soup, use a broad tined potato fork. There is quite an art in cutting bread rapidly. Get a white pine board to fit one end of the feed trough and procure a long thin-bladed butcher knife; always keep a keen edge on the knife. Place a loaf of bread on the board, take the handle of the knife in the right hand and with the palm of the left bear on the blade. The knife will cut rapidly through the bread with but little effort on your part. As soon as a loaf is sliced, with a motion of the knife push it off the board into the feed trough.

Perhaps the easiest and best way of making plain the various ways of preparing food for dogs is to classify the recipes the same as is done in cook books published for the use of housewives.

Scrappe. Take equal parts of oatmeal, flour and cornmeal, season with salt, and boil to a thick mush. It will take about two hours to cook. Before it gets too thick add cooked meat or fish, the quantity depending on the season—more in winter, less in summer. Stir the meat thoroughly through the mush by means of a wooden pole. The meat can be cut up with a semicircular chopping knife, but if the kennels are large it will pay to buy an Enterprise meat chopper. The scrappe should be poured out into large pans and allowed to cool and harden. Dogs are extremely fond of this, and it will keep for weeks in winter, but during the hot weather it must be used immediately.

Milk Gravy. Put skimmed milk in the boiler and add wheat flour, stirring constantly until the mixture is of the consistency of thick paint. Pour this over sliced bread. Milk gravy will very quickly check diarrhoea, and is an especially valuable food for dogs that have returned after going the circuit of bench shows. Puppies also thrive on it.

Potatoes and Meat. Put the potatoes in a wicker basket, allowing water to run on them until it comes from the bottom bright and clear. Empty them into the boiler and add water enough to cover one fourth deep. Then put on the cover and keep them cooking until done. They will be steamed rather than boiled and will be bright and mealy. Empty them into the feeding trough and add some cooked meat, working over the mess thoroughly with a potato fork. Potatoes cooked in this manner are not soggy and are readily eaten by dogs. When procurable, fish can be used instead of meat, and if equal parts of bread and potatoes are used the food will be more relished. Beets, carrots, turnips and similar vegetables can be substituted for potatoes.

Soup. It is often advisable to feed soup for a change. To make a palatable article, add to liquor remaining in the boiler after the meat has been cooked, rice, barley, onions, chopped cabbage, etc., and thicken with wheat flour until it is of the consistency of paste. This can be fed plain or poured over slices of bread.

Boiled Rice. Soak the rice over night and then put it in the boiler, adding about one-half the equal bulk of water. This will steam the rice when the lid of the boiler is closed down and a brisk fire started. Cook for two hours. The

grains of rice will swell to twice their original size, so this must be taken into consideration. The boiled rice can be mixed with meat, and soup or milk gravy poured over it.

When I have a sick or dainty-feeding dog I add some tripe cut into small bits, mix it into the boiled rice and pour some soup or milk gravy over the mixture. Nearly all the dogs I have kept are very fond of this diet. It is very nutritious, easily digested, and is one of the best foods I know of for a dog recovering from distemper or any other wasting disease.

Oatmeal Mush. To give the best results oatmeal should be thoroughly cooked, at least two or three hours. The finer it is ground the sooner it will cook. Do not put too much water in the boiler—rather steam than boil it as it will be less likely to get "sticky." I can never get dogs to eat plain oatmeal satisfactorily. It "balls" in the roof of their mouths, and the dogs then stop eating, so I always use plenty of milk, meat, soup or some other food to mix with it.

Corn Meal Mush. Always buy the yellow corn meal, very finely ground, as the white kind usually contains a large percentage of the cob, with which light-colored meal is adulterated. Boil the meal for several hours, stirring it with a pole occasionally.

I do not advise using much corn meal except during cold weather, as at other seasons it is very apt to produce eruptions on the skin.

Boiled Beans and Peas. These should be soaked over night before being put into the boiler. A few hours' cooking will be sufficient. Both of these are exceedingly rich in nitrogenous elements, and should never be fed plain, but in a combination of other foods.

DOGS OF THE DAY.

I WAS very glad to see that the advisory committee declined to go into the merits of Vredenburg, Secretary, vs. Peshall as to the charges respecting the accounts, also to note that the quite illegal and injurious resolution not to permit delegates to look into the books was rescinded. After my look into the accounts I said to Mr. Vredenburg and Dr. Perry that I was decidedly of the opinion that the best course to pursue was to court and command the fullest investigation. I would even, I said, go the length of accepting any two delegates Mr. Peshall might select and with two named by the advisory committee allow the four to select another for chairman and let them settle the matter at once and for all time. Mr. Vredenburg said that would be a reflection on the auditing committee, but nothing can be a reflection upon that committee that will show it did look into the accounts a little deeper than is generally imagined.

As to the charges against Mr. Peshall, I think that those who are pushing the matter will regret it. To be candid, it looks like vindictiveness—like trying to get even, and when prosecution merges into persecution the public won't stand it. I just know sufficient of the case to be aware that one can just touch bottom on the sands of truth, but you have to keep your toes stretched to their utmost to do that.

Before the Spaniel Club passes entirely from my mind it will be well to say what was done at the meeting held July 2. Every member of the committee was on hand—Messrs. Wilmerding, president; Whitehead, secretary; West, treasurer, and Kitchel and Watson, full privates. We approved the minutes of the previous meeting after deciding to strike out the representation of Dr. Kitchel by proxy. While proxies are admissible at club meetings, we agreed that it was a bad precedent to allow it to be recorded at an executive committee meeting. The treasurer reported that he had \$189.31 on hand. After which we decided it would be well to enter into communication with the Spaniel Club of England with a view of having a joint committee appointed to secure uniformity of standards. After examining drawings of cups without arriving at any definite determination we adjourned. It was a very businesslike meeting well presided over.

J. W.

THE PUG SPECIAL AT CINCINNATI.—Babylon, July 5.—*Editor Forest and Stream:* In reply to Mr. Eberhart permit me to state that if as he says "the prize was in the judge's book—I saw him write it down to the Eberhart Kennels" all I can say is that I wrote it under the impression that I was awarding the special prize for the best kennel of four pugs owned by a resident of Cincinnati. I recollect Mr. Eberhart thanking me, saying, "Much obliged, Mr. Mortimer," which I took as a pleasantry, and replying in the same jocular strain, said, "Don't mention it, my boy," for I considered the prize a cast-iron-bound one on which he, as the only exhibitor from Cincinnati, had the tightest kind of a cinch. I hadn't the remotest idea that I was awarding an open special, neither did I know such a prize had been offered by the Cincinnati Club. Mr. Eberhart, who very kindly acted as my ring steward, will bear me out when I say that neither his nor Dr. Cryer's pugs were brought into the ring to be judged for any special prize. For any act of negligence or carelessness on my part I offer a sincere apology to Messrs. Cryer, Eberhart and the Cincinnati bench show committee individually and collectively, but I most positively deny that I wittingly awarded the open special prize for the best kennel of pugs to the Eberhart Kennel or to any other kennel.—JAS. MORTIMER.

SPANIELS POISONED.—Britton, S. D., July 1.—*Editor Forest and Stream:* I sadly take my pen to write you of the loss of a most promising spaniel puppy and, worse than all, of his grandsire, Prince. After having spent a useful life of eight years—and no duck hunter need want a more faithful or tireless retriever—he and the puppy were poisoned by meat thrown out by a neighbor who wished to get rid of a miserable cat. The neighbor is a dear friend or he should be made to smart for his criminal carelessness. Knowing I shall have the sympathy of every duck hunting reader of your unequalled paper, I am, very truly—RIX.

INDIANA FIELD TRIALS PUPPY STAKE.—Indianapolis, Ind., July 5.—*Editor Forest and Stream:* At the earnest request of many of its patrons, the Indiana Kennel Club has decided to give a Puppy Stake, for dogs born on or after Oct. 1, 1889. This stake will begin Thursday, Oct. 30. The purse will be the entrance money less the expenses. Forfeit \$5, with \$10 additional to start. Divided 50 per cent. to first, 30 per cent. to second, and 20 per cent. to third. Entries will close Aug. 1. Entry blanks are now ready.—P. T. MADISON, Sec'y.

A LARGE LITTER.—Mr. J. R. Dennis's spaniel bitch Dolly whelped on June 26 a remarkably fine litter of thirteen dogs and two bitches, by Mr. A. C. Wilmerding's champion Doc. This is the largest litter of spaniels that we have any record of, and we are sorry to learn that all of them have since died.

MRS. J. M. NICHOLSON, the proprietor of the Mount Zion Kennels, sails for England this week, to visit some of the principal St. Bernard kennels there. The rough-coated bitch Juno will be taken to be bred to Sir Bedivere.

DOGS.—NALDIRES medicated SOAP for washing dogs, destroys all irritating insects, removes doggy smell and leaves the animal refreshed and happy. This prize medal soap, used by all the leading owners in Europe, is now sold by Park & Tilford, McKesson & Robbins, E. Fougere and all Druggists.—Adv't.

HIGHLAND GUN CLUB.

DES MOINES, Ia., July 4.—Shoot of the Highland Gun Club of this city. All purses were divided into three equal money, and this again divided into 60 and 40 per cent, making in all six purses in each match, the intention being to give all shooters an equal show. The day was as fine as one could wish and the attendance large.

Match 1, at 10 single Peorias, A. S. A. rules:

CLAREMONT SHOOTING ASSOCIATION.—New York, July 5.—A very pleasant company gathered on these grounds July 4 and 5. The programme included live birds and targets. The birds were a fine lot for this time of year, and fully illustrated the fact that luck is a deciding factor in pigeon shooting. The best of feeling prevailed and all had a good time. Below are the scores.

July 4.—Ten bluebirds, 50 cents entry:

Miller	10 8 8 10 10	10	8 9 10
Thompson	7 8 8 8 7 10	9	9 10
Collins	10 8 9 9 9 9	9	8 6
Jones	7 8 6 5		
Lyons	7 5 5 8 7 5	9	10
Donnell	4 7 7 6 6 6	6	5
Vincent	6 7 7 5		9 6 8
Lindsey	7 7 7 5		6 9 10

Thirty singles, 5 pairs, \$2 entry, one money: Thompson 34, Collins 26, Lindsey 26.

Five singles, \$1.50 entrance: Thompson 13, Collins 10.

Four live birds, \$2 entrance:

Miller	4 4 4	4	Lyons	1 2 3 4
Lindsey	4 4 4	4	Jones	3 3 3
Thompson	4 4 4	4	Vincent	3 4 4
Collins	3 4			

July 5.—Ten bluebirds, 75 cents entrance:

Lindsey	9 8 8 8 10 10	9	10
Lyons	8 7 7 8 7 8	8	6
Collins	7 8 8 8 7 10	10	5
Hathaway	5 5 6 8 7 9	9	3
Thompson	10 10 10 10 9 9	9	10
Jones	10 8 9 6 8 9	9	8 7

Four live birds, \$2 entrance:

Lindsey	1 2 3 4		Collins	1 2 3 4
Jones	4 4 4		Thompson	4 4 4
Mead	1 3 3 1		Hathaway	2 4 2
Lyons	1			

Miss and out: Lindsey 5, Jones 7, Collins 3, Thompson 7, Jones and Thompson divided.

OMAHA, Neb.—The Omaha Gun Club held their weekly shoot to-day. The sky was heavily clouded and a stiff wind was blowing; still some very fine scores were made at 25 Standard targets single, and 5 pairs of doubles, 5 unknown traps, 18yds. rise:

Parnee	21 10	31	Reynolds	19 6	25
Hughes	24 10	34	Jones	18 3	22
Moontis	20 4	24	Fogg	22 8	30
Montgomery	22 6	27	Smith	23 8	31
Korzy	16 16	40	Brewer	24 9	33
McCahey	16 4	20	Brucker	20 5	25
Bingham	16 6	22			

Mr. Hughes, with a score of 34 out of 35, carried off the diamond locket. A sweepstakes live-bird shoot followed, 10 birds each, 30yds. rise, modified English rules, \$7.50 entrance: Kennedy 3, Brewer 3, Field 3, Grim 3, Fuller 3, Hughes 9, Fogg 6, Krug 5, Parnee 6, Kennedy 3, five birds and laid out in a shooting purposes. The high score and laid out in a shooting purposes. The high score and laid out in a shooting purposes. The high score and laid out in a shooting purposes.

THE ONONDAGA WILL CELEBRATE.—Syracuse, N. Y., July 7.—The Onondaga County Sportsmen's Club of Syracuse, N. Y., have just completed their elegant new club house and grounds at Maple Bay on the shores of Onondaga Lake and in honor of this event will give a three-days' shoot on August 6, 7 and 8, open to all. The new house is unquestionably the finest owned by any gun club in this country. It is two stories high with broad piazzas from both floors overlooking the traps. The upper one is intended for visiting lady guests and is furnished with all toilet conveniences. The high score and laid out in a shooting purposes. The high score and laid out in a shooting purposes. The high score and laid out in a shooting purposes.

SLATER GUN CLUB.—Slater, Mo., July 4.—Second annual tournament, Peoria blackbirds, 3 traps, ties divided unless otherwise stated. Match at 6 singles:

Parent	111111	8	Combs	000001	1
Vaughan	010110	3	J Baker	111105	5
Wood	011011	4	Stean	101115	5

RED HOOKS, N. Y., July 4.—Tournament of the Red Hook Gun Club. The morning gave every indication of the Fourth of July thunder storm, with a probability that it would continue for some time when it did come. Most of the shooters from a distance who were expected to attend failed to put in an appearance, probably on account of the threatening weather. The traps were screwed up to throw the bluebirds to the farthest point possible. The elevation was as low as the rules permit. Shooting by the indicator (unknown angles) the conditions were the most difficult it was possible to make them. A good part of the time the black clouds made the light very bad. The scores, therefore, are better than the figures indicate. Shooting at doubles was new to nearly all; no member of the local club had shot at more than ten pairs in the year. Following are the scores:

Match at 12 bluebirds, 18yds. rise, A. S. A. rules:

Hainer	0011010107	7	Carroll	1111111011	11
Feller	0011010107	7	Bain	0111111011	10
Cramer	0011110101	7			

Second contest, 15 bluebirds:

Cramer	100010111111	10	Carroll	1111111010	12
Shook	110000010010	6	Massoneau	110011w	
Hainer	000000010000	2	Bain	101110111111	13
Feller	110001010001	6			

Third contest, 15 bluebirds:

G VnStnburgh	11110001011	9	Cramer	100011111111	11
F VnStnburgh	00101010111	9	Paul	010101011011	10
Shook	111111000001	8	Bain	11111001011	11
Minard	000101010111	9	Carroll	011011111112	9
Roosa	011001010111	8	C VnStnburgh	001000110000	3

Fourth contest, rapid firing system, 12 bluebirds:

G VnStnburgh	01100110110	7	Roosa	10101011110	8
F VnStnburgh	11011110000	6	Carroll	111111111112	12
Paul	111111111112	12	Bain	11101111101	10
Cramer	1111100010	7	C VnStnburgh	0000100001	3
Minard	0010101010	4	Shook	1001111101	9

Fifth contest, same conditions:

Minard	00000100000	3	Bain	11010110011
--------	-------------	---	------	-------------

WORCESTER, Mass., July 4.—There was an all-day shoot at the Coal Mine Brook Range to-day under the auspices of the Worcester Sportsman's Club. The several events resulted as follows:

Five clay pigeons.—A. L. Gilman, Dean, Burbank, Smith and Rowland, each one; Colvin and C. Forehand divide second; Welch third, Swan fourth.

Six bluebirds.—Whittaker and A. L. Gilmore divide second; Burbank and Larkin divide third; Bowdish and Parker divide third; C. Forehand and Kenney divide fourth.

Ten clay pigeons.—Kenney, Prentiss and Colvin divide first; Dean and Smith divide second; Swan, Whittaker and A. L. Gilman divide third; A. Delbert fourth.

Six bluebirds.—Smith, Whittaker, A. L. Gilman, Rugsy and M. D. Gilman divide first; Fortin and Burbank divide second; A. Delbert, Kenney and C. Forehand, divide third; Larkin fourth.

Ten clay pigeons.—Smith, Burbank and Bowdish divide first; Dean, A. L. Gilman, Welch and Haughton divide second; Kenney and Parker divide third; Rugsy, Whittaker and Cole divide fourth.

Five bluebirds and three pairs.—Jordan first; Kenney, Prentiss, and A. L. Gilman divide second; Adonis, M. D. Gilman and Smith divide third, Crompton fourth.

Three pairs clay pigeons.—Dean, A. L. Gilman and Prentiss divide first; Smith second; Whittaker third, Welch fourth.

Six bluebirds.—A. L. Gilman, Smith, Adonis, divide first; Rugsy, Prentiss, Bowdish, C. Forehand, M. D. Gilman divide second; Burbank, Whittaker and Fortin divide third; Larkin and Dean divide fourth.

Five clay pigeons.—Smith, Rugsy, A. Delbert and M. D. Gilman divide first; Dean and A. L. Gilman divide second; Burbank, Swan and Colvin divide third; Adonis and Prentiss divide fourth.

Ten clay pigeons.—Bowdish, Dean and C. Forehand divide first; Adonis and A. L. Gilman divide second; Burbank, A. Delbert and Welch divide third; Prentiss, Colvin, Haughton, Cole divide fourth.

Six bluebirds.—Adonis and Rugsy divide first; Burbank, Welch, C. Forehand, A. L. Gilman divide second; Prentiss and Davis divide third; Kenney and Taft divide fourth.

Six bluebirds.—Burbank and Dean divide first; Bowdish, Rugsy, Whittaker, Smith and A. L. Gilman divide second; Adonis, Davis, Welch, Cole divide third; A. Delbert fourth.

Ten clay pigeons.—Burbank and Whittaker divide first; Dean and Prentiss second; Adonis and M. D. Gilman divide third; Colvin fourth.

ST. LOUIS, Mo., July 5.—The Lyon Gun Club's tournament yesterday was favored with a good attendance and beautiful weather. All events were shot at bluerock targets, A. S. A. rules governing. Subsequent to the scores:

Shot No. 1, 10 single targets: Hagerty 8, Bess 9, Bauer 9, Kinner 8, Gimble 10, Weber 9, Harris 10, Mohr 5, A. Rawlings 5, Pike 9, Schenk 6, B. Baldwin 8, Cicardi 10, Alex 8, Krueger 6, Hucker 7, Reuss 6, Dick 7, Henry 7, McGivney 6, G. Rawlings 8, Weaver 10, Selzer 6, Schomborg 7, E. Prendergast 10, W. Baldwin 10, Koller 10, Fink 5, Presinger 8, G. Prendergast 9. Four moneys, all ties.

Shot No. 2, 15 single targets: E. Prendergast 12, Hagerty 13, Cicardi 12, Bess 11, Harris 15, A. Rawlings 10, Alex 7, Vall 4, G. Prendergast 14, Pike 11, G. Rawlings 8, Weber 12, Huebner 9, Henry 13, Schomborg 8, Selzer 13, Krueger 11, Weaver 13, Persinger 13, Koller 15, Mohr 8, Kajanka 10, Harris and Kelly first; G. Prendergast second; Hagerty and Henry third; Cicardi fourth.

Shot No. 3, 12 single targets: Sieminski 12, E. Prendergast 8, G. Prendergast 8, Hill 9, B. Baldwin 9, Bauer 8, Bess 11, King 9, Pike 9, Gimble 10, Kinner 9, Yunge 6, Reuss 10, W. Baldwin 5, Fink 10, Pfeifer 4, Kajanka 8, Val 4. Sieminski, first; Bess, second; ties on 10 divided third.

Shot No. 4, 10 single targets: Sieminski 9, Gimble 8, E. Prendergast 8, Reuss 6, Yunge 6, Bess 6, Pike 7, Fink 8, Kinner 9, B. Baldwin 5, King 7, T. Bauer 7, G. Prendergast 4, Pfeifer 5, Hill 5, W. Baldwin 6, Steffen 7, West 8. Four moneys, all ties were divided.

Next Saturday, at Compton Avenue Park, this city, W. C. Beck, of Indianapolis, and J. L. Meade, of this city, shoot at 100 live birds, for \$100 a side. Both parties have posted a forfeit of \$50 with the St. Louis Republic, which is stakeholder. The remaining \$50 each is to be posted on the day the match takes place. The above parties shoot at the target, on the fourth, at Indianapolis, for \$50 a side. Each shot at 50 and Meade won, killing 46 to his opponent's 44.

James Hagerty defeated M. C. Brown in a live bird match on the fourth. Each shot at 15 live birds, A. S. A. rules, for \$25 a side. Hagerty killed straight and Brown missed one, which lost him the match.—UNSER FRITZ.

NEWARK, N. J., July 5.—The members and friends of the Mural Gun Club had a jolly time in Wiedenmayer's Park to-day, when the club ran a picnic and prize shoot. Members of the South Side, East Side and Woodside Gun Clubs were present and took part in the prize shooting and other festivities. The club gave a purse of \$15 for a sweep at 15 bluebirds and there were twenty entries. W. Hunt and S. Cockefair broke 15 each and div. first, Suple and Ludecker div. second, P. Cockefair third. A number of sweeps at bluebirds and live birds followed.

The West End Rod and Gun Club held its all-day shoot, on Aschenbach's ground to-day. Each man shot at 20 bluebirds. The score was as follows: E. Asstfalk 12, G. Spahm 14, T. Bratsch 10, T. Freund 12, B. Hart 7, A. Freund 7, H. Meyer 15, J. Laub 12, C. Hickey 6, T. Hickey 2.

Shooting at Erb's Park to-day consisted of two sweeps of 8 live birds each and five 4-bird sweeps. In the grand total C. M. Heden killed 39 out of 42 birds, William Green 35 out of 39, John Erb 33 out of 36, and Hugg Leddy of Montclair 24 out of 36. The others who shot were Abraham and James E. Wheaton and Benjamin Morris.

THE SARATOGA TOURNAMENT.—The applications are coming very fast for the programme of the Saratoga tournament, and what is most surprising of all, from such distant points as Florida, Minnesota, Kansas, Virginia, Illinois, etc. It certainly looks as if it would be a grand gathering of the trap shooting brothers of the country. The management is most liberal. The grounds are the finest for developing good shooting, comfort and convenience. Then after the day's sport a lovely town full of attractions and pleasures, best of accommodations—scaling from \$1.50 to \$10 per day. Our Mineral Springs are well worth the visit alone. A. J. and hospital are welcome to all sportsmen. So come, one and all. There will be two sets of five Keystone traps, and one set of three for ties, etc. Splendid sky background. Send for programme and be convinced. Best of refreshments on grounds, good shelter, and plenty of seats. Don't forget the 15th, 16th and 17th of July.—BUCK.

PHILADELPHIA, Pa.,—Wm. H. Wolstencroft, of Frankford, Philadelphia, Pa. will give a three days' shoot early in August. He will guarantee \$150 or more for three days' sport at the traps. Shooting to be at Keystone targets, and all shooting to be on the Keys one system and Keystone rules. He will referee all matches and will not contest in any of the events. All moneys to be divided 10 per cent. to the traps, 40, 30 and 20 per cent. All surplus money goes to the shooter who shoots in all the programme events, and who makes the highest averages; surplus money divided 50, 30, 20 at the end of each day's shoot. Programmes will be ready in about one week. Those desiring programmes will please send name and address to W. H. WOLSTENCROFT, Frankford, Philadelphia, Pa.

MONTREAL, July 5.—There is going to be what may be called a boom in trap shooting at the Athletic Club house grounds during the present month, and the destruction of bluebirds will be appalling. The matches begin to-day and extend to the end of the month, the prizes being two beautifully mounted caribou heads. The conditions of the matches will be 20 bluebirds from a single trap throwing in five angles. In the open match the first prize will go to the best single score made during the month, and the second prize will be for a distinct handicap match. These shoots will continue every Thursday and Saturday during the month, on which occasion there will be a competent referee present.

NILES, O., July 4.—The gun tournament closed its three days' meet to-day. It was well attended and the sport very interesting. To-day's events comprised eight matches at bluebirds and two at live birds. In all live bird shoots the entry fee was \$3; bluebirds, \$1. The prizes were 40 per cent. to first, 30 per cent. to second, and 20 per cent. to third, 10 per cent. to fourth. The tournament was a decided financial success.

WELLINGTON, Mass., July 5.—To-day witnessed nearly as large a gathering at the Wellington traps as were there yesterday. In the merchandise match these scores were made: Dodge 13, Bowker 16, Beaudry 18, Chase 15, Bennett 15, Adams 15, Porter 11, Perry 10, Genke 7, Stanton 10, Knowles 17, Bradbury 13, Smith 13, Bradstreet 11, Dill 9, Bond 15, Webster 13.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

MONTREAL, July 3.—The St. John's Gun Club competition was certainly one of the most successful events held on Dominion Day. The shooting was started by a general individual sweep, the prizes being carried off by members of the different gun clubs represented. The grand event of the day was the team competition for a cup. Five teams were entered, and the following are the scores: Cote St. Paul 56, scratch team called St. Louis 54, St. John's team No. 1 53, Irberville 48, St. John's team No. 2 retired. The Cote St. Paul was very much pleased with the manner in which they were received and entertained by the St. John's club who, although defeated, appeared to vie with each other in the endeavor to make everything pleasant for the visitors. This is the first defeat for the St. John's club during the present year, although they have competed on five previous occasions.

TORONTO, July 3.—The members of the West Toronto Junction Gun Club shot their last competition for the handsome trophy given by the club. This competition has been held every fortnight for about six months, the following gentlemen being winners at different times: W. McDowall, P. Wakefield, W. Hinton, T. Boswell, D. Beatty, D. Walton, P. Wakefield, D. Walton, W. Dodge, W. Dodge, W. McDowall, W. Dodge. By his third win Mr. Dodge becomes the final owner. Mr. Walton won the McDowall gold medal for the highest total score. The following are yesterday's scores: W. T. G. Club trophy, value \$50, 25 bluebirds, handicap, 18 to 24 yds.: W. Dodge 20, C. Hinton 16, T. Boswell 16, P. Wakefield 15, D. Walton 15. Three members withdrew after missing 10 birds.

ROCHESTER, N. Y., July 2.—On the club grounds this afternoon the Riverside Rod and Gun Club held its regular shoot, the contestants trying their skill at Kingbirds at 18 yds. rise. The shoot was according to New York State Association rules. There were two ties which were not shot off. Hafner and Judson tying at 18 and King and Day at 23. Out of a possible 20 the following scores were made: B. N. Bates 19, John Hafner 18, F. Judson 18, W. H. Davenport 17, George Zimmer 16, Peter Kelley 14, Thomas King 13, John Day 13, B. G. Gibbs 12, F. A. Gibbs 6, H. Guny 6.

DAYTON, Ohio, July 7.—Following are the official figures in the race for the highest aggregate score of the ten guaranteed events in the four days tourney, 235 targets shot at. Benscotten broke 226, and won first money and the medal; Hubble 221, second money; Wolstencroft 218, third money; Helkes 215, fourth money; E. D. Miller and John Parker tie on 210 for fifth money.—BROWN.

CLEVELAND, July 3.—The regular shoot of the East End Gun Club held to-day, resulted as follows: Sweetman 19, Baker 15, North 25, Black 25, Haycox 24, Brockway 19, Bloom 13, Alexander 25, Turner 18, Wherry 20. North, Alexander and Black shot off the tie, Alexander winning with 8 out of 10.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Managers and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

THE A. C. A. MEET.

CAMP CIRCULAR.

NEW YORK, June 25.

To the Members of the American Canoe Association:—Since the executive committee meeting, Nov. 23 1889, at which the camp-site committee were authorized to procure the use of Jessup's Neck for the A. C. A. meet, the work of the committee has been seriously complicated by a long and vexatious course of negotiations among the owners, involving a sale of a part of the property. These negotiations have been closed to-day satisfactorily, and the owners have agreed to lease the whole property for a nominal consideration to Commodore Stanton for the month of August has been duly executed.

Pending these negotiations it was not advisable to issue any circular or official information, but work at the Neck has progressed satisfactorily, in accordance with recommendations of this committee in their report.

The Association is most fortunate in obtaining this site, the natural advantages of which are unsurpassed in the country. Wealthy New Yorkers are beginning to appreciate the beauty and healthfulness of eastern Long Island, and splendid country seats are numerous in this vicinity. Shelter Island has long been a favorite watering place and its beautiful harbors during the summer are bright with well appointed yachts.

Jessup's Neck is just remote enough to be out of the way of this factious and unscrupulous class of owners, and yet easy access from New York, New London, Saybrook, or adjacent points. No human habitation has yet marred its native beauty, and the distant white spire at Sag Harbor and the occasional villas on the further shores are the only breaks in the primeval landscape.

Location.—If you are not familiar with this locality, turn to any map showing Long Island, and you will notice that the eastern end of the island is divided into the opening jaws of a huge scorpion. Between these jaws Shelter Island is grasped like a large and palatable morsel; north and south of it are channels large enough to admit any vessel, but sufficiently small and crooked to break the force of the tide and to shut out the storms and swells of the Atlantic; west of Shelter Island and between the jaws of Long Island is inclosed the beautiful Peconic Bay, some fifteen miles long, but broken by an island and peninsula. In this bay the tide rises and falls from 2 to 3 ft.

The desirability of these waters for an A. C. A. meet was noted by C. M. Shedd, Springfield, C. C., in an article in the FOREST AND STREAM, and by Poutney Bikelow in *Outing*.

Jessup's Neck is a peninsula two miles long and less than a quarter of a mile wide in its broadest part, pointing toward Shelter Island and marking the eastern end of Little Peconic Bay. It is about 1000 feet long, and the town of Greenport and Sag Harbor, being about six miles distant from each by water.

The end of the Neck is a long, curved sand bar, which gradually rises and widens until it presents a beautiful sloping plateau of lawn, bordered by cedar and oak groves. Covered with the snowy tents and waving banners of our Association, it will be a striking picture visible for miles around.

The island is a beautiful one, rising from the beaches by an elevation of from 3 to 40 ft. The character of the soil changes at this elevation from hard white sand to rich grassy turf. The camp will be neither damp nor sandy. The drainage is perfect. A hollow divides the camp longitudinally into two portions, which will be used, the one for the main camp, the other for the ladies' camp. While in close proximity to one another, there will be absolute separation between the two camps.

At the line of separation will be located the steamboat dock, the mess tent, the store, work-shop, the offices, photographic dark room, etc., etc.

There is a small cedar grove on the point at the end of the main camp; the ladies' camp is surrounded by pleasant groves, so that ladies' tents may be in the shade if desired. The elevation of the camp gives an unobstructed view of all parts of the sailing and paddling courses, so that one may sit under his own tent awning and view all that is going on in the Bay.

The rise and fall of the tide along the beach is almost nothing for water connecting with the sea; the space on the beach between the high water and the low water lines being at most some 9 or 10 ft. Notwithstanding this the beach is very level. It is covered with the usual pebbles, shells, curious shellfish and seaweed

common to ocean beaches, but without dirt or wreckage. The water is clear as crystal.

To those who come from a distance this year's camp offers unusual attraction; for on the same trip one may visit New York city, enjoy the steamboat trip through the Sound, see the watering place at Shelter Island, and gaze upon and bathe in the ocean itself.

The Camp Mess.—The Association has been fortunate in securing the services of an experienced hotel steward to manage this troublesome part of its affairs. Mr. Arthur Baye, who has been the steward of the Rossmore Hotel and the Sinclair House, of New York, and of the Prospect House at Shelter Island, and who is now the steward of a successful Fifth Avenue club, has been engaged to cater for the camp. He has already visited the site and commenced preparations with considerable zeal. Ranges, ovens, broilers, steam table, etc., will be set up and bricked in, and a regular hotel outfit with hot and cold water supply, etc., provided by the well known hotel supply house of Duparquet, Monseu & Co., two regular cooks, a pastry cook, and a butcher will be taken from New York, and good meals will be served upon clean linen and hot plates.

In view of the magnitude of this venture it is earnestly requested that those who may have intended bringing club stewards for private camps, will not do so, thus saving themselves a great expense and helping us out on a somewhat hazardous venture.

The rates charged will be very moderate for good service, viz.: For two weeks, \$1.00 per day; for 5 to 15 days, \$1.15 per day; for one week, 75c. In successful Fifth Avenue club, for 1 or 2 days, \$1.50 per day; for a single dinner, 75c.; for a breakfast or lunch, 50c.

Those who desire to "camp out" and do their own cooking will be furnished with all necessities at moderate prices, at the camp store, which will be under entirely different management from the mess.

The Ladies' Camp.—Upon the elevation beyond the main camp will be situated the ladies' camp. The ground here is higher than that occupied by the main camp, and a grove of cedars separates the one from the other; both, however, overlook the bay.

This camp will be under the guardianship of Mr. and Mrs. L. W. Seavey, whose experience will render their advice of great assistance to ladies who visit a meet for the first time. Mrs. Baye will assist Mrs. Seavey in seeing that all are made comfortable. Those who do not wish to go to an A. C. A. camp meet must not imagine that our lady friends are subjected to the hardships of camping out. A good tent, with a raised board floor (covered perhaps with shawls and rugs), a wide cot and improved furniture make a comfortable apartment.

The mess tent is but a stone's throw (a lady's throw) from the ladies' camp, and on stormy days meals may be brought to the ladies in dry, not been to an A. C. A. camp meet must not imagine that our lady friends are subjected to the hardships of camping out. A good tent, with a raised board floor (covered perhaps with shawls and rugs), a wide cot and improved furniture make a comfortable apartment.

The mess tent is but a stone's throw (a lady's throw) from the ladies' camp, and on stormy days meals may be brought to the ladies in dry, not been to an A. C. A. camp meet must not imagine that our lady friends are subjected to the hardships of camping out. A good tent, with a raised board floor (covered perhaps with shawls and rugs), a wide cot and improved furniture make a comfortable apartment.

Speaking of the weather, it is well to allude to those salt-water pests, mosquitoes. We may see some of them, of course; there is no place on salt water absolutely free from their attacks. It would seem, however, from the narrowness of this neck and from the fact that a good breeze always sweeps across it, that it will be impossible for those insects to light upon or remain upon the camp. Their migrations vary in different seasons and are as uncertain as the weather; but we may fairly predict freedom from their annoyance.

Tents, etc.—It is hoped that most canoeists will bring their own tents. The committee will, however, engage, upon application, tents for members wishing them, upon the limit of supply in New York and neighboring towns. Tent floors and "skids" or floats for canoes will be built at cost; the lumber will be returned to the dealer, making the cost as small as possible to the members. Prices will be published later if possible in the *Sail and Paddle* and the *FOREST AND STREAM*, or letters of inquiry will be promptly answered. In either case applications should be sent in by Aug. 1 or before, so that floors, floats and tents may be ready when the canoeists arrive in camp.

Signal Code.—Under the direction of Mr. E. W. Brown, K. C. C., a complete signal code has been arranged, and coming events will be constantly made known by signal flags prominently displayed at headquarters.

For the convenience of amateur photographers a photographic dark-room, with necessary accessories, will be set up, and different facilities for dry-plate work, obtained at cost. The different dealers in canoeing outfits will be allowed space and opportunity to supply canoe sails, fittings, etc.

Particular pains will be taken to have perfect sanitary arrangements.

Transportation.—This matter will be fully set forth in a circular of the transportation committee accompanying this notice to each member of the adjacent divisions. It is sufficient here to note that members of the Eastern Division should come via New London, and those of the Atlantic, Central and Northern divisions by Albany and New York. They should arrange to send their canoes, etc., in time to catch the special A. C. A. steamer from New York.

Notice of Intention to Go to the Meet.—If you expect to be present at all or any part of the meet, you will confer a favor by informing the committee at your earliest convenience of your intention to be present, of the length of time you will probably remain in, whether you will occupy a canoe tent or a shore tent, whether you will board at the Association mess or camp out, and whether you intend to order a tent, tent floor or "skid." Any other information will be gladly given by the committee.

R. B. BURCHARD, New York City.

If so, how much?.....	
At what date do you expect to come to the meet?.....	

LAKE HOPATCONG C. C. REGATTA.—July 4.—The Lake Hopatcong Canoe Club held a successful regatta on July 4. The lake was crowded with visitors from the city, and about 200 people witnessed the races. The judges were Mr. R. Dunlap, Geo. M. Brockway, R. L. Edwards, Geo. Damerel and O. F. Meyer. Owing to the lack of time on the fourth some of the events were postponed until the next day. In the evening the boats assembled decorated with lanterns, and paraded around the lake, making a beautiful sight, and the evening closed with a grand display of fireworks.

DELAWARE RIVER MEET, JULY 4-7.

THE Delaware River canoe meet at Delanco, under the auspices of the Red Dragon C. C. was one of the pleasant affairs of the kind ever held on these waters; the only drawback being the very light and variable winds that made fukes of the sailing races in which much interest had been centered as the first test of the new boats; but no idea could be gained of their respective merits under existing circumstances.

The clubs represented were the Mersey C. C., England, by Mr. Bettr; Camden Ducker Club by Com. Dressler and Mr. Carter, and the Red Dragon C. C.

The new canoes present were Osceola and May Fly, Ah-ched models the former fitted for racing, and the latter for cruising, with board well forward. No comparison of speed could be had under the existing circumstances. Valesca, a class four paddler with folding centerboard, Enid, an Island Nymph model.

These boats all being designed and built by the Clayton firm. Kir-loe, a handsome 16-30 cruiser, designed by a club member, built by James Nigall. Two amateur-built canoes present, Cuckoo and Coquette, were very creditable attempts, the former especially being a very fine smooth-skin resembling the Fly and with plenty of go.

The events contested were unlimited sailing, started at 5:01, July 4, over a triangular course, about 3 1/2 miles. Times:

Start.	Finish.	Actual.
Osceola, B. E. Fortuier.....	5 01 00	6 00 00
Nacoochee, D. A. McCormick.....	5 01 00	6 04 00
May-Fly, H. E. McCormick.....	5 01 00	6 05 00
Cuckoo, C. H. F. Ischman.....	5 01 00	6 05 30
Thetis, D. M. Bond.....	5 01 00	6 07 30

Kir-loe, T. W. Noves..... Disabled.
Valesca, H. M. Kreamer..... Withdrawn.
Enid, A. Fenimore..... Withdrawn.

The jamming of the balliards caused May-Fly to lose some time at the start. Kir-loe had a good place when the centerboard pennant broke causing her to withdraw.

The Red Dragon Trophy Cup race was called at 5:30 July 5. Kir-loe was the only boat that completed the course, all others withdrawing on account of light winds.

Single paddling Class IV:

Enid, D. M. Bond.....	1
Valesca, H. M. Kreamer.....	2
Thetis, C. H. Baag.....	3
Cuckoo, C. H. F. Ischman.....	4

Tandem paddling:

Enid, D. M. Bond and H. M. Kreamer.....	1
Thetis, D. M. Bond and H. M. Kreamer.....	2

The majority of the canoeists broke camp Sunday evening, several remaining over Monday. The weather proved all that could be desired and a great improvement on former years. All came away regretting that the good things of life are of such limited duration.

MAX.

CORINTHIAN NAVY CANOE CLASS.—In the regatta of the Corinthian Navy, New York Bay Squadron, on Saturday, a special class was made for canoes. The wind was light at times, leaving the canoes to drift. The full times were:

Start.	Finish.	Elapsed.
Bonnie, C. B. Vaux.....	3 25 30	4 13 00
Teaser, S. A. Anderson.....	3 25 30	4 54 30
Lieda, S. Schieffelin.....	3 25 30	4 54 30
Seabright, A. Ward.....	3 25 30	4 56 00
Toltec, W. W. Howard.....	3 25 30	4 59 30
Random, H. O. Bailey.....	3 25 30	5 03 00
Vagabond, C. J. Stevens.....	3 25 30	5 08 00
Pterodactyl, B. H. Nadal.....	3 25 30	5 10 49

THE POINTE CLAIRE CANOE CREW.—On June 28 a race for open Canadian canoes was sailed under the auspices of this club. There were three entries, C. Archibald, C. Sanderson and Larkin. Archibald lead around the course and handily. On July 1 the third of a series for classified canoes—St. Lawrence River skiffs—was sailed. The entries were the Jean A. and Vagabond. Jean A. won by 3m. 58s., sailing the course in 1:15:38. Vagabond, Jean A. and Gallagher have each won a leg for this trophy, and the tie will be sailed off on July 5.

ARE YOU GOING TO THE MEET?—Members who have already decided to attend the meet will please send in their response to the circular immediately, and oblige the Committee on Camp Site and Arrangements, R. B. BURCHARD, Chairman.

YONKERS C. C.—The annual regatta of the Yonkers C. C. will be held off the club house, at Glenwood, on July 12, 2 P. M., the programme including the usual races.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

24. Newark, Annual, Bayonne.	

LARCHMONT Y. C., JULY 4.

THE eleventh annual regatta of the Larchmont Y. C. was sailed on Thursday, being fairly successful in spite of very unfavorable weather, as the entries were good and the yachts well matched in all of the classes save that Minerva was obliged to assume a handicap, in order to race with the others; her class, a matter of small importance to her, as it proved. The entries and classes were as follows:

CLASS D, 59 to 65 FT. CORRECTED LENGTH.	Waerline.	Corr. ed.	Allowance.
Viator, k. W. G. Brokaw.....	62.0	65.92	Allows.
Azalea, c.b., E. Blunt.....	61.4	65.36	1m. 48s.
Gevalia, c.b., H. W. Coates.....	59	61.91	2m. 42s.
Lotus, c.b., D. Appleton.....	59	not meas.	

CLASS IV., 54 to 62 FT.	
Anaconda, J. G. Prague.....	55.12
Clara, J. C. Barron.....	53

CLASS V., 47 to 54 FT.	
Liris, C. W. Wetmore.....	48.89
Marquita, A. Belmont, Jr.....	48.09
Chocataw, A. Thayer.....	47.08
*Minerva, J. L. Carroll.....	47.00

CLASS VII., 35 to 41 FT.	
Polly, T. Arnold.....	36.6
Sasqua, H. Andrus.....	35
Mariona, Harris.....	34.1
Volusia, J. M. Williams.....	31.6
Yonah, G. Tyson.....	30
Kathleen, T. C. Zarega.....	30

CLASS VIII., 30 to 35 FT.	
Kangaroo, F. Beames.....	33.00
Amazon, Z. E. Lewis.....	30.25

CLASS IX., 25 to 30 FT.	
Bantam, Woodbury Kane.....	25
Vixen, S. Seaman.....	25
Mouette, F. Smith.....	28.50
Frolic, S. S. Norton.....	25

CLASS XI., CABIN CATS UNDER 22 FT.	
Lakshmi, C. M. Loeser.....	29.08
Aura, W. H. Simonson.....	29
Falcon, E. W. Wright.....	25
Elfin, E. W. Wright.....	25

Open boats classified by waterline length.

CLASS XIV., CATS OVER 20 FT. L.W.L.	
Edna, Grieve and Newbold.....	

CLASS XV., CATS 20 to 23 FT. L.W.L.	
Dorothy, W. H. Goums.....	

CLASS XVI., CATS 20 FT. L.W.L. AND UNDER.	
Rival, Next, Elfin, Sherman; Giggie, Jacobs Bros.....	

*Minerva elects to sail in Class V., assuming the lowest limit of that class, 47ft., and receiving 2m. and 9s. from Liris. For the Gould Cup Minerva sails on her actual racing length and receives 3m. and 25s. from Liris.

With the exception of Minerva, all were very well matched by the new classification. Kathleen was compelled to sail against some longer boats but they in turn carried less sail, and made altogether a very good class. The regular course was sailed, the start being off at harbor, and the first mark which all rounded, in the mouth of Hempstead Harbor, three miles distant. From here Clara and Anaconda sailed around Stamford markboat and home over the same course, 27 knots; the cabin yachts from 30 to 54ft., including the schooners under 65ft., sailed around a markboat off Captain's Island and home by Hempstead, 20 knots; the cabin cats rounded Matinecock buoy and the Hempstead mark, 13 knots, and the open boats after passing the Hempstead mark went to the Scotch Caps buoy again and home, 10 knots. The usual excellent arrangements of colored balls and other distinct signals were used and the details of the race were very well managed. Besides the regular club prizes the Connor Cup was up in Clara's class, in addition to the cup won this spring by Clara and again put up by D. Barron. The 40ft. class, the Gould Cup, while Azalea and Viator had a private match as well.

The morning was dull and cloudy, a thick stifling atmosphere and not a breath of wind. Every yacht entered was at the line except Polly, and all was ready but the wind by 10 A. M. The fleet drifted about, keeping near the starting line, the hot sun by this time beating down until those who were not needed on deck were glad to seek shelter below. Once or twice a light spit of rain came, but no wind.

At last, just when all hopes of a race had been given up, the water was ruffled to the eastward, and the committee awakened the fleet by several sharp blasts of the whistle. By the time that all hands were on deck there was wind enough to work for the line, the preparatory signal was soon given, and five minutes after the larger yachts were away with a fresh breeze in the port beam as they reached across for Hempstead. Minerva, steered by Mr. Alley, was first to cross, then Liris to windward of her and 1m. 14s. astern, while Clara was almost touching Liris as the two rounded the weather markboat. Anaconda was to leeward of the pair, while Chocataw and Marquita were also near the leeward end of the line, crossing within a minute of Liris. The schooners were slowing in and Viator was handicapped. In the absence of Mr. Fish, Mr. Maxwell steered Chocataw, Mr. E. A. Willard steered Azalea and Capt. John Van B. skirled Gevalia. Minerva had a clean lead at the start, but the next boat, Liris, was chasing her hard, the pair dropping Clara. Anaconda, Marquita and Chocataw quite fast. Minerva just turned the Hempstead mark as the breeze dropped a little, leaving the others with barely enough wind to round. Clara had picked up Liris before the mark was reached and went through the forty's weather, turning the mark second. Chocataw had passed Marquita on the reach.

When part of the fleet had rounded, the wind stiffened from N. E. Minerva on rounding had gone on starboard tack for mid channel, and Liris for port. As part company with her, so tacked Larchmont. Marquita and Chocataw however were well held, and tried the chances of the Long Island shore, along which Clara was now standing on port tack. Club topsails were barred, but all were carrying jib topsails. Liris made a hot chase after Minerva, trying several short tacks to get from under her lee, and had gained on her when bearing the weather mark, but here the breeze freshened to allow Minerva to get ahead and she began to gain a little. Clara led Anaconda until the two were beyond Matinecock, when the other passed and led her. Marquita and Chocataw evidently found the breeze inshore to their liking, for they had both gained on the leaders when they came across after working the shore as far as possible to avoid the tide, Minerva took in her jib topsail when halfway over to the weather mark, but Liris carried jib topsail to the end of the race. The boats were timed at Stamford mark: Anaconda 4:31:24, Liris 4:52:55. All jibed around and set spinnakers to port, with balloon jib topsails. Minerva hardly held her own with Liris before the wind, but the latter had too big a task to pass her and gain time on her, especially as the two astern were coming up very fast and watching with eager eyes for a luffing match between the leaders that would prove their opportunity. This Liris kept out of by holding to leeward of Minerva, a bad place as it proved, for when a mile from the mark the wind came in dead ahead, making a beat to the Hempstead mark.

When around the leaders set spinnakers to port and ran across with little real change in their positions, reaching home just as the breeze fell, the rest of the fleet having to work in with barely any wind. The full times were:

SCHOONERS—CLASS D.	Finish.	Elapsed.	Corrected.
Gevalia.....	2 14 33	6 06 02	3 51 29
Azalea.....	2 16 02	6 11 43	3 55 41

R val.....	2 17 00	4 45 05	2 28 15

Kathleen and Volusia have since been remeasured, with the result that Kathleen beats Volusia by fifty-nine seconds. Gevalia's won in the schooner class subject to a protest made by Azalea against her claim. Azalea was a \$200 cup from Vixen for the postponed match of June 14 being made a part of this race. Minerva wins the Gould Cup. Clara wins her own in addition to the Connor Cup. The regatta committee included Messrs. F. M. Scott, Oswald Sanderson and Thorne Smith, the latter acting in place of Mr. Forwood who was lately called abroad.

BOSTON CITY REGATTA, JULY 4.

THE regular City Regatta was spoiled by bad weather, there being little wind, so that many yachts did not start, while those that did try had a hard time with showers and calms. The courses were: First and second class, from judges' boat down West Way, leaving Thompson and Rainsford Islands on starboard, Long and George's Island on port, Alton on port, buoy No. 3 on port and back through Narrows, leaving Fort Warren, Gallipoli Island and Nix's Mate buoys on the port, buoy No. 7, Castle Island on port, to flag boat anchored off Marine Park pier, leaving it on port, passing between judges' steamer and flag boat, 15 miles.

Third, fourth, fifth and special classes, from judges' boat to Cow Pasture buoy No. 6 (off the pumping station), leaving it on port, to flag boat, southern, leaving it on port, to buoy No. 7 off Fort Independence, leaving it on starboard, to Sculpin ledge buoy, leaving it on port, to buoy No. 6, Lower Middle, leaving it on port, to buoy No. 7, Castle Island, leaving it on port, to flag boat off Marine Park pier, leaving it on port, passing between judges' steamer and the flag boat, 10 miles. Mosquito and Whitehall class, from judges' boat to buoy No. 7, off Fort Independence, leaving it on starboard, to red buoy No. 2, about south, leaving it on port, Fort Independence on port, to black buoy No. 9, leaving it on port, to flag boat off Marine Park pier, passing between judges' boat and flag boat, three miles.

No foeties started, the largest boats being in Shadow's class. The new Shark was sailed by Capt. Sherlock to beat Capt. Crocker in the famous old Shadow, but failed to do so. The full times were:

FIRST CLASS—CENT. BOARD.	Length.	Actual.	Corrected.
Shadow, John Bryant.....	33.10	3 01 52	2 25 12
Shark, W. E. Waterhouse.....	30.00	3 11 56	2 40 05
Clytie, H. K. McKie.....	32.00	3 25 42	2 49 02
Violet, H. K. McKie.....	33.00	Withdrawn.	

FIRST CLASS—KEELS.			
Nomad, W. O. Gay.....	33.00	3 23 28	2 46 58
Maguolia, E. P. Boynton.....	33.00	3 42 03	3 15 23
Gulnare, E. C. Penz.....	33.00	Withdrawn.	

For all centerboard yachts over 30 and not over 35ft. First prize \$50, second \$30:

SECOND CLASS—CENT. BOARD.			
Almira, Thomas J. Young.....	25.02	3 03 50	2 16 01
Harbinger, J. R. Hooper.....	27.10	3 02 53	2 18 03

Bols Snodgrass & Barrie.....	14 00 02 10 47 18
Nellie, J. O'Leary.....	14 05 02 00 47 32

The winners were as follows, subject to some protests not yet decided: First class keels, Nomad first, Magnolia second. Second class keels, Alura first, Harbinger second. Second class keels, one first, Breze second. Third class keels, The Good Luck first, (the Strideway will have to be remeasured before the other prizes in this class can be awarded). Third class keels, The Good Luck first, Thelema second, Judith third. Fourth class keels, Thelema first, Port second. Fourth class keels, Astrea first, Pink second, Comma third. Fifth class, Rocket first, Psyche second, Flora Len third. Fifth class, Rocket first, Psyche second, Flora Len third. Jib and Mainsail class, Eureka first, Jadem second, Ustane third. Mosquito class, Bessie first, Ruby second, Skinner third.

Committee—William Power Wilson (chairman), Wm. G. Reed, John Cushing, Thomas W. Flood, Horace G. Allen, Samuel H. Case, Henry B. Godenough, Isaac R. Nosky, John J. Cotter, Ed. V. Dixon, James A. Jones, Judges—M. J. Kiley (chairman), Ed. Paige, F. H. Blaney, Philip J. McLaughlin.

MARBLEHEAD SWEEPSTAKES, JULY 4.

An interesting race, a special sweepstakes of \$10 each, was sailed on Friday, at Marblehead, between the following yachts: Millicent, c.b., A. B. Turner, 45ft.; Thelma, K. F. B. McQuinn, 45ft.; Ventura, c.b., C. H. W. Foster, 40ft.; Gossoon, K. F. B. McQuinn, 40ft.

Millicent was started by Captain Frisbie, all the others by their respective owners. Mr. Burgess sailed on Gossoon. The course was from Marblehead Rock to a mark 8 knots southeast, thence round the Graves Whistling Buoy and home, 21 knots; the wind being light southeast at start, freshening later. The start was given at 11:05, Gossoon, with silk baby set, going first, the times being:

Gossoon.....	11 05 20	Millicent.....	11 05 41
Ventura.....	11 05 34	Thelma.....	11 06 05

Ventura was close to Gossoon, with Millicent under her lee, all port tack, Ventura soon making a short leg on starboard tack, got well clear of the larger boats. When off Pig Rocks Ventura went on starboard tack again, followed by Gossoon and Millicent, leaving Thelma standing on alone to the westward. Thelma did her best sailing of the day, she and Gossoon having a close race, the former to windward, took a northerly course; while the other pair, with Ventura leading, went to the south. Gossoon and Millicent were carrying jibtopsails, the former a silk jib; Ventura had none and Thelma's was taken in after a short haul, being too large. The times at the first mark were:

Gossoon.....	11 19 40	Ventura.....	11 23 47
Thelma.....	11 20 26	Millicent.....	11 24 47

Ventura set her silk balloon jib topsail in good shape, but Thelma had trouble with hers, breaking it out too soon and being forced to lower it. With a nice breeze on the port quarter Thelma did her best sailing of the day, she and Gossoon having a close race, the former to windward, took a northerly course; while the other pair, with Ventura leading, went to the south. Gossoon and Millicent were carrying jibtopsails, the former a silk jib; Ventura had none and Thelma's was taken in after a short haul, being too large. The times at the first mark were:

Gossoon.....	11 27 31	Ventura.....	11 31 33
Thelma.....	11 28 17	Millicent.....	11 31 33

On the 8-mile run Thelma beat Millicent 3m. 35s. and Ventura 1.6s.

A very close race over the last leg now followed between Thelma and Millicent. Thelma was unable to blanket the other, but she had a "one gun" start and no allowance she had all chance of winning in the end. When near the line however she pulled out on Millicent, and with a corresponding R, on which she paid off under Millicent's stern and crossed the line one second ahead. Ventura was not timed, as she was astern, something being wrong with her. The full times were:

Start.	Outer mark.	Graves' whistler.	Finish.
Thelma.....	11 05 05	1 24 47	3 28 19
Millicent.....	11 05 41	1 25 23	3 28 20
Ventura.....	11 05 34	1 22 40	3 28 20
Gossoon.....	11 05 20	1 19 40	Not timed.

Thelma takes sweepstakes, \$40.

AMERICAN Y. C. RACES, MILTON POINT.

In spite of the increase in number and tonnage of the steam pleasure fleet which is more noticeable each year, the attempts to promote racing in steam craft have not proved successful in the past. The American Y. C. has done all that is possible for the encouragement of steam yacht racing, but in spite of the prizes in the regattas they have held, and the magnificent boats which have been sent to challenge from abroad, the results have been unsatisfactory, and for several years past no large yachts have entered for the races. The club, with its beautiful house and grounds at Milton Point, has been successful in other ways, with its membership and fine fleet, but the owners of the large yachts show no disposition to race them. The steam fleet is increasing rapidly in all sizes, the little launches have proved themselves indispensable to all yachtsmen that one is found in attendance on every well equipped sailing yacht of 40ft.; the river boats of 50 to 70ft. are becoming more numerous each year; the line series of cruising sailers, 50 to 100ft., such as the trawlers, the Lakes, the Atlantic coast and the canals, are also increasing in number, and in the sizes above these several important additions have been made this year. Of these two are new, of the latter 160ft. L. W. L.

One of the most important additions to the American fleet are of a hitherto unknown here, though very common in England, auxiliary cruisers. One of these, the handsome Steam Yacht, built by Mr. J. Beaver Webb, for Mr. Trenor L. Park, and built Messrs. Handren & Robins, is just nearing completion. She was purchased by Mr. E. D. Morgan, the Sans Peur, now to be retained by her original owner, of Catarina. She is an iron keel, 186ft. on deck, 23ft. beam, designed and built by Robert Le & Co., of Greenock, Scotland, in 1880. Such a vessel of the same class is the Golden Fleece, just chartered and built by Mr. F. P. Osborn, a composite craft, 119ft. on deck, 22ft. beam, designed and built by Mr. J. S. White, at Cowes, 1880. Osborn's vessel is a very fine vessel, with the privilege of purchase, she will soon be seen here. These two yachts will be found to further off shore than the rest of the fleet, such as they are, they are likely to be followed by more of the same class, as American yachtsmen learn to take the time for cruising foreign, the American Y. C. in default of entries from the steam yachts, came forward with good prizes for the 40ft. class, and held a very good regatta on the Monday following the Larchmont regatta. This year the same programme was followed, and in addition a special race of naphtha launches was added for the preceding Saturday, July 5. The prizes, which were \$25 in each of the two classes, over 20ft. and under 20ft. starters were:

Start.	Finish.	Elapsed.	Corrected.

Vedette.....	12 32 35	1 03 31	63 45
Oso.....	12 32 36	1 03 32	63 46

The winners were: First class: Columbia first prize, Aleck second prize. Second class: Sans Souci first prize, So So second prize. The regatta committee included Messrs. George W. Hall, Ezra S. Connor, Thomas L. Scovill, Wm. S. Alley and J. Howland Wainwright, who were on board of Mr. J. P. Kennedy's steam yacht Viola. A fast naphtha launch from the Gas Engine & Power Co.'s works carried the reporters over the course. The sailing regatta took place on Monday. It has since been announced that the launch Accident is the winner, in place of Columbia.

The regatta of Monday was sailed under the measurement rules and allowances of the Larchmont Y. C., but with the following changes: Cabin yachts, class A, schooners measuring over 75ft.; class B, under 75ft.; class 1, sloops, cutters and yawls measuring over 60ft.; class 2, do., 60ft. and over 45ft.; class 3, 45ft. and over 35ft.; class 4, do., 35ft. and under.

Open yachts, class 5, jib and mainsail yachts measuring over 23ft.; class 6, do., 23ft. and under; class 7, mainsail yachts measuring over 23ft. class 8, do., 23ft. and over 20ft.; class 9, do., 20ft. and under.

The courses were: For all cabin yachts, from Milton Point around a stake boat anchored off Hempstead Harbor, passing the same on port; thence around stake boat anchored one-half mile S.W. 3/4 S. of Captain Island Lighthouse, passing same on port; thence around stake boat anchored in Hempstead Harbor, passing same on starboard; thence across finishing line at Milton Point. Distance about 20 nautical miles.

For all open yachts, from Milton Point around stake boat anchored in Hempstead Harbor, passing the same on port; thence around the Black Buoy off Matinick Point, passing same on port; thence across finishing line at Milton Point. Distance about 10 nautical miles.

The starters were fewer in number than the prizes and weather deservd. Only two schooners started. Clara had no opponent. Aleck had gone to Boston. Liris was cruising, and only Mariquita turned up at the line. Kathleen and Volusia were ready for another trial. The smaller boats made a better showing, with six starters in one class, while Aura and Lakshmi made a good race. The wind was strong S.W. all day. The start was made at 12:40, the yachts crossing:

Start.	Finish.	Elapsed.	Corrected.
Gevalia.....	12 40 40	1 22 47	3 43 27
Giggle.....	12 41 05	1 23 02	3 43 52
Lakshmi.....	12 41 19	1 23 16	3 44 06
Aura.....	12 41 33	1 23 30	3 44 20
Maude.....	12 41 47	1 23 44	3 44 34
Zelica.....	12 41 55	1 23 52	3 44 42
Pearl.....	12 42 00	1 23 57	3 44 47

The first leg of three miles was to windward, a long and short hitch, the order at the mark being Gevalia, Azalea, Kathleen, Volusia, Aura, Pearl, Lakshmi, Giggle, Rival, Dot, Zelica, Next, Zeld and Maude. Kathleen had made up her start on Volusia, and turned with her, but so close that Kathleen's gust fouled Volusia's topmast stay, the topmast going at the cap. Kathleen continued the race, but was finally ruled out. Volusia cleared away the wreck and put an iris reef in her spinnaker, completing the course. It could be passed and the sail set Azalea, with Mr. E. A. Willard on the wheel, had passed her and when on the wind after Captain's Island mark was turn Azalea gained some 5m., increasing it on the last leg. Lakshmi was delayed by an accident to her throat halliards. The full times were:

Start.	Finish.	Elapsed.	Corrected.
Azalea.....	12 43 00	1 24 06	3 45 06
Gevalia.....	12 40 40	1 22 47	3 43 27

Pearl.....	12 42 00	1 23 57	3 44 47

Start.	Finish.	Elapsed.	Corrected.
Rival.....	12 43 47	1 23 53	3 44 43
Giggle.....	12 41 05	1 23 02	3 43 52
Zelica.....	12 41 55	1 23 52	3 44 42
Zeld.....	12 42 27	1 23 32	3 44 02
Next.....	12 43 21	1 24 27	3 45 27
Maude.....	12 41 40	1 23 44	3 44 34

Start.	Finish.	Elapsed.	Corrected.
Aura.....	12 41 33	1 23 30	3 44 20
Lakshmi.....	12 41 19	1 23 16	3 44 06

Class B Azalea beats Gevalia 7m. 21s., corrected time. In class 4 Volusia wins by Kathleen's foul. In class 7 Dot beats Pearl 2m. 15s. In class 9 Rival wins by lm. 9s. over Giggle. In class 10 Aura beats Lakshmi 5s.

The regatta committee included George W. Hall, Ezra S. Connor, Thomas L. Scovill, Wm. S. Alley and J. H. Wainwright. The club has just announced a regatta of steam yachts on July 26. Tillie, Straggler, Susquehanna and Alicia and others will steam from a point to the eastward of New London, finishing at Milton Point. The course will be eighty nautical miles with a time limit of five hours. The prize is a challenge cup, worth \$1,000, donated by the club.

NEW ROCHELLE Y. C. JULY 5.

The New Rochelle Y. C. was far more fortunate in the matter of wind and weather than its neighbor, the day being clear and bright, with a light N.W. wind, making a good race. The entries, however, were not so good in the larger classes. Gevalia was the only schooner, Minerva had started for Boston and no other fortilies came in to take the special prize offered for the 35ft. class. The classes were based on waterline length and the time was on mean length, the New Rochelle Y. C. still holding the record for the 35ft. class.

For all above the 35ft. class. From the starting line around the horizontally striped buoy at the west end of Execution Reef, leaving same on port, thence around buoy off Matinick Point, leaving same on port, thence around stake boat fly, club flag anchored south of Captain's Island, leaving same on port, thence horizontally striped buoy at east end of Execution Reef, leaving it on starboard, thence around horizontally striped buoy at west end of Execution Reef, leaving it on starboard, thence across the finishing line in the opposite direction from the start; 22 nautical miles.

For 35ft. and smaller classes. From starting line around horizontally striped buoy at west end of Execution Reef, leaving leaving same on port, thence around the black buoy off Matinick Point, leaving same on port, thence around stake boat fly, club flag anchored south of Captain's Island, leaving same on port, thence horizontally striped buoy at east end of Execution Reef, leaving it on starboard, thence around horizontally striped buoy at west end of Execution Reef, leaving it on starboard, thence across the finishing line in the opposite direction from the start; 17 nautical miles.

No stripping was allowed, doors, bulk-ads, seats and tables being left on board. The start was made at 12:13 Clara first. The official times were very badly taken, Clara and Anaconda, apart, and by those on the judge boat as but 47sec. apart. After a run to Execution Clara held her lead until the reach to Island, Clara gained over a minute on Anaconda. On the next leg, the finish, as time making the elapsed times alike and giving the race to Anaconda. The timing was very badly done, and the management of the race and accompanying steamer were very poor. The full times so far as made up are as follows:

Start.	Finish.	Elapsed.	Corrected.
Gevalia.....	12 18 30	3 59 00	3 40 30
Anaconda.....	12 14 00	3 30 00	3 17 00
Clara.....	12 13 00	3 31 00	3 17 00

Elaine.....	12 18 30	Did not finish.	
Next.....	12 18 30	4 20 00	4 01 30

Gevalia has a sail over, Anaconda beats Clara on corrected time Kathleen beats Sasqua on corrected time and all the rest of the class by a large margin on elapsed time. Sasqua is a fast Ellsworth class that has never done much racing, the rest are well known. Kangaroo another Ellsworth boat, wins in her class. Mouette has a sail over; Leader beat the Boston boat Coyote; Rosetta A. wins in her class; Edna beat Bjou; and Marion wins in her class, and Phyllis in hers. The judges were Gov. Leon Abbott, of New Jersey, J. W. Gibson and Howard D. Bean, in Gov. Abbott's launch, New Jersey. The regatta committee included Messrs. E. T. Smythe, A. L. Embury, B. W. Dismore.

ST. LAWRENCE Y. C. JUNE 28.

The opening race for a challenge cup, to be raced for by the 25ft. and over class of the St. Lawrence Y. C., presented to the club by Mr. Charles H. Levin, was sailed over the regular club course at Pointe Claire, on June 28. The starting gun was fired at 4:03 and the boats crossed the line in the following order: Chaperon, E. S. Clouston; Lulu, A. Irving; Black Eagle, C. H. Levin; Viking, L. L. Smith.

Chaperon carried a big club topsail and jib topsail, the rest club topsails over lower canvas. It was a long and a short leg to the east buoy, and Lulu passed Chaperon and took first place before the buoy was reached. It was a reach with the wind well over the quarter to the southwest buoy, and Lulu kept her lead with her big balloon, doing well. Chaperon set a cowsprip spinnaker and to the buoy kept her lead on Black Eagle. In rounding the buoy under balloon jib did not alter the position of the boats, Lulu and Chaperon held on down the center of the lake hunting for the middle breeze and taking full advantage of the current. Black Eagle crossed tacks and stood in to the north shore and by so doing she got a breeze which enabled her to weather out on her antagonists, and went around the east buoy, and squared away for home with a lead. The times are as follows:

Start.	Finish.	Elapsed.	Corrected.
Lulu.....	4 03 45	6 05	2 01 15
Black Eagle.....	4 04 45	6 04	1 59 15
Chaperon.....	4 05 45	6 11	2 03 30
Viking.....	4 07 00	6 11	2 03 30

The first steam yacht race of the season was started a few minutes after the yachts got away. It resulted as follows:

Length.	Handicap.	Start.	Finish.	Elapsed.
Fly, E. C. Arnold.....	17 00	Scratch.	4 05 30	Withdrew.
Mvra, A. C. Kent.....	32 00	6 00	4 11 30	1 03 30
Evelina, Dr. Lavolette.....	37 00	6 00	4 16 10	0 58 20
Ivy, C. S. Cline.....	45 00	5 44	4 21 45	0 51 45

The start for the annual cruise was made about 8 P. M. and five boats, Valda, the flagship, Pearl, Minnie A., Chance and Banshee, started. It was a glorious moonlight night, with a fresh breeze, and the little fleet was at anchor under Point St. Louis, at Beaumont's, before one watch had elapsed.

After a comfortable night and a ramble around the picturesque old town of Beaumont, the fleet started for St. Anne's, and the breeze just held long enough to take it up there. The run down with the current was a long and a hot drift, diversified by swms; and it was 7 o'clock before the leader of the fleet, the little top sail Banshee, dropped her hook in the boat house bay, at Pointe Claire. This third cruise of the St. Lawrence Y. C., which has been a great success, in spite of the fact that the fleet has been a small one.

JULY 2, DOMINION DAY.

The second of the yacht classes and the third of the skiff races were sailed on July 2. The wind was very light and huffing at the start, but it freshened into a fresh topsail breeze before the finish.

The starting gun was fired at 12:25, and the boats went across the line in the following order: Pearl, Valda, Black Eagle, Minnie A., Madge, Osprey, Banshee and Lulu. All the boats but Madge carried club topsails, and Valda carried her jib topsail as well. It was a close reach to the east buoy, and Valda led around and set a spinnaker to port. Lulu was to leeward of Black Eagle, her class antagonist, and finding that she could not work through her lee, smothered her canvas, ran across Eagle's stern, set it again and went past her as if she was being towed. Black Eagle worked past Valda. The wind was freshening all the time, and by the time the fleet rounded to for the beat home to the East buoy the time was a beautiful topsail breeze from the southeast. On the close work of the fleet carrying club topsails alone. Valda drew past Black Minnie A. and Lulu. The latter had a big lead on the fleet, however, and rounded the last buoy with about 6m. to the good on place at the buoy, but both boats had to take a short tack round the buoy, and Minnie A. kept her place to the finish. The boats crossed the line in the following order: Lulu, Minnie A., Valda, Black Eagle, Pearl, Breeze, Osprey, Banshee. The times were:

BEVERLY Y. C., JULY 4, 5.

150TH REGATTA. FIRST BUZZARD'S BAY CHAMPIONSHIP.

THIS race was sailed on Friday in a good wholesome south-wester.

In first class Mattie had a walk-over.

In second class the new Anonyma, just finished by Dunn, sailed her maiden sail and did well. Her owner being a new hand at racing handicapped her two minutes at start, and her sail set badly, forcing her to carry a racing reef.

In third class Puzzle, Eina and Cayuse fought it out again, this time Puzzle, who has largest sail of the lot, rushing off with the lead and holding it all through. Eina has not enough masthead and could not hold her gaff in place with a whole sail. Daisy carried a reef, but shook it out at end of first round. Daisy carried a single reef, but seemed to be outclassed by the others. Ada parted throat halvard and withdrew.

In fourth class Rip gained steadily to windward, but carried a reef she did not need, and lost a little running. At the end of the first round she led by eight seconds; going to windward in second round she increased this lead till the race seemed surely hers; but at windward work she tried to shake out the reef and made an awful mess of the operation, tearing sail and nearly capsizing the boat. During this operation Edith passed her and won the race.

Courses same as on June 17; 11 miles for larger classes; 8 for third and 6½ for fourth.

Length.	Elapsed.	Corrected.
Mattie, Howard Stockton.....25.10	2 00 10	1 51 16

Length.	Elapsed.	Corrected.
Mist, Geo. H. Lyman, Jr.....26.08	2 01 27	1 50 15
Widgeon, Moses Williams, Jr.....26.10	2 03 26	1 52 26
Anonyma, F. L. Dabney.....26.10	2 04 01	1 53 01
Lestris, Joshua Crane.....24.01	Withdrew.

Edith, Irving Chapman.....19.04	1 17 24	1 04 53
Rip, O. B. Jefferson.....19.01	1 18 27	1 05 41
Nymph, Geo. G. Amory.....17.01	1 27 10	1 12 12

Winners of prizes: Class one, Mattie, who is also winner of leg for pennant for actual time class two, first first, Widgeon second, Mist leg for pennant class three, Puzzle first, Eina second, Puzzle leg for pennant; class four, Edith first, also leg for pennant Judge, W. Lloyd Jeffries.

100TH REGATTA. OPEN SWEEPSTAKES, THIRD CLASS.

This race was sailed at Marblehead on Saturday. The boats got off in a very light westerly air and worked slowly out to Cat Island Edith drifting ahead. From here to Gooseberry Ledge there was a succession of dead calms and light flukes from all round the compass, Edith rounding nearly 20 minutes ahead. From here on they should have had a run to Bowditch and a beat home. Wanda and Lassie closed up on Edith and almost caught her; but wind came out ahead and gave them a heat to Bowditch and a run home, the course getting the best of it. Summary as follows, Lassie's measurement being only guesswork, as she has not been officially measured, but it is near enough to fix her place in the race:

Length.	Elapsed.	Corrected.
Edith, E. M. Wood, B. Y. C.....20.05	2 02 12	2 02 51
Lassie, W. S. Eaton, Jr., Y. C.....20.05	2 16 32	2 08 23
Wanda, R. C. Robbins, B. Y. C.....22.07	2 16 33	2 07 03
Nixie, A. C. Cochrane, B. Y. C.....24.05	2 24 02	2 15 53
Kathleen, R. S. Peabody, B. Y. C.....25.05	2 24 45	2 17 18
Wraith, H. P. Benson, W. Y. C.....22.03	2 27 15	2 17 23

Winners, Edith first, Wanda second. The 101st regatta, second open sweepstakes, open to all boats not over 30ft. waterline, will be sailed off Monument Beach on July 12, at 1 P. M.

FOR SALE—THE BRENTON'S REEF CUP.

We commend to the notice of American yachtsmen the following advertisement, the London *Field*, June 31:

"Genesta"—For sale, this famous racing cutter of 80 tons in perfect order, and holder of the Brenton Reef Challenge Cup, which goes with her. Price and particulars of — and —.

Here is a fine opportunity for some patriotic American gentleman to buy a fine challenge cup at a bargain, along with the anchors, chains, furniture and equipment of a first-class racing cutter. Such an opportunity may not soon occur again.

PLYMOUTH REGATTA.—The second annual regatta of the Plymouth Y. C. was sailed over a triangular course in a good breeze, the times being:

CORINTHIAN NAVY ANNUAL, NEW ROCHELLE.—The first annual regatta of the Corinthian Navy was held at New Rochelle on June 28, and never in the history of that yachting center did such a large fleet of small craft cross the line at any one time. Forty-two boats were entered for the race, and of these twenty-nine crossed the line, while three laid at anchor owing to a lack of class. The day was an ideal one, a fresh northwester blowing and a choppy sea running. The race for classes A and B was from off the New Rochelle club house to the black and red buoy off Execution Light, thence to a stakeboat off Hempstead Harbor and home. Classes C and D made the same course, except they took the can buoy off Larchmont instead of the boat at Hempstead Harbor. The following is a summary of the race:

Length.	Elapsed.	Corrected.
Kittie, T. T. Taber.....21.02	1 44 00	1 42 39
Phoebe R., C. Raymond.....21.00	1 48 25	1 47 04
Manhattan, A. T. Skerry, Jr.....22.06	1 51 35	1 50 55
Io, G. Barnette.....23.00	1 54 43	1 54 43
Beth, E. H. Jewett.....22.09	2 06 10	2 05 30
Marion, H. Pratt.....20.04	2 12 07	2 08 49

Length.	Elapsed.	Corrected.
May B., T. W. Pell.....19.11	1 42 51	1 42 00
Punch, A. L. Clark.....19.06	1 49 32	1 48 41
Zelica, H. A. Sherman.....19.05	1 54 18	1 53 27
Giggle, B. Jacob.....19.03	1 57 01	1 56 10
Nettie, J. Rough.....18.00	2 10 40	2 08 45
Ada, W. C. Leibes.....21.00	2 13 09	2 11 12
Unique, F. B. Jones.....18.11	2 15 24	2 15 24
Nadyr, B. F. Connor.....18.00	2 27 21	2 25 24

Length.	Elapsed.	Corrected.
Elaine, M. J. Rooney.....15.02	1 46 41	1 43 55
Addie, W. H. Hathaway.....18.00	2 13 11	2 13 11
Ramblor, Messrs. Davis.....18.00	2 22 25	2 22 25
Watermelon, Thos. Clapham.....14.06	1 58 16	1 58 16
Bonnet, Thos. Clapham.....14.06	2 03 55	2 02 55
Germania, O. Raubenheimer.....18.00	Walkover.	
Puck, J. G. Honey.....18.00	Withdrew.	

In this regatta the Io proved herself a better boat than the Burgess Beth. The Io was designed by John Coughtry, the builder of the Nanita. Thos. Clapham defeated his own invincible Bounce with the Watermelon, his latest creation in the pontoon line. The following gentlemen are proposed for membership: Frank L. Townsend, C. Raymond, J. F. Jarvis, Jr., W. H. Hathaway.

QUINCY Y. C. SECOND CHAMPIONSHIP, JULY 5.—The start in the second championship race of the Quincy Y. C., on Hough's Neck, on Saturday, was postponed until 2 P. M., owing to the calm, the little wind after that being fluky. The times were:

Length.	Elapsed.	Corrected.
Posy, R. G. Hunt.....22.06	2 00 34	1 55 40
Eric, John Cavanagh.....26.11	2 00 34	1 56 40
Moondyne, Shaw Brothers.....22.06	2 03 45	1 57 49
White Fawn, A. E. Jones.....25.00	2 06 02	1 59 43
Mudjekwi, W. P. Whitmarsh.....25.08	2 06 55	1 41 41

Length.	Elapsed.	Corrected.
Madge, W. D. Lovell.....19.10	1 44 37	1 17 34
Tartar, George Russell.....19.11	1 48 42	1 21 44
Elf, Henry L. Soutar.....19.10	1 48 35	1 20 32
Rocket, H. M. Faxon.....19.02	1 47 37	1 16 11
Flora Lee, O. E. Bockus.....16.10	1 47 26	1 16 54
Freak, G. F. Mayoury.....16.00	1 56 04	1 19 24

Length.	Elapsed.	Corrected.
Eureka, E. B. Rogers.....19.03	1 46 03	1 18 38
Madge, W. D. Lovell.....19.11	1 48 42	1 21 44
Pet, J. W. McFarland.....19.03	1 50 07	1 21 54

Posy takes a leg for the cup with Mudjekwi; Madge, under protest, has a leg with Tartar, Rocket with Flora Lee, and Eureka with Diadem. The judges were George E. Pfaffman, George G. Saville and James H. Slade. Madge was protested for carrying one too many in her crew.

BAYSWATER Y. C.—July 4.—The regatta of the Bayswater Y. C. was sailed off its club house in Jamaica Bay on Friday. The course was fifteen miles for classes A and B, and ten miles for C and D. The wind was fresh S. The times were:

Length.	Elapsed.	Corrected.
Edith.....23.05	4 10 32	1 34 03
Alert.....23.04	4 11 08	1 34 21

Length.	Elapsed.	Corrected.

Freeman.....12.47	3 23 15	2 06 23

Among the yachts in the harbor were America, Seneca and Wayward.

HOWARD Y. C. REGATTA JULY 3.—The first regatta of the Howard Y. C. took place Thursday last at Centerville, Mass., on the Nine-Mile Pond. The times were:

Length.	Elapsed.	Corrected.
Mascot, H. Marston.....14.24	1 48 24	1 48 16
Gypsy, G. H. Crosby.....14.24	1 53 07	1 52 07
Pauline, H. Kelley.....14.24	1 52 11	1 51 11
Fvelyn, D. C. Sturges.....14.24	2 06 02	2 06 02

PAULINE WAS RULED OUT FOR FOULING A STAKE BOAT.

LAKE Y. R. A. CIRCUIT.—The dates of the racing cruise of the Lake Y. R. A. of Lake Ontario, are as follows: Race at Hamilton on August 13; Toronto, Royal Canadian, 15; Queen City, 16; Kingston, 20; Oswego, 23; Rochester, 27. No other events have yet been decided on; the circuit ending at Rochester.

ROYAL CANADIAN Y. C., JULY 2.—On Dominion Day, Wednesday of last week, the Royal Canadian Y. C. sailed a very hard race, the day being rainy with very strong wind and some exceptionally heavy squalls. Psyche and Madge lost topmasts. Verve carried away gaff jaws, and Fennette broke her tiller. A number of the yachts were late at the start, Merle being among them. The times were:

Length.	Elapsed.	Corrected.
Orion, schooner, Toronto.....24.10	4 25 10	2 25 10

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1, black bass; No. 2, bass and pickerel; No. 3, muscalonge, salmon trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction, one minnow having been known to catch twenty-five bass before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

J. B. WISE, Watertown N. Y.

T. W. BOYD & SON,

1641 Notre Dame St. Montreal, Que.

The Celebrated Divine Rods.

Split Bamboo, Bethabara, Greenheart, Dogma and Lancelwood. Twisted split bamboo rods. An entirely new method of treating the bamboo, giving it a twist while winding, thus distributing the strain equally all around the rod and making absolutely the strongest bamboo rods ever constructed. Made only by the manufacturers, **DIVINE & BÉCRAFT**, successors to Fred D. Divine, Utica, N. Y. Mention FOREST AND STREAM.

Do You Wish to Catch Large Trout? THEN GO WHERE THEY ARE!

The Rangeley, or more properly, the Androscoggin Lakes, contain the largest brook trout on this continent, and land-locked salmon running up to seven pounds. You can learn all about the fish, the best angling points, routes, expense, etc., by purchasing "The Androscoggin Lakes," illustrated. Contains 52 pages text, 60 illustrations, covering the entire sporting region of northern New Hampshire and northwestern Maine, and Game and Fish Laws of both States complete. Price \$1. Illustrated catalogue sportsmen's books mailed for 5c. JAMAICA PUBLISHING CO., Jamaica Plain, Mass.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the angler chooses.

THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH.—It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

YAWMAN & ERBE,

ROCHESTER, N. Y.

Send for Catalogue, Free.

All Anglers know of "Chubb" and the high reputation that his goods have obtained. If you need a rod or other tackle, send direct to him and get goods that are warranted.

His New Catalogue for 1890 contains description of everything that you need; it also contains articles on fishing, written by such well-known writers as Dr. James A. Henshall, Patronella, W. H. Murray, Geo. P. Goff, Norman, Bro. Gardner and others.

Send 25 cents, and receive Catalogue, post paid. This amount will be deducted from first order (if accompanied with Coupon in book) for one dollar's worth or more of our goods. Address

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES,

With Notes on the Origin, Customs and Character of the Pawnee People.

By **GEORGE BIRD GRINNELL ("YO.")**

Cloth, 417 pages.

Illustrated.

Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales, and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill or sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parallel to the East Indian mango feat. Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

BIRD PORTRAITS.

Some Native Birds for Little Folks.

BY **W. VAN FLEET, M.D.**

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Killdeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, \$3.00. **FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.** DAVIES & CO., 1 Finch Lane, Cornhill.

ANSWERS TO CORRESPONDENTS.

POLITICS AND FISH.

IN connection with the present investigation of the United States Fish Commission by Congress, there are three points which must not be overlooked nor robbed of their true weight. First, the investigation has been entered upon for the purpose of providing an excuse for making the bureau a political department. Second, this transfer is asked for wholly in the interest of politics. Third, politics will ruin the Fish Commission.

When the place seekers and the patronage mongers shall attain their ends, and the Commission be given over into the hands of politicians, to be run on the same principles as those on which the other departments of the Government are conducted, its usefulness will be destroyed. In the present investigation the real question at issue is not whether the Commission's affairs are conducted in the most economical manner possible; it is whether the Commission can be captured by the politicians for what there is in it. And their eagerness to get hold of the bureau is to be accounted for wholly by their belief that it has tremendous opportunities for them and for their jobbery. Political control and economic fish-culture cannot go hand in hand.

THE PESTIFEROUS SPARROW.

IF the imported English sparrow is really the menace to agriculture that it is claimed to be by intelligent investigators, it must be confessed that the people of this country are displaying a most foolish indifference to the subject. One by one the several Legislatures have removed the protection once accorded to the sparrow, but heretofore in no single instance has any adequate method of campaign been set on foot to reduce the bird hordes by destroying them. The Massachusetts Legislature, after a discussion extending over several weeks, has now passed an act entitled, "An act providing for the extermination of the English sparrow in the Commonwealth," and reading as follows:

SECTION 1. In all cities of the Commonwealth the officers having charge of the public buildings, and in all towns thereof such officers as the selectmen shall designate and appoint, shall take and enforce such reasonable means and use such appliances as in their judgment may be effective for the extermination of the English sparrow therein; but in so doing poisons shall not be used.

SEC. 2. Any person who shall wilfully resist the persons in any city or town charged with the execution of the provisions of this act, while engaged therein, or who shall knowingly interfere with the means used by them for said purpose, to render the same less effective, shall be punished by fine not exceeding twenty-five dollars for each such offense.

SEC. 3. Nothing in this act shall be so construed as to allow an officer to enter on private property without consent of the owner or occupant thereof.

The subject has received considerable attention in Massachusetts; and the Boston papers have discussed it pro and con, with a good deal of energy. During the discussion of this bill a resolution, introduced by Mr. Bicknell of Boston, was passed in the House which provided that the Board of Agriculture be requested to make inquiry and investigation as to the birds that inhabit the State, and report thereon as to their character, habits and value as insect destroying and grain and fruit destroying birds, and to advise such legislation as may be necessary for the protection of private and public interests.

At this late date, it is probably vain to hope that the English sparrow can be exterminated, but there is no doubt that energetic action and unceasing vigilance can reduce this bird from being a great injury to the farmers to one whose influence will be but little felt. We have in mind a number of places near New York city, where, by energetic persecution on the part of the residents, these birds have during the present summer been so thinned out that their presence is scarcely noticeable. In the sections where this has taken place a noticeable increase of native birds has followed, and the results have been so encouraging that householders have determined to continue their efforts in the hope that in the course of a few years the sparrow may be gotten under control.

The methods which have been followed by these good results consist in destroying the nests as fast as they are built, and in shooting, with tiny loads, the sparrows at all times. While a very great number of the birds have been killed, it is thought by those who have watched the matter that those which have not been destroyed have learned that the places where they are thus pursued are dangerous. At all events, the fact that lawns and yards, once entirely given up to the sparrows, are now entirely deserted by them, is evident.

SNAP SHOTS.

PREPARATIONS are being made to ship to the Yellowstone Park for planting in its waters a large number of the fry of valuable food fishes which are to be turned into lakes and streams which have heretofore supported fish food but no fish. As stated last winter in FOREST AND STREAM, there were set aside for this purpose 30,000 landlocked salmon, 25,000 Loch Leven trout, 100,000 lake trout (*namaycush*), 25,000 European trout (*S. fario*), and 25 000 Eastern brook trout. So soon as the snows have sufficiently melted to admit of the passage of pack animals across the range, the car containing these fish will start for the Park. It is understood that if Col. McDonald can get away from Washington he will accompany the car and will himself superintend the planting of these fish.

Just as we go to press we are in receipt of the full text of the decision recently rendered by Judge Craig in the Illinois Supreme Court, *in re American Express vs. the People*, and shall publish it next week. The Illinois law prescribes that quail may not be killed for sale, nor transported after sale or for the purpose of sale; and the decision is to the effect that the law is constitutional, the State having power to make such a regulation. Judge Craig's conclusions are sound law, but we do not agree with his premise that game is the property of the State. On the contrary, as we think has been satisfactorily shown in these columns, property in game vests in the owner of the land on which it is found, by the term property being meant, however, only the exclusive right to take the game. This principle of private ownership in no way precludes the State from making such regulations, under the police power, as may be deemed proper for the conservation of the game supply. We shall return to this subject next week.

Fish Warden Hague, of Pittsburg, Pa., has created a reign of terror along the Allegheny river. He set out the other day on a campaign of net confiscation and netter prosecution. He discovered that about every resident along the river who cared anything for fish was in the habit of seining illegally. Whole villages professed ignorance of the law; but the fishermen themselves knew enough to elude Warden Hague when they could. Seven men fled from the State. Several thousand dollars' worth of unlawful tackle was confiscated. The outlook is for a radical change in law observance in that district. The warden will now turn his attention to other rivers, and if he shall persevere in the good work, western Pennsylvania rivers will once more have a supply of food fish.

There is money in some of the fish and game preserve enterprises. Members who go in "on the ground floor" often find the value of their shares doubled or quadrupled within comparatively short periods. Some years ago a party of three salmon anglers bought Brandy Brook in the Restigouche county of Canada, paying for it \$600. Subsequently they sold a portion of their property for \$15,000. Nearer home, there are Adirondack clubs and Atlantic coast ducking clubs, which have proved to be capital investments.

The initial meeting of the British National Rifle Association is on this week at the new Bisley ranges. There were some misgivings about the change from Wimbledon, but with such a live, energetic body of riflemen as made up the Wimbledon contingent for a score of years past, the chances are that the old record of the Common near London will be repeated and excelled upon the new and commodious ranges.

And now it is reported that the word "woodcock," which appears in an act of the last New York Legislature designed simply to relate to ruffed grouse, was surreptitiously inserted. The effect is, as we have already reported, to defer the opening of the season from August 1st to September 1st. If this was a piece of forgery, who did the forging, and why was it done?

Next week we shall publish the rules of some thirty Western railroads respecting the transportation of hunting dogs. The information there given will be of value to sportsmen who are contemplating a shooting excursion in the West.

The Black Bass and Its Allies.

THE third fishing supplement offered to its readers by FOREST AND STREAM will be published next week, and will be devoted to one of the most popular and widely known families of fresh-water fishes—the black bass family. The illustrations will show the two basses, the blue sunfish, the long-eared sunfish, the warmouth perch, rock bass, Sacramento perch, calico bass, and crappie, besides the stone catfish and the river crayfish—two of the most important baits for black bass. The young black bass and the stone catfish will here be figured, we believe, for the first time.

Dr. James A. Henshall, the great authority on the black bass, and now Secretary of the Ohio Fish Commission, has again contributed timely and valuable notes on angling for the various species for this number. He has written also a paper on the "Bass and Bass Islands of Lake Erie." "Kingfisher," will recount "Some Personal Recollections of the Bass Family" in the enjoyable style which has enlivened his well known accounts of the camps of the Kingfishers. Mr. W. P. Seal will describe his recent interesting observations on the "Nesting of the Sunfish," and Mr. Lung will contribute notes from historic Wyalusing. Altogether we trust that the black bass supplement will win its way into public favor as the black bass itself has established its claim on the popular esteem.

The Sportsman Tourist.

SUMMER SKY AND SEA.

THE great wind that has been tumbling white, frothing billows shoreward all day long, has, with the approach of evening, sighed itself out and stolen away to sea. The bay has resumed its quiet, and only a soft heave remains on its smooth broad breast, where still and dreamy shores are mirrored. All noise and sound is hushed in this sweet, gentle time of day, before the dusk has made its presence felt; and the fishing village lies still and apparently deserted, as we slip from the shelter of the one solitary dock, borne by the ebbing tide, and the sail barely filled by a soft, slow wind. To the east, where evening is gathering, looms our goal, the silent and peaceful cabin, lonely on its green marsh island, mirrored in the still, smooth plain of water, that is broken only here and there by dun-colored patches where long tangled grasses lie motionless or submerged sand bars hide their yellow backs. The only sign of toil or life is the long irregular line of gloomy black buildings far on the southern sea level. But with the long line of smoke hanging motionless in the evening air and stretching like a great streamer for miles and miles, even they are softened by the dying sun that flashes blood-red in the windows and tips the surrounding stunted swamp cedars with flame.

Now and again, as our craft ripples slowly on, some fish rises suddenly and breaks from the water, falling back with a sharp, resounding crash, and leaving only a ripple, that slowly widens into immensity before subsiding; or perchance a gull, homeward bound, sails lazily overhead, pausing an instant to look down, then, with a laugh, wheeling till the white pinions flash like a sun-tipped cloud. All else is silence, so we hold our course over shallows where bright-tinted weeds sway, over deep, hurried channels and through winding, placid waterways. The village is fading in the distance and we can see the solitary form in front of the shanty awaiting our arrival. As we round the point the flag comes from the staff, even as the sun sinks behind the western woods. One last hot, burning glance comes through the green laced boughs, then the dusk steals swiftly over sea and land.

Then Matt's cheery voice sings out with a welcome that cannot be mistaken, hearty and honest as the man himself, and on the air floats the fragrance of coffee, a good omen to us. As soon as the repast is ended, out come pipe and weed, and a goodly company and true, goodly not in numbers, but in friendship, gathers before the cabin to watch the falling of night and listen to her soft language. Around us the rushes are beginning to whisper mysteriously, while the tide that is coming back from the sea, rich and fresh with the delight of its embrace, murmurs and sobs in every nook and around every timber. Out in the gathering gloom fish are beginning to leap, good token for the morrow. The great bay has darkened, but in a vast circle around us innumerable lights begin to twinkle and tremble over the black waters. To the south, the twin stars of the Highlands waken and send their watchful red beams over the troubled sea that stretches between them and us, while to the north, a dull, throbbing glare in the sky tells where the great city lies, heated and noisy, with its multitudes and their feverish haste after pleasure or money, with all its sins and sorrows, blare and empty show. Around us, the sea, calm and strong and pure; and nature, sweet and gentle to those who love her truly, tells magic tales with the voices of the wind and billow, and with her touch heals all the wounds that daily life has struck, banishing all sorrow.

So we sit and listen dreamily while the waves tell of strange things. Of old forgotten wrecks, rich with the crystallized life of the sea; of still, grass-bound channels, where great watchful fish lie still, winnowing the current with fins ever ready to dart away. Of old times, centuries ago, when no fisherman's hut broke the solitude of the marshes and no summer cottages breasted the sea. But the tides came and went as they do now, and annually through the inlet came great schools of sea-run fish, and the rushes and banks were as beautiful and dreamy then as now. Perhaps it was a night like this, two centuries since, that a high-pooped, bulky ship dropped anchor near the inlet. The trembling moonlight touched on the shining muzzles of frowning cannon and on piles of gleaming cutlasses and muskets, and on wicked, dark faces in fantastic head dress. If the old Dutchmen, quietly nodding in their observatory, miles away on the sandbar, had seen them, if they had followed the rowboat that was lowered from the side of the ship, and marked the motley crew to the shore, where, in silence, they labored long with shovel and pickaxe, and buried something large and bulky and heavy, they might have been richer than a dreamer's wildest vision. If they had marked the spot many an unfortunate from Montauk to the Palisades would have been saved an unsuccessful search and a back-ache. For the strange craft belonged to the blood-stained man who has ever since been tinged with the romance that envelopes a stormy and wild life, that Captain Kidd who closed his wicked career on the gibbet. The magic of the night is over us, and all the surroundings inspire visions. Yon fog bank might well be the spectre of the old pirate, haunting the grave of his ill-gotten gains. But with the fog bank comes a cold night breeze that is very substantial and warns us inside and to our bunks, where soon everything is still and asleep.

Of course it seems hardly an instant until the alarm clock awakes us all. One last sleepy yawn and out we tumble into the air. A liberal application of cold rain-water awakes the senses fully, aided by a cup of steaming coffee, and then we are out on the still dark waters. Though impenetrable night yet reigns, there is that indescribable something in the air that tells of the day-break approaching. Softly, as if bent on some evil design, we slowly and carefully pull out into the stream, and let the anchor glide gently and noiselessly to the bottom. Then the reel turns swiftly as the leaded line speeds into the water, armed with its long leader and shrimp-baited hook. Now comes the test. The tide is right, and there is a nervous pause and a hush of expectation, as we wait for the first weakfish of the season. Two, three, five minutes pass, and no strike. We whisper to one another in disappointment, for they must come now or not at all. My companion, with ready fingers on rod and reel, looks around at me, when—whirr! down goes my tip like lightning. For an instant there

is a mighty surge as my line follows the fish to the surface; a glittering something leaps into the air fifty feet away, then my rod straightens out, and I have lost the first fish. Now the "buck fever" is on us. Eagerly, with quick fingers, another bait is adjusted, and, after what seems an eternity of waiting, the line rests on bottom again. Then suddenly the figure in the stern straightens out, his rod begins to spring and bend and—something has leaped at my hook like lightning, and my rod is doubled up under the boat. But this time he is fairly hooked, and as my companion lands his fish, mine comes to the surface, now leaping and thrashing till the water is white with foam, then surging through the water with gills angrily red and fins erect, while all the tints of rainbow and sunrise combined play on his lordly sides. Away, away from the boat, until the rod bends, till further yielding seems impossible, while the line cuts the water like a knife, and swishes and quivers like an overdrawn bow-string. Now he shakes his head savagely, then darts straight away, while rod and arm in unison now yield, and then recover, inch by inch, and every inch is stubborn fight. At last he slowly turns and tries to circle round the boat. As he comes nearer and nearer, he reserves his strength, and suddenly makes one fierce and mighty effort; dashing the tide with his great tail he turns, with each muscle tense, and plunges like lightning down, down, until his shining sides are lost in the black depths, whence a bubbling wake rises to show where he disappeared. It was his last grand, giant effort and well nigh successful: but the slim rod yielded barely in time, and the hook holds fast, while the cruel tireless strain on the line breaks his strength. The reel, that shrieked at the beginning of that savage downward leap, while the handle was but a blur of light, now speaks slowly and more slowly, until at last the great fish is overcome, and gradually yields with gasping mouth. One last despairing effort and then he lies in the boat, spent but beautiful, with violet and crimson, purple and gold playing over his silver-mailed, black-spotted sides. A prize fairly won and satisfying as a laurel wreath to the victor in the games.

But there are more down below, and we must seize fortune as she smiles. Every instant comes a fierce, head-long rush at the line, then one is brought almost to the boat, only to leap away and break from the hook at the last moment; again (and frequently) a thud on the bottom boards proclaims one well landed.

Almost unobserved day has slowly drawn the curtains from the eastern sky, and shore and hut have become distinct and stand out black against the lit background. Then, as the turning tide swings us around, a fiery globe lifts itself from the distant sea, and day has fairly come.

Great flaming clouds hang over the sea level, and slowly break and drift away like sunlit puffs of white smoke; flocks of snipe, flashing now white, now black, scurry past us, whistling shrilly, while far away toward the inlet there black shining objects break the broad, glassy sheet of water, and the snorting and splashing tell of porpoises gathering an early breakfast. As the fish have stopped biting, we may go shoreward for the same object, as verily we have earned it, and as the smoke curling into the still air gives redolent promise of substantial award awaiting us, for Matt, good-natured and thoughtful as always, has made a jolly breakfast, which is rendered still more enjoyable by a last glance at the mass of iridescent fish in the boat. J. W. MULLER.

SLIDE ROCK FROM MANY MOUNTAINS.

VII.—THE LOST SHEEP.

THE indefinite is twin brother to the inaccurate. Therefore when I say that my friend has the gift of slumber you may understand, not that he is the eighth sleeper, but merely that on the particular morning of a particular day he kept his couch late.

And to remove any trace of laziness about this friend I will tell you who he is. He is a doctor and a man of science. He is the editor of a newspaper and he speaks the truth. The combination is said to be unique in America, and will surely point him out, for of course it would embarrass him to baldly tell his name.

But my friend slept, and I left him in order to seek for game with Dick as a companion and helper.

The horses were rounded up and a choice of mounts was made. The blind roan (blind but of one eye) was my usual horse, but he had a nature so sociable that he would squeal and whinny for his mates when he found himself alone, and this amiable trait unfitted him for the chase. Then there was the chestnut, but our best packer told me that the chestnut was "skin poor" and "rash," and that only yesterday he had been nearly "packed loose" by that very animal. The "blue" was a tried hunter, but he had a pace of his own, slow to majesty, and you could only induce him to keep even that pace by hard, continuous labor. So I took the little bay and prospered.

Dick went with me because he was a fine hunter and a fine fellow. Besides, our Indian, the only other available comrade, had, after an unusually enormous supper, dreamed the night before that "the man with the windows" (for thus in Chinook he spoke of my spectacles) had shot him, and he therefore was a little shy of my society for the time.

Dick and I rode from our mountain camp down the creek and down the river. We examined various pastures and "licks," and we became pleasantly weary and rather eager for game. The river here, near its source, is a swift mountain torrent, dashing among smooth granite boulders and cutting away the alternate sides of its narrow trough where the soil proves softest. This makes a series of steep banks, at times cliffs of massive stone, at times inclines of slide rock and at times again acres of dirt bank, 100 or 200ft high, and set at as acute an angle as the soil can stay in place. I do not call this the angle of repose in the geological sense, for it is not of repose. Even when undisturbed the surface keeps tumbling in small masses from top to bottom, and when one tries to walk along the face of such a bluff he longs to be a fly.

These clayey banks seem to contain a mixture of those salts called by the general name of "alkali," and at certain spots deer and sheep are wont to come to nibble and lick this, to them, savory appetizer. At these spots, too, the animals paw and scrape the dirt with their front hoofs, so that the amount of excavation may be very great, reaching in some cases to the removal of hundreds of tons of earth.

We sat down to consider. Of course to consider properly you must be calm, and to be calm you must smoke. It was here that the grim truth, that I had left my own tobacco in camp, burst upon me. Now, my own tobacco is tempered to the mildest capacity and manufactured expressly for the use of ladies and infants. I could of course borrow Dick's tobacco, but Dick is a strong man, with corresponding tastes. Once I had tried this plan of borrowing, but the result was not a calm only, but an over-calm, almost a qualm. The loss of this needed smoke disturbed me, but after reflecting on where our best chances would be we pulled ourselves together and went on.

We rode west up the trail, winding along the top of the bluffs, on the south bank of the river. To the left rose forest-clad hill and cliff, to the right lay the river and, beyond that, a mountain front of varied character, with a strong leaning to the precipitous. Dick, like most trained hunters, has a quick discerning eye. He can distinguish the outline and color of game when very distant. I myself can at times hardly find these objects when they are pointed out. The coats of sheep and deer harmonize so well with their surroundings, that when they are far off and my eye once loses them, it is often impossible for me to catch them again, unless by chance they show the white patches on their sterns or should happen to move. Let them but wink an ear and I see it.

On this occasion it was my pride to see the game before Dick did, for, as our horses walked along, two ewes, glimpsed between the trees that fringed our bluff, took a couple of steps along the face of the slide rock on the other side of the river. "There they are!" whispered I, and we pulled up short, just in time to avoid being seen, and tied our horses. The ewes stopped and, at that distance, I could not distinguish them, so here Dick's eye came to the rescue.

We came to the conclusion, though it was hard to tell certainly so far off, that the animals were sheep and not black-tail does. The long ears of the doe can easily be mistaken for the short horns of the mountain ewe, and both have a similar gait in walking, and similar shape and size. But the ewe stands a little lower and is of a tawny color, as the coat of the deer at this season is of that steel gray shade, called by hunters the "short blue." We crept forward as far as we well could to a point of rocks. Below to the river the ground was open and shelving, but along the bottom there was quite a tangle of timber on each side of the stream. An Indian, perhaps, would have tried to get closer, for Indians are said to seldom shoot at over 50yds. distance, but these soft shod fellows have a capacity for swift, stealthy approach and tireless waiting that the booted hunter of the superior race can hardly rival if he cares to. We thought we could get no nearer without being seen and must try our chances from where we were. I turned up my sight to the ninth notch. Now I use a patent sight which does not give you any deceitful numbering on the standard, but leaves you to guess the distance and adjust the elevation to it without any confusing ciphers. As this is a suspicious world I will state that I have received no inducements from the patentee to recommend his sight and therefore conceal the name.

With sight prepared for a distance somewhere between two hundred yards and a quarter of a mile, I looked for the sheep and again found them invisible, or only to be seen when the sun glinted on their coats, but at last I counted five animals and the field-glass showed them all to be ewes—I selected one and fired. Dick said the ball struck four or five feet too high, but the ewes had a long open cliff to travel over and were not so much startled by the report as to rush along without occasional halt, so I turned back one notch on the sight and took two more shots, neither of which could be seen to strike the ground. Far up on the mountain we soon counted four white stems of the flying sheep, but there had been five, and Dick suddenly cried out, "There she is! lying down. You've hit her."

Sure enough the glass showed an ewe with a blood-spattered shoulder lying as if simply resting among the rocks where she had stood. Of course she was severely wounded or she would have run away, but exactly how severely we could not tell. We saw her rise and take a step or two and then lie down again, and that told us, both that the shoulder was not broken and that she was very hard hit. After we had lain still for some time to see whether the ewe's wound would speedily prove mortal, we had to confess that there seemed no immediate prospect of that issue. The animal nibbled a little grass unconcernedly and seemed easy in her mind. We then carefully descended over the open bluff to the most advanced spot attainable, and both hunters and hunted watched each other. We could now do one of two things—leave the ewe where she was and see whether she would drop from her perch before night, or cross the stream so as to get within reasonable range and finish her up. The first course was the wise one. We took the second.

We struggled through the thicket to the river's bank and the sheep got up. I took a hurried shot and the ball went a trifle too high. She ran a few steps and stopped in that position so usual with game and so vexing to the hunter: to wit, with her forequarters hidden by a tree and the rear half of her body alone visible. Now, an animal shot well back in the body is, of course, mortally wounded, and if left alone may lie down and not rise again; but if pursued, it will show an amount of speed and endurance entirely surprising. Our ewe already had her death wound, and I could hardly hope to stop her effectively as she stood, but my evil genius prompted me. I fired and shot her through the body. The sting was a spur to her, and she sprang off like a race horse.

Dick and I crossed the river, most of the way on boulders above water. An important fraction of the passage, however, was done by wading, and I got over with moccasins soaked and trousers wet to the knee. We climbed up to the sheep's trail, saw the blood spots on each side of her track, followed her over places meant only for sheep or rolling stones, and finally came empty-handed back to the river as night was gathering. Then we had to recross. A friendly log bridged much of the distance, but several steps had to be taken on the tops of boulders that showed smooth and slippery under the rushing water. A combination of wet moccasin, swift water and slimy rock is distinctly hostile to a good balance, and I went down twice.

Up to this moment I maintain that my temper under adverse conditions had been perfect. A malignant ewe, who refused to run off at first and save me trouble, had

decoyed me by showing her fatal injury across an icy stream and through much nasty brush; she had arranged things in such a way as to be so shot a second time as only to add to her speed; she had led us over slide rock and break-neck bank until long after sunset, and my disposition was still sweet, but these final straws, I confess, infused a subtle acid into my feelings, and my expressions at that time were not those of unqualified blessing. For the moment I thought that my age and infirmities would look better by the domestic fireside; that hunting and camping were occupations fitted only for the undeveloped, the slightly evolved savage; that after carefully cleaning my gun I would hang it on the wall as an immovable ornament forever. Did I follow this wise and sudden resolve? Time will show.

H. G. DULOG.

Natural History.

A HUMMINGBIRD'S NEST.

MARIN COUNTY, California, which lies just north of San Francisco and the Golden Gate, is beautiful, rich and fertile. It abounds in smooth, rounded hills and mountains, in beautiful, rich-soiled valleys, in swift-rushing crystal trout streams, in ravines and cañons lovely with flowering fragrant shrubs, on some of which every day in the year fresh bloom can be found. This county has the most perfect of temperate climates, where even the broad-leaved tender banana stretches its great fronds up 15ft. in the air without fear of nipping frosts, and the *Caladium esculentum* forms great clumps of tropical foliage. Marin county is, as Kate Field wrote of it, a poem. Not an epic nor an heroic poem of blood, war or tragedy, but rather a bundle of love sonnets, a winter's tale with a fair Rosalind in rustic garb, and bea-ting a shepherd's crook or milk pail. For this fairest home for the lovers of the beautiful is given up to the prosaic cow and the bleating sheep. Where the hills and mountains ought to be covered with the vine and olive, instead we find grovers of wool. On the foothills and tablelands where we should see the orchards of apple, pear, plum, prune, cherry, nuts and oranges, the finest in the world, we find those most unromantic things of rural life, the ill-smelling pig sty and the dairy. The rich floors of the beautiful valleys given up to hay, Marin county is nearly one continuous butter dairy over its every acre.

Marin county seems to be the natural home of those jewels of bird life, the hummingbirds. For full half a century I had striven to find a hummingbird's nest with eggs or young *in situ*, but somehow I was always a little early or late. At last, however, I have found one. Two weeks ago we, old Dobbins and I, were plodding along in one of Marin county's most beautiful valleys. On one hand a sparkling, rattling trout stream played hide and seek beneath over-arching leafy bowers. On the other side the mountain stretched away upward in dizzy heights. The road, as smooth as any pavement, was nearly overarched with an hundred flowering shrubs. There were the great round-topped "buckeye" with its plumes of snowy white and pink, the spirea with its great cones of creamy white, the elder with its broad sweet umbels tinged with gold—all of these filling the air with their heavy honey, sweet, or spicy fragrance. There were great rounded clumps of ripening crimson gooseberries, large, fine in flavor, but with prickly coats, long banks with the drooping thread-like vines of the wild blackberry arching over them like some smooth water-fall of tender green, sprinkled beneath with their bright red or black fruit. On the mountain side above, all was aflame with the scarlet of the painted cup and the bright gold of California's pride, the golden poppy. The setting for these regal beauties of the mountain side was made up of an hundred more moderate yet beautiful flowers of every moderate size and color, and especially in a wealth of the *malvacia*, from a tiny crimson cup with a golden eye to the great pink and red cup of the school-girl's "wild hollyhock." The whole was intermingled with thousands of great fern fronds and delicate maiden hair fern, mosses and lichens, *fleur de lis* and an hundred grasses. Away up that cañon on the damp north mountain side a clump of towering redwoods (*Sequoia sempervirens*) shoot into the bright blue sky, they are 50 to 75ft. high and surround the hoary stump of a patriarch felled 40 years ago by some pioneer.

This, the coast redwood, is one of the strongest as well as one of the most valuable trees in the world. It is unique in many particulars. It seems nearly impossible to kill them. Cut one down, and at once two to ten spring up from the margin on top of the stump, and grow with great rapidity into straight, stately trees again. Tens of thousands of them felled 40 and 50 years ago, have now these "suckers" grown into trees large enough for lumber. In the redwood forest one may find thousands of them. Where the original tree has survived its span of perhaps 1,000 or 3,000 years, decayed and fallen, there four to six offspring sprung from the margin of its stump, grown into giants, have been felled, and now a lusty third generation, ranged around their stumps, stand over 100ft. high in 40 years. The bark of a great redwood is 4 to 8in. thick. This becomes very dry in the dry season on the outside, but is very moist on the inner side. Then if very dry and this outer bark is fired, it burns right up to the top of the tree, burning off all the foliage and some branches, and leaving nothing but the smooth blackened trunk. In a few weeks the whole surface of this great black column will be covered with the tender moss-like foliage of the tree, and in a few seasons the arrowy giant is growing as serenely as if there was no such thing as fire in the world. Think of a tree 35ft. through at the surface of the ground, then shooting away up 250ft. as straight as a candle, gradually drawing to a point, covered from away up yonder with its thickly-growing, slender spray, seldom over 10 to 15ft. long, often gracefully drooping, and even pendant! Then think of these giants growing nearly as thickly together as possible, so that if they were sawed off at the surface of the ground their stumps would make nearly one continuous pavement, and you would have in your mind's eye a picture of a coast redwood forest. Yet these seeming giants are mere switches in comparison with the great redwood of the Sierras (*Sequoia gigantea*), specimens of which can be seen nearly 400ft. high and 60ft. in diameter at the base.

Driving through such a forest we pass out into the bright sunshine. My eye is closely scanning the bank to the left for ripe blackberries, for in this strange climate of Marin one may find them dead ripe in one shelter and exposure, and then only a few rods away hardly in blossom. From a cluster of drooping swaying blackberry vines a tiny ball of gray goes whizzing up the mountain side. A fire-flash of most brilliant crimson scintillated toward the bushes, and then with arrowy flight followed the brown buzzer up the mountain side, showing flickerings of bright metallic-green in the sunshine. A swaying of the drooping vines from where the little brownie started gave me the cue, and looking carefully among the slender prickly vines my eyes were at last gratified by the sight of the nest of one of the smallest of our hum-birds. There it was, a tiny little cup of delicate down and fiber, deftly woven, perfect in shape, fastened directly on the side of the slender vine, with many a li-gature artistically entwined, covered outwardly with gray and blue lichens and moss-like cryptograms, all placed in their natural growing form with consummate skill. It was directly roofed by a large leaf, and so like its en-tire environment as to be completely masked, so that when one was looking right at it he could hardly see it—a tiny cup, or well-nigh an oblong ball, about the size of a hen's egg, drawn at the top, and the margin of the opening smoothly rounded. The outside was of the strong gray silken fiber of the hop-vine; the inside lined with the softest down from the thistle and willow, pure white; and away down in its bottom, two tiny eggs, pearl white, translucent, rarely tinted with a glinting of shadowy pink.

The eggs are truly large for so small a bird, somewhat more oblong than usual among small birds. I asked the bright sons of a settler near at hand if they knew where there was a hummingbird's nest. "Oh, yes," they replied, "there is one right up the road there on some blackberry bushes. She laid her last egg yester-day, and we have another in the house which we found last week, that some mean skunk of a boy stole the eggs from." And sure enough he brought out a nest, the exact counterpart of the other, but fastened to the side of a slender drooping twig of a blue gum (*Eucalyptus globulus*) tree. Neither of the boys knew how long it took for incubation and rearing.

Two weeks from that day I drove out there, ten miles, expressly to see the young in nest, and to find out if possible what the little creatures were fed on. As I neared the nest I saw both parents fly up the mountain side out of sight. The young birds were nearly fledged already, two weeks and a day since the last egg was laid. I therefore consider that only a little over three weeks suffices for nest building, laying, incubation and rearing until the young leave the nest.

Once upon a time I saw a large hummingbird at the lower end of a sloping, leafy-shaded glade, busily visiting every tuft of "Sweet William" up toward where I was. I laid down prone on the turf with my eyes within 16in. of a fine spray of flowers. The bird was a fine fellow with his flashing coat of bright emerald green. He visited every flower of each clump as he came up the little vale. At last he reached the one near my face, and with no suspicion thrust his slender beak into each purple cup. When I would wink my eyes he would stop and peer at me with his wee diamond black eyes, but I could not see what he got from the flowers to eat, whether nectar, pollen or minute insects. It is generally supposed that they feed entirely on nectar, and that their tongue is a slender tube by which they suck it up. The student of biology should take no such hearsay stories for granted; facts are his stock in trade. My wish was to find out on what and how these tiny birdlings were fed, so I carefully hid my person in the greenery with my face within a few inches of the nest, and waited long and impatiently for feeding time, but the parents did not show up in sight. After an hour or more, thinking my horse near by kept them away, I moved him, and then hid still more carefully, but in vain, and as the young became restless I concluded not to punish them longer. Then looking carefully I found numerous voidings of the young on twigs around the nest and on the ground below. I gathered a number of these pellets, took them home, soaked them in clear water, placed them under the glass, and found them to be wholly composed of the remains of very small gnats and aphids, and seemingly nothing else. I could find in them no heads of small caterpillars and grubs. Many of the wings and heads of these gnats remains were so perfect that the trained entomologist might have determined from them the species. There were whole heads with the antennae attached, whole perfect leg cases, etc. This seems to settle the question that this hummingbird does not feed its young on nectar from flowers, as I have read they do. These young, though nearly full grown, had not their beaks as yet more than one-third the length of the old ones.

Hummingbirds of many species are quite plenty here, some of them remaining with us quite or nearly all winter.

In Marin county in old times the great grizzly (*Ursus horribilis*) was the cruel monarch. Then he roamed where he pleased, afraid of neither man nor beast. There are supposed to be a black bear now and then in the mountain fastness near the west coast yet, with quite a sprinkling of deer. Marin in ancient times was the favorite winter home of deer, elk and bear from a wide scope of country. The pioneers say they just swarmed there.

PETALUMA, Cal.

TO RAISE BEAVERS.—*Editor Forest and Stream:* I think I have a plan whereby beaver may not only be raised without loss by straying, but may even be made to pay the breeder a handsome profit on the investment. Find a small, deep lake, around part of which the banks are high and steep. Dig a trench all around it at least 3ft. deep and not less than 50yds. from the water's edge. Set regular fence posts in this trench, and tack to them a woven copper wire fencing of say 10in. mesh and 8ft. deep. All but 3/4ft. of it could be made of iron wire, but the lower part should be copper. When the fence is completed fill in the trench and make a gateway large enough to admit a wagon. Now you can put your beaver in the lake and they cannot possibly get away from it unless they climb the fence. I do not think they would do that, but to be doubly sure a wide board could be nailed along the top of the posts. If there should be no suitable food timber growing along the shores of the lake, it could be cut and hauled to the place by wagon as re-

quired; and two or three times a year the debris should be cleared away. I venture to say that with a starter of four beaver in such a place as I have described a person with ordinary luck could raise a large number of them in five years.—J. W. SCHULTZ (Pegian, Montana).

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Exchanged—Three reindeer (*Rangifer tarandus*). Purchased—One grizzly bear (*Ursus horribilis*), three black ducks (*Anas obscura*), sixty-five water moccasins (*Ambystoma piscivorus*), seven ground rattlesnakes (*Crotalophorus mitchellii*), one barlequin snake (*Blaps fulvus*), four pine snakes (*Ptyophis melanoleucus*), four garter snakes (*Eutania sirtalis*), five black snakes (*Bascantium constrictor*), three Sackens's garter snakes (*Eutania sokeni*), thirteen kink snakes (*Ophibolus gelidus*), six water snakes (*Tropidonotus sipedon*), three cyclops water snakes (*Tropidonotus cycloplum*), seventeen banded water snakes (*Tropidonotus fasciatus*), four brown water snakes (*Tropidonotus taxidiotus*), one green snake (*Cyclophis vernalis*), three indigo snakes (*Splotes ercbennus*), two whipsnakes (*Bascantium flagelliforme*), one corn snake (*Coluber guttatus*), and one gopher tortoise (*Testudo radiata*). Presented—Two woodchucks (*Arctomys monax*), one mink (*Putorius vison*), one ocelot (*Felis pardalis*), ten opossums (*Didelphis virginiana*), one woodcock (*Philohela minor*), two barred owls (*Syrnium nebulosum*), one screech owl (*Scops asio*), three hog-nosed snakes (*Heterodon platyrhynchus*), one pine snake (*Ptyophis melanoleucus*), two Fox's snakes (*Coluber vulpinus*), one mountain black snake (*Coluber obsoletus*), three common water snakes (*Tropidonotus sipedon*), one pine snake (*Ptyophis sagi mexicana*), one Agassiz's gopher (*Zemata gassisi*), seven alligators (*Alligator mississippiensis*), one horned lizard (*Phrynosoma regale*), one horned lizard (*Phrynosoma orbiculare*), one geographic terrapin (*Malacoclemmys geographicus*), one box tortoise (*Cistudo carolina*), and three amphisbaenas (*Amphisbaena means*). Born—One fallow deer (*Dama vulgaris*), two elk (*Cervus canadensis*), one black-striped wallaby (*Halmaturus dorsalis*), one llama (*Lama peruviana*), and three leopards (*Felis pardus*).

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents: CLABROUGH 12, May 1, '90. PARKER 10, hammer, June 6, '89. COLE 12, July 25, '89. PARKER 12, ham'less, June 6, '89. COLE 10 and 12, Oct. 24, '89. REMINGTON 16, May 30, '89. FOLSON 10 and 12, Sept. 26, '89. REMINGTON 12, Dec. 5, '89, Feb. 6, '90. FRANCOTTE 12, Dec. 12, '89. REMINGTON 10, Dec. 26, '89. GREENER 12, Aug. 1, '89. SCOTT 10, Sept. 5, '89. GREENER 10, Sept. 12-19, '89. L. C. SAUND 12, Oct. 10, '89. HOLLIS 10, Nov. 7, '89. WHINNEY SAFETY 12, M'ch 6, '90. LEFFEVER 12, March 13, '90. WINCHESTER 10 & 12, Oct. 3, '89.

CHICAGO AND THE WEST.

CHICAGO, Ill., July 5.—The following loose and inaccurate paragraph from a recent issue of a Chicago daily contains a reference to a late Supreme Court decision which in some respects appears to be the most interesting and important to sportsmen of any of recent years: "The Supreme Court of Illinois in a recent decision affirms the constitutionality of the game laws of Illinois, and affirms the judgment of the lower court. The law was passed by the last session of the Legislature, and the new feature was the absolute prohibition of the selling of game, as well as its transportation for sale. Last fall the American Express Company received and delivered quail to a Chicago commission house. The company was fined \$200 in the County Court for the violation, and to test the law the case was taken to the Supreme Court, which has just handed down a paternal decision affirming the judgment of the County Court. Counsel for the company raised two principal points—the unconstitutionality of the law and its violation of the rights of property, holding that the game when killed became private property, and the game law violated that right by destroying the property without the process of law. It is the first test case under the law, and the decision is of great interest to the people as well as to the bench and bar of the State."

In the above, reference is doubtless made to what is known as the "Effingham county case," which has been watched with interest by sportsmen since last December. In this case the Supreme Court has fairly carried the war into Africa, and has taken ground which could not be more satisfactory to the sportsmen of this State. It has always been tacitly admitted in Illinois, Indiana, Wisconsin and Michigan that, in spite of the law, when game was once killed and in possession, the State could not step in and control its disposition. The Supreme Court of Michigan, indeed, is on record directly to this effect. "No game warden in Michigan will pretend now to prevent a party from taking or shipping deer out of the State, and even the wardens of Wisconsin are afraid to make an arrest on that ground, for fear they could not make a case stick. It has been thought all through this country that the laws forbidding shipment, sale, etc., were unconstitutional, and indeed they have been practically disregarded. This Illinois decision makes good law out of what was believed to be bad law, and it is at least an offset to the Michigan case. The Illinois case holds that the State holds paramount title to its wild game; that no individual can acquire title in the same other than a title in trust; that the individual holds such property fully subject to all conditions the State may impose, and under sufficient notice through existent statutes. Such doctrine as that will be an eye-opener to the South Water street men, for it means practically that the State can follow its title even into a private game-freezer, in spite of the fact that money may have been paid for its contents.

Mr. Wolfred N. Low, the attorney who has had in charge most of the prosecutions in Chicago for game law violations, himself a prominent sportsman and ex-president of the State Sportsmen's Association, said in regard to this late decision:

"It is all we could ask and more than we could expect as sportsmen. I have purposely delayed pushing the celebrated Smith case, which has lain so long in the courts, until after hearing from the Effingham county case. You will remember the large seizure of illicit game in the hands of F. Smith, the Chicago commission merchant. We will now have some definite law to go on, and the only thing to prevent our winning the Smith case is the question of search-warrant right. The latter complicated the Smith case and made it harder than the case in hand, so that we were willing to wait and see a thing or two first. Now we will go ahead and win the Smith case in every probability. The State court has taken the position of good sense and justice. Another precedent or two and we can make trouble on South Water street yet. I do not quite understand the quoted bearings of the decision which would make it seem that

the sale of game was illegal, but the actual bearings of the case are plain and important."

A transcript from the record of the Supreme Court will be had as soon as possible, and the matter in its entirety offered to the readers of FOREST AND STREAM. From what is known of the case in this city, at the present time, it appears to be one of singular importance.

E. HOUGH.

SHOT COUNT AND WEIGHT.

THE table of No. 6 shot completes our examination of the present state of manufacture of chilled shot. The figures of this number are secured, as were all the others, by the careful weighing and counting of the ten charges of 1½oz. each measured out by the companies and kindly sent on at our request.

The table, it will be seen, displays about the same run of variation as did all the others from No. 10 shot. The smallest count, and hence the largest shot of the series, goes in this size to the Collier Co. of St. Louis, with the Robertson tower of Baltimore at the other end. Reckoning from the former the latter shows a variation of over 40 per cent., and yet the change is not in the weight, since the smaller number of pellets runs the heavier in weight, and when a perfectly uniform basis of comparison was secured by counting out 100 pellets of each the weight runs as 229 to 160, or in other words the same number of pellets of the same number of shot from one factory would have over 43 per cent. more weight than if procured from the other factory. This means the placing of that additional amount of work upon the charge of powder, and the extra work is altogether too great if anything like careful experiment has, in the first place, fixed the powder charge. The Sparks shot from Philadelphia runs on the average so far as count is concerned, but is out a few grains on weight. The two English companies get together on this size shot very closely in count and weight as well, and the difference between shot used in this country and that from the other side is very clearly shown. It will be noted that the Robertson shot of Baltimore is exactly in line with the English sizes and that average American size is far away, with the difference in favor of the American shot for largeness. A glance down the column of average weights shows a rather large run of weights. The Tatham shot average up 547 grains per charge of 1½oz., while the Merchant's tower shot of Baltimore reaches 597 grains. The difference is not explained by the increased number of shot and must be due to the manipulation of the metal and temper used in hardening the mass before dropping into pellets.

CHICAGO, Ill., July 9.—Billy Mussey, Joe Card, "Slick" Sharp and several other Mak-saw-ba men have, since the opening of the season, killed a few woodcock on their grounds along the Kankakee. They say that any one with a good dog could get good shooting there, as the birds are plentiful this year. It is probable that about all the Des Plaines River birds in this State will be killed off before the legal season opens, as the weather is now cooler and more fit for hunting in the thick cover. The birds here are, of course, as far advanced as they are in Indiana, and after a woodcock can fly he is considered about ripe in this sinful world.—E. HOUGH.

NO EXTRA CHARGE for fast time. No transfers. No midnight changes. No luxuries but the best. No mistake possible if you take the Chicago & Atlantic to Chattanooga, New York, New England and all points East. NEBRASKA PRAIRIE CHICKENS.

OMAHA, Neb., July 11.—The various gun clubs of this city have concluded to call a special joint meeting to ascertain whether it is not possible to devise some ways and means of preventing the wholesale illegal killing of prairie chickens this season, and it is high time this very work was accomplished. The time will shortly arrive when the pot and market hunters will shoulder their blunderbusses and sally forth to the slaughter, and there is no time to be lost if anything is to be done toward the protection of this season's crop of birds. From all parts of this State and the Dakotas comes the report of an unprecedented hatch, and that the prospects are excellent for the biggest chicken crop in fifteen years. The young birds are now out and nearly half grown, and in the bountiful stubble will be but a few weeks longer in reaching their most delicious condition. The theories for the abnormal hatch this season are both numerous and reasonable. Last winter was one of the mildest periods experienced in these States for years, and the birds left over have been undisturbed in their nesting. This spring, to be sure, there was an excessive rainfall, but it had been preceded by such a long, continued drought that the earth was simply one immeasurable sponge, and the water was absorbed speedily, and inundations and overflows were rare.

This summer more birds are seen in their accustomed haunts than for many, many years. Even in localities where the birds had been almost exterminated they are now to be found in satisfactory numbers. The localities in question last season were so barren that there was no inducement for the market-hunter to visit them, and the few birds that were left were almost totally unmolested, and this summer every old hen is clucking proudly through the long yellow grass with her fifteen or twenty bright-eyed children. What glorious sport would await the legitimate sportsmen now if effective means could be adopted for checking the market-hunter. Delightful September and golden October would be months of incomparable sport afield, if there was only some way of preventing the devastation of our prairies before the legal season opens. I have grave doubts, however, of anything material being accomplished.

The Legislature is seemingly indifferent as to the fate of both our game and fish. So thoroughly indifferent was this body at their last session that they had not the briefest time for the consideration of a code of excellent game laws drafted by the well-known Judge Kennedy and the Omaha Gun Club, and forwarded to the very members whom it was thought would take a robust interest in the matter. Persistency may win, however, and action on the part of the sportsmen's clubs cannot be too prompt or too decisive. Last season as early as the middle of this month half-grown prairie chickens were being served regularly at our leading hotels, and they were being transported from the State in refrigerator cars by the thousand dozen. It is a certainty that there will be a speedy resumption of this order of things, and in a few years more, at the present rate of destruction, prairie chicken and grouse will be no more a welcome sight along our prairie highways.

Last fall I indulged in a three weeks' outing in the northwestern part of the State, and at no less than five different points on the B. & M. road did I visit the rendezvous of Eastern market-hunters, who have built permanent shipping establishments, with refrigerative annexes and shipping departments, and carry on their unlawful business regularly all the year round openly and defiantly. These shippers not only employ all the farmers'

boys they can roundabout the country, but they bring in expert shots from the East, whom they pay a regular salary for their work in the field. Now is not this a sad commentary upon the laws of a great and progressive State like Nebraska; isn't it an unqualified disgrace and an outrage, and does it not call for a loud protest from every true sportsman in the State, and a vigorous remonstrance from all our lovers of nature? I think so.

Woodduck and some mallard are breeding at Honey-creek Lake this season. Just north of this charming ellipse of water is a long reach of low-lying, boggy meadow and woodland, where the birds have secreted their nests. Young squirrels, particularly fox squirrels, are reported in exceeding plentifulness in the timbered bottoms along the Missouri River, six or eight miles below the city. Young squirrels are supposed to be at their best when the alderberry is in bloom, and as this bush is now in the height of its flowering, it is time to go a gunning. And what sport it is, a day's squirreling in the odorous woods.

GRIS.

LIFE WITH THE OLD HUDSON BAY CO.

IN the spring of 1861 I enlisted for three years as an apprentice in the service of the Hudson Bay Co., that great corporation which for so long fattened on spoils of the savage wilderness lying in what we speak of generally as the British Possessions. I cannot, at this date, give any special reason for this step on my part, unless it were a general love of adventure. I was then not quite 19 years of age. The pay of an apprentice was \$100 in money per year, with board, clothing and ammunition thrown in. If one cared to devote a lifetime to it, he might possibly hope that time and rotation in office would eventually make him a "chief trader," entitled to one share of the company stock, or even a "chief factor," with two shares, in either of which cases he would have a fortune. He might even become a director, if he lived long enough. I question whether I considered all these things very much. I was American born, of Lowell, Mass, but enlisted at Montreal.

Montreal was the initial point of our territory. Up till 1861 the recruits for the service, who came largely from Scotland, the Orkneys or Shetland Islands, usually came by ship direct to Hudson's Bay, then disembarked and crossed to the remote West. There was also the freight route of the great "North canoes," from La Chine, up the Great Lakes and so by water to Winnipeg and the North. In my time the journey was usually overland to La Crosse, Wis., on the Mississippi River, then by steamer to St. Paul, thence to Georgetown, Minn., and so on, either by Burbank's overland route, or by the old steamer Anson Northrup, which plied on the Red River of the North.

The city of Winnipeg is now a great populous place, but in those days there was little to it but old Fort Garry, on the north side of the river, and the old Cathedral of St. Boniface, on the south side. There was a badly mixed population of perhaps 15,000 souls and bodies scattered along the river for about 25 miles. All the trading done at that great post was done inside the stockade of the fort. The wall was about 16ft. high, with bastions at the corners. The stockade would cover about two city blocks. The first frame house in Winnipeg was built in 1861 by Norman Kittson of St. Paul. In that year the great charter of the Hudson Bay Co., known as Prince Rupert's grant, expired, after running its course of 100 years. As this broke the monopoly, other traders began to crowd in. The company till then had had all the Indians over that whole country bring their furs in

to barter. It now had to begin to send out and solicit of the Indians. Norman Kittson laid the foundation of his great fortune here at Winnipeg. Many fortunes have been made on furs.

I lay at Fort Garry some time, waiting an assignment, and was finally sent to Behren's River post, near the north end of Lake Winnipeg, which body of water is about 300 miles long. Prior to my arrival at my post I passed all through the Nelson River country.

The post at Behren's River consisted of two log houses, one dog stockade, one fish house and a trading post. The windows of the house were made of deer-skin parchment, scraped thin and oiled. They let in some light, but you could not see through them.

My duties, at least so far as I remember to have practiced them, consisted in running a bark canoe, hunting, fishing and trapping in the summer, and driving a four-dog team of Esquimaux dogs in the winter. The dog was the draught animal of that country. I was the only white man at the post. There were five other men there, all Scotch or French half-breeds. The pure whites, no matter what their station, always made the aristocracy of that land.

We were allowed by the company 100lbs. of flour per annum, and some tea and rum. For the rest, we depended upon the reindeer—which is the same animal as the caribou—upon the fish we caught, upon the abundant small game, or the wild rice gathered by the Indians. Wild rice is good to eat, and I sometimes gather and cook it at our marshes even yet.

The first year at our post we traded for four tons, actual weight, of furs. We had 3,600 beaver, also bear, otter, muskrat, fisher, mink, fox and sable.

All the trading of that country was done under what was called the "Made-beaver tariff." There was no money. The Indians didn't know what money was. I saw no money during my life there, except a few silver quarters I carried in my pocket. A full-grown beaver skin, which would weigh about 1lb., was the standard or unit of the fur currency. It took ten muskrats to make one beaver, or four minks to make one beaver, or two sables to make one beaver. Two beaver made one otter, and ten beaver made one silver gray or black fox, between which no difference was made, although the latter was twice as valuable. The company gave one flint-lock musket—which cost about \$40 a dozen—for ten made-beaver. A blanket was worth from two to five made-beaver. Everything else was in proportion, and the profits may be imagined.

The Indians knew this tariff perfectly, and you could not fool them. When an Indian opened his pack of furs we gave him a goose quill for every made-beaver value. He held his bunch of quills in his hand, on the counter, and signified what goods he wanted. As we delivered him every made-beaver's worth of goods we pulled a quill out of his hand. This was a good sort of C.O.D. arrangement, which pleased both parties. All the trading was done in this way. The Indians were great beggars, however, and we always figured on giving about ten per cent. of the face value of a good big lot of fur by way of gratuities, in axes, flour, nets, needles, powder, etc.

About the middle of September we began our fall fishing, to get in the supply of whitefish, on which we fed the Indians and the dogs all winter. These fine whitefish would hardly be fed to the dogs in that way in this country. At first we fished about nine miles out, using a sort of wooden dory fish boat, such as the half-breed carpenters made. When the ice came we set the gill nets under the ice and kept on fishing till about the first of January. We used the dog sleds then to carry in the fish.

We hunted the reindeer in the winter, using snowshoes. We could kill any number, and when we had a lot we cached the meat and got it later with the dog sleds. Black bear were very plentiful in that country, with some brown and cinnamon. We got numbers of them. I have killed one with a tomahawk in the water. Once I shot a bear with BBs as he was going up the bank of a river, where I had surprised him at his fishing. When the shot hit him he turned to snap at his hindquarters, and turned a most amusing somersault clear down the bank. Ruffed grouse and hares we always used to snare. The company furnished us no shot smaller than BBs. In January, when the ptarmigan came down from the north, we would drive these birds up out of the snow, where they roosted, into the willow trees, and if we didn't bag a dozen at a shot then we felt grieved. I have spent hours splitting BBs to shoot ptarmigan with. The Arctic foxes used to follow the ptarmigan down on their winter migration in great numbers. These foxes were very stupid and easily caught.

We used to eat a great deal of beaver meat, and also the hindquarters of muskrats. The muskrat is one of the cleanest animals that lives, it never eats a morsel without first washing it thoroughly, as you may see it do with a bit of root it has dug up. We got our beaver by chiseling them out of their winter lodges, sometimes, or by shooting them as they swam. If a beaver once sees you he will slap his tail on the water with a report like a pistol, then down he goes and you will see him no more. In trapping beaver the trap was always set from a canoe. A runway was picked out, where the beaver went out to his cuttings, and in this the trap was set, 2 or 3 in. below the water, to prevent any scent being given off by it. The chain was put under the water and the stake that held it was always driven clear down below the water. The nose of the beaver is very keen, and at the least hint of intrusion it leaves a spot for days at a time.

There is a popular notion that the beaver can fell a tree exactly where they wish. This is a mistake. All they do is just to gnaw round and round it. They are shrewd enough to select usually only such trees as hang out over the water, or lean in the direction they wish. The greatest weight of branches on a bank tree is usually on the open, or water side. The beaver like poplar best, then willow, alder and birch. When the tree is in the water they cut off the limbs and cut it into lengths. These sticks lie flat on the bottom, in the mud, and in the winter the beaver eat the bark off of them. Beaver don't cut dead trees.

When the beaver can find a high bank it burrows, just like a muskrat, and will not build a lodge. They call these "bank beaver," but they are just the same as the "marsh beaver," which build lodges. You don't see muskrats build houses when they can get to burrow in a bank.

We usually caught otter at a "slide." The trap was nearly always slung on a spring-pole, so that the otter would be thrown out into the water, and could not get to the bank, where he would be likely to gnaw off his foot. The trap was set a few inches under the water, and was always a strong double spring trap.

Foxes we got with strychnine, using fish bait cut into pieces about an inch square. We always left some minced bait lying around to keep the foxes picking till the poison took effect. The holes where we fished through the ice were always much haunted by foxes. We could catch the Arctic fox even in deadfalls. The bulk of our catch was red and cross fox. The blue fox is a cross of the red and white fox. It is not generally known, but it is true that the black and the silver gray fox are not distinct animals. They are the same as the red fox, and there may be blacks or silver grays in the same litter. These rare colors, however, are confined to the far North. A black fox may have red pups. They shift around that way, but the skin depends on the individual.

In the summer and fall the wildfowl were numerous. The mallards breed in the Winnipeg country, and do not or did not then go much further north. The Canada goose also breeds there, and some widgeons and greening teal. The bluewing do not breed so far north very often. The laughing goose (called "speckled brant" by some of our shooters), the Norway goose (called sometimes the "white-necked brant"), the wavy goose (the white goose with black-tipped wings), the pintail, red-head, bluebill, scaup and canvasback duck, all breed mostly in the country lying between Alaska and the Hudson's Bay, including the Great Slave and Great Bear lakes, Lake Athabasca and the McKenzie's River. The canvasbacks breed on the Yukon, and it is likely that the Pacific Coast flight comes down from the Yukon country, while our flight perhaps comes from McKenzie's River and the Bay.

The Indians could not shoot very much, and usually snared the waterfowl. They used to gather in the duck eggs to eat, and also many gull and tern eggs, of which there are thousands on the islands of Lake Winnipeg. The pelican eggs we could not eat; they were too fishy. There were a good many cormorants and crested grebes, and of loons there were thousands. We used to detest the loons and ducks, because they got tangled up in the whitefish nets so often. They make a pretty mess of a gill-net, and nearly always have to be cut out. Although Lake Winnipeg was not the main breeding ground of the fowl, it was a great flyway, and seemed to be the last stopping point of the northern fowl in the spring. The Indians said the wildfowl did not stop again till they got away north. Along the McKenzie River they breed in the willows, on the sandbars. They start south as soon as the young can fly. GEORGE T. FARMER.

[TO BE CONCLUDED.]

DAYTON, Ohio, July 7.—Under the Ohio game laws the squirrel season opened July 1, and the hunters have found fair sport, but no big bags are reported. Both gray and fox squirrel are plenty, but leaves on the trees are so large that the game hides securely. Young woodcock are of good size and the marshes are full of birds. The open season begins next Tuesday, July 15, at which time dove shooting will also break out all along the line. Prospectors report more doves even than last year, but young birds are scarcely large enough yet, though all are very fat. By reason of almost universal respect for the law, and the favorable winter, all southern Ohio is occupied by quail. There has been no shooting, and the birds are astonishingly tame and have not been near as careful as is their habit in hiding and guarding their nests, nor have they mated off so sharply. The whistle of the birds is heard along the roads and even in the towns and villages, and nests are found everywhere. Chris Rohrer, a farmer four miles from this city, discovered a nest in a field with seventy-four quail eggs in it, and his neighbor ran upon a nest with thirty-four eggs. John Cosler, a few miles further out, near Byron, Greene county, in mowing, preparatory to starting in his reaper, uncovered a nest from which three quail hens flew, leaving ninety eggs exposed to the astonished farmer.—B.

CANADIAN WILDFOWL.—53 Victoria, Chapter XX.—An Act to amend the Quebec Game Laws. (Assented to 2d April, 1890). Whereas the law, in limiting to the 15th of April, instead of the 1st of May, as was formerly the case, the time during which the shooting of wild ducks is permitted, is very prejudicial to hunters and the public in general; Whereas, during that time large numbers of ducks called "golden-eyed ducks" (*canards cailles*) frequent our waters, but do not remain or lay eggs here, but on the contrary they migrate to other countries where they are hunted, and the survivors return here the following year at the same time, as birds of passage, to disappear again immediately, so that the Province is deprived of all benefit, without profit to any one therein, and whereas the same applies to widgeon and teal; Therefore, Her Majesty, by and with the advice and consent of the Legislature of Quebec, enacts as follows: 1. Clause b of the first paragraph of article 1400 of the Revised Statutes of the Province of Quebec is replaced by the following: "b. Any widgeon, teal or wild duck of any kind, except sheldrake, loons and gulls, between the 1st day of May and the 1st day of September in each year." 2. This act shall come into force on the day of its sanction.

OUR WESTERN NUMBER.—Portland, Oregon.—Your issue of June 12 was very interesting, indeed. Henry Kleinman's article on duck shooting is intensely interesting and instructive. The Kleinman boys, without doubt, rank among the very best duck shooters in the country. It is to be hoped that you will call upon Abe and John before you get through. Few men have had the opportunity and inclination to hunt and study the habits of ducks as they have had, and, at the same time, improve it, for they have almost lived among them all their lives, their home being on the great Calumet Marsh, which is miles and miles in extent and which in years past was annually visited by millions of water fowl. Mr. Loyd's article on prairie chicken shooting is also very good, and is refreshing to all who have enjoyed this rare sport. In the same number there is a very good article by Mr. Mussey on trap-shooting, which the managers of our tournaments, it is to be hoped, will ponder over and govern themselves accordingly, if they wish to make trap-shooting popular. Taken as a whole, this is a banner number.—NORTHWEST.

WM. MALCOLM, known to rifle shots as the manufacturer of rifle telescopes, died at his residence, 101 James street, Syracuse, N. Y., at 2:30 A. M., July 12.

GLOVERSVILLE, N. Y.—Woodcock seem to be abundant. There are lots of birds.—McK.

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

ANGLING NOTES.

WHILE fly-fishing in Lake Laura (Pike county, Pa.) last week, Mr. Alfred Roe, a member of the Blooming Grove Park Association, hooked a black bass weighing about half a pound. As he reeled it in toward the boat, a large pickerel made a savage dash at the bass and fastened his teeth in him. As they passed the boat, the guide, by a lucky and skillful sweep of the landing net, captured them both. The pickerel weighed a trifle over 3lbs. The bass was so badly injured that it could not be returned to the water. One of the club members took a black bass in the same lake that had just swallowed a small bird. The tail and legs were still sticking out of the fishes mouth when it rose to the fly. The bird had evidently fallen out of its nest from some overhanging tree or bush, and, being too young to fly, had fallen a victim to the bass.

Mr. John Codville, a famous Canadian angler and an experienced fly-fisherman, had the good fortune to kill a 4lb. trout recently. He says that of all stubborn fights he has ever had with bass, trout or salmon, this fish took the lead. He hooked him in the river about half a mile above their club house and fought him for one hour, when it became too dark to see what he was doing. So he allowed the canoe to drift slowly down to the club, towing the fish along. Here some members brought out lanterns and by their light he was enabled to get his fish near enough to the canoe to allow the landing net to be used. Time 1½ hours.

If reports speak truly, the salmon are having a hard time of it in the upper waters of the Hudson. Jigging and spearing at Mechanicsville, and netting down in the lower part of the river will interfere greatly with the efforts of the fish commissioners.

The trout hog seems to thrive about the Maine waters, judging from the catches published in the local papers in that State. Catches of from 100 to 200 trout per day seem to be in order, and the average weight about 2oz. each. Shades of Izaak Walton! To think of people calling themselves anglers that do such things. The writer once had the misfortune to "go out" with such a party. Slinging out trout with bait poles by the hundred and drinking whisky by the quart seemed to be their chief ambition.

Weakfish are now quite plenty, particularly in Barnegat Bay. In fishing for these fish now, it is necessary to use hooks snelled on piano wire, owing to the great number of bluefish in the bays. These rascals cut off the gut-snelled hooks as fast as the angler can put them on. The weakfish prefer the pearl hook to the plain hook; but in using the pearl-mounted hooks a little bait, either crab or shrimp, should be used, and a good-sized swivel is sinker enough. Many anglers use too much lead, and the result is that their bait is taken by the crabs, toadfish, sea robins, etc., that haunt the bottom.

Mr. J. M. Clark, of Chicago, Ill., has just published an interesting little book called the "Anglers and Sportsman's Guide." It is profusely illustrated and has several maps of Western fishing grounds. It also contains a number of articles on fishing, camping, cooking, fly-casting, bait-casting, etc., etc., by well-known writers. It is particularly interesting to Eastern sportsmen in that it shows the difference in the tackle used by Western and Eastern anglers. For instance: Eastern anglers favor the double multiplying reel, while West the quadruple is all the rage. And in rods as well as in many things there is a marked difference in the articles used.

ANGLING HINTS.—Editor *Forest and Stream*: In the last issue of *FOREST AND STREAM* I notice that "Big Reel" sighs for an oil can that won't leak. Has he tried the "perfect pocket oiler," advertised in "our" paper by Cushman & Denison, 172 Ninth avenue, New York? My experience with this oiler has been entirely satisfactory, having used one for about a year I found it perfectly free from leakage. I have persuaded a number of brother sportsmen to use them and have not heard a word of complaint. It is a neat and handy little contrivance, and is exactly what the sportsman needs. They are made in two sizes, either of which are convenient for the pocket. Try one, "Big Reel." Just why the manufacturers of the "American spinner" do not put their address on each box or bait has long been a mystery to me. I had one given to me by a friend a couple of years ago, and when it began to show signs of wear I was in a quandary how and where to duplicate it. Our wholesale houses did not keep them. Finally I got on the trail and now keep them in stock. McHarg & Co. need not be ashamed of them, for No. 6 B is one of the very best artificial baits I ever used for bass. Another killing bait is the new one manufactured by the Syracuse Bamboo Furniture Co., called the "glittering gang bait." I've made some fine catches of black bass on it this spring. It is something quite new and has a very attractive appearance. The above hints are in return for many that I have profited by from "our family," through *FOREST AND STREAM*.—KOSHEE (Gravenhurst, Ont.).

MR. GEORGE PRICE, whose advertisement appears in another column, will remove his business to larger and more commodious quarters at 171 East Eighty-fourth street in a few days. Mr. Price has been compelled to make this change on account of largely increased business. He is making a specialty of fine fishing lines, and has some excellent Cuttyhunk bass lines now on hand.—Ad.

SOME MASCALLONGE EXPERIENCE.

[Continued from Page 493.]

THE morning after our loon adventure, Mac and I walked half a mile through the woods to the bridge over the Whitefish thoroughfare. Bert took the boat around, an hour's journey, full of mosquitoes and crooked water. Then we took a whirl or two around Whitefish, didn't raise a lunge, got to catching pike, which we didn't want, grew disgusted, and ran back to Virgin in time for lunch at the house. There are good fish in Whitefish, but you take your chance there, as everywhere.

That afternoon we spent on Virgin. The water was very rough. We caught plenty of pike, and some good ones. There was a bit of deep, still water back of the island, among the rocks. We rowed past there, and all at once on Mac's line there came that great, angry, splashing, leaping strike, and we all shouted "Lunge!" Bert began to pull for the middle of the clear water, but to our surprise the fish, which we had seen to be a good one, made no fight at all. "There's something the matter here," said Mac, as he towed the fish alongside and skated it into the boat.

The matter was plain enough. The fish was freshly bruised and bleeding from one end to the other, its brilliant armor broken and crushed in half a dozen places. No wonder it did not fight. We rowed back to where the strike was had, and there we found a large rock, about six inches or a foot below the surface. On this the fish had unquestionably struck as he fell back from his rise. This was one of the most singular incidents I ever saw in fishing, and it certainly shows more clearly than anything I could say, the tremendous blind fury of the mascallonge in striking. This fish was about 8lbs., and was perhaps the largest we took. The muscles along the back and shoulder were crushed and broken in. We made great sport of Mac about this, and got even with him on that fish strangling story by telling him he couldn't catch a mascallonge without first banging him to death on a rock. I will back W. W. McFarland, of Austin, a Chicago suburb, against any man on earth, to catch live wild mascallonge by knocking their brains out on a rock, 31yds. rise, both men to wear stockings on their hands. I don't want any foolishness about this. Chicago leads the world.

We saw the team arrive that was to take us over to town, and therefore reluctantly turned our bows inshore. We paused long enough to take a turn around a promising bar which we had discovered, lying hidden away out in the lake. Mrs. Russell had taken a good lunge near here the day before, and she told us that she had struck and lost a very heavy one, which she had "thought was a log or snag at first." We were just turning to leave when I felt something strike my hook or jar my line, I could not tell which. "No other pike," I grumbled, and gave the line a snip with the rod, when, just as the spoon left the water, out came a mascallonge, full glory, zebra-like, quivering. "What is that spoon hook?" said he, anxiously. "Did any of you fellows see it? Did—?" but by that time his voice was drowned in the silvery wave, and we sorrowfully and swearfully rowed away. This was about an 8lb. fish. Observe my moderation. I could make it 40lbs. just as easy. He barely nicked the hooks, and we could not make him rise again.

We now bade farewell to our quaint and kindly host and his wife, and indulged in the luxury of a wagon ride over to town. A ride of this sort in that country is not luxurious by reason of its comfort, but because it comes high.

It was now time for Mr. McFarland to go home, and this he did at 10 P. M. He took a fine box of fish down with him. He had been out a little over two weeks, and had taken, I believe, thirteen mascallonge in all, averaging about 5 or 6lbs. each. He always fished two lines. At Russell's our fish had been buried in a mossy swamp, with a chunk of ice on top of them. We put them on ice at the station, and although it was two days later before I opened my original package, I found the fish in perfect condition. I had just an even barrelful of fish and ice. This was out of what Mac and I caught in a day and a part of a day, and we gave Bert a quantity of pike and a few pickerel. We at once threw back nearly all the pickerel we caught. I don't know what any one would want of any finer fishing than that, and as for the big mascallonge, I'll get him some day sure, so I'm not worrying about that. I must say that I never caught a load of fish so quickly and easily in my life, though I never did care anything for trolling.

I was to have gone up to Gogebic, under Mr. Vliet's invitation to meet him there, but I heard that friends of his had wired him to come on down to Three Lakes, and later I heard he had passed down the line to Milwaukee, suffering from prostration due to overwork. This was hard news to hear, for Mr. Vliet is a genial and hearty gentleman, only less fond of sport than he is addicted to hard work. His early recovery is hoped by many friends, who told me that his illness was really severe.

I mentioned Mr. Bonnell as one of Mr. Vliet's party. It seems that the bass fishing was not yet good at Gogebic, and Mr. Bonnell and two friends whose names I could not learn, had come down here to try for mascallonge. They got Blodgett to take them out on the "Main Chain," and they fished Planting Ground and Long lakes the same day that Mac and I fished Julia. We heard that they brought in five fish that weighed 83lbs. That was as near as the hotel keeper's conscience could come to it. We asked Blodgett about it, and he said that the heaviest fish weighed 22lbs., but that all were good ones. His boat caught four fish, he himself landing three out of the four on a hand line, as I heard it. It appears that early in the morning Blodgett's angler, whom he speaks of as the tenderest kind of a tenderfoot, was kicking because a mascallonge did not come and get in the boat, as per contract, until Blodgett got tired of it and calmly rowed him across the lake and put him ashore, telling him he could swim if he wanted to get home. At this the young man made amends and was taken back in the boat. That afternoon they struck seven mascallonge, and owing to bungling, unexperienced and excited handling, the angler lost three, all the largest ones. On one spoon hook two of the hooks were broken off and the fish got away. Another time, such was the strain put on the line by the frantic young man, that the entire gang of three great hooks was torn off from the No. 8 spoon and a magnificent fish lost. This disgusted Blodgett and he took a hand in the game himself. That must have

been high jinks on the lake that day. In the other boat the two anglers tried to land a 15lbs. mascallonge in a landing net. Holy Moses! They will never try it again, on that fish at least. He smiled adieu. How many fine fish these poor people did strike that day I do not know. I am accurate only in giving this story as it was told to me. All this time here had been Charlie Gammon and Mac and Will Cribben and Tom Smythe and myself, some of us, at least, good, plain single-handed fishers, wandering all over the country after just what these fellows, unable to handle it when they got it, had found right under our noses, in old and fished out waters. When I heard of that I could no more go home than I could fly.

"I'll row you over that ground to-morrow," said Blodgett, "and if we don't strike a big lunge I won't charge you a cent."

"I'll go you," said I.

On the next morning we walked down to the little round lake which runs up into the edge of the town, crossed it, walked about forty rods, took another boat on the next lake, crossed it, went up the creek to the big sheet of water known as Planting Ground Lake, itself a water that has yielded hundreds of great fish, trolled around its best shore, ascended the short "river" up to Long Lake, fished the latter hard and steadily and faithfully all day long, caught a few little pike—and never saw or heard of the first sign or suspicion of a mascallonge.

Such is life. It may have been the rain of the night before, it may have been one thing or another, or then again it may have been something else, but anyhow, we didn't have a strike all day. And yet those other fishers had a dozen only two days before, on the same water.

I talked with Blodgett a good deal that day. He told me that the largest fish ever taken on these waters was caught at the mouth of the river running into Planting Ground. This fish was taken on a handline by a Mr. Saunders, of Wausau, Wis. It weighed 55lbs. Blodgett was rowing, and they shot the fish four times, straightened a gaff on him, and finally got him by the gills, and both lifted him into the boat.

Blodgett told me that these were the waters where that celebrated and execrated angler, Dr. Robert Hunter, of Chicago, used to come four or five years ago. Blodgett told me that he knew Dr. Robert Hunter, of Chicago, to leave 300lbs. of mascallonge to rot in one heap on the bank at one time. Blodgett said that Mr. Winans, of the Wabash road I believe he is, whom I mentioned last year as having "good success," used to come up with Dr. Robert Hunter, of Chicago, and used to fish these waters. In common with Dr. Robert Hunter, of Chicago, Mr. Winans used one of those infernal automatic spring boxes for winding up mascallonge, first contrived, so I am informed, by the learned person before mentioned. Mr. Winans, so Jim Clark, of Wilkinson's, told me, was for a time inclined to brag a little about his automatic spring contrivance for winding up mascallonge. It is self-acting, gentlemen. By its means you can catch 300lbs. of mascallonge, so many that you will be obliged to leave them to rot. A child can operate it. Its invention is due to the brain of a fishing philosopher whose modest ambition was only to kill every fish in the lakes, if he could. Step up, gentlemen, and buy one. Join the ranks of the noble anglers who never go out without bringing in fish. Have a share of our glory, gentlemen!

Now, I suppose, if I sat down and tried I could find some pretty hard writing to do about fellows like that. I will not. But I've got the facts now, and so have the readers of this journal, whose pages are customarily too clean to spoil with the adjectives appropriate to this case. I'm not much of a kicker. But I have told the plain story of our little trip in these waters this spring, hoping it may be of that service I could wish toward taking others to as good a time, at least, as we had; and I would just like gently to ask, is it not barely possible that one or two of the mascallonge that our party did not catch may have been in that pile of 300lbs. that the worthy gentleman, alluded to above, did catch and leave rotting on the bank? In that pile, or some other pile? And how many piles were there in all?

I talked with Mr. Vliet about this, and he said, referring to a certain gentleman whom I do not name further: "I know all about that man. The boatmen tell me he has buried mascallonge in the sand. I do not want him to come up over the Lake Shore road, and I would not sell him a ticket if I could help it. Such men hurt us."

I should prefer to let some one else ask or answer the question about the mascallonge supply. Our individual experience is given just as it happened. This is the first time I was ever in that country, and I never saw such a fishing country, even as it is. If it was ever better, it must have been a screamer. I caught three mascallonge myself, total weight about 15lbs. I had a barrel of fish, or half a barrel anyhow, and a good deal more than a barrel of fun.

I had long wanted to take the trip into this country, to see just what it held for addition to the story of fishing waters about Chicago. Now I can see and say definitely: It is a one night's run on the sleeper either way. The total expense for a week or two weeks, including railroad fares, guide and boat hire or freight charges, will run from \$30 to \$50 per head in a party of four. The cost can be made \$40, and everybody live like a king. You can go for less and have about as good a time, stopping at a local place and hiring a boat as you need it.

The guide told me there was a lake two miles above the town of Three Lakes, where the bass were as thick as flies, and at Pine Lake, a little lower down, any quantity of bass can be taken. In short, I heard of so much fishing country that it nearly distracted me. Anybody can catch fish there. The trouble is, small-mouthed black bass aren't good enough. The angler must have mascallonge or nothing. Such being the case, he should go prepared to stay two weeks at least, and go till he finds him. The fish may be shyer than they used to be or the water may be too high, as it is this year, but perseverance conquers mascallonge, and the fish are there. The lakes were not in bloom two weeks ago, or about June 10. August is about the only month when the fishing is not good. Anglers going up in July will doubtless have better luck than we did in June, this year.

E. HOUGH.

175 MONROE STREET, Chicago.

OMAHA, Neb., July 9.—Large quantities of inferior black bass are being taken from Horse Shoe Lake, and the pickerel at Honeycreek never were more ravenous.—GRIS.

CANADIAN CLUBS AND WATERS.

QUEBEC, July 10.—Quite a revolution has been caused among the angling fraternity of the quaint old Rock city of Quebec. The exhibition of some magnificent specimens of ouananiche and brook trout in the show windows of the Chic Hardware Co., prizes of the members of local clubs, have set our resident and visiting anglers on the *qui vive* for sport.

Numerous parties left for the fishing grounds in this district within the last two weeks, some in quest of the gamiest fish existing for his inches—the ouananiche of Lake St. John; others after the equally gamy but more beautiful *Salmo fontinalis*, the speckled denizen of our waters.

Many salmon anglers are now returning to their homes, delighted with the sport experienced this year. The king of fishes has been more plentiful than usual, and no one of late has been disappointed. Messrs. Amos Little, D. C. Yates and Borden, also Messrs. Ellis and Kaercher have just returned from the Moisie, where they have been fishing for a month. The largest salmon caught was the prize of D. C. Yates, Esq., and weighed 33½lbs.; over 6,500lbs. of fish were killed by the party. The Natalken River is furnishing grand sport this year. Next trip will bring some news of the catch on these waters.

The famous Godbout River is being fished by Messrs. Colonel J. D. Gilmour, of Quebec, and A. Law and party, from Montreal; 35 salmon were killed in one day by the party. Satisfactory evidence that His Excellency the Governor-General and party are having good sport is that several leading citizens have been the recipients of magnificent specimens. Among the fortunate ones are His Honor the Mayor of Quebec, Lieut.-Col. Forest, J. U. Gregory (the genial Commodore), and many others.

Of the Restigouche I can say but little, as these gentlemen do not come or go our way.

The sea trout are in high favor in all the streams emptying into the Gulf as far up as Tadoussac. They vary from 1½ to 7lbs. and will average 3lbs. This is getting to be a very popular fish with our local anglers. The best fishing is to be had on the north shore where permits can be obtained. They are to be reached by taking steamer Otter from Quebec. Any person wishing to have an outing of two weeks or more should take this trip, the steamer leaves Quebec every two weeks and is owned by Messrs. A. Fraser & Co. of this city.

The Montmorency Club.—The Montmorency is once more giving some grand sport. Dr. H. Teyers and L. Welch, C. Ganoreau and a few others have just returned from a three days' trip to Snow River, one of the tributaries, where they captured *Salmo fontinalis* averaging 2lbs., the largest 4lbs. This river is not up to the standard as yet, however, the waters being still very high and much blurred.

The Jacques Cartier River Club.—Sport of a very curious nature was the result of a fishing trip up this stream last week. Rods, etc., were discarded when the vicinity of a bear was made apparent to them by the unearthly howls proceeding from a cluster of pines close by. Mr. Bruin had very foolishly got caught in a trap and consequently made things lively in the environs. The members present being so much taken up with this new kind of sport did not do much in the way of angling. Unfortunately this is the first outing this year on these waters, and we shall have to wait for revelations later.

The Tourilli Fish and Game Club.—The Grand St. Anne still holds its prestige for the best fly-fishing in this district. Mr. E. A. Panet, of St. Raymond, vice-president of the club, and Geo. Van Felson, of Quebec, secretary of the club, have just returned from a three days' trip on these preserves, having wended their way by water and trail to Lake Jambon. They here camped for two days, and although the weather was much against fishing they secured an average of 1½lbs. of the gamiest trout on this continent. The next day was spent on the St. Anne and Tourilli. Six fine fish were captured at Tourilli Falls, one of 4½lbs., two of 3½, one of 2½, two of 2½, all with the fly and from the immense rapids here, gave as fine sport as any salmon. An eye witness giving a description of the sport exclaimed, "Gentlemen, it was worth the trip to any man to witness the skillful handling and grand play of these fish." In these falls 80yds. of line were spun out in less than ten seconds. It took thirty-five minutes to play the 4½lb. fish. Some very fine specimens were caught immediately opposite the new club house. A contingent of the American members is expected this week. On this trip no less than ten coveys of grouse were seen, and they are said to be very plentiful all over these limits. Caribou, the famous Canadian winter game, are so numerous as to keep the club trails in good order by their continuous passage to and from the river and lakes. The season which opens Sept. 1 is anxiously looked forward to by the members.

The Little Saguenay Club.—These gentlemen have abandoned their limits for the time being and gone to try the ouananiche; they are, however, expected on their grounds this week, grand sport and a goodly gathering of flies await their arrival very anxiously. This club has received a great honor in having a view of the Little Saguenay, their headquarters, as frontpiece to the beautiful work of Mr. Samuels, "With Fly-Rod and Camera." It well deserves this marked attention, as a more beautiful spot is not to be seen on this continent.

The Laurentides Club.—This enterprising club is receiving considerable attention from its members this summer; no less than 40 members and their friends having visited these preserves since May 24. Some very fine catches have been registered in the club books; no very large fish have been killed here as yet, but still 3lbs. ought to satisfy any man; and they get a good few of these and none smaller than 1½lbs.

The Stadacona Club.—Lac au Rognons re-echoed the shouts of joy of a party of jovial young Englishmen who had abandoned a salmon trip in order to visit these waters productive of big trout. Not being well acquainted with these lakes, their guides being also novices here, their catch was not what it might have been. When fly-fishing is to be had in these lakes it is in shallow water. This important fact became known to them only when it was too late, consequently the best fishing was lost. It is important for persons visiting the Lake St. John region to secure guides knowing the waters they intend fishing. The largest fish for this party was 4lbs., but a good creel of others around 3lbs. and little less were killed.

Lake Edward.—Laurentides' house furnishes its hospitality to some thirty guests who have certainly raised the

prestige of this beautiful sheet of water far above the average yet obtained. A party of three brought home one evening sixty-five most tempting specimens, averaging 14lbs., the largest being 54lbs. This is, however, extraordinary luck. The same luck will reward the angler, who, with the patience of good old Izaak, will await the peculiar and untimely eccentricities of Mr. Trout. He does not always take the fly here, but when he does there is great sport.

The Springfield Club has relaxed once more into quiet and solitude since the departure of its late members from Springfield. Many a pleasant narrative will be the result of the grand sport experienced by these gentlemen on their late excursion to their limits. They will soon be with us again, however.

The Q. and L. St. John Co. are doing a lively business on their road, and every day sees the parlor car well filled with anglers bound for the famous ouaniche. No less than 50 to 100 guests are continually at the Robeval House. Parties leave daily on the steamer for the Grande Discharge, the Peribouca and Mistassini Rivers. The largest ouaniche killed last week was by Dr. Chas. Parke of this city, and weighed 5lbs. The best tackle and flies to use in our district I will give you in next issue.

FONTINALIS.

THE RED HOUSE CLUB.

THE grounds of the Red House Gunning and Fishing Club lie around the south end of Shelley's Island, which is situated in the Susquehanna River just fourteen miles east of Harrisburg, Pa. They are reached by the Pennsylvania Railroad on the east, and the Northern Central on the west side. The grounds extend from the island to the north end or head of the Conowingo Falls, which are famous for bass and wall-eyed pike (pike-perch). There are at present thirty members in the club, all from Harrisburg. They have leased a small plot of ground upon which there stands a one and a half story log house, weather-boarded and plastered, and one of the oldest houses of the country, having been built in 1787. The house is well furnished. Carpets, easy chairs and beds are in place, and there are plenty of comforts. There are sleeping accommodations for twenty persons, but a much larger number can be dined. A well of excellent water is on the property, the bottom of this well is chiseled from solid rock in the shape of a basin. Dr. H. says the water is so cold that it makes one's teeth ache. A fine grape arbor, 30ft. in length, shelters the well. There is a promenade leading south from the house to the river, on the banks of which are stately elms, around which have been erected two platforms having seats. This forms one of the most attractive retreats of the place, and is reached by a bridge. Great efforts are being made to make the grounds about the house beautiful and attractive. One-half of the property is converted into a park, arbors have been erected, upon which pretty vines are now growing. Walks have been laid out, flowers and numerous varieties of fruit trees have been planted and add to the natural attractiveness of the resort. The balance of the ground is devoted to the raising of vegetables for the use of the club members and their friends. With the present activity and enthusiasm this club is making its retreat a very pleasant place, and it promises to be one of the best in the State. There is a good boat house with room for twenty-five boats. The club has now a number of canvas canoes, ducking boats and dories.

The fishing here is excellent; bass and pike-perch ("salmon") being the game fish of these waters. The Falls of Conowingo are noted for their fine bass and "salmon" fishing, and anglers from other grounds and considerable distances come here when, as they say, they "want to catch fish." The river at this place seems to be especially suitable for the bass and "salmon." In some places the water is 18ft. deep, forming quiet pools; a little further on it will be found shallow, rapid and turbulent. The most remarkable catch for one day that has yet been made off Red House was that by Mr. N. Russ in August, 1889, when he succeeded in landing 160 bass. Mr. R. is said to be one of the most expert anglers in Harrisburg and has been dubbed "professor" by his friends. Dr. Hollingshead is credited with having taken on very light tackle the two largest bass that have been caught in this locality. Both were taken the same day and weighed 6 and 6½ lbs. respectively. Besides these two monster bass the doctor took twelve which averaged 1½ lbs. each. The tackle used by the members of the Red House Club is of the latest and most approved patterns. Mr. Russ has a simple, but convenient, way of carrying his flies when he does not wish to be bothered with a bulky fly book. He puts each fly separately into an envelope, which he is careful to seal and plainly label, he writes on each paper the name of the fly it contains and the number of the hook. The envelopes are made two inches long and one inch wide. These can be stowed away in the vest pocket without danger of tangling or getting mixed up, and are easily found when wanted. Mr. R. makes no charge for the hint and only desires that anglers try his way of carrying flies.

The most killing baits used near or at Red House are the stone catfish, helgramites and minnows. The last mentioned are not much liked here. Bass and fall-fish (*Semotilus*) are caught with the artificial fly.

Another of the many attractions of the Red House is the fine collection of stuffed birds gathered together by Dr. Hollingshead. This collection consists of the following game and other birds: Mallard, redneck, bluehead, stiffey, whistler, wood-duck, black duck, teal, bluebill, sprigtail, bufflehead, widgeon, Canada goose, sandhill crane, woodcock, woodpecker, German stork, hawk, quail, jay and others. Squirrels, rabbits and other stuffed animals are also included. The Doctor is adding to this collection and hopes to increase it largely.

STEHMAN.

PERTH AMBOY, N. J., July 11.—Trolling for bluefish is all the go just now along the south shore of Raritan Bay between South Amboy and Keyport. The fish weigh from 3 to 5lbs. and give great sport. One boat took 19 in about one hour this afternoon. Weakfish are biting also, and porgies are numerous, while menhaden have appeared in the most astonishing quantities. Several sloops and steamers engaged in catching the latter in purse-nets were caught last week by the police, and their captains and crews were arrested and fined for illegal fishing. —J. L. KEARNEY.

CHICAGO AND THE WEST.

CHICAGO, July 3.—Mr. Jack Cudahy, one of the wealthiest of Chicago's young business men, is off at Macinac Island with his yacht and party, and has sent down for a lot of tackle suitable for fishing in Lake Superior, whither he contemplates going.

Mr. C. F. Hills, president of the Fox River Fish and Game Protective Association, on having laid before him the matter of the destruction of bass below Yorkville by the "jumping" process described last week, remarked: "It is clearly against the law. We will look into it and prosecute promptly at the first opportunity. Our agent, Mr. Buck, has lately passed through that section, but heard nothing of what you describe. We have to report now that every dam on the whole length of the Fox River is supplied with the proper fishway. This we have accomplished at the expense of much trouble and considerable litigation."

Mr. Hills told me that last week he had a good day with the bass on Grass Lake, his boat taking fourteen, and being then obliged to stop on account of a storm. During that trip Mr. Hills met with a peculiar accident. He pricked his hand slightly with a fish hook, thinking nothing of it at the time. Blood poisoning set in, and now he has a very bad hand of it.

There have been comparatively few trout caught by parties out of Chicago this season, for those who went brought back discouraging stories of very high water and unusual numbers of mosquitoes. It is probable that the trout fishing will now be shelved till the cold nights of August have made life and fishing in the woods take on pleasanter aspects. Numbers of parties are out after bass now, and the hundreds of trains that leave town tomorrow will be crowded with anglers bent on celebrating the "glorious" in a more or less moist or aqueous way. If luck favors the writer, he will shoot his firecrackers this year on the banks of Cedar Lake, Indiana, in company with a limited number of friends who prefer fish to eloquence. But in front of all this there hangs a tale which needs telling, since few tales ever were happier in the happening.

July 9.—Mr. J. E. Reddock, a fly-fishing resident of Yorkville, 51 miles from here, on the Fox River, writes me under date of July 8: "Good fly-fishing here now." I do not believe a fly-fisher would make any mistake in going down there now. Mr. Hoyt, of Aurora, informs Mr. Loeb, of Spaldings, that some of their fly-fishers have lately had good sport on the Fox, both above and below Aurora, baskets of 20 and 30 fish having been made.

Mr. De Long, of Brooklyn, N. Y., was lately in this city. He says that this paper last summer reported him as having been fishing up in Wisconsin, when he had never been there at all. The grade of Mr. De Long's refreshments must have resembled the quality of mercy. Certainly he must know that if this paper ever said he had been fishing, he must have been fishing, whether he could remember it or not.

July 12.—The anglers of Aurora, Oswego and other towns along the Fox have had fine fly-fishing for small-mouthed bass for the past week, the water being now in good condition. A Mr. Kendall and his brother caught 18 bass that weighed 30lbs. one day. The former gentleman took fifteen bass on another day, and ten on yet another. Brown-hackle, Gov.-Alvord, jungle-cock and ibis were the flies used, and these were tied on No. 3 hooks.

E. HOUGH.

ANGLING IN COSTUME.

A JOLLY party was in camp by Lake Foley, no matter where, having good luck fishing, catching black bass, croppies and pickerel. Inasmuch as two barrels of these fish were caught the last two days, some of the bass weighing 5lbs. and pickerel from 7 to 11lbs. by the scales, it may be accepted as proof of fine sport.

One afternoon, when the boats were in and the boys were constructing dinner, a carriage was driven up on the little by-road and out stepped a gentleman dressed in the altitude of fashion. He proved to be a friend of one of the party and was cordially greeted, notwithstanding his silk hat, swallow-tail coat, low cut vest, expansive shirt bosom, kid gloves, patent leather shoes, silk umbrella and a red pongee kerchief, cunningly showing from a side pocket. The contrast, glancing from this pleasing spectacle to our mud-stained apparel, slouch hats and bronzed countenances, was severe, and there was difficulty in restraining remarks.

The gentleman explained without hesitation that he was going to a wedding, at the railroad station four miles away, and happening to hear that we were at the lake, and having several hours to spare, he forthwith determined to come out. He was sorry to appear in polite society in such incongruous rig, but hoped we would pardon him under the circumstances. No one hated a plug hat more than he did, he had frequently waked up in the night for that especial purpose; but the demands of society are inexorable, and he trusted, in spite of appearances, they would concede his intentions were honorable.

"Say, boys, lend me some tackle and one of these boats," will you?"

The request staggered the community speechless for a moment, then one who regained composure soonest exclaimed:

"What! fish in those robes?"

"Certainly; good enough, ain't they? There's some aristocratic and lordly fishes out there, judging by these strings of yours by the platform, and I want to renew my acquaintance with them—Colonel Bass, you know, Sir John Pickerel, Admiral Croppy, not to mention Jonathan Sunfish, ex-Senator Perch, and Rev. Mr. Pout. I'd dearly love to take 'em by hand and be sociable. I love to mingle with the throng."

"Mingle is good," said a voice in rejoinder, "and they are all there, even Major Eel and Sergeant Dogfish."

The request was readily granted, and Leather Breeches, our boy of all work, said he would take the gentleman out.

We sat down to our frugal dinner of baked mallard, boiled pickerel, fried bass, broiled prairie chicken, with mushroom sauce, claret de Maxinkuckee, and yellow-jacket pudding, most of which was formulated by a railroad man among us, and served in a way that would have made John Chamberlain sigh with envy.

While we were attending to these articles the patter of rain was heard on the roof, and, with thoughts of our swallow-tail friend, the door looking out on the lake was

opened. And there was an exhibition. Leather Breeches was holding the silk umbrella over him, and the gentleman hauling in bass, taking the umbrella when a fish was brought to the boat, while the boy unfasted and re-baited the hook.

It didn't rain much, and in the course of an hour our odd friend came in with five bass, two croppies, and a pickerel that weighed 7lbs.

"Returns all in—population not over-estimated—splendid showing—St. Louis nowhere—card reception"—he went on blithely as he came up. "Gentlemen," he headed, brushing off the only speck of dirt on his evening toilet, "I've got to catch the 6:30 train. I certainly am greatly obliged for distinguished consideration. Fish always bite best when it's raining. I'll tell the bride and groom I met you. That pickerel came near getting into this shirt front. I'd rather fish than be married. That's a nice rod, action and balance perfect. There's my card, and if you'll all dine with me at the Palmer next Wednesday evening I shall feel honored."

Then, thrilling Leather Breeches with a dollar, he took his departure amid exclamations of "Come again!" "Don't go!" and the like, in which the trees and the breeze participated. JEROME BURNETT.

FISH NOTES FROM CAPE COD.

CODFISH continued plentiful in Buzzard's Bay and Vineyard Sound during May, large numbers of them having been taken in traps and lobster pots—a thing heretofore unknown in this region. A fish trap at Tarpaulin Cove caught 500 at one haul, weighing from 5 to 10lbs. each. Little cod, 3 to 4in. long, left the shore last week; we never catch them when the water gets above 60°. Tautog are almost entirely absent from these waters. A very few small mackerel have been taken in Buzzard's Bay. Some large ones, measuring 18in. in length, were caught south of Martha's Vineyard last week. One Spanish mackerel was taken last week. Kingfish are being caught in larger numbers than I have ever seen before. A few small weakfish or squeteague, averaging about 2lbs., have been obtained. John Vedder caught one that weighed 15lbs. dressed—a very unusual size. The run of scup has been very small. No fish trap in Buzzard's Bay has taken more than a twentieth part of last season's catch, and that was not more than two-thirds of the yield in 1888. I think no trap has secured 50 barrels. The trap at Ram's Head, which took 1,000 barrels last year, has caught 5 barrels this season, and those were obtained this week; they did not get a scup in May. The traps at Wood's Holl took most of their scup in May. On May 19 lots of small scup struck in; they were 5in. long and fifteen of them weighed 1lb. Some mornings there were as many as 60,000 in each of the traps about Wood's Holl. They continued plentiful until last week, when they began to grow less and less, and this morning (June 24) there were very few. These scup are of the size usually taken early in November, when the species leaves us. It seems that they must have hatched somewhere South in December or January. There is a run of these small scup every year, but only a few of them, say from 100 to 300 a morning in the traps for about a week, and then they are gone. Sea bass have been scarce. One trap at Menemsha, on Martha's Vineyard, caught twice as many as last year, but I do not think there is another that has taken one-half the usual quantity. Very few bluefish have been taken anywhere in this vicinity. Shad were scarce last month, but this month they are plentiful; they have spawned somewhere, for they are spent and very thin. I went to Menemsha last week and seined all along the shore and did not catch a fish of any kind, not even a sculpin or a minnow. This is an experience I have never before had anywhere, winter or summer. At the Wood's Holl Station I have collected and hatched eggs of flatfish, four-spotted flounder, sand dab, cunner, tautog, mackerel, squeteague, scup, sea bass, lobster and squid. Eggs of loach-fish and skate have not yet hatched. We have liberated large numbers of sea bass and young lobsters.

WOOD'S HOLL, Mass., June 12. VINAL N. EDWARDS.

[Mr. Edwards has had 20 years experience as a collector at Wood's Holl and is naturally an expert in the field. When he cannot find a single species of fish on a particularly rich shore, where we have often taken 25 kinds at a haul of the seine, the conditions must be unique, and we would be glad to have an explanation of the phenomenon.]

JUMPING BASS.

Editor Forest and Stream:

Mr. Hough's information about "jumping bass," as given in his last letter (and by the way his letters are always interesting and informing), reminds me of a little experience and considerable sport enjoyed by the writer some thirty years ago on the Little Miami River near Loveland, about twenty miles above Cincinnati. I was stopping with a relative whose farm lay along the river, and I was often in his boat bass fishing. One morning, after a heavy rain the night previous, I went out in company with my cousin, but the water was so muddied that fishing was a failure, and skirting the shore, keeping out of the current, we spent the time "projeckin' around, until the splash of the inshore oar caused a good sized bass to leap fairly into the boat. We 'caught on' to the 'winkle' at once, and going up stream quite a distance floated down stream near shore, striking the water now and then inshore until we had quite a number of bass secured by this new, to us, mode of fishing. I have often thought since that when opportunity offered I should try the same plan to see if it would work as successfully, but have never done so. In this instance I believed and still believe that the fish were feeding in the rolled and higher water, and not that they were asleep as suggested by Mr. Hough's informant. Mr. Hough seems to think that it is a disreputable or questionable method of securing fish, but it is an open question whether it is worse to scare a fish to death than it is to deceive him to the same end. As a means of sport there is no room for debate. We are both in the same lot.

I notice the comment of I. L. S. concerning my experience in Toronto with scales, and am very much obliged to him for enlightenment. I had feared that doubt and uncertainty and nightly visions of scaly disappointment were destined to dog my pilgrimage, but they vanish. It proves anew the potency of the FOREST AND STREAM in disseminating light and happiness. Long may it wave.

O. O. S.

KEEPING FISH.—New York, July 14.—*Editor Forest and Stream:* Often, when having captured a large trout in distant waters, have I longed for some means to preserve my quarry and exhibit it to my friends and "the old folks at home." It has been an easy task to bring home an assorted array of touching finny legends—the kind that go right to the heart, but never damage it in the least. When a man tells a "corking" fish story, and then and there deliberately produces the veritable fish spoken of, his argument is, of course, incontrovertible. This leads to the point. I have found something, after a search of many years, that will really and honestly preserve fish for a long time. By "a long time" I mean that fish I sent home during the warm days of June last, were six days in transit, without ice, and reached New York in perfect condition. Last year, all the fish I sent over the same route, with plenty of ice, were spoiled. Strange that an article of so much real merit, has never been heard of among sportsmen, for it will preserve game of all kinds in absolute perfection. When, in May, I started for the camp of the Paradise Club in Quebec, I took a 5lb. box of "Preservaline." Upon arriving there I dissolved a pound of the white powder in two gallons of water, and all I did afterward was to lay my cleaned trout in the solution for two hours, then pack in moss—wet or dry—and ship home. Ten boxes of splendid trout were thus simply treated, and all reached New York as perfect and bright as on the day they were landed. I take great pleasure in recommending the article to sportsmen in the field or on the water, and I am surprised the manufacturers, whoever they may be, do not advertise it in *FOREST AND STREAM*. It is too valuable an article to be lost to view, and its great merit alone prompts me to thus indorse it.—KIT CLARKE.

MAINE BASS, PERCH AND TROUT.—Boston, Mass., July 1.—Many thus far this year have gone from this city to Maine, as the New England angler's reserve for their favorite sport. As a whole, so far as my knowledge goes, those who went early in the season are more pleased with results at Moosehead than at Rangeley. Among the angling vacationists, at the present time, a very large number are at Cobbascontee and Long Pond for black bass and white perch, and an occasional landlocked salmon. This year I am informed the Commissioners of Fish and Game have had the ponds from Monmouth to Belgrade well stocked with this game and toothsome fish. A number of my friends from the large mercantile houses of this city are now at Harmon's Grove, Cobbascontee Lake, taking from 2½lb. to 5lb. black bass and smaller white perch in out of the wet with great glee. At Chandler's Mills, Belgrade, the enterprising landlord of the hotel has launched a steamboat upon the waters of Long Pond, whose patrons have great success. I fear this boat will still be the cause of depleting the fighting black bass and the very popular white perch. Some of the apostles of rod and reel have just returned from the Dead River region. They are very enthusiastic and report wonderful strings of beautiful trout.—J. W. T.

MAINE WATERS.—Boston, July 14.—The trouting season is about over, and yet nearly every passenger train out of Boston is graced with a number of fishing rods. July 4 came on Friday, and many of the trades voted to close over Saturday, while manufacturers, in many instances, shut down their mills from Thursday night till Monday morning. This gave a good chance to many a sportsman to try the trout for a day or two, and it was surprising to see the way the short holiday season was utilized. Trains were crowded to overflowing on the Boston & Maine, while the shorter lines in Maine were well patronized. Still the record of trout caught is not a very heavy one, though the general report is that the fishing was even better than anticipated. That same week Prof. J. F. Moody, of the Edward Little High School, at Auburn, Me., with his little son Frank, fished the Russell Brook in Sumner, with a record of 169 trout in one day, all of them large enough to clear the law, and one weighing 1lb. and 13oz. Of the number little Frank, only 1½yrs. old, caught 69. Some good records in the way of sea trout are mentioned, taken by Boston merchants and business men from streams on the Nova Scotia shore.—SPECIAL.

PIKE-PERCH IN LAKE GEORGE.—*Editor Forest and Stream:* In answers to correspondents, July 10, you state that Lake George, N. Y., contains pickerel, which are wall-eyed pike, Susquehanna salmon, etc. It is to be hoped, and very possibly this is correct, for some years ago Mr. Myron O. Brown, proprietor of the Sagamore Hotel, purchased and brought from Lake Champlain over 100 spawning pike-perch and planted them in the waters of Lake George, but from the day of planting to this not a single pike-perch, so far as diligent inquiry can determine, has been taken from the lake. The pickerel of Lake George are really pike, *Esox lucius*. Furthermore, the lake trout had not become almost extinct in 1889. The work of restocking the lake with lake trout was begun in 1873, and almost each year planting of fry have been made until the grand total amounts to over 4,500,000 lake trout that have been planted in Lake George, and the fishing never was better than it is this year.—A. N. C.

MAINE WATERS.—Wilson's Mills, Me., July 8.—Some very handsome specimens of trout have been taken from the waters of the upper Magalloway River, Maine, during the past few weeks. Mr. Jas. G. Menzies, of New York city, brought down a fine string numbering about 18 or 20, and weighing 1 to 2½lb. each, besides quite a number smaller ones. Mr. John P. True, of Boston, also took some in weighing from ¾ to 1½lb. Several parties from Berlin, Milan, and towns near by have taken good catches. One trout weighing 7½lb. was caught in the Diamond River near its junction with the Magalloway a short time ago.—SEVES.

ALBANY, July 7.—The boys have returned from the Rushmore Camp on Lake Champlain. Fishing was not equal to last year, owing in part to the high water. They report quite a number of black and wood ducks in the marshes. I hope to help to thin them out in the fall. An engineer on the Fitchburg road caught a 10lb. salmon at Mechanicville last week, he claims on the fly; there are people who think it was jigged. It is a shame they don't put a fishway in the dam, as there are plenty of salmon seen trying to make their way up stream.—DEXTER.

SALMON AT BANGOR.—Bangor, Me., July 11.—The club house is closed for the season. The season has not been a brilliant one. The highest number caught on any one day has been but seven. The river has been in a continued state of flood, from 6 to 8ft. running over the dam. The whole number caught has been 85. The fish taken were mainly of large size; the largest I am told 25lbs. The river is still full of fish, but they no longer take the fly. I have no doubt they might be taken readily with the fly at Piscataquis Falls, which is the site of the new pulp mill, known as Montagne, and where the usual procrustinations and evasions of wealthy corporations have still left legal promises of completed fishways unfulfilled. The fish are here left impounded in considerable numbers.—PENOBSCOT.

LAKE CHAMPLAIN.—Albany, July 12.—I was at Burlington, Vt., last week and tried the wall-eyed pike, but it was the day after the tornado and the wind was still blowing a gale, which made it impossible for an ordinary boat to stay out on the reef. No one beside ourselves tried it. We worked hard but only got nine good ones. A few days previous they caught as high as 75 to a boat down off the Queen City Park grounds. This hot weather will send them in deeper water and that will end the shore fishing.—DEXTER.

Fishculture.

WATER LIFE.

Occasional Observations on the Fishes in the Aquaria of the U. S. Fish Commission.

A NUMBER of observations, extending over several years, have convinced the writer that there are as great possibilities in the modification or adaptation of the more valuable species of fish as in those of an ornamental nature. It is said that in Japan there are bred small gold fish, perhaps three inches in length of head and body, with tails a foot long and with other fins in proportion, and in view of some of the wonderful developments of fins cropping out among the progeny of more ordinary Japanese trout in this country we have no occasion to doubt this statement, were the authority doubtful. The two species of paradise fish (*Macropodus*) known to this country and Europe, to which they were introduced from China, are said to be wholly the products of cultivation. The wonderful things that these Asiatic people do in horticulture are well known. Dr. Shufeldt stated to the writer that his father, the Admiral, saw in Asia small chickens with tails sixteen to eighteen feet long, the result of generations of patient cultivation.

It is not such useless modification as this, however, to which the writer has reference, but rather the gradual adaptation of certain valuable species to modified or restricted conditions. It will be noticed on placing common brook fish into a still-water aquarium that for a number of days there will be very evident distress to the respiratory organs, the respiration very rapid and the fish keeping constantly at the surface sucking air. That this is not the result of fright is evidenced by the fact that they may be picked up by the hands, whereas, if not in physical distress, they would dart away and hide. During such changes many fish will die, but those which survive the change will thereafter live in still water without regard to natural changes of temperature, unless the aquarium be overcrowded.

The little black-nosed dace (*Hemichthys atronotus*), which is an interesting aquarium fish, lives usually in very much the same character of waters as are inhabited by the trout, clear and rapid running brooks and streams, and although difficult to introduce into the aquarium will, if it survives the change, live in the ordinary aquarium as comfortably as the gold fish; and furthermore, although in nature it probably lives wholly on living things, will at once adapt itself to the artificial food of the gold fish. The same may be said of all the *Cyprinidae*, although most of them live in quiet and warm waters and endure the change more readily. According to the writer's experience and observation, the same capacity for adaptation to changed conditions is inherent in all fishes in at least as great a degree as in the black-nosed dace.

At the Ohio Valley Exposition at Cincinnati, O., in 1888, a number of trout of several species were changed within a short time from a temperature of 45 deg. to 70 deg., and were kept comfortably at the latter temperature until the close of the exhibition. At least two cases have come to the writer's notice where trout have been safely kept in ponds at 70 deg. or thereabout. In the marine aquaria at Washington there are now young shad, adult gizzard shad, striped bass, white perch, flounders, sturgeon, tautog, etc., living in water which has already at times reached a temperature of 80 deg. Some young shad in a pool in the yard of Central Station are now living and growing finely in a temperature which is sometimes as high as 82 deg. to 85 deg., the latter temperature existing at the surface. It is quite probable that not one of the species mentioned is ever subjected to such temperatures in nature, as, when the surface water is heated, they can descend to the cooler depths.

Where such changes are too great or too sudden they will generally be fatal. If more gradual some may survive, as some individuals of a species will endure greater changes than others. During the past winter, when the temperature approached the freezing point, some species of fish brought from the Gulf, and which had lived well until that time, quit feeding and soon succumbed. Likewise on the approach of high temperature some species from the colder waters of the New England coast succumbed also, but these changes were very considerable.

A number of yearling rainbow, or California trout, are now living in an aquarium at Central Station in water the temperature of which is now 76 deg. They are healthy and lively, and feed with avidity. It is quite certain that they will stand a temperature of 80 deg., and possibly even more. It should be stated that a small stream of water (about 1-16in.) is driven into the aquarium with force, and impinging on the surface of the water carries in with it a large amount of air, which being dispersed throughout the whole body of water in very minute bubbles is rapidly absorbed, and it is thus demonstrated that a high temperature is fatal to many fishes, under artificial conditions, because unless the water is artificially charged with air it does not afford them sufficient oxygen.

The point sought to be suggested here is that it is quite possible, judging from the experiences herein related, that the species of the salmon family as well as other fishes might be so modified in character as to be readily adapted to waters of warmer and more sluggish character than those usually inhabited by them.

Numbers of experiments have been made for the purpose of determining what amount of heat fish will stand, but many of them are of no practical value for the purpose herein suggested, because made under conditions which do not occur in nature. A paper on "The Effects of an Elevated Temperature on Fishes," in the Bulletin of the U. S. F. C. for 1885, records a number of high temperatures to which fish are known to be subjected in nature, and also a number of experiments. One of the statements is that "a young fish kept in water at 84 deg. was found to be dead,

and to be sure that the result was not owing to a want of air in the water the experiment was repeated in the same water when cold, without injurious results." As air is re-absorbed by water in cooling (just as it is expelled in heating, and in the same proportion though less rapidly) the inference drawn is based on false premises. And likewise all experiments of this nature which do not take into account the natural aerating agencies of nature, vegetable life, evaporation, etc., are useless, except as establishing a thermal death point under unnatural conditions.

It is the opinion of the writer that great changes or modifications have already taken place in the trout of various species by means of domestication, for purposes of propagation, and that, in the course of time, they may be adapted to the great rivers of the country, and the purpose of this article is to suggest experiments by the trout culturists of the country in the direction of the gradual adaptation of *Salmonidae* to warmer and more sluggish waters. It is a matter worthy of discussion at all events.

It is in trout culture that the greatest advances in methods of artificial propagation have been made, and it is still throughout the world the great fishcultural school, and therein possessing a high value were there no other benefits derived from it; and there are, from recent observations, yet unexplored fields for the trout culturist. Wm. P. SEAL.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. C. H. Corbett, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 10.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Berkeley, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. J. D. Brougher, Secretary.

TICKETS!

NEXT week we shall publish the dog fares charged by thirty Western railroads, and their rules governing the transportation of hunting dogs. This data has been furnished by the passenger agents for the benefit of *FOREST AND STREAM* readers.

AMERICAN KENNEL CLUB AFFAIRS.

WE said last week that we expected to have for publication to-day the stenographer's report of the advisory committee meeting held July 3 to consider the charges preferred by Secretary Vredenburg against Mr. C. J. Peshall. Mr. Vredenburg has advised us, however, that it has been decided to withhold that report, pending a reference of the case to the American Kennel Club.

Meanwhile we have endeavored to get further light on the contract between Mr. Lewis and the stud book committee for the publishing of Parts II., III. and IV. of Vol. V. of the Stud Book, for it is on the alleged exhaustive character of this contract that Mr. Peshall has finally rested his case. The imperfect recollection of the several parties to this contract forcibly illustrates the capacity of a verbal agreement for subsequent dispute. Of the five persons who should know definitely the terms of the Stud Book contract, only two have been positive in their statements. Mr. Peshall has declared that the agreement was that Mr. Lewis should take all the receipts, pay all the bills and retain all the surplus or bear any loss. He has declared that it was thus an "exhaustive contract."

Mr. Vredenburg, on the other hand, has declared with equal positiveness that Mr. Lewis took the book on the same terms that he himself (Vredenburg) had managed it, namely on a fixed salary of \$68.75 per month.

With a view of determining the exact nature of the contract which Mr. Lewis had with the stud book committee for the publication of the Stud Book, we last week sent the following inquiry to Messrs. Terry and Schellhass:

"Will you kindly advise us whether the statement made by Mr. C. J. Peshall, that for the publication of Parts 2, 3 and 4 of Vol. V. of the American Kennel Club Stud Book Mr. A. D. Lewis had an exhaustive contract; that is to say that the agreement was that he should take all the receipts and pay all the expenses and retain the surplus as his remuneration? If there was such an agreement can you tell us when it was changed?"

The replies were as follows:

Editor Forest and Stream:

I have yours of the 11th, and in reply beg to say that I have been a member of the Stud Book Committee of the American Kennel Club since its inception, and with my knowledge and consent no such contract has ever been made.

THOS. H. TERRY.

New York, July 12.

Editor Forest and Stream:

In reply to your note asking me on what terms Mr. A. D. Lewis was to publish Parts 2, 3 and 4 of Vol. V. of the A. K. C. S. B., I would say that it was understood that, should there be no profits from the said publication, Mr. Lewis was not to hold the A. K. C. for any salary, and in any event his salary was not to exceed any profits that arose from the publication.

HERMAN F. SCHELLHASS.

New York, July 14.

In order to get more definite information of their understanding of what the contract actually was, we called upon Messrs. Terry and Schellhass, and also met Mr. Lewis,

Mr. Terry said that his recollection was somewhat indefinite, but his impression was that Mr. Lewis was to have the income or profits from the Stud Book up to the sum of \$1,500, but that any amount which came in above that sum was to go to the club; that is to say, if the profits should amount to \$1,501, the \$1 would not be Mr. Lewis's but the American Kennel Club's. Mr. Schellhass said that at the time of Mr. Lewis's appointment he had been connected officially with the club only a short time, and that he had not known officially what Mr. Vredenburg's arrangement with respect to the Stud Book was, but unofficially he had always supposed that Mr. Vredenburg was publishing the book and taking the surplus as his remuneration. As to the arrangement made with Mr. Lewis, Mr. Schellhass said, his recollection was indistinct; he would only say that his remembrance of the contract was that Mr. Lewis was to take the book for what there was in it; and in the event of any loss he was not to hold the A. K. C. for either salary or loss. As to whether all the profits, however great, were to go to Mr. Lewis, Mr. Schellhass was not very positive; but he did remember distinctly that in no event was the club to stand any loss.

Mr. Lewis himself being asked what the contract was, said that he could not tell definitely how much he had received from the American Kennel Club, but that Mr. Vredenburg's books would show; he had, however, taken the publication on the same basis as Mr. Vredenburg had done. Being given an inquiry similar to that sent to Mr. Terry, already noted, Mr. Lewis replied as follows:

Editor Forest and Stream:

Replying to your letter of this date, in which you ask if I had an "exhaustive contract" with the A. K. C. for editing the A. K. C. S. B., would say, most emphatically, no. I took charge of the book on precisely the same terms as did Mr. Vredenburg and drew the same remuneration as he did up to Feb. 1, 1889, after which date I drew a stated salary.

A. D. LEWIS.

HEMPSTEAD, July 14.

Editor Forest and Stream:

During the past year communications have from time to time appeared in the columns of the sporting press containing reflections upon the management of the American Kennel Club, and grave doubts as to the financial soundness of that organization. Occasionally denials have come from some officials of the club, but, unfortunately, they have been too general to fully refute the statements which drew them out, many of which had an air of truth, and doubtless carried conviction to those who only look upon the surface of things.

As an officer of the A. K. C. I consider it right and proper for me to put before the breeders of this country certain facts with which I am conversant, that they may be able to judge understandingly whether or not the affairs of the A. K. C. are rightly conducted, and whether it is prosperous or on the verge of insolvency, as some have intimated. Also, to throw light on certain seeming discrepancies in the financial reports of the club. Those who know me will need no assurance that in writing this I am actuated purely by a sense of duty and a love of fair play. The affairs of men connected with the A. K. C. do not concern me; it is to the club only that I owe allegiance. I shall study to be as concise as possible, and leave speculation to others.

At the last meeting of the Advisory Committee, in New York, I examined the books of the treasurer, Mr. Vredenburg, with the purpose of determining whether his reported statement, made early in 1890, was a true one or not. Here I will say that, considering the communications already alluded to, there was some reason to suspect that the accounts had been "juggled," or that by connivance some friend of the club had managed to swell its funds about \$1,000. To be more explicit, considering the published statements it certainly seemed possible for Mr. Belmont to have entered into an arrangement with Mr. Lewis, by which the latter was to renounce his claim to the profits from the stud book—of nearly \$1,000—and leave the same in the treasury, to be made good by Mr. Belmont. In other words, there was a possible chance that Mr. Belmont desired to make the A. K. C. a present of about \$1,000, and was forced to trickery and fraud to accomplish his benevolent purpose.

With this far-fetched theory in mind I went over the treasurer's accounts. I found that Jan. 11, 1889, the A. K. C. had a balance on hand, from receipts of club dues only, to the amount of \$285.33. In the stud book account on that date there was a balance of \$942.89, from receipts of its income only. These sums added together constituted the balance on hand, "from all sources," \$1,228.28, which was duly reported in the January number of the *Kennel Gazette*. It appeared that it had been the custom for the treasurer to report at the A. K. C. meetings solely his own accounts as treasurer of that club, which were entirely distinct and separate from stud book income. To report the latter was the duty of the stud book committee. On Jan. 11, 1889, for the first time Mr. Vredenburg included in his report to the A. K. C. the receipts in the stud book department. This, \$942.89, explains the sudden and considerable increase in the funds of the A. K. C., and near that sum was supposed to have been donated surreptitiously by the president.

Now, in February number, same year, of the *Kennel Gazette*, we find reported a balance of \$333.45. This is but a continuation of Mr. Vredenburg's account as treasurer, carried on to Feb. 16, 1889, and it included further receipts from dues and prefe fees, also expenses incurred. This amount was combined with the receipts from all sources; hence his two reports at the annual meeting.

It appears that Mr. Vredenburg was in charge of the stud book sixteen months, for which he received a salary of \$1,100, or \$88.75 per month. Mr. Lewis, it seems, did not take the book on speculation, as has been frequently stated, but was appointed on the same terms and under the same conditions as those which had been accepted by Mr. Vredenburg. This is the statement made by the treasurer, by Mr. Lewis and by Mr. Terry. The books of the treasurer show that Mr. Lewis drew exactly the same sum per month as did Mr. Vredenburg. Here is Mr. Lewis's account in brief: April, 1888, to Jan. 31, 1889, ten months' salary, \$687.50. During 1888 he drew \$400, and I am informed that as large a balance as possible, until it could afford to pay the rest of his claim without inconvenience, he drew what remained, amounting to \$287.50 in different amounts, from Jan. 28, 1889, to Nov. 30, 1889. Thereafter Mr. Lewis made a new arrangement with the club whereby he was to receive a salary of \$1,000 per year.

I have this morning received from Mr. Vredenburg the following statement: "The A. K. C. has at this date, July 9, a balance on hand of \$2,141.35. The total liabilities are \$178.09. Few of the assets of the club can be estimated. The furniture of the office is worth about \$120. There are bound volumes of the stud book, which if sold at the regular price—and it is likely that they some time will be—would bring over \$1,000. There are also files of the *Gazette*, other printed matter, electrotypes, artist's drawings of dogs, etc., which may bring \$100, and they might bring near \$1,000."

A word as to the *Gazette*. The treasurer informs me that it has cost for the last six months \$983.34 to print, bind, wrap and mail, together with all other expenses of every description. For the same period the receipts have been \$1,071.60. During the next six months the expenses will be a trifle less. There is now due the *Gazette* for advertisements \$1,257.97; bills for which have been sent out this week. This sum, if paid, will defray all expenses for the balance of the year, and probably leave a margin of nearly \$800 profit, without considering any other income.

And now to the end. On Jan. 1, 1887, the A. K. C. had a capital of less than \$100. It has bought the *Kennel Register*, for which it paid the sum of \$500. It has never received any financial aid, has had only its legitimate income, and to-day it has a cash balance of nearly \$2,200. Its total debts are less than \$300; and there is due it from parties, every one of whom are believed to be perfectly reliable, over \$1,200. During the present year the *Gazette* is ahead of its expenses; and probably at the end of 1890 it will have a balance on the right side of \$300 or \$350.

The foregoing statements I submit, without comment, to all interested in the affairs of the A. K. C. The books of the club are open to all delegates, and if there is any one who questions what I have written he can easily reach the truth.

J. FRANK PERRY.

BOSTON, July 9.

Editor Forest and Stream:

To the many correspondents who have sent me commendatory letters regarding what was published last week over my initials regarding the Kennel Club accounts I desire to express my thanks. To do what is right is only every man's duty, but thanks are always appreciated and these letters have been very pleasant reading indeed. At the same time I feel that I have to express my personal thanks to Mr. Perry and to Mr. Vredenburg for asking me to again go over the accounts and so remove any doubts there may be in my mind. I considered it to be no reflection upon myself to say I had doubts, and I will go further and say that I do not see how any fair-minded non-partisan could fail to have doubts on the subject, who had not received from some independent source irrefutable proof of the correctness on one side or the other of the case at issue. Had I not had a look at the books last April I think I would have been a partisan and that against the A. K. C. My particular line of business, dealing in a great measure with the correctness of records and extending over a long period of years has, or at least it ought to have, trained me to the proper weighing of evidence, and this is the way I looked at the thing.

Certain charges of malfeasance in office were made against the leading officials of the A. K. C. Made by a person, it must be remembered, who had peculiar advantages for being in the possession of positive information on the subject. In response to these charges there was no specific denial, but in place thereof a seeming effort to decline according information. In my own case, when I wrote for some particulars, Mr. Vredenburg replied that he had not time to give me what I wanted. I wrote again asking some five or six questions calling only for a few minutes of research to give the figures in response. These I obtained without delay. Mr. Leslie also wrote, and Mr. Vredenburg replied that he had neither the time nor the inclination to give him what he asked for. Now, however much Mr. Vredenburg may have been pressed for time, I think it was certainly very impolitic for a person in his position to say he had no inclination to accord information such as was asked for. Then came the unfortunate editing of Mr. Vredenburg's statement at the annual meeting and Mr. Belmont's statement at the May meeting, both of which were to the effect that Mr. Belmont had not put any money into the A. K. C. treasury. When I mentioned this to Dr. Perry and Mr. Vredenburg, the former laughingly remarked, "We must be careful of these hypercritical critics, Mr. Vredenburg." But it is these very things that have to be noticed when weighing contradictory statements. Then we had the ruling of the advisory committee that no one should be allowed to look at the books without their permission, all of which in combination could not fail to create a feeling that where so much disinclination was manifest in suppressing information and investigation there was something to suppress.

Against that side of the case we had to place this. A committee had investigated the accounts of 1889—not of 1888 remember—and pronounced them to be correct. Also that there would be no harm in Mr. Belmont's presenting \$500 or \$1,000 to the club he took so much interest in, if it was in straightened circumstances. If he had done so and it was made plain in the books, it would have been a very handsome thing indeed and could not have failed to redound to Mr. Belmont's credit and been properly recognized by a vote of thanks. But it was not the alleged giving of the \$1,000, but the giving it in the underhanded manner as stated, that was reprehensible. If it had been done in that way it would have been deception. What threw doubt upon this statement of the \$1,000 addition was that there was no necessity for any such manner of aiding the A. K. C. There was no kick against Mr. Belmont at that time. He had only a short time before made his handsome offer of a guarantee for the establishment of the *Gazette*, which had been received and accepted with thanks, and if he had gone further and said that as the club was not then very strong he would place in the treasury \$1,000 as a fund to start with, it would have been hailed with applause. The strongest point against Mr. Peshall's statement was undoubtedly the fact that the way of putting in the \$1,000 was not probable for lack of necessity in the method said to have been adopted. So that the residue of the case was this: Mr. Peshall must be accorded credit for opportunity of knowing his alleged facts, and the action of the A. K. C. officials lent color thereto; the auditing committee was that of the 1889 accounts, not of 1888. Per contra, there is but the improbability for lack of necessity for doing what was alleged in the manner stated. I think there was room for doubt. At least that amount of doubt which would let a man go into the jury box unprejudiced. I felt that evidence was necessary to prove the correctness of one or the other of the statements, and after fully examining the evidence I freely and willingly sided against Mr. Peshall.

It is probable that Mr. Peshall will reply to my letter of last week, and I am fully prepared to see him shift his ground because it cannot be very pleasant to have all his castles in the air come tumbling down with such a run. Life is too short to continue a discussion against theories as opposed to facts, and it is my desire to end the whole business as speedily as possible. Mr. Peshall said two weeks ago that if he was wrong there was no apology too great to be demanded of him or for him to make. I propose, therefore, that he make an appointment, next Monday if possible, and I will go with him to the A. K. C. office where I will exercise my right, as per resolution of the Advisory Committee, to look through the books once more, and from those books I will answer every one of Mr. Peshall's questions. In order to see whether those questions are answered I would suggest that we be accompanied by the editor of *FOREST AND STREAM*. I suggest this because if left to my friend Peshall and myself we will get into some of our endless discussions, whereas all we need is questions and answers—oh yes, and the apology.

J. W.

Editor Forest and Stream:

If Mr. Watson in his endeavor to answer the charges that I have made against the management of the A. K. C. of juggling and huggermuggering the accounts, would confine himself to the articles or letters that I have sent to the sporting press, and not drag in either casual or convivial conversations, perhaps conclusions reached would, at least, be more satisfactory to not only those interested in the welfare of the A. K. C., but to your readers generally. The conversation to which he refers, if I remember, occurred either very late at night or very early in the morning. We were sitting at opposite sides of the table with glass bottles between us that perhaps were not so full, or were not as needful of stoppers as ourselves; and, if I remember, the end of the table as well as ourselves was not only graced, but en-

tertained by and with the presence of Brother Winslow. In this conversation Brother Watson unfolded to me the envelope which contained thereon the figures made and income given by Mr. Vredenburg of the A. K. C. accounts from Jan. 2 to Jan. 11, 1889, amounting to \$129 and some odd cents. In this conversation I might have said the month of June, but I evidently intended the month of May, as will appear from the following taken from my letter of June 20, 1890:

"Mr. Lewis was to assume the duties of editor of the Stud Book, was to compile the pedigrees, and do all the work as editor of the Stud Book. He was to publish the Stud Book quarterly, was to pay all the bills and expenses thereof, as well as one-half the office rent, and for his services he was to receive the entire receipts coming into the office, as well as the proceeds of the sale of the book. If after paying all of these bills there was nothing left, Mr. Lewis agreed that he would make no claim upon the American Kennel Club. This was substantially our contract, and it was faithfully, honestly and efficiently carried out. At the meeting of the American Kennel Club, which was held May 5, 1888, the Stud Book Committee reported this change to the club, and at the same meeting Mr. Vredenburg made his report as treasurer, showing the balance on hand in the American Kennel Club to be the sum of \$128.01. After this Mr. Vredenburg went to Europe, and he returned on Monday, Dec. 3."

Consequently there is no point to be made in the first contradiction made by Mr. Watson in his letter to *FOREST AND STREAM* in the last issue.

In reply to his second contradiction I will say that I was chairman of the stud book committee, and at the meeting in May, 1888, the change made by Mr. Vredenburg's resignation as editor of the stud book, and the appointment of Mr. Lewis as editor, was reported to the meeting, as will appear from the published reports. From April 1 until the end of the year 1888, Mr. Lewis published the stud book under an exhaustive contract made between the stud book committee and himself. Mr. Vredenburg at the time was well aware of that fact, and is now, and any statement he makes to the contrary is simply done to cover up the huggermugger heretofore stated of the management. Three weekly issues of the sporting press have appeared since my letter, and no denial of my statement as to said exhaustive contract and terms thereof has yet been made by either Mr. Lewis, who was the editor, Mr. Schellhass or Mr. Terry, who were the other members of the stud book committee, and the only explanation that has appeared is what Mr. Watson says in his letter that Mr. Vredenburg told him what Mr. Terry and Mr. Lewis would tell him. If Mr. Lewis and Mr. Terry were willing to comply with Mr. Vredenburg's statement, the denial would have appeared long since; in fact it would have been furnished with the same eager promptness for publication in the sporting press as was the denial of the so-called auditing committee; and I will now say that the denial would have been squelched with equal promptness. If Mr. Vredenburg will promptly publish the denial of these two gentlemen, and that Mr. Lewis was drawing \$68.75 a month as a fixed salary, I will with equal promptness not only convince your readers but these two gentlemen themselves by evidence over their own signature of their error.

As to the third conclusion in contradiction made by Mr. Watson in answer thereto, which I believe will be sufficient to convince the dog men of the country that his conclusion is not well founded, I will say that Mr. Vredenburg has kept and does keep the books; and that whenever a treasurer of a public club does not court, and, in fact, invite the most searching scrutiny of his accounts, when the same have been questioned, as has been by members of local clubs and the sporting press, that when an investigation is made in the way in which it should be made, and the shell is broken, that in 99 times out of 100 the meat in the egg is usually to be found, almost generally always, somewhat putrid. I stated shortly after the account containing the item \$1,228.28 was published that it was not earned by the club, that it had been book-kept in, and I am now as fully convinced that I am right, notwithstanding Mr. Watson's last letter.

These accounts have never been audited; the auditing committee that was appointed under Mr. Anthony's resolution, and which was made palatable by Mr. Vredenburg's suggestion, simply looked at the books that were presented to them by the treasurer, and added up, perhaps, the figures given to them by him. There was no comparison of vouchers with items charged, there was no looking through bank statements, returned checks, etc., that an auditor is expected to do; and evidently this committee was huggermugged by the management when the private books of Mr. Lewis were imposed upon them.

A man named Webster, who lived some years ago, defines in his dictionary the word "auditor" as follows: "A person appointed and authorized to audit or to examine an account or accounts, compare the charges with vouchers, examine the parties and witnesses, allow or reject charges, and state the balance." This definition is the usual and accepted one pertaining to the duties imposed upon an auditor, and I don't believe that any one of the distinguished gentlemen who acted upon this so-called committee will now claim that they audited these accounts. Every one of them knew that not only myself but others had questioned, and that the sporting press had contained articles questioning the accounts, especially the delegate from the N. J. K. C., who was well aware that I had protested against that item of \$1,228.28, and yet upon the most casual glancing over of books, he, and the other members of this so-called auditing committee, attach their names and certify that they examined the accounts and found them correct in every particular. I will not state that this report made by the auditing committee emanated from coagulated hebetudinosity, but that the gentlemen were easily satisfied we must all admit. And we find that within a few days after this report is published that two members of said committee, when applied to for the items going to make up this \$1,228.28 which had been carried as a balance from the preceding year, and had been talked about and written against by the dog men and sporting press throughout the country until it had become more popular and notorious than the negro's gig 4-11-44, were unable to give the items. Mr. Vredenburg down to and at the so-called annual meeting, held without a quorum, evidently had some doubts or misgiving himself about this balance of \$1,228.28, because in reply to a question by Mr. Watson, as appeared afterward in his own report of said meeting, he said the balance happened to be \$1,228.28. Now it is an old maxim, which we perhaps obtain from the Arabians, that figures never lie, while we do know that sometimes under some circumstances that sometimes treasurers are mistaken. They're not always and under all circumstances infallible or altogether accurate, and it is for these reasons and under these circumstances and usual for clubs and other public bodies to appoint an auditing committee whose duties are now so well defined; not only by the aforesaid Webster, but by custom. The casual examination of the books which was made by the so-called auditing committee and the fleeting examination made by Bro. Watson do not show sufficient scrutiny of the accounts to satisfy a skeptic, or even convert a captious critic to a skeptic. I would like to become a convert to the views expressed by Bro. Watson and become thoroughly convinced of my error in this matter, not only that thereby I might be enabled to offer a sufficient apology for the grievous wrong that I have done this A. K. C. management, but that I could convince not only myself but the advisory committee that I had regained my normal condition. Will Mr. Vredenburg publish over his own signature the itemized expense account for the year ending Dec. 31, 1888, the itemized receipts for the same period, and then give us the items to make up "Peshall's gig"—\$12-38-28—and not only thereby oblige a host of dog men throughout the country, but a

captious critic? Will Mr. Vredenburg kindly give us the figures?

JERSEY CITY, N. J., July 12.

Editor Forest and Stream:

It is really unfortunate that the delegate of the New Jersey Kennel Club should be drawn into a controversy over the American Kennel Club finances, but I do not think that by his letter in your last issue he makes his side of the case any stronger. At the meeting of the executive committee of the A. K. C., held Dec. 19, 1889, the following motion, offered by the delegate of the Southern Field Trials Club, was carried: "In order to comply with the suggestions made by Mr. Watson and Mr. Vredenburg, I will add to my motion that, before publication, an auditing committee, consisting of Messrs. A. C. Wilmerding, Maj. Taylor, and F. B. Fay, be appointed to audit the accounts. I name these gentlemen because they are *ex-officio*, and I ask that they be appointed to audit the accounts, and to state whether they are correct, whether they have been correctly kept, etc." If the New Jersey delegate will read the above motion, and then recall the certificate, with the word "only" italicized, appended to the A. K. C. statement for the year 1889, and signed by him, I think he will find one reason for his unfortunate position, and if the secretary-treasurer of the A. K. C. referred others, as he did me, to the auditing committee for information concerning his accounts, the delegate may find another reason.

A short time after the A. K. C. account for 1889 appeared I called on the secretary-treasurer, at his office, for some information concerning it, and I will briefly state what took place. The secretary-treasurer answered one or two immaterial questions relative to his accounts, and in fact handed me one or two copies of the *Kennel Gazette*. I wanted for reference; on my putting a further question to the secretary-treasurer, his manner quite changed, told me he didn't propose to be catechised, didn't know that I had any standing there, advised me to learn something about bookkeeping, refused me further information, and finally referred me to the auditing committee.

On Feb. 17, 1890, the New Jersey delegate wrote down at my dictation some six or seven items of the A. K. C. accounts, of which I told him I would like to get full, or such information as I could. He replied: "I will see if I can get them for you;" and on my calling on him later the same day he said to me, "They won't give them." On this same day, Feb. 17, 1890, the New Jersey delegate, according to a letter written by the secretary-treasurer of the A. K. C., examined the books of that club. I do not think it would necessitate a member of the auditing committee being a statistician or a walking vocabulary to carry in his mind for a few hours a few figures, or if it was necessary for a member of the said committee to be a statistician or a walking vocabulary to do so, why did not the New Jersey delegate, who is neither one nor the other, make a memorandum of them? The New Jersey delegate says in his letter: "I did as requested." Will the New Jersey delegate state what he was requested to do in this matter, and who it was that made the request, also if he did examine the books of the A. K. C. on Feb. 17, 1890.

I want to know the items that make a total of \$365.64, the expenses of the *Kennel Gazette* from Jan. 11 to Feb. 16, 1889, as appears in one of the treasurer's reports; also the items of receipt and items of expenditure of the secretary-treasurer of the A. K. C. from Dec. 5, 1888, to Jan. 11, 1889, both dates inclusive.

Will the New Jersey delegate give me any part or all of the above asked for information?

"J. W.'s" letter last week is very interesting, particularly so in so far as it refers to the contract under which Mr. A. D. Lewis edited the *Stud Book*. In Parts 2, 3 and 4, Vol. V., of the book A. D. Lewis appears as editor, so that, instead of Mr. Lewis running the *Stud Book* between May, when the Secretary-Treasurer of the A. K. C. received his two checks, and September, when he went away, Mr. Lewis, apparently, edited the book from April 1 to Dec. 31, 1888, and if he did not do so why does his name appear as editor in these three parts, which appeared, as a rule, one or two weeks after the date of the closing of their respective entries. Your correspondent "J. W." says that "three of Mr. Peshall's main allegations are conclusively contradicted," and one by reason of the entries in the Secretary-Treasurer's bank book, *probation est*. Mr. Peshall, who was chairman of the *Stud Book* Committee at the time Mr. A. D. Lewis edited the *Stud Book* (three or nine months), has stated the contract the *Stud Book* Committee made with Mr. Lewis. The Secretary-Treasurer of the A. K. C. tells "J. W." that Mr. Perry and Mr. Lewis will tell him there was no such arrangement. Will "J. W." tell his readers the deposits appearing in the bank book he examined between April 1 and Dec. 31, 1888, or the deposits made during the time Mr. A. D. Lewis was running the *Stud Book*, as they will tend, I believe, to settle the question relative to Mr. A. D. Lewis's connection with that book.

JERSEY CITY, N. J., July 10.

ENGLISH VS. AMERICAN BEAGLES.

MAYHEW, Lacy, "Namquoit" and the editor of the *English Stock-Keeper*. Now, gentlemen, I protest it isn't fair for three Englishmen and an American to "jump onto" one poor Irishman, because he stated what he thought was true about the beagles of England and America. When I wrote the article I intended to do like the tramp who put a match to a barn and then ran away shouting, "Let the people interested put out the fire." But as none of the members of the Beagle Club will come to my rescue and stick up for their standard, *i. e.*, a beagle as a miniature foxhound, I will give another instalment of my little piece and then drop the matter for good.

For fear that your readers may suppose that all this discussion is either a masked battery loaded to kill somebody else's dog or else one of those harmless bombs that are continually going off in the dog press to boom certain lots of beagles, I will state that I am not a member of a beagle club, never judged in the ring in my life and never used the reading columns of the dog papers to advertise without cost any dog I owned.

I have bred beagles since 1876, but have been one of those short-sighted fellows who insist upon a beagle doing field work, no matter how likely he was to make a sawdust hero. Notwithstanding all this, I have an admiration for the type that General Rowett brought over here, and I want to blow my little whistle in protest against the indiscriminate awarding of prizes to the foxhound or bloodhound types which has been going on since the importation of Bannerman. Both cannot be correct, let the breeders decide which is preferred and decisions be given accordingly.

"Namquoit" in your issue of June 26 says, "The beagles I saw in England last summer were miniature foxhounds." Furthermore he states, "Hibernia" calls [English] Ringwood's head a caricature of a bloodhound. Barring the long ears and a slight throatiness, I consider it an excellent ideal of the American beagle."

I am aware that beagles of the type of Ringwood have been winning in this country, but if the portrait published resembles in head an English foxhound, then I have never seen one either in the flesh or in black and white. If it does not resemble a foxhound, then the decisions given by the judges have been wrong according to the Beagle Club's standard, which is supposed to be modeled on the type of the Rowett beagles.

Mr. Lacy shows me very plainly that I was wrong in regarding to the number of beagle packs in England. As the in-

formation I gave came from the paper he edits, he certainly will consider such an error excusable.

Mr. Lacy says, "In the first place, if Little Duke was indeed like the picture represented, we should call him rather like a small harrier, as he should be (italics mine) than a foxhound, but he is not." The picture of Little Duke, I'll admit, resembles the original about as much as the Little Duke of to-day looks like the Little Duke of three years ago. This engraving was selected especially to set the ball rolling in exactly the direction it is going. My object was to get a picture as much in contrast to Ringwood as possible and thereby create discussion.

To quote further: "He [Ringwood] has really, barring the square muzzle, a great look of the dog Ringwood shown in the picture * * *. Then again as to type, we understand from Mr. Mayhew, who knows the dog Ringwood, that barring size Blue Bell II. is almost a counterpart of her sire." I fall to see even the slightest resemblance between the two pictures, except in body and legs, and all breeds of hounds (except the modern bloodhound) have these in common.

And further: "Mr. Schellhass, when judging the special at New York for best beagle in show, was quoted as saying that had Blue Bell II. been in condition, that is harder and firmer in muscle and condition, he would have placed her over anything in the show, as he considered her, barring muzzle, a little model."

Of course Mr. Schellhass knows his business, but if Blue Bell II. is a *fac-simile* of Ringwood and the latter a counterpart of his picture, I cannot see how Mr. S. can recommend to the breeders of this country such a type of head as his Trailer, etc., which is entirely distinct from Blue Bell II. If head is not to count, then some of the common rabbit dogs to be met with everywhere should win on the bench, because many of them have the perfection of body and feet, although sadly lacking in head and ear properties.

Mr. Mayhew and I agree at least on one point, and that is that Blue Bell II. is not a miniature foxhound in head. The head being the key of the type to all hound breeds at least, consequently the little bitch cannot be a Liliputian foxhound at all.

The beagle breeders have several authorities to be guided by, and they can take their choice:

"Namquoit" says Ringwood, barring long ears and throatiness, is an excellent ideal of the American beagle.

Mr. Lacy informs us that a beagle should be a small harrier.

Mr. Mayhew believes a beagle ought to be a miniature southern hound (bloodhound).

The *English Stock-Keeper* says (see reprint in *FOREST AND STREAM* June 5): "Without going extensively into the subject of the different strains and their origin, which is one of the most intricate tasks of doggy lore, we limit ourselves to-day to mentioning that, making a broad distinction, there are two kinds of beagles, viz., the north country beagle, of whom the 'County Squire,' in his observations on hunting, says: 'He is nimble and vigorous; he pursues the hare with impetuosity, gives her no time to double, and if the scent lies high, will easily run down two brace before dinner;' and the southern beagle, a diminutive type of the old southern hound, and of this variety the subject of our illustration is a splendid specimen."

The Beagle Club's standard emphatically states that a beagle should be a miniature foxhound.

And our judges give their decisions in favor of all three types (foxhound, harrier and bloodhound), in the same class.

Any beagle breeder who will cut out the coupon below and write on it a correct answer of the problem, "Which is the correct type of beagle," will be entitled to a year's subscription to the *FOREST AND STREAM*. Any one can guess as often as he or she likes, but answers must be written on the printed coupon.

The judges will be Messrs. Mayhew, Lacy, "Namquoit" and "Hibernia," and no prize will be awarded until a unanimous decision is arrived at by these four.

BEAGLE PUZZLE.

Which is the correct type of beagle, foxhound, bloodhound or harrier?

Answer.....

Name.....

Address.....

But joking aside. It does not matter a picayune to me whether the type is bloodhound, harrier or foxhound, only set up one standard, breed to it, and judge by it. My experience as to the practical field work of the bloodhound and foxhound types is as follows: The former is almost too keen scented and will follow too old a scent; he has a more melodious yodel but is a potterer and a babbler; that is, he will run a few yards, stop and give tongue, and then run on, and is apt to cry on a cold trail. For hunting where a rabbit (American hare) is likely to hole, he is much preferable to the foxhound type, as the latter is not apt in such a case to stick very long, but will go off after fresh quarry. The foxhound type has more grit and staying qualities, is a better starter and not so afraid of briars. While not so musical, he seldom gives much tongue except after a rabbit (American hare) has been jumped.

Messrs. Mayhew and Lacy both consider me wrong in stating that our so-called rabbit (*Lepus* something) is better suited for the powers of the beagle than the European hare. It is not probable I can convince them of the truth of my assertion by printed arguments, but I know I can by practical observation. It may appear strange to them, but I can any time after Nov. 1 show them a pack of beagles on both the European and American hares. The ancestors of the former came from Germany, but they are known as the English hare, and are the same species. There is a sufficient number of them running wild to be a curse to beagle owners and nurserymen in my vicinity. If the gentlemen will take a day off in the proper season, and "gird up their loins," I will furnish beagles, hares of both sorts, and a hill from which they can "stand and watch the little beauties circling round." They will, however, have to take a powerful spy glass to see the English hare circle, because he generally makes that geometrical figure about ten miles in circumference. If they then still believe that the English hare is as suitable quarry as his smaller and less fleet American kinsman for the beagle (no matter what the type is), then I'll not alter my opinion, but keep forever mum on the subject.

HIBERNIA.

FOX-TERRIER COURSING CLUB.—Omaha, July 12. —*Editor Forest and Stream*: It is a settled fact that Omaha has succeeded in finding enough members to start a club for the purpose of coursing wild rabbits with fox-terriers, and on Wednesday evening of next week such an organization will be consummated. There are enough fox-terriers here to start a sixteen dog course, or eight pairs, for there must be four winners to run the final course. The projectors, and they consist of a half dozen of Omaha's best known citizens, are very anxious to have all who own, or expect to own, fox-terrier dogs, to join the club, so that a good start may be made early in September, when rabbits, both jacks and the common hare, will be plentiful.—GRIS.

DOGS OF THE DAY.

GENERAL MACIVER is a Scotchman who has the bump of combativeness so enlarged as to have a continual ache to be using his sword, either on his own account or on that of some other person or persons. He has had the story of his life told in a book entitled, "Under Fourteen Flags," which is full of hair-breadth escapes, from the period of the Indian Mutiny down to the Servian War. The general, however, would be little to the readers of *FOREST AND STREAM* did he not own a dog, by name Brankie. I saw a brief notice of the existence of owner and animal in *FOREST AND STREAM* a few weeks ago, which does the latter scant justice. Brankie is a very good dog, indeed, in fact, allowing for not seeing the dogs together, I think he would give Maney Trefoil a hard rub. He is the same style of dog, only a little lighter and brighter in color, and a judge would not put them far apart in the prize list. Brankie is good enough bred for anything, being by Metchley Wonder out of Miss Charlemagne, and was bred by Lady Charles Innes Ker. I fear we will not get much chance to see Brankie at our shows, for when General Maciver was in Philadelphia a few days ago he was talking about starting for South America. Ever since reading his life I have been scanning South America telegrams to see where the war is going to be.

Has any one tried Mossine for dogs? It is a fluid preparation said to be made from dulse, Irish moss and various other things. To the human skin and scalp it is a blessing this warm weather, and I doubt not it is all the labels claim as a dog wash.

The dog Millais-nium is announced in England. It is a freak of the kennel director of the *Fanciers' Gazette* whereby we are to have no more distemper at shows. Owners are never to go about without copies of the revised edition in their pockets, nor to show a puppy that has had distemper within two months, and benches are to be passed through the fire of disinfection seven times. No judge is to be employed who reports for a rival journal. I have not yet received a copy of the by-laws, but it is rumored that the son of a gentleman will open proceedings with prayer, and on Friday night the son of another ten-months-old gentleman will doubtless pronounce the benediction. No more bogus pedigrees, no judging dogs one has recently sold, nor sending crooked-legged Irish terriers to foreigners, nor sending mongrels abroad disguised under the name of Basset hounds after this. What happy times are in store for us all.

The Spaniel Club committee proposes to make some important changes which it is believed will still further strengthen the pioneer specialty club of America. One change likely to be put in operation will be that in place of offering to give clubs from \$15 to \$25 for the adoption of one of the club classifications, specials for local exhibitors will form a feature, the local exhibitors to be members of the Spaniel Club. By local exhibitors is meant residents of States within hail of the city of the show, not residents of the city itself. This plan, in addition to specials open to all members, should be the means of encouraging entries and increasing the club membership. The more members the more specials and *vice versa*, the committee thinks, more specials, more members. Some people have at times said I run the Spaniel Club. I wish I could lay claim to such an honor, but I am only one of five to do my share toward making it a success. Do you ever hear anything about changes in the Spaniel Club, or of working up a lot of I tickle you, you tickle me judges in fixing up prizes, as is more than hinted at in connection with some other clubs? Just at this time we are hearing a good deal about specialty judges, criticism being based on an article in the *English Kennel Gazette*. The way the Spaniel Club does is this: It sends a blank slip to all of its members asking them to name the judges they consider the most competent. The number of judges to be elected is specified, and there is no restriction whatever as to club members being named. The best judges are what the club needs, and it is in the hands of the members to say who they are. This system of doing all for the best interests of all has always been the method of the American Spaniel Club. Hence its success.

The committee believing that a change in the classification is desirable has in like manner sent out a request to all members to offer their suggestions. If any non-members would like to make a suggestion it will be perfectly proper for him to do so. Communications should be addressed to the secretary, Mr. George H. Whitehead, Trenton, N. J.

J. W.

PHILADELPHIA KENNEL CLUB DERBY.

THERE are eighteen entries for the Derby of the Philadelphia Kennel Club, eleven English setters, one Irish setter and six pointers. All with the exception of one pointer were whelped in 1889.

ENGLISH SETTERS.

ALBERT'S DUCHESS (Dr. John A. Hartman, Latrobe), white, black and tan bitch, Feb. 14 (Warwick Albert—Princess Belton).

BEVERLY (Francis G. Taylor, Philadelphia), black, white and tan dog, February (Roi d'Or—Mildred).

BUSTER (Col. B. Ridgway, Germantown), black, white and tan dog, March (King Noble—Cricke).

CLEMENTINE (L. Shuster, Jr., Philadelphia), black, white and tan bitch, Oct. 2 (Ezra Noble—Cornelia G.).

JEAN (J. B. Ellison, Philadelphia), black, white and tan bitch, Oct. 8 (Fritz—Hazel).

LARRY NOBLE (H. Fitzgerald, Philadelphia), orange and white dog, Oct. 2 (Ezra Noble—Cornelia G.).

LUCY NOBLE (W. B. Smith, Haverford), black, white and tan bitch (Count Noble—Alphonse).

MADGE (George Fox, Torresdale), bitch, Sept. 12 (Gun—Victoria).

OLD SNEED (L. Shuster, Jr., Philadelphia), black and white dog, Oct. 2 (Ezra Noble—Cornelia G.).

PEG WOFFINGTON (Francis S. Brown, Philadelphia), black, white and tan bitch, March 17 (Ben Hill—Nora).

UNNAMED (G. Schreiber, Philadelphia), orange and white dog, Oct. 2 (Ezra Noble—Cornelia G.).

IRISH SETTER.

SPARKLE (Dr. G. G. Davis, Philadelphia) bitch, April 30 (Desmond II.—Lorraine).

POINTERS.

BEAUTY SPOT (J. W. M. Cardiza, Philadelphia), liver and white bitch, July 4 (Half and Half—Favette).

BESSIE ITEM (H. Fitzgerald, Philadelphia), orange and white bitch, January 19, 1890 (Gambol—Mollie R.).

BOB TOLAND (John B. Ellison, Philadelphia), dog, Oct. 12 (Victor the Blue Stocking—Charlotte Corday).

DUCHESS OF HESSEN (J. H. Winslow, Philadelphia), liver and white bitch, July (Duke of Hesse—Duchess of Waterloo).

JACK ELLISON (J. H. Winslow, Philadelphia), liver and white dog, Oct. 12 (Victor the Blue Stocking—Charlotte Corday).

LONDON (George Fox, Torresdale), dog, October (Beaumont—).

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by *FOREST AND STREAM*.

DOG TALK.

MR. ARTHUR FRICKETT, E. H. Moore's efficient kennelman, has purchased for the Melrose Kennels the well-known crack St. Bernard dog Alton (ch. Plinlimmon—ch. Queen Jura). Alton is an excellently-marked, well-shaded dog with a most excellent head. He has won first and cup at Sheffield, Darlington, Windsor and Crystal Palace, and if I mistake not will rub Hesper close for championship honors in the States.

Nero III., the sire of the world's champion St. Bernard, Sir Bedivere, is reported as being very near his goal and his owner expects to be obliged to report his death very soon.

Although I only landed at 11:30 this A. M. I could not resist the temptation to take a run over to Wallasey, just across the Mersey from Liverpool, and visit the kennels of Mr. T. H. Green. I found Sir Bedivere in grand form, and while resting in the house I saw what is undoubtedly the largest and finest collection of prizes ever won by one dog, namely, the magnificent Halsey Trophy, which Sir Bedivere must win twice more to claim as his own; the Deakin Challenge Cup, which he has won twice; a magnificent silver collar, three gold medals and nine smaller cups. Mr. Green's kennels also contain the excellent smooth coat Baron Wallace, a full brother of Sir Bedivere. Another full brother by a still later litter, only eight months old, promises to rival the champion; he has a grand head and expression, great depth of muzzle, good markings and shadings, excellent bone and great character. Two bitches of the same litter, a rough and a smooth, also promise remarkably well. The smooth one in particular will undoubtedly be heard from this coming season if shown. In brood bitches Mr. Green has quite a kennel. Bena, the dam of Sir Bedivere, will soon be bred to Keeper; Gitana, full sister to Sir Bedivere, a 30in. bitch of great body, fair in head, but lacking a trifle in muzzle, should prove a great brood bitch; she is in whelp to Keeper. Lady Bernie (ch. Boniface—Item Queen), is another good bodied one, with excellent bone, good coat and of a serviceable size, weighing 155 to 160lbs. Mr. Green is also boarding for Mr. Halsey the stud dog Jim Blaine (Bryan—Martha Washington, both in America). He is an excellent headed, typical dog, straight and strong, but rather on the small side, though he doubtless weighs 180lbs., and the brindle bitch Griselda, by Valentine, in whelp to Jim Blaine.

The Belfast entries number 455.

The new departure in canine literature, the *Canine World*, comes out this week with 4 extra pages. Among many other new items I notice one stating that 6 "Russian greyhound" puppies by Krlut—Elsie were shipped to Mr. W. Wade of Hulton, Pa., from Swansea last week.

I visited Mr. Smith's kennels to-day, at Leeds, and gave Alton a careful examination. He is a dog with a great deal of character, massive skull and great depth of muzzle, dense shadings, narrow blaze, ears of good size and color, coat a bright rich orange and perfectly flat, bone excellent, straight and strong in front and fairly well bent behind. In short, a "clinker." Hesper is his only rival; he sails from Liverpool Thursday, July 10. Alton was bred by Mrs. Halliwell, and whelped April, 1887. He is by champion Plinlimmon and out of champion Queen Jura. He has been shown nine times, winning first in his class each time, and taking cups from such noted dogs as champion Guide, Prince Regent, Lord Bute, Angelo, Young Wallace and others.

Mr. Sydney Smith's grand kennel of rough coats are worthy of a brief description. Nearly all of them are well known in America, and some of them are liable to cross the pond at any time. All of the dogs have done a lot of winning here. Mayor of Leeds, by Plinlimmon out of Lady Adelaide, and Aristocrat, his litter brother, are both clinkers, excellent in skull, muzzle, expression and markings, and strong on the limbs. Aristocrat, I judge, is a little the better of the two. Young Wallace, by Pilgrim out of Bessie II., a brother to Plinlimmon, of a later litter, has much the same type of head as Plinlimmon, with great depth of muzzle and good in length of body and depth of chest, not quite right behind but not badly off in that respect.

Young Plinlimmon, by ch. Plinlimmon ex Nora of Addiewell, is a trifle large in ear, not quite as strong in muzzle or as good in coat, but typical in head and expression, good substance and a good mover.

Scottish Prince, a son of Prince Regent, is at 13 months the best St. Bernard I have seen yet; he stands nearly 35in. and has plenty of bone and substance, but although one can find but few faults with his body and limbs, his skull and muzzle are marvelous. Fancy a muzzle on a 13 months pup that is deeper and full as square at the end as Hesper's. He is also very massive in skull and grand below the eye. He shows great character, and if England has a more promising youngster, I have yet to see him. Mr. Smith purchased a very promising bitch puppy at the late Leeds show, where she won first in novice and first 12 months puppy class. She is by Hesper out of Lady Abyss. She shows great character and great depth of muzzle, stands 31½in. at shoulders, but I will describe her later, as I understand she may soon be purchased for an American breeder. The most noticeable feature of Mr. Smith's kennel is the remarkable uniformity in type and expression, not a faulty eye in the whole lot. Besides those I have described, we saw Lady Flora II., a brindle and white—always in the money, and a nameless bitch by Young Wallace that is much above the ordinary.

ENGLAND.

THE KINGSTON SHOW.

THE Kingston Kennel Club's prize list for their bench show of dogs to be held at Kingston, Ont., September 2d, 3d, and 4th, is now ready for distribution and will be mailed on application to the secretary. We are receiving every encouragement from breeders and owners from all directions and expect to make this show a great success. The prizes are very liberal and everything is being done to encourage entries. Mr. Floyd Vail, of New York, will judge setters and pointers, and J. Otis Fellows all other breeds. As Kingston is so convenient and easy of access from New York State, we trust our American cousins will send their canine pets over the line—especially as we, with the desire to give our show an international character, have engaged real live Yankee judges. C. H. CORBETT, Sec'y and Supt. KINGSTON, Ont.

THE TORONTO DOG SHOW.

TORONTO, July 10.—*Editor Forest and Stream:* The premium list of the Industrial Exhibition Association's Grand Second International Bench Show of Dogs, to be held in the city of Toronto, September 15 to 19, are now ready and can be procured by applying to the secretary, Mr. C. A. Stone, Industrial Exhibition Office, Toronto.

The Association are presenting a very liberal list consisting of cash and silver and bronze medals.

There are one hundred different classes, all cash prizes, composed of challenge, open, novice and puppy classes, besides cash prizes for the best kennels to consist of four or more of the following breeds: St. Bernards, great Danes, greyhounds, foxhounds, pointers, English, Irish and Gordon setters, collies, spaniels and fox-terriers, and bronze medals for the best kennels owned in Canada, and silver and bronze medals for the best dog or bitch of the following breeds: Mastiffs, St. Bernards, great Danes, greyhounds, pointers,

English, Irish and Gordon setters, field, cocker, Clumber and Sussex spaniels, collies, fox, black and tan, Irish, bull and Bedlington terriers, pugs, beagles and dachshunde.

Mr. F. G. Verley donates a special valued at \$25 for the best English setter dog or bitch bred in America.

In addition to the above the Association are donating two specials, viz., \$35 in cash to the party or gentleman making the largest number of entries at the show, not less than ten, and \$15 for the second largest number of entries, not less than eight.

C. A. STONE, Sec'y and Supt.

ST. BERNARD IMPORTATIONS.

MELROSE, Mass., July 14.—*Editor Forest and Stream:* I have purchased the crack rough-coated St. Bernard dog Alton. Arthur Trickett, my head kennel man, left Liverpool Thursday, July 10, on the Cunard steamer Scythia with him, and will arrive home Saturday. He is the best rough dog living, bar Sir Bedivere, and he runs him very close. Arthur has also purchased a fine rough-coated St. Bernard bitch and is leaving her there to be bred.—E. H. MOORE.

MELROSE, Mass.—*Editor Forest and Stream:* I am just in receipt of another rough-coated St. Bernard dog, Lord Dante, from England, sent me by Mr. Geo. Booth, of Hull. He was represented to me by letter as a little on the small side, but on his arrival last Saturday I measured him up and I am happily surprised to find him such a grand dog. It is true he is not as tall as some, standing only 32in. high, and not as heavy, weighing on arrival only 140lbs., but his skull measures 26½in. and muzzle 16½in. Such limbs I never saw on but one dog, Hesper; they are very massive for such a sized dog. His coat is a perfectly flat, magnificent orange-tawny, with absolutely correct white markings and black shadings; his ears and tail are carried perfectly. In fact, I consider him a thoroughly typical St. Bernard. He is only 16 months old, and is by Prince Regent (champion Plinlimmon—Miss Meg) and out of Lady St. Gothard (St. Gothard III.—Saffron).—E. B. SEARS, Wyoming Kennels.

THE ENGLISH SETTER CLUB.—We are pleased to state that the two English setter clubs have consolidated. The conference committee of the two clubs came to an amicable arrangement to unite as one club to be known as the English Setter Club. All members of each club are members of the new club, and all the funds will go into the common treasury.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Black Wood Kennels. By Christian Pfeleiderer, New York, for his kennels of St. Bernards.

BRED.

Prepared Blanks sent free on application.

June 11.—Hornell Silk. Shokoquon Kennels' (Burlington, Ia.) cocker spaniel bitch, June 12. (Nigger—Bonny II.) to J. Otis Fellows' Hornell Silk, Mass.

Yorktown Fussy—Sam Weller, Jr. Yorktown Kennels' (Buffalo, N. Y.) fox-terrier bitch Yorktown Fussy (Ebor Splash—Barmad) to their Sam Weller, Jr. (Sam Weller—Topsy Brant), June 13.

Lady—Sam Weller, Jr. Mr. Cox's (Buffalo, N. Y.) fox-terrier bitch Lady to Yorktown Kennels' Sam Weller, Jr. (Sam Weller—Topsy Brant), July 7.

Bradford Lill—Champion Bradford Harry. P. H. Coombs's (Bogor, Md.) Scotch terrier bitch Bradford Lill (Tinkle—Judy) to his champion Bradford Harry (Crawshaw's Bruce—Beal's Lady), July 6.

WHEELS.

Prepared Blanks sent free on application.

Stella. Shokoquon Kennels' (Burlington, Ia.) bitch Stella (Nero II.—Flora II.), May 19, eight (five dogs), by Maenner's Pedro (Mentor II.—Minerva). One bitch since dead.

Alice Grey. Rosecroft Kennels' (Birmingham, Conn.) English setter bitch Alice Grey (Yale Belton—Forest Dora), July 10, nine (five dogs), by their Don Quixote. Two bitches dead.

Bizreena. F. L. Cheney's (Ida, Mass.) Irish setter bitch Bizreena (Nimrod—Bizarrah), July 6, six (two dogs), by his Henry Shamrock (Muskerry—Avoca).

Cleopatra. William F. Murphy's (New Haven, Conn.) cocker spaniel bitch Cleopatra (champion Black Prince—Zona), July 9, six (two dogs), by A. Wellman's Dixie (champion Black Pete—Miss Nance).

Daisy. J. M. Thomas's (Hudson, N. Y.) fox-terrier bitch Daisy, July 7, three bitches, by C. L. Wilton's Regent Vox.

Romach. Lawrence Timpon's (Red Hook, N. Y.) Skye terrier bitch Romach (champion Kingston Roy—Lulu), July 5, four (two dogs), by James Lenox Banks's Dundee (Donald—Romach).

SALES.

Prepared Blanks sent free on application.

Minka. Light brindle great Dane bitch, whelped Nov. 22, 1889, by Hanno out of Stella, by Shokoquon Kennels, Burlington, Ia., to J. W. Heitz, same place.

June 11. Black Newfoundland bitch, whelped November, 1888, by Phelan's Major out of June I., by Shokoquon Kennels, Burlington, Ia., to K. P. Gohlmann, Charlotte, Ia.

Hectores. Orange and white rough-coated St. Bernard bitch, by Brunswick out of Gertrude, by Shokoquon Kennels, Burlington, Ia., to Nashville Kennels, Nashville, Tenn.

Queen E. Orange and white St. Bernard bitch, whelped June 13, 1889, by Eiger out of June, by Shokoquon Kennels, Burlington, Ia., to W. Roach, Park Ridge, Ill.

Bruno. Tawny and white rough-coated St. Bernard dog, whelped June 13, 1889, by Eiger out of June, by Shokoquon Kennels, Burlington, Ia., to O. Kayser, St. Joseph, Mo.

Pido—June 11. Bitch, by Black cocker spaniel dogs, whelped Nov. 5, 1889, by Shokoquon Kennels, Burlington, Ia., one each to Minut T. Wright, Des Moines, Ia.; J. C. King, Colorado Springs, Col.; and E. Leder, Chicago, Ill.

Pedro—Stella whelps. Great Danes, whelped May 19, 1890, four dogs and one bitch, color fawn and brindle, by Shokoquon Kennels, Burlington, Ia., to H. E. Wright, Kansas City, Mo., and one dark brindle bitch, J. W. Heitz, Burlington, Ia.

Bello—Hectores whelps. Orange brindle and white rough-coated St. Bernard bitch, whelped Jan. 5, 1890, by Shokoquon Kennels, Burlington, Ia., to F. S. Foster, Beloit, Wis.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

X.—To exercise my beagles I run rabbits in the evening. A beagle dog 14 months old, very nervous, has been affected in this way: After running a few minutes he staggers, falls and struggles on the ground, foams at the mouth, slowly recovers and in ten minutes is ready to hunt again. Has had three attacks in a week for the last three days. What shall I do? Will he be all right to hunt in cold weather? Are the attacks dangerous? Ans. Cause is obesity or stoppage of the bowels or worms. For the first the treatment is exercise and depletion. For the second syrup of buckthorn in tablespoon doses. For the third aca nut in 30 grain doses. Give 5 drops of Fowler's solution twice daily in the food; also 5 grain pill of quinine each day for a week.

T. P. Germantown, Pa.—I have a fox-terrier pup three months old, who on no account will get up after which he dragged his hindquarters and with great difficulty could use them. I merely noticed a very slight weakness before the fit. When he sits or lies down he has difficulty in getting on his legs again, his hindquarters appearing very weak. When up he walks with difficulty, in fact limping at times. I have noticed his hindquarters, when he has turned around sharply, sink under him. There appears to be no pain, having this trouble with his legs. He appears to be in good health. Do you think this is muscular rheumatism produced by too high feedings? I have been bathing him with camphor and soap liniment. Ans. It may be a sequel to distemper, or possibly the dog has worms. Satisfy yourself as to the latter by purging the dog thoroughly and watching the stool. Regular rubbing along the lower spine with a mixture of chloroform and turpentine. The application of electricity and the following pill will benefit.

R. Ferri et strychnin, citrat. ss.
Fit pil No. 12. Sig. Give one pill concealed in a bit of meat three times daily.

Rifle and Trap Shooting.

RANGE AND GALLERY.

OUR MARKSMEN IN GERMANY.

BERLIN, July 8.—This morning twenty-five members of the Independent Schuetzen boarded a special train here and departed for Friedrichshagen on the special invitation of Prince Bismarck. The beautiful gardens of the ex-Chancellor's residence were decorated with flags, the Stars and Stripes being conspicuous over the door of the mansion. A fine old gentleman, looking the picture of health, was at the station to receive and welcome the guests. He shook hands and spoke to every one of the riflemen. The party comprised Messrs. Diehl, William Weber, Hermann Weber, Ehret, Eisenhauer, Hopfner, Koerber, Koster, Kruse, G. Krauss, Loewer, Lebing, H. Mahrenholz, A. Mahrenholz, Moas, Splittdorf, Stein, Weiler, Wintermeyer, Wegeler and Waldschmidt. Chief Forester Lange conducted them to the castle, where Prince Bismarck shook hands with each one. William Weber expressed the thanks of the party for the privilege given them of visiting the great man to whom Germany owed her unity. Thousands of his associates, he said, would envy his standing at Friedrichshagen, and the day would be the pleasantest memory they would carry back to America. The Iron Prince was dressed as usual, with slouch hat and half-military frock coat. He was accompanied by two great boar hounds. He walked with a firm upright military step. There was no sign of decay in his voice, which was strong and hearty, and he was especially pleased at the opportunity to show kindness to Americans and to let them see since his retirement led the way to the mansion, talking freely with the New Yorkers all the way.

When the guests arrived at the house they found a sumptuous lunch prepared. Bismarck took the head of the table and insisted that all feel at home. William Weber sat on Bismarck's right, and Commercial Councillor (Vogeler, as an honorary member of the Independent Schuetzen Club) on his left. The guests proceeded to converse indiscriminately, asked all kinds of questions, avoided politics, showed great interest in American social topics and referred to the wonderful progress made by the United States, how many great men and women had been produced there and predicted a great future for the country. He spoke of the excellent relations existing between the United States and Germany and that he still took a great interest in what was going on in that very day will draw the feeling of friendship closer. What most interested him was the doings of the riflemen. He alluded to their wonderful precision and remarked to their excellent bearing, accoutrements and discipline.

The lunch lasted three hours. Champagne, Rhine wine and beer flowed freely. The Prince was in the happiest vein and kept up a brilliant flow of conversation, conversation, and hoped that every day will draw the feeling of friendship closer. What most interested him was the doings of the riflemen. He alluded to their wonderful precision and remarked to their excellent bearing, accoutrements and discipline.

After the repast Prince Bismarck smoked his favorite pipe, while the guests were regaled with choice cigars. Yesterday the Prince had his photograph taken on horseback, and he promised to give Mr. Weber one of his pictures when they are completed. He was visiting the estate and started on their return to Berlin at 5 o'clock.

In the rifle contests here to-day Messrs. Busse, Krauss and Schroeder, of New York, won cups.

The American teams feel highly honored at their splendid reception. They cannot speak too highly of the courtesy and hospitality of the ex-Chancellor. They returned to Berlin after a delightful and most pleasant trip, and in spite of the weather, charmed with all they had heard and done and had a most interesting time.

BERLIN, July 9.—Things are not going well with the American riflemen here. Jealousy has taken root. The discontent has been smoldering for some time. The facts have been unattainable till to-day. Foolish expressions of envy made by the St. Louis and San Francisco corps in reference to the action of the New Yorkers caused the trouble.

In all the teams it appears that the New York Independents were from the first considered, rightly or wrongly, as the chiefs of the expedition. So in face of the Berlin civic arrangements they insisted in holding their own. President Weber got himself disliked at the banquet on Independence Day. A large number of city riflemen could not find room to sit in the great Rathhaus and had to be accommodated in a side room, where they conversed in the privacy of such he overheard. He thereupon told them that if they wanted to talk they might go out on the street and do so.

The next cause of trouble was on the day of the feteal entrance into the city, when the Independents kept all the rest waiting fully an hour and then insisted on the right of precedence, Weber leading his corps in advance of the others. Again, on Sunday, in today's shooting, the Independents at the head of the parade through the city, thus making the programme of the civic authorities and of the Central Committee had arranged differently. The last straw was at the Bismarck luncheon on Tuesday, when only the Independents were invited. There is now bitter rivalry, almost amounting to hatred, of the New York Independent Schuetzen Corps. These facts are not yet fully apparent to outsiders, but it is understood partially, and lots of people are talking about it.

The strange attitude taken by the New York Independents causes surprise, because it was supposed that the teams should be on equal footing. Strenuous efforts are being made to patch up the quarrel and to prevent the facts getting into the German papers. Weber and the heads of the other teams refuse to talk beyond making wild contradictory assertions.

In today's shooting, the following named Americans won cups: Messrs. Sieburg, Schroeder, Fickler, Vondohler, Jordan and Miller of New York; Mr. Spaeth, of Cincinnati; Mr. Schick, of St. Louis, and Mr. Koenig, of San Francisco.

The good weather to-day compensated the Schuetzen for their wetting yesterday. The Americans keep up their form. Zimmermann, of New York, won another cup to-day, and Laute, another, and so on. Stein captured a cup and landed another prize for good pistol practice.

Telegrams of congratulations from the Kaiser, the Austrian Kaiser and the Italian King will be made known to-morrow.

BERLIN, July 10.—Wednesday evening was devoted to the Turner's torchlight procession, followed by a grand "Commerz" given by the Berlin Schuetzen. Among those taking cups to-day were Scholke, of Philadelphia, and Radloff, Schmidt, Syburg and Engel, all New Yorkers; Bernhardt, of Philadelphia; Kolbe, of Brooklyn, and Jacoby, of San Francisco, also took prizes, which the Americans have hitherto done out of all proportion to their numbers. Count Balthazar Giobresca won a silver cup.

At the banquet in the Festhalle to-night the Kaiser's telegram was read: "I beg you to thank the assembled Schuetzen for their kind wishes." The King of Italy thanked them for the kind treatment of his subjects.

A party of New York riflemen visited the Central Fire Station to-day. Inspector Krameyer welcomed them and showed them the apparatus.

Mr. Schroeder, of New York, won a prize at the field target to-day, and Mr. Fabarius, of New York, won a prize at the fixed target.

BERLIN, July 11.—Mr. Hermann Weber, president of the German-American riflemen now here, has received a letter from Emperor William thanking the riflemen for the resolutions adopted by them at their banquet in Berlin on July 4, congratulating His Majesty.

In the rifle shooting to-day, Mr. Engle, of New York, won a prize at the field target, and Mr. Drese, of New York, won a prize at the fixed target.

BERLIN, July 12.—The Schuetzenfest ends to-morrow with a grand breakfast. Among the prize winners to-day were Scholke, Fickkaumart and Laute, of New York; Gilmore, of Cincinnati, and Count Zio-Baltade, of Brescia.

BERLIN, July 13.—Herr Diersch presided at a banquet given to-day on the occasion of the closing of the shooting tournament. Bismarck's widow wrote a letter apologizing for his absence, in which he expressed the regret that the national and friendly ties created by the competitions would ever increase in strength. The sentiment was received with cheers.

After the reading of greetings from various sovereigns and princes and remarks by delegates from Austria, Hungary, and Italy, Mr. Simon Wolf, of Washington City, formerly American Consul General, made an address, in which he dwelt upon the inseparable bond that united the people of America and the Germans of Germany in a common love for the Fatherland.

At the close of the festivities the presiding officer expressed the hope that he would see all the visitors at the next tournament. The Emperor's Cup was then presented to the winner, Herr Musch, of Berlin. On the occasion of the presentation, prizes in to-day's contest were won by Messrs. Zimmermann, Krameyer and Jacob Scherf, of New York, and Jvarels of Philadelphia.

BERLIN, July 14. The American riflemen to-day started for

Cologne. Their departure was marked by an ovation from numerous friends.

COLOGNE, July 15.—The American riflemen arrived here at 7:50 o'clock this morning from Berlin, and proceeded to Königswinter and Siegenburg. They were received at Königswinter by the Burgomaster and a large number of the residents, headed by a band. The Burgomaster made an address welcoming the riflemen to the town, and a salute was fired in their honor.

BERLIN, July 15.—The Independent New York Shooting Corps visited Drachenburg and Drachenfels to-day. They dined at the Berliner Hof.

ST. LOUIS, Mo., July 12.—Below will be found the scores of the St. Louis Pistol Club made at its last shoot. 125yds. standard American target:

P. Morstadt.....	7	9	9	9	9	10	10	10	8-80
S. Dornin.....	9	9	9	9	9	8	8	8	8-87
W. Bauer.....	7	10	9	9	9	9	7	10	6-86
S. Alexander.....	10	7	10	10	10	8	8	7	7-85

D. B. Lefever.....	9	0	3	0	3	4	5	3	0-27

The next meeting for practice will be on Friday afternoon, 25.—D. B. LEFEVER, Sec'y.

NEW YORK, July 14, 1890.—The first of the series of sharpshooters' matches of the N. R. A. was shot at Creedmoor on Saturday, July 12. The weather was fine but a strong 5 o'clock wind proved very trying to the competitors. The following succeeded in winning their silver bars by scoring 42 and over:

*C. W. Simmons, Co. A, 23d reg't.....	24	25	49
*R. M. Kalkoff, Co. H, 7th reg't.....	22	23	45
*J. W. Halstead, Co. C, 7th reg't.....	22	21	43
*R. M. Dunn, Co. G, 7th reg't.....	24	20	44
*W. H. Palmer, 5th, 7th reg't.....	24	20	44
*W. A. Bayer, Co. D, 23d reg't.....	20	23	43
*W. N. Bayer, Co. C, 7th reg't.....	23	20	43
G. C. Wessels, Co. C, 7th reg't.....	24	19	43
G. L. Hoffman, Co. H, 7th reg't.....	24	19	43
E. S. Spink, Co. F, 23d reg't.....	21	21	42
S. Francis, 68th reg't.....	23	19	42
H. Melville, Co. B, 7th reg't.....	23	19	42

*Winners of cash prizes. Next match July 26.—J. MANZ, JR., Assistant Sec'y, N. R. A.

CREEDMOOR DATES.—Qualification and Marksmen's Badge matches will be shot at Creedmoor on Saturdays, July 19, Aug. 2 and 16, and Sept. 1. The Sharpshooters' Match will be on for Saturdays July 12 and 26, Aug. 3, 23, 30.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

July 15-17.—Saratoga Gun Club Tournament, at Saratoga Springs, N. Y., \$1,500 guaranteed. All money prizes, no merchandise. W. A. Coster, Sec'y.

July 22-24.—First Annual Tournament of the Central City Sportsmen's Association, at Jackson, Mich., \$1,000 guaranteed; \$400 extra in merchandise. H. G. Sutton, Manager.

Aug. 6-8.—Onondaga County Sportsmen's Tournament, at Syracuse, N. Y. Guaranteed purses, all cash.

Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa. Sept. 1-2.—Hackettstown, N. J., Gun Club Shoot, Labor Day, Sept. 1, at targets; Sept. 2 at live birds. For programme address E. Richter, Sec'y.

Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to all. World Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse, Wm. E. Limberg, Sec'y.

EL PASO.

EL PASO, Tex., July 10.—The first summer tournament of the International Gun Club was held July 8 and 9. The days were perfect and more good scores ought to have been made, but as our club is young, having been organized only since April, we consider we did fairly well. As visitors we had Gillet, Boxter, Hornbeck, Rooney and Van Sickle, from Alpine, Tex.; and Chebott from San Antonio, Tex. All matches at singles were shot from five traps under the rapid firing system, and everything worked as smoothly as clockwork, every one declaring they had never seen a finer arrangement. Mr. J. R. Smith carried off the smoking set for best average first day, and Chas. Layer the gun case and gold badge for best average second day and the two days combined. The targets were Peoria, American Association rules. The day was divided, unless otherwise noted. Match 1, 9 singles, \$1.50 entrance, \$10 added:

Layer.....	11111111-9	Barnett.....	010010100-3
Irvin.....	11110001-5	Freidenbloom.....	10110111-7

THE CORRY TOURNAMENT.

CORRY, Pa.—The Keystone Co. announces its third annual August gathering for a week's shoot and a general good time. Nothing has been left undone to make this the best and most successful of tournaments. Twenty traps will be used, 10 in center and 5 on each side. The 5 traps on the left of main set will be used for the 50 singles, 25 on the right, in addition to the 10, will be used in the main events. Electric bells will be attached to all traps, and the Keystone Patent Wire Pull will be used; and, in fact, everything will be arranged as well as money and time can do it. On the grounds will be erected for all manufacturers wishing to display goods, as near the center as possible, either a tent or building as may be desired, and every effort will be made to give exhibitors a chance to display their goods to the best possible advantage without expense. Traps and grounds will be in readiness and all desiring can participate in open sweeps on Monday, Aug. 18, thus allowing all to become familiar with grounds and rules before the regular shoot begins on Tuesday, the 19th. The programme provides a total of \$1,200 in guaranteed money, \$1,200 in prizes, \$50 each day for averages. Prizes will be 5 in each trap, and "dropping into a nest of duifers" will not be the temptation to the cracks. The list of events reads, with entrance fees:

Tuesday, Aug. 19.—Keystone Trophy Day—10 singles, \$1; 15 singles, \$1.50; 10 singles, \$50 guaranteed, \$2.50; 15 singles, \$75 guaranteed, \$5.00; 15 singles, \$1.50; 20 singles, \$100 guaranteed, \$5; 15 singles, \$1.50; trophy contest, \$50 singles, \$5; 10 singles, \$50 guaranteed, \$2.50; 10 singles, \$1.

Wednesday, Aug. 20.—L. C. Smith trophy day—15 singles, \$1.50; 10 singles, \$1; 10 pairs, \$50 guaranteed, \$2; 10 singles, \$1; 20 singles, \$75 guaranteed, \$4; 15 singles, \$1.50; 25 singles, \$100 guaranteed, \$5; 50 singles, Smith trophy contest, \$5; 10 singles, \$50 guaranteed, \$2.50; 10 singles, \$1.

Thursday, Aug. 21.—Peters Cartridge Company day—15 singles, \$1.50; 10 singles, \$1; 50 guaranteed, \$2.50; 15 singles, \$1.50; 10 singles, \$50 guaranteed, \$2.50; 10 singles, \$1; 10 singles, \$2; team race of 6, 25 singles, \$100 added, \$50 per team; 10 singles, \$1; Peters trophy contest, 50 singles, \$5; 15 singles, \$75 guaranteed, \$5.

Friday, Aug. 22.—15 singles, \$1.50; 10 singles, \$50 guaranteed, \$2.50; 10 singles, \$1; 20 singles, \$75 guaranteed, \$4; 15 singles, \$1.50; 25 singles, \$100 guaranteed, \$5; 15 singles, \$1.50; 15 singles, \$1.50; 10 singles, \$1.

Saturday, Aug. 23.—Clammy day—10 singles, \$1; 10 singles, \$1; individual championship, 100 singles, \$5; team race, must be 80 years old between them, \$10 per team; team race between East and West, 100 singles, for the championship of America, \$50 per team; team race, any two, \$10 per team.

STELTON, Pa., July 5.—The following scores were made here to-day by the Stelton Gun Club, first shot at 10 bluebirds, black-necked traps, 16 and 18yds. rise, A. S. A. rules, prizes div. 50, 30, and 20 per cent:

Sheely11111111-9	Block11111111-7
Wellington11111111-10	Haas11111111-6

"Sullivan"11111111-4	Motter11111111-4
"Wellington"11111111-5	Block11111111-4

THE MARRIED MEN TOOK THE BAKERY.—London, Ont., July 8.—Capt. Redpath's team of single men are the champions. Capt. Gibbs and the married men are elected to buy the 100 loaves of bread, and the same to be presented with the compliments of Mr. Redpath and his team as follows: Fifty loaves to be presented to the Protestant Orphan Home, and fifty loaves to the Catholic Orphan Home, also fifty loaves for the Old Men's Home, won by Mr. Redpath from Mr. Avey, of Avey Bros. Redpath and the single men, who shot like heroes to win the bread for a good cause, will look forward for an acknowledgment of the same through these columns. The excitement in the match ran high with the shooters and also the large crowd of spectators, and it was great pleasure to witness such an interesting match with such good feeling displayed on both sides. The single men were most averse to the expenditure for the bread, but the honor of winning the match was too great a temptation, and they settled down to fine work. Evans and Redpath carried off the honors for the single men and Ward and Avey for the Benedicts. The rapid-firing system was used with great success, the match of 600 shots being fired off in 1 hour and 30 minutes. Mr. W. Dullen acted as scorer and Mr. John Padon, clerk, the official scorer of the London Gun Club, performed his work very satisfactorily. The following was the score, 30 birds per man:

Redpath's Team—Single Men.	Gibbs's Team—Married Men.
Evans.....24	Avey.....20
Tee Kay.....16	Payne.....9
Walker.....8	Brewer.....9
Vernon.....14	Davis.....14
Dennis.....9	Gibbs.....9
Harvey.....8	Ward.....23
Peters.....10	James.....11
Bowman.....15	Davey.....14
Tee Kay.....14	Bowman.....8
Redpath.....21-151	Graham.....9-126

WALNUT HILL, July 9.—To-day was set apart by the shotgun members of the Massachusetts Rifle Association for their annual "ladies' day," and the weather was all that could have been desired for the occasion. The ladies crowded the piazza of the club house and watched the shooting with the utmost interest, never failing to applaud the completion of a particularly brilliant score. At noon an elaborate collation was served, to which there sat down the ladies and gentlemen to the utmost of the dining hall of the club house. The event of the day was the first contest in the "diamond pin match." Mr. Bowker set the pace in this contest and finished an easy winner. He will hold the championship badge until the next match, which is booked for July 23. Diamond pin match, at 20 single Keystone targets and 5 pairs of standard targets:

EASTERN Y. C. ANNUAL REGATTA, JULY 10, 11.

THE Eastern Y. C. proved but little more successful than the New York clubs this year in its annual regatta, the starters being not over numerous and the weather very poor on the day set for the race, Thursday of last week. No New York yachts were entered save Minerva, and the only center was Burgess boats, making it rather a family affair; but in addition to the fact that the entries were so split up as to insure at least a duel in each of the four classes, there were a couple of special features that were not seen in the New York races; a real live schooner race, and the meeting of Minerva with two of the three new Burgess boats built to beat her. The schooner fleet is now confined to Boston, so far as any racing goes, New York being out of it apparently for some time. Boston has now three out of the four racers in the 50ft. class, the fourth, Grayling, being used for cruising only this year. The issue between the new Merlin and the older Sea Fox and Mayflower in new hands is still sufficiently open to excite considerable interest over their first meeting, and had the weather been favorable on the first day a fine race would have been seen. As it was, the short course of the second day hardly made the race what one looks for between such large boats. The chief feature of the racing was of course the meeting between Minerva and the two new Burgess forties, Gossoon and Ventura; and those who went to see this battle were not disappointed by course or weather, both being above the average. The fleet of the Savannah Y. C., including the flagship Medusa, the schooners Miranda and Iroquois, and the cutter Huron, and Minerva, was in the harbor of Marblehead; but besides those on the yachts no visitors were present from New York, a marked contrast to the years '85 and '86. The full list of entries is as follows:

SCHOONERS OVER 70FT. L.W.L., 36 MILES.			
Yacht.	Owner.	Helmsman.	Mens. A1.
Merlin, c. b.	W. J. Forbes.	Capt. Stone.	39.45 0 09

Shark, c. b.	C. Prince.	W. B. Waterhouse.	36.07 0 00
Hawk, c. b.	Robert Dexter.	Owner.	36.07 0 00

All these yachts were designed by Mr. Burgess with the exception of Sea Fox, by Com. Canfield; Fanita, by Mr. Ellsworth; Minerva, by Mr. Rife. Volunteer, Tomahawk and Chiquita did not start on the first day, and in addition Wayward, Milicete and Fanita failed to start on the second day. The regatta programme, which, with many other details of the arrangements, was the work of Mr. E. J. Adams, secretary of the regatta committee, was very complete, giving on the inside page a reproduction of the coast survey chart with the regular courses of the Eastern Y. C., and on the back the code signals for each course, in colors, together with the preparatory and starting flags. The larger triangular course, with 12-mile sides, starting from Half Way Rock and with one angle at Harding's Bell Buoy, was chosen for all classes, the intention being to send all yachts over 40ft. L.W.L. around the triangle, in one direction or the other, according to the wind; those under 40ft. sailing out and back over one or the other legs, 24 miles in all. At the request of the 40ft. class they were sent the shorter course on both days, and after the failure of the schooners to make a race over the triangle Thursday, they were sent over the 24-mile course on the second day. The start was the usual flying one, 5m. preparatory gun and 5m. to

cross, the signals being given by whistle and flag from the judge's tug, anchored off Half Way Rock.

On Wednesday there had been a strong breeze all day, but by Thursday morning the wind was very light. The start was delayed as long as possible, but at noon the signals for Harding's Buoy, which had been lying for some time, were sent down, and those for the southeast mark were set, the wind being light S.E.

The club experienced the annual difficulty in securing a steamer for its members, the old John Brooks being the only boat available. As she did not leave Portland, where she had been liberally daubed up with many gorgeous hues during the day, until midnight on Wednesday, she only reached her wharf in Boston in time to take her passengers on board and got to Half-Way Rock at the advertised hour. She had few chairs on board, and not coal enough to make the trip at any speed, but the 500 people on board were very good-natured, cushions and mattresses from the state-rooms were carried to the upper deck and used as seats, and all enjoyed the picnic.

The fleet of steam and sailing craft about the start, the latter mostly white, as befits a Boston boat, and with sterns dutifully disfigured by a patch of black on which a kindly and paternal government prescribes that a yacht's name shall be painted. From Volunteer down to Gossoon and Ventura, every white boat had the same black patch on her stern, on which her name and port were displayed, until one is tempted to ask what offense the yachtsmen of Boston have been guilty of that a law enacted in 1793, and intended to apply of course to mercantile vessels only, should be arbitrarily enforced to annoy them. In most countries where yachting is at all known it at least receives nominal recognition and support from the government; the United States is, we believe, the only nation which discourages yachting, both in steamers and sailing craft, by the enforcement of ancient and obsolete laws made long before yachts were thought of. The time has come when some concerted action on the part of yachtsmen is absolutely necessary to secure the passage of special laws for steam and sailing yachts.

From the fleet present it is plain to see that Eastern yachtsmen are making a good sail; Volunteer, indeed, is the usual number of batten; Ventura had two battens in her jib, three in her staysail, and three more in her new mainsail; Gossoon had six, three in her mainsail; while Merlin had a perfect Jacob's Ladder of battens up the leech of her staysail.

The schooners had been working about to the southward of the Rock, coming up for the line in a steady all on starboard tack. The whistle blow at 12:25:00, Merlin being first over, with Fox on her weather and Mayflower on her lee; Enone being last, abreast of Wayward. The start was very poor, all but Merlin being handicapped. The smaller craft all started together, there being quite a crowd and some confusion at the line. As usual one of the larger boats persisted in running jib along the line on port tack, while the windward boat, thus putting others about, making a general nuisance of herself. Gossoon, with Mr. Burgess on board and Mr. C. F. Adams at the stick, was first away at gunfire, getting a good start; while Milicete stuck close by her. Ventura came next, with a clear start, but Minerva was obliged to tack to leeward of Fanita, and in the midst of the rear-guard. Hawk had a place to blanketed. The start was timed as follows:

Start	12 25 00	Milicete	12 40 50
Merlin	12 29 20	Ventura	12 41 20
Handicap Time	12 30 00	Hawk	12 41 38
Sea Fox	12 30 40	Fanita	12 41 50
Mayflower	12 30 50	Minerva	12 41 50
Wayward	12 33 30	Thelma	12 43 20
Start	12 40 00	Pappoose	12 43 45
Gossoon	12 40 35	Shark	

The fleet went over on starboard tack, the schooners, carrying maintopmaststaysails and jibtopsails, all holding this tack for some time save that Enone tacked and stood for the southward soon after crossing the line. As the single-stickers drew well clear of the Rock, Gossoon was ahead, with Milicete astern and to leeward, while Ventura was perhaps 300 yds. behind. Just after her was Shark, with Hawk on her weather beam, and a line astern of the pair were Alga, Minerva and Thelma, the Scotch cutter under the lee of Alga. Gossoon went on port tack, followed by Milicete, and soon the fleet was well broken up, the three large schooners to the east on starboard tack, Enone to the south on port tack, and the rest of the fleet, including a little on the windward side, to the west on port tack. Gossoon was leading, and Enone was front in hers, and Ventura second, and Shark had a constantly increasing lead on Hawk. Minerva had been badly placed at the start, and was not yet over her troubles, as Ventura was to windward of her and it was some time before Minerva could get clear. Gossoon was gaining steadily now, being clear of the rest, with Minerva close behind, and Enone close behind Minerva. Minerva finally escaped from Ventura's lee and left her, Ventura being on starboard board tack and stood across Gossoon's wake and over toward the big schooners. Pappoose was to leeward of Minerva and Thelma and some distance away.

A little before 2 P. M. Enone stood across on starboard tack from her inshore position and came out ahead of Sea Fox, who was then on port tack, and then she tacked and stood across Enone, with Milicete, Fanita and Alga in her wake, crossing some distance ahead of Gossoon's bows, while to leeward of Gossoon were Thelma, Minerva and Pappoose, Ventura being on port tack astern of the other forties. The schooners, with Wayward and Ventura, now held along well off shore on port tack for some time, the rest of the fleet starting closer along the shore. The windward side of the fleet was now broken up, and the fleet was little left, the fleet, now scattered in all directions, and within 3 or 4 miles of the southeast mark, feeling a light roll of the sea which they headed on one tack. Enone was on starboard tack, Gossoon in her wake, with Wayward and Minerva astern of her. For two hours more they worked along slowly, Gossoon and Minerva to the distance of a mile or more, and then, after a little on one or the other tack, Minerva was long since clear of the Pappoose no better off. Milicete was far ahead of Thelma, while Fanita and Alga were far astern. The race had become a dreary drift, and there was little chance that it could be finished before the official sunset of the Eastern Y. C., which was at 5:22 P. M. on July 10.

The schooners dropped astern as the wind fell until Milicete was the first at the mark, the fleet being timed:

Milicete	5 11 00	Alga	5 37 00
Gossoon	5 12 00	Merlin	5 41 00
Wayward	5 12 30	Ventura	5 45 15
Enone	5 15 00	Pappoose	5 50 45
Minerva	5 16 00	Fanita	5 53 45
Mayflower	5 16 00	Shark	6 10 15
Sea Fox	5 17 30	Hawk	6 23 00
Thelma	5 30 45		

The leaders set spinners to starboard for the run in, while the schooners set jibtopsails for the reach to Hardings, Sea Fox setting her balloon. Gossoon made a good turn at the mark, but when Minerva came up she was between Mayflower and Sea Fox, being blanketed for some time by the latter, and then, when well away, Gossoon overhauled Milicete and gained on Minerva, but the wind was growing lighter and by 6:30 there was almost a flat calm, putting an end to the race. The tugs were sent to pick up as many of the racers as possible, but Shark, Hawk and other unlucky ones did not get in until midnight. When the committee reached the club house it was decided to start again next morning.

During the night a strong N.E. breeze came up, blowing merrily at 6 A. M., but by breakfast time it had fallen somewhat. The fleet, however, found wind enough at 10 A. M. to take them out to the line, where the committee boat was showing but one signal, the Hardings Bell Buoy, for schooners as well as the others. As usual in cases of postponement, some of the starters of the previous day did not turn up, Wayward, Milicete and Fanita not starting. This made the race even less interesting than on the preceding day, the 40ft. class having only two Burgess keel boats, and the 50ft. class two Burgess centerboards, it being a matter of small importance to most of the spectators whether or not Alga beat Thelma or Shark beat Hawk. Had the centerboard Milicete been present in the 40ft. class, and the single-sticker Thelma, there would have been enough at stake to lend a little interest to the racing of the two classes. As it was, the only real contests were between the four large schooners and the three forties, Ventura, Gossoon and Minerva.

At the time of the start the wind was moderately strong from E. or E. by N., but by 10:30 it had fallen to a light breeze, and a spinaker would pay for the setting. All Salads and the rest of the fleet were at the line at 11:50:00, Capt. Nat Watson taking Enone over within fifteen seconds. Merlin and Mayflower were at her heels, but Sea Fox was a couple of minutes late. All set spinners to port.

It was 5m. later when the whistle for the smaller boats sounded, and the "Pay" got under way. The fleet was now broken up, and Minerva just under her rival's lee. As on the previous day, Gossoon took the honors of the start, and Minerva again paid dearly for it. The 40ft. boats had a beautiful start but 5s. apart, Alga, with large jibtopsail, to windward, and Thelma, with balloon, to leeward. Ventura was the last of her class, going over between the two thirties, with spinaker to port, the others

having no spinakers set. Hawk came for the line just ahead of Shark, but the latter, under good way with her spinaker drawing, ran up on Hawk's weather and was soon past her. The times were:

Start	11 15 00	Gossoon	11 20 30
Enone	11 17 00	Minerva	11 20 32
Merlin	11 17 30	Thelma	11 30 55
Mayflower	11 17 45	Alga	11 31 00
Sea Fox	11 19 30	Hawk	11 31 30
Start	11 30 00	Ventura	11 31 35
Pappoose	11 30 15	Shark	11 31 45

It was soon plain that spinakers were best leeward deck. Sea Fox and Mayflower having stowed their sails, were leading Merlin and Enone, the latter pair bearing off toward the shore to make the big sails draw. Ventura was making an elegant display of hers, as it ballooned over the stay, finally getting it in and running straight for Hardings, leaving the others in a triangular duel of their own; up to windward, Shark and Hawk held to theirs for a while, Shark being to windward. When they overtook the other two was about an eighth of a mile ahead of Hawk, this distance shortening at times but with no great change one way or the other over the whole of the first leg and the greater part of the second.

The great fight was, of course, between Gossoon and Minerva, the Burgess boat ahead; while little Pappoose was running very fast for her length, and making a superb effort to hang on to Minerva's skirts. As the wind now blew from the north, the two boats were stopped every effort of Minerva to get by her. After several unsuccessful attempts at her lee, in which Minerva was at times well up on her beam, the Scotch boat made a dash for Gossoon's weather, but this too was unsuccessful, and she settled down close to Gossoon's lee quarter again. Meanwhile, after holding the pair very well for over half the course, Pappoose had dropped a little to windward. When she overtook the other two, she was about a mile ahead of Hawk, this distance shortening at times but with no great change one way or the other over the whole of the first leg and the greater part of the second.

The turn at Harding's Bell Buoy was timed:

	Turn.	Elapsed.
--	-------	----------

Mayflower	12 31 00	1 15 35
Merlin	12 31 00	1 35 50
Enone	12 31 00	1 16 00
Sea Fox	12 37 20	1 17 50
Alga	12 59 15	1 28 15
Thelma	1 00 00	1 29 03
Gossoon	1 03 40	1 33 10
Minerva	1 04 00	1 33 40
Ventura	1 05 45	1 35 30
Pappoose	1 05 45	1 35 30
Shark	1 14 05	1 42 20
Hawk	1 15 05	1 43 35

The last column, of elapsed times from the start, shows the performance of each boat. Ventura made the best time of the forties, but she was not bothered on the way; Pappoose had really done the best work down wind, saving her time for half the course on all the others. Minerva had run Gossoon a little on corrected time, but she was not bothered on the way. Although there had been quite a sea all the way down, it had not been felt off the wind, but now it promised to be more troublesome on spars, the wind falling lighter, and several yachts lowered their clubtopsails. Merlin and Enone did so, and also Thelma, setting working topsails, while Minerva set her small club and the two thirties shifted to sprit sails. As the wind now blew from the north, the yachts were nearly able to lay their courses, while the sea moderated considerably as the day advanced. Merlin and Enone went on starboard tack at once after rounding, but Mayflower held her port tack well out to sea, with Fox after her, the latter even holding her course off shore after Mayflower had headed somewhere near where she intended to go. Men to go overboard, left the others far astern when Half-Way Rock was reached.

Alga, with clubtopsail, held to windward of Thelma with jib header most of the way in, but Thelma footed faster. The pair started direct for home as soon as they turned, making one long leg until the wind headed them a few miles from the finish. Thelma was then on starboard tack, and Alga on port tack, and they had been quite a sea all the way down, it had not been felt off the wind, but now it promised to be more troublesome on spars, the wind falling lighter, and several yachts lowered their clubtopsails. Merlin and Enone did so, and also Thelma, setting working topsails, while Minerva set her small club and the two thirties shifted to sprit sails. As the wind now blew from the north, the yachts were nearly able to lay their courses, while the sea moderated considerably as the day advanced. Men to go overboard, left the others far astern when Half-Way Rock was reached.

Gossoon, swinging her club, led off with a stretch to the south, on port tack, with Minerva astern. They held this leg for some time and then tacked nearly together and made one long leg for the line. Gossoon gained steadily on both legs, and the distance between them had nearly disappeared in the end in her favor. At the end of the just tipped by the judges' boat, at the leeward end, while Minerva crossed some distance further to windward, having oversteered a little more than was really necessary. Ventura broke tacks with the leaders at the turn, standing inshore for a time and then tacking out, being well in the wake of the others. Pappoose, too, found the road up hill a hard one, and the final pair gained a little on the others, but in the end in her favor. At the end of the just tipped by the judges' boat, at the leeward end, while Minerva crossed some distance further to windward, having oversteered a little more than was really necessary. Ventura broke tacks with the leaders at the turn, standing inshore for a time and then tacking out, being well in the wake of the others. CLUB CRUISES.

JULY is the month of club cruises, and Bay Ridge, Larchmont, Newport and Marblehead are for a time deserted. The cruise of the Seawanhaka C. Y. C. one of the first, carried the fleet to Marblehead, where it joined with the Eastern Y. C. The New York Y. C. holds its summer meeting to-day, and on July 30 the fleet will rendezvous, as usual, off the Pequot House, New London. The Massachusetts Y. C. starts on its cruise on Saturday, the following general order having been issued:

ON BOARD FLASHIP.

CITY ANCHORAGE, July 8, 1890.
The squadron will assemble off Thompson's Island on Saturday, July 19, at 2 o'clock P. M. The flagship will be at anchor, and then signal is made to pass in review, the sailing squadron will pass under the stern of the flagship, headed by the vice-commander, and make the best of their way to Portland. The time of each vessel will be taken on board the flagship. The steamers present at the rendezvous will pass in review after the sailing yachts. A full attendance of yachts is requested at the review. It is expected that some of the yachts of the Portland Y. C. will arrive here on the 17th inst., in which case a reception will be given at the wharf house on Friday, the 18th, of which due notice will be given. The race committee offers two cups in each class for the race from Boston to Portland, open to the yachts of both clubs. At Portland the two clubs will proceed for the Mallet cups, presented by Mr. Mallet. The race committee also offers cups for the race from Portland to Boothbay. The fleet will race from Boothbay to Rockland, where an entertainment will be given by residents. Two cups have been offered by Mr. Rice of the Portland Y. C. for a race off Rockland. Probably some of the yachts of the Portland club will extend their cruise to Rockland and take part in the race. The squadron will proceed from Rockland to the Cape, where they will disembark. Captains intending to participate in the cruise are requested to notify the fleet captain at the wharf club house at the earliest possible moment.

By order of the commodore.

ARTHUR F. SHEPARD, Fleet Captain.

The South Boston Y. C. started on its cruise on July 12, the first stop being at Salem.

The Great Head Y. C. started on the same day and anchored at Marblehead over night.

EASTERN Y. C.

The annual cruise of the Eastern Y. C. began on July 12, the fleet sailing from Marblehead at 8:30 P. M. The fleet included Sea Fox, Com. Tucker, Mayflower, Egonne, Gitana, Troubadour, Foam, Meta, Volunteer, Puritan, Wayward, Medusa, Huron, Bayader, Ajax, Millicent, Gossoun, Ventura and Pappoose. The wind was light southwest and spinners were set, the fleet reaching Gloucester at sunrise. A meeting of the captains was held in the evening, at which Col. Cochrane, of Egonne, offered to give a \$250 cup to the schooner making the best average runs of the cruise, corrected time, and Bayard Thayer, of Pappoose, made an offer of a cup, of like value, for the sloop showing up best under the same conditions as the schooners. The offers were declined, as it was decided not to make a race of the cruise. Minerva left Marblehead for the westward, not joining the cruise.

LARCHMONT Y. C.

The fleet of the Larchmont Y. C. left the club's anchorage on July 12, at 11 A. M., for Black Rock, the first port on the cruise. The fleet included the flagships Daphne, Com. Lowery, the schooners Leona, Elfin, Clochette, and the singiestickers Dare, Lolowana, Vandal, Trochilus, Harriet and Kelpie. Black Rock harbor was made at 4 P. M.

ATLANTIC Y. C.

The rendezvous of the Atlantic Y. C. will be at New Rochelle this afternoon, the fleet sailing for New London to-morrow morning. The cruise will probably extend to New Bedford, calling at New London, Shelter Island and Newport.

The Knickerbocker Y. C. will rendezvous on July 19 in Hempstead Harbor for the annual cruise, which will extend to New London or Newport.

A meeting of the New York Yacht Racing Association was held on July 11, at which Charles E. Cameron, of the Newark Y. C. was appointed fleet captain by Commodore Prime. The annual cruise was discussed, and it was decided to change the programme that one of the stopping places should be at Bridgeport instead of Black Rock.

BEVERLY Y. C.

161ST REGATTA.—THIRD OPEN SWEEPSTAKES, MONUMENT BEACH, JULY 12.

THIS race was sailed in a very light and variable air with lots of flukes. When the judges' boat got into position at 12:45 the wind was light N.E., and course numbers were hoisted accordingly, but just as the starting gun should have been fired the wind changed to S.E., and the start was delayed ten minutes to see if it would change again.

As it looked as if it would hold for a couple of hours, the preparatory gun was fired at 1:08, sending 1st and 2d classes to Pines Buoy, then to Wings Cove Buoy, from which they would have a beat across to Wings Neck and a run home—114m.

Third class went to Pines Buoy, then to Dry Ledge boat to Pines; a dead beat as wind was at starting and a run home, 75m. Fourth class apparently had no beat in their course of 65m, twice down to the Pines and back.

In 1st class Mathe, though entered, did not start, while Climax had it all her own way with A.P.E., who needs more wind.

In 2d class Anonyma led off on gun fire, with Mollie a minute behind her, followed by Mist, Gynote, Widgeon and The Crawford, a new boat just brought round from Quinoy.

As they neared Pines Buoy, the wind shifted to S., and the leaders getting it first had the advantage; off Wings Cove the rear boats had it W.N.W., and there were frequent calms, the boats coming home in a light S.W. air, and there being no beating at all in the race. Anonyma sailed well and spun out a long lead.

Third class had a very similar race, no beating, and numerous shifts and calms. Elma, flying light, led off with her large sail and spun out a long lead, she was followed by Cayuse, Hermione, Algouquin, Daisy and Puzzle. The latter sailed with a small sail and had no chance; she is having a larger one made.

In the fourth class Rip started behind, but soon took the lead. On the second round they had a fluky beat to windward, Rip making three or four more beats than Edith.

FIRST CLASS.

Length.	Elapsed.	Corrected.
Climax, F. C. Stetson, Mattapoisett.	30.05	2 30 13
A.P.E., C. Crosby, Osterville.	27.04	2 48 54

SECOND CLASS.

Length.	Elapsed.	Corrected.

Winners of first prize class one, Climax; class two, Anonyma; class three, Elma; class four, Rip; second prize, class two, Mist; class three, Puzzle. Judge, W. Lloyd Jeffries.

MOSQUITO FLEET.—South Boston, July 12.—Third pennant race. Course No. 1, from starting point to Buoy No. 2, to barrel off Middle Shaft, back to starting point, leaving everything on starboard; distance 5 miles, weather cloudy, wind south and moderate, flood tide. Start at 4:05. Summary:

FIRST CLASS.

Length.	Elapsed.	Corrected.
Tantrum, J. F. Small.	5 02 55	5 02 55
Minnie, James Bertram.	5 11 26	5 06 26
Spruce, H. M. Wells.	5 05 27	5 00 27
Lytle, W. H. Ramsom.	5 07 27	5 02 27
Nina, J. P. Bullard.	5 11 21	5 06 21
Nellie, E. N. Leary.	5 14 12	5 09 12

No second class race. Bessie won two races and gets pennant for this class. Tantrum won to day's race. The Lucy, Minnie and Tantrum each have a leg in the pennant for the first class. There will be sail-off to settle who shall have it. Regatta Committee, J. P. Bullard, J. F. Small, U. L. Stickney, J. R. Fisher, Jr., and W. E. Elliott. Judges, James Bertram, Willis T. Tufts and Mark W. Richmond.

OYSTER BAY Y. C.—The race of July 12 was postponed until July 19 for lack of wind.

RIVERSIDE Y. C. ANNUAL REGATTA, July 12.—The young but flourishing Riverside Y. C., of Riverside, Conn., held its annual regatta on Saturday in a light S. E. breeze that strengthened during the race. The course for the two sloop classes was from a line marked by two stakeboats anchored southwest of Captain Annap's Island, black buoy off eastern point of Captain's Island, keeping same on starboard, thence around black buoy (or stakeboat) off Mattinick Point, keeping same on port, thence around Center Island Buoy (or stakeboat) off Oyster Bay, keeping same on port, thence home, keeping "Flat Neck" Buoy on starboard and black buoy off eastern end of Captain's Island on the port, 17 miles. For the cats, from the same starting line to black buoy off eastern point of Captain's Island, keeping same on starboard, thence around red buoy off Western end of Captain's Island, keeping same on starboard, thence to starting line, keeping red buoy off Comorant Reef on starboard, making 11 miles. The full times were:

CLASS 3, SLOOPS.

Elapsed.	Corrected.
Alcedo, W. A. Hamilton	3 11 18
Wayward, F. Beltz	3 25 22

CLASS 5, SLOOPS.

Elapsed.	Allows.
Vorant, G. G. Tyson	3 27 13
Zanth, R. C. Ralli	3 44 09

CLASS 8, CATBOATS.

Elapsed.	Allows.
Sirene, H. E. Doremus	2 18 30
Pearl, G. Potter	2 29 22

CLASS 9, CATBOATS.

Elapsed.	Allows.
Phyllis, H. J. Jones	2 08 42
Rival, C. J. Hart	2 10 42
J. C. C. M. Barrett	2 16 58

The regatta committee included F. B. Jones, chairman; W. A. Hurlington and L. A. Lockwood. The launch Emma K carried the committee and a party of ladies over the course. In the evening a hop was held in the club house. During the day the schooner Gevalia, Mr. H. W. Conates, went ashore in entering the harbor, but got off with the tide.

ST. LAWRENCE Y. C.—The third of this club's series of yacht races took place over the usual club course on July 5. There was a fresh breeze from the northwest which kicked up quite a sea in the channel, and made tucks a necessity. The start was at 3:30. All the boats drew in their mainsails and some of them three reefs in their mainsails and a reef in their jibs. Valda set her number two spinnaker over her reefed mainsail. Breeze passed Minnie A. on the reach out, and the fleet went around the east buoy in the following order: Lulu, Valda, Breeze, Black Eagle, Minnie A. and Pearl. Black Eagle fooled Breeze as she rounded up after passing the buoy and tore her mainsail, and Breeze did not escape unscathed. Breeze was put into the collision, and Minnie A. slipped passed them into third place while they were getting free of each other. Lulu and Valda ran down the south buoy on one tack, fetched both it and the north buoy in another, and on the run down to the east buoy, almost dead before the wind, Lulu set her club spinnaker, and Valda her small spinnaker. Black Eagle drew in their third reef, and Breeze did not escape materially on the leaders. It was a long and a short leg from the east buoy to the finish line, and Valda shook out her last reef while going about for the last time and crossed the line under all plain sail. The times were:

FIRST CLASS—26FT. AND OVER.

Start.	Finish.	Elapsed.
Lulu, A. Irving	3 31 25	5 07 00
Black Eagle, C. Levin	3 32 00	5 13 00

SECOND CLASS—21FT. TO 26FT.

Start.	Finish.	Elapsed.
Minnie A., C. Smart	3 31 20	5 23 00
Breeze, J. Patterson	3 31 40	5 30 10

THIRD CLASS—21FT. AND UNDER.

Start.	Finish.	Elapsed.
Valda, G. H. Duggan	3 31 25	5 12 10
Pearl, C. H. H. H.	3 33 30	5 42 00

Lulu wins in first class, Minnie A. in second class, and Valda in third class. Lulu's corrected time over the course was approximately four seconds better than Valda's.

CORINTHIAN Y. C. OF MARBLEHEAD, July 12.—The regatta of the Corinthian Y. C. of Marblehead was sailed on Saturday in a light S.E. breeze, the start and finish being off the club's handsome house on Marblehead Neck. The chief feature of the race was Mr. John B. Paine's new 20ft. racer Hornet, who sailed her first race and won very easily. Hornet is a jib and mainsail cutter. After the first corner, a clipper seemed to have been decked out in model, 20ft. l.w.l., 8ft. beam and 8ft. draft. Her rig is peculiar, the pole mast is set very far forward, being stayed to an outrigger or boomkin on each bow, in order to obtain sufficient spread for the shrouds. She carries only a large mainsail and a jib. The course was around Mid-Channel Rock Buoy, Half Way Rock and Cat Island. The start was delayed until 3 P.M. waiting for wind. The elapsed times were as follows, the winners of each third class not being decided owing to a doubt over measurements:

THIRD CLASS.

Length.	Elapsed.	Corrected.
Delphine, Barker	Not meas.	1 36 46
Psyche, Gray	Not meas.	1 36 42
Wanda, R. C. Robbins	Not meas.	1 38 43
Edith, R. M. Wood	21 10	1 39 00
Niobe, W. O. Taylor	21 10	1 39 38
Joker, B. Tilton	Not meas.	1 40 18

FOURTH CLASS.

Length.	Elapsed.	Corrected.
Hornet, J. B. Paine	25.03	1 26 19
Wraith, J. B. Benson	21.03	1 38 03
Nixie, C. C. Cochrane	Not meas.	1 38 13

FIFTH CLASS.

Length.	Elapsed.	Corrected.
Josephine, D. H. Follett	Not meas.	1 36 21
Banjo, J. L. Taylor	Not meas.	1 41 59

Hornet and Wraith win first and second prizes in fourth class, and Josephine takes first in fifth. The judges were Daniel Appleton and William P. Fowle.

MONATQUOT Y. C., July 12.—The first championship regatta of the Monatiquot Y. C. was sailed on Saturday in a light S.E. breeze, the times being:

FIRST CLASS.

Length.	Elapsed.	Corrected.
Posy, R. S. Hunt	1 04 00	1 02 17
Secret, F. J. Linton	1 05 42	1 04 11
Moondyne, A. J. Shaw	1 07 25	1 06 24
Folly, J. F. Shepard	1 08 21	1 07 21
White Fawn, H. A. Jones	1 08 57	1 08 06

SECOND CLASS.

Length.	Elapsed.	Corrected.
Diadem, L. A. Hayward	1 18 12	1 19 37
Eureka, E. B. Rogers	1 20 08	1 20 10

THIRD CLASS.

Length.	Elapsed.	Corrected.
Rocket, H. M. Faxon	1 16 02	1 15 25
Freak, W. F. Maybury	1 16 01	1 15 42
Elf, Perry Lawton	1 19 05	1 17 47

The judges were: Henry Gardner, H. P. Worcester, George H. Bickell. The summary: Posy takes a leg in the first-class cup, and Secret takes the cash prize. Diadem takes a leg in second, Rocket in third, with Freak for cash prize.

BAY OF QUINTE YACHTING.—Belleville, Ont., July 7.—Our harbor on Saturday visited by yachts of the fleet of the Rochester Y. C. with Com. Newell, Messrs. Cartwright and Cramer, and other gentlemanly representatives of the beautiful "Flower City." The yachts, which are all well fitted, staunch and well able to cope with Ontario's surges, were Ripple, Armida, Majel and Edith. They will remain in this vicinity for a few days and then go eastward, probably to the Thousand Islands.

It is to be regretted that Armida and Majel, ignoring the buoys which mark a gravel bank off the river's mouth, ran around, but happily no damage was sustained by either of them. Our visitors found the Murray canal, recently opened, a great assistance in reaching the Bay of Quinte, which it connects with Lake Ontario, as by its means they saved 75 miles of the worst navigation on the lake. The fine sloop-yacht Nora, with her owner, Mr. John Bell, of Chicago, and his family on board, left on Saturday for a cruise around Lake Ontario. This yacht, it will remember, holds the Fisher cup for sloops, the emblem of the championship for her rig on fresh water. It seems strange that no craft can be found to challenge for it. Nora has now held this cup for several years, and nothing has ventured to take her measure for it. Mr. Jarvis, of Hamilton, when he owned White Wings, nibbled at it, and also when he owned the Commodore, but he did not attempt it, but as they could not get a race on a date of their own fixing they backed out. Mr. Bell would have accepted their date, but he was waiting for a new mainsail, and therefore wished as much time as the rules allowed him. Under these circumstances it would seem to be but reasonable that the cup should be awarded to Nora if no challenger should sail for it this season. As Mr. Bell is to be absent for some time, it seems fair to compel him to keep his craft in trim for the sole purpose of defending this emblem, which is the only trophy that he would race for.

VREDA.—Com. Boswell's steel cutter Vreda, which sailed from Falmouth on May 24, arrived at Quebec on July 8 after a hard passage. Vreda is 45ft. l.w.l., 10ft. lln. beam and 9ft. draft, designed by Watson and built in 1882.

TORONTO, July 9.—On June 28 the Sunnyside Boating Club held a regatta on Humber Bay, open to all boats under 20ft. waterline. The entries were: Sloops Rambler, Whistler, Caprice, Caprice, Quaker City Y. C. sloops, Alvaetta, Egeria, Widgeon, Parkdale Boating Club, and sloops Escallo, Gwendoline and Smiling Morn, Sunnyside Boat Club. The race was sailed over a 4½ mile triangular course twice around. The start was made to windward with a light breeze, the Alvaetta crossing the line first, closely followed by the rest of the fleet. The first buoy was rounded by Alvaetta first, with Rambler about three minutes later, closely followed by Egeria. The wind shifted slightly, so spinners were set for the run to second buoy, which was rounded, Alvaetta first, Egeria about ten seconds later and Rambler, Whistler and Egeria close behind in a bunch. The wind now freshened considerably and the Alvaetta rapidly drew away from the rest, finishing the first round with over five minutes lead. The Egeria following second, with Egeria third, the balance of the fleet was a long distance astern, and were practically out of it. The leaders did not change their positions from here, Alvaetta finishing first with a lead of ten minutes, Egeria second and Egeria five seconds later. Caprice and Widgeon were a few minutes late starting.

HOW LONG IS THE ANACONDA?—The Larchmont Y. C. regatta committee has met with as much difficulty in measuring Anaconda as has been found in the case of other sea serpents, and the actual waterline length of her snakeship is still a mystery. On the evening of July 4, while preparations were being made to measure her, she disappeared from Larchmont Harbor as suddenly as the stock sea serpent disappears from the seaside summer resort, and she has since kept out of the way of the official tape-line. While it is certain in any event that Clara beat her in this race, there are good grounds for doubt in the race of the New Rochelle Y. C. In the first place two sets of times were taken on the start, while at the finish, though there is ample testimony that Clara crossed the line ahead of Anaconda, she is shown on the official times as finishing astern of her. Before it is accepted as a fact that Anaconda has really beaten Clara, these discrepancies in the starting and finishing times must be explained, and Anaconda must be accurately measured.

BIJOU.—Mr. Jeannot's fast catboat was incorrectly reported in our last issue as beaten by Edna in the New Rochelle Y. C. regatta. This is an error, as Bijou was not in the race.

CORINTHIAN NAVY.—The New York Bay squadron of this association held a very successful regatta on July 5 off Stapleton, Staten Island. On July 12 the Hudson River squadron held its regatta, and the fleet was very large. The next regatta of the association will be given by the East River squadron on July 26. The start will be off the Knickerbocker Y. C. grounds at Port Morris. Entries for this regatta may be made with A. Dahm-Petersen, 63 East 114th street. The fleet of the navy will assemble at New Rochelle on August 2, to take part in the first annual cruise. The first cruise will be to the Cape, for membership; E. M. Post, John W. McCarthy, Chas. Ohmeis, T. Irving Woods.

A NEW YACHT.—The sloop yacht Adele, built at Port Jefferson, L. I., by Messrs. Mather & Wood for Mr. Theodore A. Lord, of San Francisco, was successfully launched yesterday afternoon in the presence of several guests of the owner and a large gathering of people from the neighborhood. The Adele is built on the most improved lines and is expected to develop considerable speed. She is built of the very best material and constructed in the most workmanlike manner. The Adele is a centerboard boat, the following dimensions: 80ft. over all, about 55ft. on the waterline, 18ft. 9in. beam and 7ft. 6in. draught of water. The cabin is finished in mahogany and is to be handsomely upholstered. Among the accommodations is a chart room, or library, and hot and cold water throughout, even for the men forward. She will not be enrolled in any yacht club.

ALVA.—On July 8 Mr. Vanderbilt's steam yacht Alva arrived at Newport with her crew on board, having sailed from New York on June 27 and stopped for one day at Falmouth. She ran the 1,419 knots from New York to Falmouth in 4 days, 4 hours, 53 min., an average of 14.06 knots. She spent July 1 at Falmouth, and sailed at 7:50 A.M. next day for Newport, running the 1,900 knots in 6 days 5 hours, the average being 13.35 knots. The best average run on the entire trip was 14.54 knots.

GREAT SOUTH BAY.—On July 9 a race was sailed on Great South Bay, off Babylon, over a 20 mile course, the wind being strong northwest. The start was made by Thrysa, R. H. Linder, J. D. DeForrest, Jr., Buzzy, William Arnold, Mab, J. Cadwalader, Vixen, F. Wicks, and Henry Ward Beecher, James Arnold. Buzzy lost her mast, and Thrysa and Mab each sprung theirs. Beecher finally won. The judges were Messrs Nelson G. Carman, Charles Searies and A. C. Smith.

KATHLEEN AND MIRTH.—A match was set for July 9 between the keel cutter Kathleen, Mr. T. C. Zerega, and the centerboard sloop Mirth, Mr. J. W. Beckman, of the Oyster Bay Y. C., to be sailed off Oyster Bay. As Mr. Zerega could not get his Corinthian crew together for that day, he sent a check for his part of the stakes to Mr. Beckman, and the race is now off.

NEW BURGESS BOATS.—Mr. Burgess has an order for a fisherman, similar to Fredonia, for Mr. W. H. Jordan, of Gloucester. He is also at work on two designs for large carrying schooners, one to be commanded by Capt. Crandall of the yacht Mohican.

30, 31, Sept. 1, South Boston, Harbor Meet.

TALASSIT C. C.
20, New Jersey Athletic, Bergen Point, Fall.

ONE of the most notable events which has occurred at Lake Quinsigamond for some time was the launching of the Talassit C. C. war canoe last week, the first one of its kind ever seen in existence in this country.

The club has only been in existence a few months, but already has a membership of 20. The officers are: Fred P. Dean, Com.; E. W. Finney, Vice-Com.; Fred A. Sears, Captain; A. H. Laing, Purser. The club is at present located at Mr. H. H. Bigelow's private boat house, which is one of the most desirable locations on the lake, being away from the railroad, highway and steamboat landings. Being on private grounds, the members are not troubled by the usual annoyances of a public place.

The club members assembled at the club house about 7 P. M., and donning their uniforms were soon on their way across the lake to Coburn's boat house, from whence the launch took place.

At 8 P. M. the twelve paddlers took the canoe from her braces and deposited her tenderly in the water, and taking their places in pushing off from the landing, while the Commodore, in a small bottle of "Extra Dry" over her prow, and in a happy vein of humor gave a short sketch of the origin of the club, and christened the mammoth canoe Wachawewak, which is the Indian for sunflower, the club's totem.

A crowd of several hundred had assembled about the boat houses to witness the event, and as the craft moved swiftly and silently down the lake, propelled by the united strength of twelve young braves, she was admired by all.

She is the third largest canoe in the country, and reflects great credit on her builder, Mr. D. L. Rigby. The Wachawewak will probably be seen at the annual meet of the A. C. A. this season.

The proper pronunciation of Wachawewak has been mastered by but a few members, as yet, the majority contenting themselves with an original pronunciation which is remarkably put "Why should we walk?"

THE NORTHERN DIVISION MEET.

THE camp site committee has prepared the following circular: There are so many attractive points on the Lake of the Two Mountains that the committee had some difficulty in fixing upon the one best suited to the A. C. A. camp, and after a careful examination of the available places, has chosen Ile Cadieux, which is by all means the best. The camp will be about 4 miles from Ste. Anne de Bellevue, about the same distance from Vaudreuil, and 5 miles from Comoy. It is the last of the series of islands which skirt the shore from Ile Perce up, and thus offers exceptional facilities for both paddling and sailing water. On the upper side there is a broad open stretch of water which narrows somewhat at Comoy, and then broadens to the end of the lake and extends in the other direction 7 or 8 miles to the Back River. On the lower side of Ile Cadieux is a fine sheltered bay, from which narrow channels lead among the islands, which are thickly wooded and very pretty. The camp landing will be in the narrow between Ile Cadieux and the mainland, and well protected on all sides. The main camp will be on rising ground, well drained and with a fine outlook over the lake, so that the races can be seen from the tents. The ladies' camp will be sheltered by trees and is a short distance from the main camp. The island is about a mile long, and the lighthouse at the opposite end from the camp is the only dwelling upon it. The objective point will be Ste. Anne de Bellevue, which is on the main line of both Grand Trunk and Canadian Pacific railways, about twenty miles west of Montreal, and a point of call for all steamers on the Ottawa River, which have to look through at this place. From Ste. Anne's a special steamer will be run to the camp, managed by this Association, and connecting with the trains, morning and evening. Campers are recommended to take trains arriving at Ste. Anne's in the morning. Arrangements have been made with an experienced caterer in Montreal for a camp restaurant at a cost of \$1 per day and single meals 50 cents. There will be a barber constantly in the camp. There is good fishing in the immediate vicinity of the camp. Excursions may

easily be made to Oka, Carillon and other points on the lake and Ottawa River, and to the numerous summer resorts along Lake St. Louis, to Lachine and Montreal. The St. Lawrence Y. C. has accepted an invitation to visit the camp, and will probably arrange a cruise in the Lake of Two Mountains during the meet. The Canadian Pacific and Grand Trunk railways have agreed to issue round trip tickets from July 23 to Aug. 7, good to return up to Aug. 21, at single fare; and will also allow each passenger canoes and camp kit to the extent of 200 lbs., free in baggage car. The special certificate required to obtain these tickets may be had on application to the purser.—A. W. MORRIS, HUGH McLEAN, R. TYSON, Committee.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

C. F. D.—Wall street, go to Chas. Fenton's, Number Four.
J. H. K., Boston.—You will find lines of steam yacht in the FOREST AND STREAM of Feb. 16, 1888, which can be reduced to 50ft.
J. G. F., Schome, Wash.—The best plans for a sharpie which we have published are those in the FOREST AND STREAM of Sept. 13, 1883.
C. VON B.—Please inform me when it is allowed to shoot snipe on Long Island. Ans. Snipe season runs from July 10 to January 1.
T. Benedict.—You will find several rigs for canoe yaws in "Canoe and Boat Building for Amateurs." The cat yawl or canoe rig, mainsail and mizen, is one of the best.
A. T. L., Monroe, N. C.—If "it was decided by the management that the highest scores should take the prize" then the prizes should be distributed after order was fixed by shooting off ties.

The usual plan is to have class shooting and then the tie is shot merely to decide who shall take the prize in his class.

W. R., Slater, Mo.—A shooter goes to the score, loads his gun (a hammerless), throws up to shoot but it don't fire; he takes his gun down and finds only one barrel cocked, the one not loaded. Does he get another bird under American Association rules? Ans. The general rule is to penalize the shooter for his own fault, and Rule 18 under live bird shooting of the American Shooting Association code says: "If the gun is not cocked or the safety not properly adjusted and the bird escapes, it shall be scored a 'lost bird.'"

FISHERMAN, Mass.—Can you or any of your readers inform me as to the cause or prevention of worms in the air bladders of trout? I have a pond of some three acres on a spring brook and both are well stocked by nature with trout. The fish in the pond will run from 3 to 8oz. in weight. For the last year or more their air bladders have been more or less filled with a small white worm about as large as a very fine needle and some quarter to half inch in length. The fish seem in good condition and are nice flavored, and show no signs of parasites in any other way. Some of the bladders seem nearly or quite half full of worms, while others contain only a few. Ans. No way is known of preventing the occurrence of parasitic worms in trout. They are derived from the food and the source is often obscure. There is an eminent authority on fish parasites in the Washington and Jefferson College, Washington, Pa., who will doubtless identify the worm for you, and tell you its habits and development. He is Prof. Edwin Linton, and we advise you to communicate with him either directly or through this office. We shall be interested to know more about this subject. Perhaps some of the small fish on which your trout feed are the first hosts of the parasites.

The Glittering Gang Trolling Bait.

Best in the world. Try them alongside your best bait and you can see the difference. We refund the money if not satisfactory. For sale by dealers. Prices: 75c., \$1.00 and \$1.25.

Eight muscalonge were caught in two hours by Geo. Graham, Rice Lake, Can., with the best Canadian spoon alongside without a strike.
Six muscalonge were caught on Rice Lake by Chas. Gilchrist one forenoon.
Forty-three pike were taken by Chas. Smith, Oneida Lake, in three hours.
Wm. Comstock, Alexandria Bay, caught 22 bass and 7 pickerel in one day's fishing on our baits.
J. D. Wilson, Tallahassee, Fla., had 16 strikes and took 13 bass, largest weighing 17lbs. 10oz.

We can show hundreds of testimonials received this season already.

Trout and Bass Flies.

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1, black bass; No. 2, bass and pickerel; No. 3, muscalonge, salmon trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction, one minnow having been known to catch twenty-five bass before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

J. B. WISE, Watertown N. Y.

Salmon Fishing in Canada.

We have now received our entire stock of Forrest & Son's Salmon Flies, Rods, Reels, Casting Lines, etc., etc. We have everything in Fishing Tackle for the successful capture of Salmon and Trout in Canadian waters. American anglers can obtain Outfits from us far below New York prices. We make a specialty of salmon tackle. We have salmon flies from No. 3-0 single to No. 8 double. We also have a large assortment of Heavy single gut Salmon Casts. A complete stock of firearms and every variety of Sporting Goods. Send for illustrated catalogues.

The Celebrated Divine Rods.

Split Bamboo, Bethabara, Greenheart, Dogma and Lancelwood. Twisted split bamboo rods. An entirely new method of treating the bamboo, giving it a twist while winding, thus distributing the strain equally all around the rod and making absolutely the strongest bamboo rods ever constructed. Made only by the manufacturers, **DIVINE & BECAFT**, successors to Fred D. Divine, Utica, N. Y.

Mention FOREST AND STREAM.

Do You Wish to Catch Large Trout? THEN GO WHERE THEY ARE!

The Rangeley, or more properly, the Androscoggin Lakes, contain the largest brook trout on this continent, and land-locked salmon running up to seven pounds. You can learn all about the fish, the best angling points, routes, expense, etc., by purchasing "The Androscoggin Lakes," illustrated. Contains 32 pages text, 60 illus. Map 2x2 1/2 in., covering the entire sporting region of northern New Hampshire and northwestern Maine, and Game and Fish Laws of both States complete. Price \$1. Illustrated catalogue sportsman's books mailed for 6c. JAMAICA PUBLISHING CO., Jamaica Plain, Mass.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the angler chooses.
THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other reel.
FIFTH.—It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

YAWMAN & ERBE,

ROCHESTER, N. Y.

Send for Catalogue, Free.

All Anglers know of "Chubb" and the high reputation that his goods have obtained. If you need a rod or other tackle, send direct to him and get goods that are warranted.

His New Catalogue for 1890 contains description of everything that you need; it also contains articles on fishing, written by such well-known writers as Dr. James A. Henshall, Petronella, W. H. H. Murray, Geo. P. Goff, Norman, Bro. Gardner and others.
Send 25 cents, and receive Catalogue, post paid. This amount will be deducted from first order (if accompanied with Coupon in book) for one dollar's worth or more of our goods. Address
